Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter addressed to the editor of the New York Sun by Mr. F. C. Nichols, an American, living in Berne, Switzerland. The letter was printed in the New York Sun of May 23, 1949.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EUROPE'S RECOVERY—CORRESPONDENT IN BERNE ALARMED AT POLICY OF AID FROM AMERICA

To the EDITOR OF THE SUN.

SIR: To an American living in Europe who knows conditions far better than biased investigators from back home—so easily influenced by European politicians—it is evident that there is absolutely no longer any call for the scandalous waste of American money and goods here.

If you will check back over 12 months you will find that the industrial and agricultural production as well as exports of England, France, Belgium, Holland, Denmark, Sweden, and Norway have in most products surpassed the prewar figures. That being so, and since in prewar days Europe lived well, had all the dollars required and equipped armies, why is there the need to pour in United States dollars and supplies?

Even last summer the stores in France, Belgium, Holland, and Italy were loaded with food and luxury items. In these countries the finest food could be eaten in restaurants and the average well-to-do homes, better food than could be found in the United States. In Holland and Belgium thousands of the very best and biggest automobiles were imported, at a time when there was still a shortage in the United States.

In most countries in western Europe there is no shortage of food and dollars. There have always been as many dollars available as needed; all one had to do was to get out into the black market to get them. This only serves to prove that what Europe needed was not a Marshall plan at American expense, but a reorganization of distribution of what was available, as well as governmental control of the dollar situation.

The United States Government is deaf to the pleas of American exporters, who are aware that through the Marshall plan we are building up European factories and putting such factories in a position, with their cheap labor and lower overhead, to undermine American exports for all time. It is really heartbreaking to see American machinery and equipment pouring into European factories so that they can eventually compete with American products and also eventually put millions of our intelligent workers on the dole. Our Government is not only not satisfied with this state of affairs, but is sending over groups of technicians at tremendous expense to show Europeans our latest methods. Have we gone crazy?

We are so stupid in what we are doing that many Europeans have frankly asked me whether our leaders are blind to the dangerous outcome of our present policy, or as blind as our leaders who sold us down the river to the Russians by agreeing to postwar conditions which enabled the Russians to overrun half Europe. We showed lack of foresight then and we have not learned our lesson.

Western Europe, now that it feels secure in the Marshall plan, is asking us to spend further billions in reequipping its armies, which they always managed to do in prewar days without any outside assistance, and at a time when industrial production was not as high as it is now.

You have a very good man on your staff who is more American-minded and has clearer vision than 75 percent of our present leaders—George E. Sokolsky. Send him to Europe to investigate; let him tell the American people how they are really taken for a ride.

We are so generously overfeeding Europe, overequipping factories, that these pampered countries are rewarding our generosity by exporting millions of dollars of critical items to countries back of the iron curtain. England recently made a deal in truck tires, Belgium sold thousands of reconditioned American Army trucks to Russia (we gave them the trucks in the first place); millions of dollars of American ball bearings are getting through to Russia.

F. C. NICHOLS.

BERNE, SWITZERLAND.

Address on States' Rights

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. SMITH of Kansas. Mr. Speaker, on May 24, I included in CONGRESSIONAL RECORD the reprint of a speech on States' rights which I felt should be called to the attention of the Congress—page A3210—I regret that in reproduction, the authorship of this commendable article was omitted.

I would like to say that the author of this speech was John Temple Graves, well-known speaker, writer, and columnist of Birmingham, Ala. He made an excellent statement of the fundamental principles of States' rights in this speech given on May 11 at Columbia, S. C.

Intergovernmental Relations

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Thursday, May 26 (legislative day of Monday, May 23), 1949

Mr. O'CONOR. Mr. President, as the author of the pending legislative proposal for the establishment of a commission to give consideration to intergovernmental relationships, I am particularly interested in enlightened discussion regarding this subject matter. A particularly intelligent statement on this question has been presented by Mr. Stanford Schewel and, because Members of Congress will be benefited by considering it, I ask unanimous consent to have the statement inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF STANFORD SCHEWEL, MADE ON WEDNESDAY, MAY 11, 1949, BEFORE THE SENATE AND HOUSE SUBCOMMITTEES ON INTERGOVERNMENTAL RELATIONS, WASHINGTON, D. C.

I would like to thank the committee for its invitation to present my views on the proposed bills to establish a Commission on Intergovernmental Relations. As I understand it, the Commission will be charged with the task of investigating the field of National, State, and local governmental powers and making recommendations to Congress regarding them.

My interest in and knowledge of this subject was heightened by my work with the Committee on Federal-State Relations of the Hoover Commission. As an assignment from that committee, I was engaged during 1948 in study and research on the birth, growth, and development of State and National governmental powers. I then prepared a monograph entitled "The Development of Governmental Powers in the United States," which was used as background material by the Committee on Federal-State Relations. A copy of this monograph is attached hereto.

My studies in this field have made me keenly aware of the tremendous expansion of both National and State powers during the past hundred years, the manner in which they have grown in all directions, and the frequency with which they overlap and conflict. The average American, constantly beset by a multitude of governmental regulations, is not likely to reflect on the source of the power being exercised upon him, or to wonder if today's new regulation is a rightful exercise of National power or should more properly be left to State control. His uppermost thought in contemplating the blessings of life under a Federal system is that he is

twice regulated, twice conformed, and twice taxed.

It should be apparent to every American that one of our keenest contemporary needs in the field of government is a comprehensive plan to channel the mushrooming and overlapping governmental powers of Nation, State, and local unit into their appropriate areas. If the present trend is allowed to continue unchecked, it will undoubtedly accelerate, and in another generation this Nation may well find itself strangled by a maze of intertwining and conflicting governmental functions even more appalling than exists today. Were this calamity to occur, it would not only make for ever-increasing taxation, but would also seriously endanger the system of division of powers between Nation and State which has heretofore been the basis of our Republic. In these days when the Congress is so eagerly searching for ways to reduce the crushing burden of taxation upon our people, it seems obvious that the elimination of duplicating governmental functions would be one of the most efficient ways of accomplishing this vital purpose. It is plainly the duty of Congress to begin a thorough untangling of this fast-thickening jungle of our Nation's governmental powers.

The Federal-State Committee of the Hoover Commission has already spent months of time and many hundreds of hours of thought and labor on this problem and has come forth with excellent recommendations. If the establishment of the Commission proposed by these bills is a necessary prerequisite to congressional implementation of the recommendations of the Hoover Commission, then, by all means, let the Commission be established and begin its work as quickly as possible.

There are three specific suggestions I would like to make in connection with the proposed bills:

First. The terms of reference of the Commission: I note that one of the proposed bills would establish a Commission to study only intergovernmental fiscal relations. I note that the other two bills set out more or less general terms of reference for the Commission. If the bill finally introduced into Congress by you gentlemen sets up one Commission to cover the entire field, I urge that the scope of its activities be not circumscribed. It is my feeling that the Commission should be given complete freedom to investigate and make recommendations concerning the entire field in which governmental authority affects the citizen. The actual and potential area of conflict of power and functions between National, State, and local governments runs the entire range of governmental activity. Let the proposed Commission have power to investigate and make recommendations concerning any problem over which the functions, power, and responsibility of National, State, and local governments presently or potentially conflict, or overlap.

This suggestion may perhaps be criticized on the grounds that the duties it gives the Commission are too general, and that more effective work might be done were the Commission's scope of operations somewhat limited. This may be true; and, after the Commission has begun its work, it may decide on its own initiative to limit its investigations to fields in which its recommendations are likely to have some practical effect. But, I believe it important that Congress let the Commission itself determine whether it should at any future time limit its own activities. This, in my opinion, would be far preferable to a limitation in advance by the bill setting up the Commission.

Second. Submission of the recommendations of the Commission: I note that the proposed bills give the Commission authority to submit its recommendations to Congress. Some, if not all, of the subjects on which the Commission is likely to make recommendations, may require State as well as national legislation. Therefore, may I suggest that the bill also authorize the Commission to pass on its recommendations to the 48 State governments as well as submit them to the national Congress?

Third. Avoiding duplication of effort: I note that the bills propose that there be a Director of Research for the Commission, and also makes provision for other staff. Anybody casually connected with Government knows that if the office of director of research is established the setting up of a staff to assist the director is thus impliedly authorized.

I earnestly hope that this does not mean that the proposed Commission will repeat the spade work and research work in this field already undertaken by the Hoover Commission. If the Commission utilizes these background studies already completed with painstaking care, this does not mean that it would necessarily have to agree with the conclusions of the Hoover Commission. But it would mean that the work which has already been once adequately completed, will not be repeated at the taxpayers' expense. To avoid so unfortunate a possibility, may I suggest that you insert into the bill either a directive or a recommendation that the investigation and research of the proposed commission not duplicate similar work already done by the Hoover Commission.

Geological and Geophysical Mining Claims Act of 1949

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. BARING. Mr. Speaker, Senator JAMES E. MURRAY, of Montana, and I have introduced identical bills, S. 1793 and H. R. 4750, termed the "Geological and Geophysical Mining Claims Act of 1949." This bill was drafted after an 18-month intensive study of the needs of the mining industry by the Subcommittee on Mining and Minerals Industry of the Senate Small Business Committee, which issued an exhaustive report on the bill.

The Hoover Commission task force, after studying the natural resource situation in the United States for some 16 months subsequent to the Senate Small Business Committee study, proposed several changes in the general mining laws. It is a well-known fact that as the surface has been well combed over, noncropping or "blind" ore bodies constitute major possibilities for future ore reserves and the discovery of such deposits depends upon modern scientific methods of prospecting beneath the surface. Scientific prospecting requires expensive equipment and the highest grade of technical skill to interpret the results and no one is going to put in the money and time unless they have some rights to the surface of the lands being explored.

The Hoover Commission recommends that the mining laws be amended so that there be recognition of the validity of claims without the requirement of "discovery" of valuable minerals so that ground without surface exposure or other positive evidence of ore or valuable mineral deposits may be held for sufficient time to complete exploration or to secure evidence indicative of its prospective value. At the same time, we do not want large areas of the public domain encumbered for a long period of time or permanently so as to exclude bona fide prospectors by holding the area for sheer speculation.

Mr. Speaker, I believe the Murray-Baring bill, H. R. 4750, solves the issues raised in the Hoover report. It would give up to a year to do geological or geophysical work. If positive results are found, a further year may be had in which to do physical work such as diamond drilling or shaft sinking. If, thereby, an actual discovery of mineral is made, the new type of location may be resolved into the usual unpatented type of mining claim and patented in due course. If any of these steps is nonproductive, the located area returns automatically to the public domain.

I have not the time to go into all the details of the bill now, but I expect to discuss it more fully at a later date. It answers a number of other issues raised by Mr. Hoover, and, I believe, will be an important step in making it safe to invest liberally in modern scientific exploration projects.

I believe, Mr. Speaker, that this bill represents a major improvement in our mining laws, which date back to 1872 and which did not contemplate the situation in which we now find ourselves. I understand the bill has in principle at least the blessing of the Interior Department and the National Minerals Advisory Council. Speaking for myself, and I feel sure Senator MURRAY is of like mind, I am open to any suggestions which would improve this important piece of legislation.

Modifications in the President's Legislative Program

EXTENSION OF REMARKS
OF
HON. OWEN BREWSTER
OF MAINE
IN THE SENATE OF THE UNITED STATES
Thursday, May 26 (legislative day of Monday, May 23), 1949

Mr. BREWSTER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD editorials published in yesterday's New York Times and the New York Herald Tribune of today, dealing with the modified program of the President for this session of Congress.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of May 25, 1949]

THE PRESIDENT'S PROGRAM

On January 4, in his state of the Union message, President Truman recommended to Congress the enactment of 24 major measures in the field of domestic legislation. Nearly 5 months have passed since then. It is a striking fact that only one of these 24 measures—the extension of rent control—has reached the President's desk for his approval, and in this case success was achieved only at the price of a compromise permitting the lifting of Federal controls on the

UNIVERSITY OF MICHIGAN LIBRARIES

initiative of State and local governing agencies.

To a minor degree the slow progress of the President's program has been due to accidental factors: the illness of Senator George, for example, has postponed consideration of Mr. Truman's recommendation with respect to the reciprocal trade agreements bill, on which the House has already acted and on which favorable action by the Senate seems assured. A more important factor has been the reemergence of a successful coalition of southern Democrats and northern republicans to block action on such issues as the civil-rights program. But these factors alone do not explain the administration's near-zero record for the first 20 weeks of the present session. An additional factor, and a powerful one, has been the inflexibility of the President's own position in the face of a changing situation.

Thus, Mr. Truman has continued to stand steadfastly by his proposal for a $4,000,000,000 tax bill, though Congress has plainly made up its mind that in view of the trend of business since January 4 this is no time to impose new taxes. He has continued to insist on unprecedentedly broad powers to prevent inflation, at a time when the problem of inflation has yielded place, at least temporarily, to the problem of deflation. He has used his influence to prevent acceptance by the House of Representatives of an acceptable substitute for the Taft-Hartley Act, and stood inflexibly for reenactment in its place of the Wagner Act, with a few unimportant improvements. He has forced postponement until the next session of Congress of any legislation in the field of public health, because he has not been willing to make a modest start in this direction but has asked Congress instead for the immediate enactment of a costly prepaid compulsory health insurance plan, at a time when both Government revenues and private payrolls are declining.

In these matters, and others, Mr. Truman has insisted on his own interpretation and his own sense of timing of the pledges given in the Democratic platform. This is one reason why a legislative deadlock now prevails in Washington.

[From the New York Herald Tribune of May 26, 1949]

CONFESSION OF FAILURE

The ineptness and lightheadedness of the Democratic leadership has at no point been more blatantly revealed than in Senator LUCAS'S announcement of the wholesale postponement and virtual abandonment of the Fair Deal. With adjournment of Congress set for July 31, the administration is content to press for repeal of Taft-Hartley, enactment of reciprocal trade laws, and ratification of the Atlantic Pact. Presumably not even the supporting arms program is included. The completion of bills dealing with housing and Federal aid to education—already far advanced in the legislative mill—is left in doubt.

Only a short while ago the social reforms of the Fair Deal were being proclaimed as the substance of an irrevocable mandate, to be enacted posthaste and without change. But all that is now quietly ignored. The grandiose health program, the new minimum wage law, the widened social-security system, the complex farm program, the new taxes—they are all put to one side, as if they had always been but an idle, wishful dream.

The charges against President Truman and his administration would thus seem to have been substantiated at one stroke. It has been claimed that the President was taking a dogmatic stand on measures which had been imperfectly worked out and combined; that he was claiming the support of the people for reforms which in fact they only partially understood; that he was heaping commitment on commitment without counting the ultimate cost. And now, as if he suddenly saw the void beneath him, he retreats hastily. Not being able to get everything, he wants nothing at all.

The reaction of the Republican Party must be one of understandable relief. Not only have the Democrats admitted the bankruptcy of their leadership, but they have withdrawn from a fight which (with the exception of civil rights) would have brought in proportion to its success pyramiding costs and dangerously mounting controls. But this confession of failure by the Democratic majority has the effect of placing new responsibilities on Republican leaders. They have heretofore been faced with the necessity of checking the extremes of the Fair Deal program; now they must increasingly take the initiative. Senator TAFT and others have made it clear on behalf of their party that action cannot indefinitely be postponed in such fields as housing and medical facilities. They have provided convincing suggestions that such action can be realistic, moderate and comfortable to establish principles of local responsibility and decentralized control. In the vacuum left by the Democrats they may have a chance to put these suggestions to the proof.

Equalizing Educational Opportunity

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. BYRNES of Wisconsin. Mr. Speaker, last week, I testified before the Barden Subcommittee on Federal Aid to Education. I appeared in opposition to S. 246, the Federal aid-to-education bill which recently passed the other body, and in favor of Federal aid to education as provided for in H. R. 4711, a bill I recently introduced. I would like, at this time, to explain to the Members the reasons why I have taken such a position.

GENERAL

The prime purpose of Federal aid to education should be to equalize educational opportunity. In view of our traditions against Federal control of education, we cannot advocate such aid on any other basis. There can be no doubt that the great disparity in educational opportunity because of varying economic conditions and varying numbers of children to be educated among the States justifies an attempt at Federal equalization—the only immediate remedy.

The heart of any Federal aid-to-education bill which seeks more nearly to equalize educational opportunity is in the formula devised to distribute Federal aid. Unless this formula is objective, impartial and consistent, the legislation's purpose—equalization of educational opportunity—may well be thwarted.

In any formula attempting to equalize educational opportunity dollarwise, the two basic questions involved are (1) the size of the job to be done in each State and (2) the capacity of each State to do the job. The necessity of establishing eligibility for Federal aid introduces another factor, (3) the State's willingness to do its share.

It is important that any formula speak in like terms throughout. If our answer is to come out in apples, we must subtract apples from apples. We cannot use peaches as a subtractor and expect the result to make any sense. Similarly, we cannot use one kind of factors to determine the size of the educational job to be done, another to determine the ability of the States and a third to determine eligibility and expect to arrive at an intelligible answer. In addition, our factors must have some relation to reality. They must be related to criteria which provide a basis for measurement. Abstract figures designed more to determine the final result rather than to establish a sound basis for Federal assistance have no place here.

Briefly, my suggestions to establish a formula along these lines are:

First. The size of the job should be determined by (a) the number of children being educated and (b) the amount we believe should be spent on each child. Any other basis, as I shall attempt to show later, leads us into traps and pitfalls which seriously undermine the purpose of the legislation.

Second. The capacity of the State to do the job should be measured by (1) the most accurate available information we have on the relative incomes of the States and (2) the percentage of their income which States can reasonably be expected to expend for education.

Third. Eligibility for Federal funds should be based solely upon proof that a State is unable to meet the minimum requirements established by any formula. If the basic factors in that formula are properly determined, then a State is shown either to be in need of Federal funds to meet minimum standards or not to be in need. If it is in need of Federal assistance, it should be aided. If it is not in need, it should not be aided.

It is upon these principles that H. R. 4711, a bill I have introduced, is based. For the rest of this presentation, I shall discuss the operation of the formula which I propose in detail, comparing it with the suggested formula in S. 246, the Federal aid to education bill which passed the Senate. I believe there are serious defects in this latter formula.

THE APPORTIONMENT FORMULA

The principle in the apportionment of Federal aid for education may be simply stated as "size of the job minus capacity to do the job equals Federal assistance." An attempt is made, by formula, to determine the dollar need for education and the dollar ability to meet that need. The latter is subtracted from the former and the result is the Federal allotment. Coupled with minimum requirements for effort by each State, this formula is the principle behind the apportionment of funds under most Federal aid to education bills. It can readily be seen the importance which the factors used in the formula assume. If any one factor is unrealistic, unsound, or unreasonable,

the entire determination of Federal assistance loses its validity.

SIZE OF THE JOB—UNDER S. 246

The size of the job, under S. 246, is determined by multiplying two factors: First, the number of children 5 to 17 years of age in each State and second, a dollar amount, currently $50.

Both of these factors are defective and make the determination of the size of the job in each State totally unrealistic.

First. As a first factor, the number of children 5 to 17 years of age.

It is important to remember that an increase in either factor of the size of the job portion of the formula operates to increase the Federal aid payable. It should also be remembered, however, that the problem is not solely to increase the amount of Federal allotments by choosing the largest factor available; basically, it is to provide a method which will equalize educational opportunity.

S. 246, by basing its determination of need upon the total number of children of school age, would not encourage, through financial incentive, any State to bring more children into its school system, particularly those not in attendance at the present time. On the contrary, since the State would always have its need—the size of the job to be done—determined by the number of school-age children within the State irrespective of the number in school, it would have little incentive to extend educational opportunities to those not receiving them. Furthermore, the use of this factor might very well encourage some States to curtail educational opportunities to certain groups already being educated since the State would be assured of a constant factor, in the years ahead most likely an increasing factor, in determining its need. By so doing, it would increase the amount of Federal assistance available per child in attendance.

Furthermore, it must be remembered that most States require school attendance only for age groups between 6 or 7 to 15 inclusive—Federal Spending Facts, Bulletin No. 47, April 29, 1949. Of 4,000,000 children between the ages of 5 to 17 not attending school in 1947, 3,467,000 were either 5, 16, or 17 years of age. It would seem strange justice to base Federal aid upon the children a State was not educating by reason of lax school-attendance laws. Such action would only serve to penalize those States which have stricter attendance requirements.

In addition, there is a strong moral argument against using the number of children attending private and parochial schools as an important part of this particular factor thus increasing the potential Federal assistance, then denying, as Supreme Court decisions apparently require, any assistance to the schools which are educating those pupils at present. The same moral argument holds against using pupils not attending any school as a basis for determining the amount of aid to those in attendance.

Most important of all, use of this factor prevents any accurate determination of the size of the job to be done. We cannot determine the number of unemployed men by taking a count of all men whether they are working or idle; neither can we determine the number of children to be educated by the State by counting all of its children, regardless of whether they will ever attend State schools or not.

The basic weakness of this statistic can be illustrated by a table showing the tremendous difference in the percentages of children of school age actually in daily attendance in public schools:

Percentage of children 5–17, in average daily attendance 1947–48 (5 highest and 5 lowest ranking States)

	Percent
Nevada	92.4
California	90.2
Wyoming	82.9
Utah	82.3
Idaho	82.1
Kentucky	64.1
Massachusetts	63.3
Rhode Island	63.0
Louisiana	62.4
New Hampshire	61.6

From The 48 State School Systems, Council of State Governments, 1949

The basic unfairness of the use of this statistic can further be illustrated by comparing 2 States, each with about the same number of children 5–17 years of age and with about the same level of incomes but with different size educational jobs because of a great difference in attendance:

Comparison of treatment under S. 246 of Utah and Arizona

[Data from Senate report on S. 246]

	Utah	Arizona
Children 5–17, 1947	161,000	155,000
Average daily attendance, 1946–47	130,000	105,000
Size of job ($50 x children)	$8,050,000	$7,750,000
Income payments (1945–47)	$688,000,000	$625,000,000
Aid under S. 246	$1,170,000	$1,500,000
Aid per child in attendance	$9	$14

Under S. 246, Utah, educating 25,000, or 23 percent more pupils than Arizona, is computed to have a dollar job only $300,000, or 4 percent greater than Arizona's. Arizona has only a 10 percent less capacity to support education, yet she would receive under S. 246, 40 percent more aid per child in attendance.

Second. As a second factor, a fixed dollar amount, currently $50.

It is difficult to find any justification for the present dollar amount, $50, being used as a second factor. The Senate report contains no explanation of its derivation. On the floor of the Senate, the chairman of the committee, Senator THOMAS, merely stated, "the bill authorizes * * * Federal aid to assist the States in establishing a foundation program of public elementary and public secondary school education equal in quality to that which can be provided by a current expenditure of $50 each year per child of school age in the State." Equal in quality to what?

I submit that $50 per year per child of school age means absolutely nothing. Is it too much? We do not know. Is it too little? We do not know. We do not know because $50, alone, means nothing to us. It is not related to anything real or concrete in our experience. Does $50 multiplied by all children, whether attending school or not, equal a foundation program for those the State must educate? The question defies answer.

It might be pertinent to point out that this dollar factor has historically been juggled, as Federal aid bills have been introduced from year to year. At various times, it has been $40, $45, and $50. The history of these bills shows that the advocates of this formula have tended to increase this amount as income payments within the States have risen thus tending to reduce the potential aid available.

Use of this meaningless fixed amount as a second factor raises the question as to whether the Congress wishes to amend the law each year as economic conditions vary the amount of aid payable. Certainly, as events have proved, this would have been the case had the bill become law 3 years ago.

Most important of all, however, if we are to write a formula establishing the size of the job to be done, one of the most important factors in that formula should be based upon something more than guesswork, visual attractiveness, or the case by which it can be multiplied.

Third. Summarizing, there are serious objections to the formula used to determine the size of the job under S. 246. It does not exactly determine current need; it weakens the States' incentive to educate the uneducated; it penalizes States with high educational standards; it may encourage States to lower the number of children being educated; it lays the act open for yearly amendment.

SIZE OF THE JOB—UNDER H. R. 4711

My bill attempts to remove the objections to S. 246's formula for computing the size of the educational job by (1) determining more exactly the educational burden in each State; (2) providing incentives for States to bring to more children the benefits of education; and, (3) tying the determination of need more closely to minimum educational standards. The two basic factors used are (1) the number of children in average daily attendance in each State, and (2) a fixed percentage of current United States average expenditure per child in average daily attendance.

First. As a first factor, the number of children in average attendance in public elementary and secondary schools.

This is an exact determination of the present burden of the State school systems. It does not represent what the State's burden might be if all of its school-age children were attending school and if all of its private and parochial schools should close. It represents the number of children for which the State school system is actually responsible.

If children in attendance is used as a factor, it is immediately apparent to each State that the amount of Federal assistance will increase as more children, not now in attendance, are brought into

UNIVERSITY OF MICHIGAN LIBRARIES

its school system. It reduces the possibility of curtailment of opportunity for those being educated at present, because if a State denies opportunity to any group, it will lower the number of children in attendance and simultaneously, the amount of Federal assistance. Furthermore, the use of this factor removes the moral argument against using private and parochial school students as a basis for computing Federal aid which they will not receive.

Objections have been raised to the use of this statistic as a factor claiming it is not accurate and is subject to variation in different States. It should be pointed out that the Office of Education has compiled this statistic for years and that it has heretofore been considered reliable. In addition, it is considered reliable enough to be used in two different places in S. 246 (sec. 7 (A) (2) and sec. 7 (B)). Furthermore, it must certainly be considered more accurate from a statistical standpoint than the Census Bureau's estimates, which are only estimates of the total number of children of school age in each State—the basis for the formula used in S. 246.

Second. As a second factor, a fixed percentage of the current United States average expenditure per pupil in average daily attendance.

If we are to multiply the number of children by a dollar amount to determine the dollar size of the job to be done, it would seem wise to fix upon a dollar amount which has some relation to reality and to our educational experience.

Since the major purpose of this legislation is to equalize educational opportunity through financial aid, it appears only sound to search for this second factor in the place where we might logically expect inequality to show itself. The most realistic statistic in this connection is the compilation of amounts currently being expended from State and local sources per child in average daily attendance.

If we wished to obtain absolute equality, we would seek to cause an identical amount to be expended in each State per child in average daily attendance. We would try, in other words, to determine the average expenditure per pupil in the United States from local and State sources, and attempt to expend an identical amount on each child being educated in the United States.

It is not our purpose, however, to drag the highest-ranking States down to the average level, nor do we believe it possible to bring the lowest-ranking States up to the average level solely through Federal aid. We are primarily interested in seeing that the lowest expenditure per pupil in any particular State is not so low as to be below minimum educational standards. The major contention of this legislation is that there is too great a spread between the lowest State—approximately $54 per pupil—and the national average—approximately $148 per pupil.

It would seem obvious, then, that the dollar determination of the size of the job to be done is intimately connected to current expenditures from State and local sources per child in average daily attendance in the United States. Our second factor, in this portion of the formula, should have some relation to this figure.

H. R. 4711 proposes that the second factor be an amount, rounded to the next highest whole dollar, equivalent to 60 percent of the current expenditure from State and local sources per child in average daily attendance in public elementary and secondary schools in the United States. Currently, this figure is 60 percent of $148.60 (the national average), or $89.16, or rounded to the next dollar, $90.

There is nothing sacred about the percentage figure used, but it seems to be sound from the standpoint of accomplishing our major objective—removing the great discrepancy that exists between our lowest ranking States and the national average. In conjunction with other parts of the proposed formula, it insures that no State shall fall more than 40 percent below the national average in expenditures per pupil, providing it makes the proper effort on its own part. Eight of our States were below that level in 1946.

Furthermore, the use of a fixed percentage of a variable average should remove the necessity for yearly amendments to the proposed legislation. Current expenditures per pupil from State and local sources represent a figure that is realistic in relation to changing economic conditions. In a sense, it may be described as representing the educational equivalent of national income statistics or the cost-of-living index. If it continues to rise, it may be taken as evidence that educational needs, in the dollar sense, are greater. If it should level off, or fall, it may be taken as evidence that educational needs, from the dollar standpoint are not as great. In either case, the proposed second factor will rise or fall yearly with the current national average expenditure per pupil from State and local sources.

Third. Summarizing, the proposed revision of this portion of the formula more exactly determines actual current needs in the individual States; provides incentives for the States to increase their enrollments; ties the dollar factor to a realistic base, and removes the necessity for year-to-year reappraisals of the apportionment formula. It more accurately estimates the size of the job to be done.

CAPACITY OF THE STATES TO DO THE JOB UNDER S. 246

The capacity of each State to do its educational job is measured in S. 246 by multiplying the average of the State's annual income payments over a 5-year period by 1 percent. By no standard does the result provide any realistic measurement of the capacity of the States to handle their educational task.

First. As the first factor, the 5-year average of annual income payments.

It has been contended that it is impossible to determine the relative wealth of the States through use of this statistic. Admittedly, it is imperfect, but it is certainly the best available and, as a general indicator, of comparative wealth, it is fairly accurate. No quarrel is found with its use as the first factor in this portion of the formula.

Second. As the second factor, 1 percent.

This factor has no apparent tie to reality.

If we are to determine a State's ability to support education by measuring its expenditure as a percentage of its annual income, then that percentage should reflect the percentage which our experience shows States are able to devote to educational purposes. The measurement of how much of its income a State can afford to devote to education should be related to how much of their incomes our States are now able to spend for this purpose.

It would be difficult to justify the use of the 1-percent figure in the light of current statistics, which show that the national average percentage is 1.88 percent, that no State is spending less than 1.22 percent, and that the top State is spending 3.36 percent of its income payments for education.

S. 246 tacitly recognizes the unreality of the 1-percent figure as a basis for determining the capacity of the States to perform. Other sections of the same bill penalize States for spending less than 2.25 percent of their income payments for educational purposes and make a State ineligible for apportionment of funds under its formula after 4 years if it spends less than 2 percent.

It should be emphasized again that unless the formula is realistic, which means that all of its factors are realistic, its usefulness is seriously limited and apportionment might better be determined by some other means.

Third. Summarizing, use of an unrealistic percentage figure in this portion of the formula threatens to nullify the entire purpose of the formula—a mathematical determination of the amount of Federal aid necessary to equalize educational opportunity.

CAPACITY OF STATES TO DO THE JOB UNDER H. R. 4711

This bill attempts to set up a realistic evaluation of the ability of the States to support education by making use of a percentage figure in the second factor of the formula which has intimate relation to the actual experience of the States.

First. As a first factor, the 5-year average of annual income payments.

No change is suggested in this factor, except that the 5-year average is based on statistics for the five most recent years available, rather than the third, fourth, fifth, sixth, and seventh years preceding.

Second. As a second factor, 2 percent.

Two percent is within 0.01 percent of the median of percentages of State income payments being used for educational purposes. Relating expenditures in 1946–47 to income payments during the years 1943–47, and including the Dis-

trict of Columbia, 24 States have percentages higher than 2 percent, 24 States lower. The mean was 2.01 percent.

Of the 24 States lower than 2 percent, 18 may be classified as among the wealthier States, indicating that a smaller percentage of their higher incomes meets their educational needs. Of the 24 States higher than 2 percent, 17 are expending over 2.1 percent, 12 are expending over 2.4 percent, 5 are expending over 2.6 percent, and 1 is expending over 3 percent.

The foregoing facts would indicate that, first, 2 percent is the approximate median percentage of income payments being expended from State and local sources for educational purposes; and second, where the need exists, States have no apparent difficulty reaching and exceeding this percentage point.

Two percent is therefore suggested as the second factor in this portion of the formula. It is believed that this figure establishes a realistic appraisal of the States' ability to support education.

Third. Summarizing, having attempted to establish a realistic appraisal of the size of the job to be done, the proposed formula attempts, in the second portion, to be realistic in its measurement of the capacity of each State to do the job.

THE STATE'S WILLINGNESS TO DO ITS SHARE

The most serious weaknesses in Senate bill 246 are found in its determination of eligibility, its penalty provisions, and in its minimum-payments theory. These provisions are:

First. Any State, regardless of the working of the formula, receives at least $5 per child.

Second. If a State otherwise eligible for apportionment under the formula fails to expend 2.25 percent of its income payments during the first 2 years of the act, 2.5 percent thereafter, its Federal allotment is proportionately reduced, but in no case below $5 per child 5 to 17 years of age.

Third. After 4 years' operation of the act any State which spends less than 2 percent of its income payments is ineligible for apportionment funds, except for the minimum payment of $5 per child.

These provisions will be taken up, one by one, in conjunction with suggested changes included in H. R. 4711.

1. THE MINIMUM PAYMENT THEORY

(a) Under S. 246: No State, regardless of wealth or capacity to do the job, would receive less than $5 per child under the terms of S. 246.

Having attempted to write a formula to more nearly equalize educational opportunity, S. 246 here proceeds to discard it summarily, for what sound reason it is difficult to fathom. The absurdities involved in this provision are best illustrated by an actual example:

Using the factors in S. 246's formula and the data in the Senate report on S. 246. Take California—1 percent of its income payments amounts to $141,420,000. This is equivalent to approximately $80 per child 5 to 17 years of age.

On the other hand, 1 percent of income payments in North Dakota amounts to $6,340,000. This is equivalent to approximately $44 per child 5 to 17 years of age, a little more than half of California's figure.

Yet, under the minimum payments provision in S. 246, California would receive $5 per child 5 to 17 as Federal aid, and North Dakota, under the formula, would receive $1 more, or $6 per child 5 to 17. This is strange equalization.

The inequity is further illustrated, in this case, by the fact that California, through an effort equal to 1.68 percent of its income is spending approximately $140 per child 5 to 17, while North Dakota, through an effort equal to 2.45 percent of its income is spending $33 less, or $107 per child 5 to 17. If North Dakota were to expend 1.68 percent of its income as California is doing for education, it would have available for each child 5 to 17 approximately half of California's amount, or $74.

The same inequities could be shown by comparing California or New York, or any of the highest income States, and their treatment under the minimum-payments provision, with Arizona, South Dakota, Utah, and Vermont who come under the working of the formula.

The point is this. Either we should adopt a formula which will attempt to more nearly equalize educational opportunities by making Federal payments to States we can demonstrate as incapable of attaining fair standards, and stick to it, or we should abandon our efforts to write an equalization formula and search for some other principle.

The sole argument thus far advanced for minimum payments to each State regardless of their capacity to support education is that "they can use it." We are not attempting in this legislation, however, to meet optimum standards; we are attempting to raise our minimums up to more acceptable standards, and we are using Federal assistance as the most practicable method of doing so. In the final analysis, the richer States, through Federal assistance, will contribute the bulk of the money necessary to accomplish the equalization. To require the richer States, as we would be doing, to contribute, through taxation, additional funds to the Federal Government to support the minimum payments to which they would be entitled under S. 246 is to deny logic and to compound confusion. There is no wealth in the Federal Government that does not reside within the several States.

Finally, since over one-half of the cost of S. 246 results from the minimum payment of $5 to States regardless of need or ability, the question immediately arises, "If we have additional money beyond basic equalization to spend for Federal aid to education, where shall we place that money—in States that are far above the national average without Federal aid, or in States that will remain far below the national average in spite of the Federal aid this bill provides?"

(b) Under H. R. 4711: H. R. 4711 removes the minimum payment of $5 per child, and bases its payments solely upon the operation of the formula, coupled with minimum requirements for effort—described later.

To use the example of North Dakota and California, cited above:

Using the factors in H. R. 4711 and data from the Senate report: 2 percent of California's income payments yields $282,840,000, or the equivalent of $212 per child in average daily attendance. Two percent of North Dakota's income payments yields $12,680,000, equivalent to $124 per child in average daily attendance. Neither would receive any aid under the Byrnes bill, because the operation of the formula reveals that 2 percent of their income payments will yield more than $90 (60 percent of the national average) per child in daily attendance. In other words, neither State needs aid to meet our established minimum standard.

It might be argued that North Dakota, as the formula reveals, has only half of California's capacity to support education, and hence, should be aided. This is true only if we believe it possible to bring all States, through Federal payments, up to the level of our most able States.

My bill, by removing the minimum-payment provision, says to each State, "If it can be proved that you need Federal assistance, we will give it to you," instead of "Everybody can use more money, here's some for you."

2. THE INCENTIVE PROVISION

(a) Under S. 246: Purportedly to encourage States to make a greater educational effort, and to penalize those who do not, S. 246 proportionately reduces the Federal allotment of any State otherwise eligible under the formula if it fails to expend 2.25 percent of its income payment during the first two years of the act, and 2.5 percent thereafter.

If this provision's purpose is to provide incentive and to penalize lack of effort, it could not have been more ill-devised for the purpose. A concrete example will illustrate this point.

Using data from the Senate report, let us take the case of Alabama since it is one of the States which would have its allotment cut under this provision.

Alabama is spending $38,125,000 currently for education. This is 1.8 percent of her income payments. She would thus be entitled to 83.1 percent of her allotment of $17,390,000. Her Federal aid, under S. 246, would then be $14,451,000.

Alabama's penalty, thus, is $2,939,000, for expending only 1.87 percent of her income in contrast to the standard of 2.25 percent set under S. 246. But, Alabama has lost nothing she had before; Alabama instead has gained $14,451,000, even though she is failing to make the minimum individual effort established in the bill, a fact which puts a different light on the severity of her penalty. The crucial test of the effectiveness of the penalty, however, is the determination of how much incentive it gives her to meet the minimum standard. This can easily be computed, and no doubt will be by Alabama's shrewd State legislators.

To win $2,939,000 more, Alabama must raise her level of educational expenditures from 1.87 percent to 2.25 percent,

UNIVERSITY OF MICHIGAN LIBRARIES

or from $38,125,000 to $46,922,000. For $2,939,000 additional Federal aid, Alabama must spend $8,797,000 of her own money. The game is scarcely worth the candle.

The penalties in this provision of S. 246 are scarcely penalties and the incentives are almost nonexistent.

(b) Under H. R. 4711: H. R. 4711 proposes that no aid shall be forthcoming to any State otherwise eligible if it fails to expend 2 percent of its income payments during the first 2 years of the act, the requirement increasing by 0.1 percent each year until 2.5 percent is reached, at which time it remains constant.

This provision provides severe penalties and concrete incentives.

Using Alabama as an example again (under the Byrnes formula and with data from the Senate report):

Alabama, currently expending $38,125,000 or 1.87 percent of her income for education, would be ineligible for any aid, under the Byrnes bill, unless she increased expenditures to at least 2 percent of her income payments, in which case she would be eligible for $8,130,000 under the Byrnes formula.

Alabama's legislators are thus presented with two choices. They can continue their present rate of expenditures and receive nothing. This would be a severe penalty. Or, they can increase Alabama's expenditures by $1,695,000 and receive $8,130,000 in Federal aid. I submit that this would be a real incentive.

Furthermore, the bill I have introduced contemplates a fairly low minimum requirement at the beginning of the act, rising gradually over a period of time, and reaching a fixed level in 5 years. It provides the States with time to meet the minimum standards for effort and warns them that Federal aid will be dependent upon continuous improvement in effort at the State and local level.

3. THE ELIGIBILITY CLAUSE

Under S. 246, after 4 years' operation of the act, any State which spends less than 2 percent of its income payments for education is ineligible for apportionment funds, except for a minimum payment of $5 per child.

No serious quarrel is found with this provision except that it allows too much time leeway in the light of present levels of effort and except for the minimum payment which only serves to reduce the incentive to meet attainable standards.

No similar provision is placed in my bill, eligibility under its provisions being determined solely by the operation of the formula and the penalty and incentive clause discussed above.

4. SUMMARY

S. 246, through use of minimum payments, threatens to pervert the purpose of the legislation. H. R. 4711 eliminates minimum payments.

S. 246, in the name of incentives and penalties to encourage additional State effort, sets up a system which minimizes penalties and seriously reduces incentive. H. R. 4711 provides severe penalties for failing to make real effort and concrete incentives to reach established standards.

EQUALIZATION WITHIN THE STATES

Under S. 246: S. 246, seeking to equalize the distribution of Federal funds within the States, requires each State receiving funds, after 1953, to make available to each local public-school district, from all sources, at least $55 per child in average daily attendance.

In passing, it should be noted that S. 246, in this instance, uses the only practical method for establishing educational dollar standards—the amount spent per child in average daily attendance. Since S. 246 apportions Federal aid upon the basis of children 5 to 17 within the State, to be consistent it should probably require distribution within the State on the same basis. When the problem is reduced to the district level, however, this method immediately reveals its absurdity. In one district, 80 percent of the children of school age might either be attending private, parochial, or no school at all. The remaining 20 percent would receive aid, in this case, way out of proportion to other children in the State.

No particular quarrel is found with this provision, except that it presents a case of common sense arriving too late.

Under H. R. 4711: H. R. 4711's formula, it is to be remembered, seeks to make sure that each State has available per child in attendance 60 percent of the current national expenditure per child in attendance. If this is sound, it would seem equally sound to require States to equalize their expenditures, in order to be eligible, to insure that each school district has available at least 60 percent of the amount the apportionment formula makes available from all sources. H. R. 4711 so provides, and each State is required to make available, after 3 years, at least 60 percent of the minimum standard established in the formula. Currently, this is 60 percent of $90, or $54.

It should be pointed out that those States not receiving aid will not be subject to this requirement. S. 245, because it gives aid to all States, subjects every State to mandatory equalization. It can well be argued as to whether this is good or bad. Certainly, it is one foot inside the door of Federal control.

COSTS

No one would deny that the element of cost in any legislation which the Congress might enact is of the utmost importance, particularly during this fiscal year. In any legislation, we normally consider the relation between the benefits to be derived and the cost involved. The comparison between S. 246 and H. R. 4711 proves interesting.

S. 246, it is estimated, during its first year, will cost approximately $268,000,000, taking into consideration the penalties which would be applied to 10 States. Its allotments, before penalties, are estimated to total $284,000,000.

H. R. 4711, it is estimated, during its first year, will cost $50,000,000, taking into consideration the penalties which would be applied against two States. Its allotments, before penalties, are estimated to total $58,000,000. The cost of H. R. 4711 is thus about 20 percent of the cost of S. 246.

In relating costs to benefits, the Congress will undoubtedly wish to determine what additional benefits they will achieve by authorizing some $200,000,000 additional annual expenditures under S. 246, and whether those benefits have any relation to the major objective of the legislation—the equalization of educational opportunity. Those benefits might be described as follows:

First. Every State, rich and poor, will receive $5 per child 5 to 17 years old. This will, in no way, equalize educational opportunity.

Second. Aid will be based upon the number of children 5 to 17 rather than the number of children attending school. This defeats any attempt to determine the needs of any particular State with any degree of accuracy.

Those two questionable benefits are the principal causes of the tremendous difference in cost between S. 246 and the Byrnes bill. As for the other benefits in S. 246, it is submitted that they are present in H. R. 4711, with the difference that they have been placed upon a sounder basis.

As for projected costs, each bill contains within it the seeds for future increased Federal assistance. In S. 246, the factors which might lead to increased costs in the future are, (1) an increase in the number of children 5 to 17 years old, (2) any possible future increase in the $50 payment per child through congressional action, and (3) any possible decrease in income payments within States. In H. R. 4711, these factors are, (1) an increase in the number of children being educated by the State, (2) an increase in the national average expenditure per child in attendance, and (3) a decreas in income payments within States. The increase under (1) is liable to be greater in H. R. 4711 than in S. 246, as is the case in (2). In each case, it will be noted however, the increase will stem from causes which will contribute to the equalization of educational opportunity.

In any case, it is deemed likely that the future cost of H. R. 4711 will remain roughly 20 to 25 percent of S. 246.

So that we may better gage the future impact of this legislation upon our fiscal affairs, I asked the committee to furnish estimates of the cost of both S. 246 and H. R. 4711 during periods of low business activity when income payments are considerably less than their present levels. Since these bills increase considerably in cost as the level of income payments falls, it is important that we know their estimated cost per year if income payments should be 10 percent, 20 percent, or 30 percent lower than they were during the period 1943–47, the period upon which all present costs are computed. In any case, it is deemed likely that the future cost of H. R. 4711 will remain roughly 20 to 25 percent of S. 246.

In conclusion, Mr. Speaker, if it is the object of this Congress to write legislation more nearly to equalize educational opportunity, I respectfully urge that H. R. 4711 be made the basis for any Federal-aid-to-education measure which we might enact into law.

As part of my remarks, I include two tables explanatory of the workings of H. R. 4711:

TABLE 1.—*Operation of formula, H. R. 4711, for fiscal 1949–50*

Concurrent Resolution Relating to China

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein House Concurrent Resolution 6 to express the sense of Congress that the national interest demands that immediate and effective aid should be given the Republic of China.

The resolution is as follows:

Resolved by the House of Representatives (the Senate concurring), That it is the sense of Congress that the continued existence of the Republic of China is threatened, and that the national interest demands that prompt and forceful measures be taken by the Government of the United States to provide assistance to the Republic of China. Therefore, the President is respectfully requested to formulate a program to furnish assistance to the Republic of China in meeting its present crisis. In order that the assistance given the Republic of China shall be both immediate and effective, it is requested that the program so formulated include (1) provisions for the initial expenditure of $1,000,000,000, (2) provisions for the immediate dispatch of increased military missions to China to advise the Government of the Republic of China as to the conduct of its military operations, (3) provisions for the immediate mustering of sufficient transportation facilities,

UNIVERSITY OF MICHIGAN LIBRARIES

both surface and air, to insure that assistance to the Republic of China shall not be delayed for lack of such facilities, and (4) provisions for the immediate expenditure, without regard to the restrictions imposed under existing law, of such unexpended funds as have been heretofore appropriated for the aid of China. The President is further respectfully requested to submit to Congress as soon as possible the program so formulated, together with proposals for the legislation necessary to effectuate such program.

Comments of the National Customs Service Association on the McKinsey & Co. Report Covering the Bureau of Customs, Treasury Department

EXTENSION OF REMARKS
OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. TAURIELLO. Mr. Speaker, some time ago the firm of McKinsey & Co., management consultants, of New York City, made a survey of the operations of the Bureau of Customs, upon authorization of the Treasury Department, and at the direction of the Congress.

Many of the recommendations contained in the firm's report, submitted to the Department, and subsequently to the Congress, are far reaching in character, and, if adopted, would drastically alter the operational methods of the customs service and the traditional concept of its obligations and duty, both to the importers and the public at large.

Therefore, the pros and cons of these recommendations should be considered with complete objectivity, both by the Congress and the administrative heads of the Customs Bureau and the Treasury Department.

The National Customs Service Association, composed of officers and employees of the United States customs service, has not been officially invited to comment on the McKinsey report. The rank and file, the thousands of men and women who have made careers in customs are, in a very real sense, the customs service, and these people, who collectively are the reservoir of experience, knowledge, and ability that make the customs service tick should, in all fairness, have an opportunity to report on the recommendations which so vitally affect them.

The employees' group, entirely at its own expense, and on its own initiative, has prepared a commentary on the McKinsey report which is herewith transmitted to the Congress:

FOREWORD

In making this commentary on the McKinsey & Co. report and recommendations, we have not had the funds or the facilities made available to McKinsey & Co., nor have we commanded the resources of manpower and time which the Bureau of Customs and the Treasury Department have expended in their study of the report. All of the work that has gone into these comments has been at our expense, by our own customs people, working on their own time. Despite these handicaps, we consider that we have done a first-rate job and that our conveniently cataloged, succinctly stated comments on each of the McKinsey & Co. recommendations are a valuable contribution to any study of the subject matter.

We have no great concern over those recommendations which require legislation for we are sure that Congress will give them adequate consideration before adopting them. However, there are many recommendations which require only administrative acceptance to become effective.

There is a tendency to treat the recommendations as something akin to revealed truth. In fact, we hear that the Department's attitude is that, unless the various study committees it has set up can demonstrate the unsoundness of any proposition to a degree that even a prejudiced jury would be convinced, the recommendation is to be adopted. When it is recalled that the McKinsey & Co. surveys was ordered by Congress as a result of severe congressional criticism of certain aspects of customs management, this defensive attitude, this predisposition to go along with the report, is wholly understandable.

Many customs people have characterized the McKinsey & Co. report as a waste of money. Having in mind the circumstances which gave birth to the survey, we don't think the money has been entirely wasted. Certain useful recommendations have been made, customs has been giving a clean bill of health by an outside group, and a great deal of consideration has been given to ways and means of improving the customs service.

It is significant that the McKinsey report does not find any fault with the customs service so far as the employees are concerned. Practically all recommendations made in the report will require a change in the law or regulation, although a few may be put into effect administratively.

Many of the recommendations lose sight of the fact that it is the duty of customs to collect, as well as protect, the revenue. Some of the Customs Bureau operations lose money if one looks at them from a cost accountant's point of view. However, the operation is not carried out for the money obtained, but as a deterrent to attempts to evade the law. A policeman is not paid according to the number of arrests he makes or the amount of fines which are assessed as a result thereof.

The report is superficial in some respects and many of the recommendations are extremely short-sighted. Further, there is a tendency to make whipping boys out of systems and procedures rather than individuals where it is thought that work is not being performed as efficiently as could be, but the fundamental fault we find with the report is its preoccupation with the dollar sign. Cost cutting is all to the good when it is not accomplished at the expense of the scope and effectiveness of necessary activities. This is of particular importance in enforcement work where a negative record is frequently a badge of success. McKinsey & Co. lose sight of this circumstance at times in their zeal to save a dollar. This preoccupation with cost is evident through the report and appears to impair their judgment when the necessity for certain activities and services are being reviewed.

Chapters I and II of the McKinsey report are not discussed in these comments, which have been limited to specific recommendations contained in the report.

CHAPTER III. ENTRY AND INSPECTION OF IMPORTED MERCHANDISE

In discussing this chapter the same procedure is used as will be found in our discussion of most of the subsequent chapter; i. e., the McKinsey & Co. recommendations are set forth and our comments, if any, follow immediately thereafter.

Extending the use of informal entries

This recommendation is divided in the text with three subdivisions and our comments follow the same pattern.

The difference between informal and formal entries has been exaggerated. The use of informal entries on a complicated transaction involves complicated work. The use of a formal entry on a simple matter does not make the transaction more complicated, it still remains a simple matter. The difference in complexity rests with the merchandise covered by the transaction, not in the form of transaction. Expanded use of informal entries will not result in any appreciable savings to the Government. In fact, it will be necessary to have a larger number of highly trained personnel (higher classifications and salaries); examinations will necessarily have to be done away from normal customs facilities causing delays in traveling to individual importations whereas, at present, merchandise is brought directly to the examination room (at low cost per importation) permitting numerous examinations per man-hour of the higher trained personnel.

Unconditionally free merchandise

Except in the case of a limited number of seaport or border ports the majority of free entries are not of the class that can readily be determined to be unconditionally free of duty, the reverse is true.

The distinction between a crude product and the same product in one of the initial stages of processing or manufacture, which is often the difference between a free material and a dutiable one, is frequently a very fine one requiring the use of highly specialized personnel. The distinction between crude drugs and those advanced in condition, has frequently required litigation for determination.

A proposed list of specific rate merchandise

This is equally impractical for the same reason. With specific rate merchandise, the identity of the merchandise is the most important consideration. Any casual reading of the specific rate provisions of the tariff will suggest this even to the inexperienced. Expecting each of a large number of customs inspectors (over 500 at New York) to be able to accurately identify by visual examination a lengthy list of commodities and materials in addition to his already numerous duties is blue printing slipshod work. It poses an impossible training program. The recommendation envisages (and it probably applies also to the unconditionally free merchandise) that if the inspector is in doubt he may require the making of a formal entry. This means that the importer who is thus required to make formal entry has already wasted a good deal of time. Further since he may not have the same officer in subsequent shipments he is uncertain from one shipment to the next whether informal entry can be used. The effectiveness of the proposed system varies with the confidence and assurance of the individual inspector. The possibilities by loss through honest error would be enormous to say nothing of the loss through deception by unprincipled importers.

Ad valorem merchandise not exceeding $500 in total value for any one item of an entry

This proposal has not been thought out else it would never have been made. Department store and chain store entries totaling thousands of dollars are frequently made up of many invoices for individual commodities each of which is under $500. Then, too, the value with which customs deals is wholesale value and a shipment valued at $500 for our purposes represents approximately $1,500 at the retail level.

The adoption of this plan would be tantamount to the abandonment of the cardinal customs principle of uniformity of treatment. Because it is uneconomic to assign

highly trained and specialized appraisers personnel to handle informal entries, the appraisement and classification of merchandise covered thereby is largely on a rule-of-thumb basis. The inspector is an employee of multitudinous duties, and he cannot be expected to appraise and classify merchandise with the preciseness and uniformity that the importing trade expects. The opportunities presented in this set-up are alarming. In the absence of the sworn statements as to value and identity which are part of a formal entry, the unprincipled importer has nothing to lose by attempting to defraud the revenue.

There is a very significant statistical loss involved in these proposals. The Tariff Commission would lose much of the data which it secures from the statistical copies of formal entries, data on which it relies in making its recommendations or answering congressional inquiries. Further the absence of data in shipments aggregating a large (but unknown) volume would raise doubt as to the accuracy of any of its import data.

All of the proposals under this heading are so completely impractical that we wonder they were made. We think if the business community, domestic and importing, were apprised of these proposals and advised of their effects, they would be up in arms.

Combining documents used for immediate transportation entries

Recommendation would result in another customs form, rather than elimination of several, because such consolidated form would be limited to certain cases only. Impractical in one feature. The law provides that the carrier bringing the merchandise within the limits of the port of entry and so forth, has the right to name the owner or consignee for customs purposes. However, such right is exercised both at the border port and at the port of destination. The action of the carrier at the port of arrival in naming the consignee does not extend beyond that port. The carrier at the port of destination has the ultimate right to name the consignee at the port of destination. Therefore it would be necessary to have a form with two carrier's certificates. This recommendation also overlooks the right of a holder of a properly endorsed bill of lading to make entry, without the use of a carrier's certificate. The expanded use of informal entries would require the handling of customs moneys by many persons, compared to the very limited number under the present systems.

Simplifying warehouse ledger records

Approved as to elimination of notarization but not as to combination entry and invoice. There would be no over-all benefit here. The suggested document would be of limited usefulness and would constitute just one more form of which there are enough already.

Discontinuing amended entries

This should result in considerable simplification in paper work and decreased handling with substantial savings all round. Provision would have to be made in cases where the appraised value is higher than the entered value to distinguish between advanced values and those which would normally be covered by an amendment.

Simplifying warehouse ledger records

This recommendation has no particular merit. The additional copy of the entry would provide, in most cases, a poor carbon copy for ledger purposes: Any possible benefits being offset by the likelihood of indistinct records and the time lost in referring from the entry to the ledger record when they are on reverse sides of the same sheet.

Abolishing or charging for warehouse transfers

This is fundamentally a question of policy for Congress, though it might be said in passing that the saving contemplated appears exaggerated. In taking up the policy question here, the National Legislature might consider, in addition to the transferee problem (see 557, Tariff Act) and the heavy burden of work it imposes in customs, the manipulation provision of section 562. Even if the policy implicit in this provision is to be continued, some effort should be made to keep manipulations within bounds. For example, an importer may make a warehouse entry of 10,000 dozen handkerchiefs in perhaps 100 or more styles or qualities. Under the repacking provision of this section he may repair to the warehouse and make up an assortment of, say, one-half dozen of this quality in this color, one-half dozen of that quality in a different color, and so on, for withdrawal.

A single shipment can in this way produce hundreds of separate withdrawal entries. The private warehouse charges the importer each time for access to the merchandise and its labor, but the customs, under the necessity of computing the exact duty on each lot withdrawn, in effect maintains an inventory for him and keeps his books free of charge. The same situation is common in the repacking of spirits, with, in addition, very large losses in duty and internal revenue.

Eliminating affidavits and evidence of exportation

This suggestion is of limited practicability. Where draw-back is involved it is not feasible.

A certificate of exportation is important where the question of draw-back on exportation is involved. The suggestion as to "lists of manufacturers and articles, as well as the amount of draw-back claimed on such articles when exported," is not sound. The draw-back on atricles, even in the case of individual manufacturers, varies from lot to lot, month to month, or other period, according to the various factors involved in each case. Any such list would be subject to continual amendment, and another record to be prepared and kept up to date. The compilation of such a list would be a tremendous job; standardization of amounts of draw-back impossible under the law; the suggestion indicating a complete lack of understanding of the subject of draw-back.

Expanding the use of special-delivery permit

These permits are in general use at present. Further, their use is at the choice of the importer, not the customs. Section 8.59b of the Customs Regulations of 1943 provides that entry must be made within 48 hours after release of the merchandise which is what the recommendation contemplates.

Simplifying baggage declaration form

Instructions are necessary as indicated but there isn't a great deal of room for change in the form; there is no duplication of arrival date, the space for the number of pieces of baggage is necessary to account for the stamps used by the inspector.

Modernizing baggage inspection

The gist of this recommendation is that the practice in effect at border ports—i. e., spot check examination of baggage rather than a check of each passenger's baggage—be extended to the seaports. Entirely ignored are the differences which make the spot check useful at border points but extremely risky at seaports. The nature of border traffic and its volume, large numbers of people, Sunday traffic lines of cars, most travelers with but one or two pieces of small hand luggage, the short duration of the foreign trip, all operate to make a system of spot checking a necessary expedient but a reasonably effective one.

Spot check examination as outlined by the report, if put into operation at a seaport such as New York, would be little better than no examination at all. Not only does it have the appearance of discrimination and engender a suspicion of the examined passenger by his fellow travelers, but it would tend to make people dishonest. For, as the system became known, travelers would realize that there is no percentage in showing purchases over the exemption since that would insure the examination of their baggage where, if the declaration showed nothing of a dutiable nature, the chances are 10 to 1 that the traveler would "get away with it." Such would be the dilettante smuggler—the lady who "forgets" to declare all her purchases. How about more unscrupulous travelers? Even with the present complete examination known to be in vogue, there is hardly a vessel of any consequence arriving at New York on which several passengers are not caught trying to "put one over" either by failure to declare purchases or by undervaluation of them.

The proviso that an inspector may examine the baggage even though it is marked for nonexamination might lead to some very unwholesome situations.

Authorizing inspectors to classify and determine value within a limit

There is no "Yes" or "No" answer to this since the usefulness of this proposal depends on the nature of the baggage. A system very much akin to that suggested is followed successfully at border points. Where a very limited variety of merchandise is normally encountered there is no reason why the inspector cannot be trained to appraise and classify up to the limit indicated. But the staggering training problem and the highly doubtful effectiveness of such a procedure make it impractical at a large seaport where the variety and volume are sufficient to justify the detail, as the need arises, of trained appraisers' personnel. The large seaports where the need exists have appraisers' personnel readily available. Why not use specially trained personnel when you have them? Where the volume and variety warrant their use as they do at seaports it is more efficient to use the specialists.

The purpose of the recommendation is to cut down the manpower presently employed at large seaports for baggage work. This remedy is a roundabout method of achieving that result. The direct method, already taken in part by Congress, is to increase the exemptions. This will pare manpower needs to the bone and still enable the customs service to do its work in an efficient manner by having each man do the job for which he is best fitted.

Adopting modern business machines at border ports

Appears to be a worth-while suggestion.

Instituting a crew baggage declaration form

The Bureau of Customs is already working on such a form.

Changes in exemption limits

Returning Residents

Congress has gone beyond the recommendation of the committee and made the exemption for a return after extended foreign travel $400 per person. However, we do not subscribe to the committee's view that the "to follow" privilege should be eliminated. It smacks of discrimination against air and auto travelers, the nature of these types of transportation precluding bulky articles from accompanying the passenger.

Nonresidents from nothing to $10, provided duties and taxes do not exceed $3

We should suggest raising this to $25 and including commissions and other noncommercial items. This coupled with the $400 exemption for residents would limit the function of appraisers personnel on the majority of vessels to a stand-by role. It would decrease the requirements for inspectors also by making baggage examinations much speedier. Nor would any training program on value and classification be required in view of the margin these generous exemptions would provide.

UNIVERSITY OF MICHIGAN LIBRARIES

These two exemptions combined would be a panacea for most of the personnel problems in seaport baggage examination.

Crew members from nothing to $10, provided duty and taxes do not exceed $3

This is impractical. Crew members with purchases over $10 would have fellow crew members declare and have passed the excess over $10. A crew baggage declaration is all that's needed here.

Unaccompanied importations from $1 to $10, and so forth

No comment.

Recommendations 4 (a) to 4 (d) and 4 (f) to 4 (k), pages 70 and 71

These recommendations are minor improvements.

Elimination of dock books 4 (e)

Dock books are not used extensively at many ports, except possibly some of the larger ports visited by the survey. Their use should be discretionary. Some sort of work sheet is necessary on large shipments and there would appear to be no reason to rule out a convenient form for some improvised work sheet. On large shipments, particularly where shortages, bad order, etc., exist, the information in the dock books prove valuable, particularly in litigation. The problem, if any, appears to be a local one.

Experiment with the use of the Inspectoroscope 4 (l)

Even the partial testing outlined in the text is sufficient to indicate that this contraption is a useless gadget as far as customs is concerned. A determination that a package contains a "foreign" object is not of much value.

Recommendations 5 (a) to 5 (e) on page 71

There is not field for comment here for this is merely a listing of situations at New York which should be studied for possibilities of improvement. No specific suggestions are made.

Consolidating collectors' liquidating activities

We thoroughly disapprove this recommendation.

Experience has shown that decentralization of such activities is necessary. Prior to the 1922 Tariff Act, auditing of customs entries was done at a central point. The conditions resulting from the use of such system resulted in the establishment of the present decentralized system of comptroller offices. The recommendations made reflect the impression, gained from casual observation, or otherwise, that liquidating functions are purely mathematical and mechanical, bordering on the clerical. Nothing could be further from the truth. The recommendation to consolidate appears to be principally for the purpose of savings in dollars and cents. The estimated saving is questionable. Certain amounts claimed as possible savings would be offset by increased costs in handling, record keeping, much additional correspondence certain to result from removal of the transaction from the locale of the origin of the transaction. Frequent interviews between liquidating officers and other customs personnel and importers, brokers, etc., are necessary to develop all the facts required to effect a liquidation of an entry. It is an indisputable fact that in personal interviews facts can be developed and procedures explained in a very small fraction of the time required to accomplish the same result by correspondence. The serious delays would be from this source not from the 4-day transmission period conceded by the committee. This system now exists between headquarters ports and subports and the consequences are as we have outlined. Consolidation of such liquidating activities would remove the present know-how from the collection district and compound the problems arising and the resulting correspondence. Liquidating officers perform many duties in addition to the liquidation of formal entries. Such other related duties could not be performed at a central liquidating office as economically, and would require a mass of papers continually moving through the mails. Personal contact, in such cases, between liquidating and entry or other divisions is practically indispensable, otherwise much correspondence would be required. Consolidation of liquidating activities would result in the removal from the jurisdiction of the collector of customs of the final classification of merchandise and place it in an independent office not concerned with actual handling of the merchandise imported. Protests would, of necessity, be directed against the decisions of such independent office, and the authority of the collector to entertain and decide protests, and the handling of all protests, except those foreign to the ascertainment of duties, would also be removed from the jurisdiction of collectors. Much confusion of jurisdiction would result. With reference to the planning and handling of the work load it should be noted that no charge is made that customs is overmanned. On the contrary, practically all districts are understaffed. Consolidating the work at any given office or offices will mean nothing more than a redistribution of the work now being done. If a full day's work is now being exacted from each employee in the liquidating divisions no additional work can be expected by changing the location of the activity. It would be necessary to have experienced personnel to assemble all documents for each entry prior to forwarding to the liquidating office. Such assembling, at headquarters ports where most entries in a district are filed, is now done in the process of liquidating the entry. In view of the present fairly uniform methods and practices in liquidation the so-called benefit of more uniform liquidating methods and practices that would result are not worth commenting on.

Centralizing certain draw-back activities

This recommendation is likewise unsound.

First, an error should be corrected relative to filing draw-back claims, as it appears in the report. It is said that draw-back entries are filed at the headquarters port. This is incorrect. This may be true in New York and, possibly, several other districts; however, there is no provision of law or regulation, or established practice which requires that entries may be filed only at a headquarters port. In practice claimants file entries either at the port nearest their place of business, or, particularly where a broker is employed, at some port of their own, or their broker's choosing. To require that all draw-back be handled at one office, New York, would work a hardship on many draw-back claimants in various sections of the country. The distances involved would prevent personal visits at the customhouse to obtain necessary advice and information. Claimants outside New York would be severely handicapped in securing the draw-back of duty they were entitled to. This is just as absurd in the case of draw-back entries as it would be in the case of import entries. The taxpayer should be privileged to transact his customs business at the port of his own choosing, to suit his particular needs. To centralize such activities at one port would remove all the present widespread draw-back knowledge in the customs service from the various collection districts to New York as a result of which all draw-back contacts outside of that city would have to be made by mail, a slow and costly method. Experience has shown that much time is required to deal over the counter with draw-back claimants covering highly technical and intricate problems. Handling such problems by mail would be a costly and slow process. Most manufacturers are not conversant with technical draw-back requirements and it is necessary to frequently consult with customs draw-back liquidators relative to draw-back matters. Such opportunity would be denied claimants except those located in the vicinity of New York. It would be economically nonfeasible, and because of the time limit involved, practically impossible for claimants under section 313 (c) of the Tariff Act to file draw-back claims at New York on transactions originating throughout the country. The same condition applies to merchandise exported with benefit of draw-back from continuous customs custody. Under the present system claimants can check draw-back data at the customhouse quickly and with little expense inasmuch as the records of exportation, etc., are located at ports in the areas in which their business is located. Personal contact enables claimants to obtain required information from the customhouse at one time, whereas much time on the part of both the claimant and the Government would be consumed in correspondence with resulting costly delays in consummating transactions. Claimants located at points away from the liquidation center would be deprived of the privilege of checking draw-back data from the notices of intent filed in the customs office. Many manufacturers file hundreds and thousands of notices of intent each year. At the present time the claimant can refer to such records, at no cost, when they are on file in such office in his area. Many minor discrepancies or inaccuracies now solved by city phone calls, personal routine calls, etc., would involve lengthy correspondence, costly long-distance phone calls, or telegrams, etc. It should be understood that only in rare cases are draw-back rates (authorizations to claim draw-back) of two manufacturers similar. Therefore no standard replies can be evolved to cover questions arising in involved draw-back rates. It would also be impractical to attempt to set standards of draw-back to apply to items of similar nature. Many factors enter into the basis for the allowance of draw-back depending on the actual conditions found in each case, in many cases peculiar to each manufacturer. To set up such standards, and properly protect the revenue, many manufacturers would be deprived of considerable amounts of draw-back to which they are rightly entitled under the law, because of conditions prevalent in the establishments of competitors. Maintaining information, at one central office, frequently found necessary for duty calculations on importations of American goods returned would cause a flood of additional correspondence from all sections of the country to the central office to ascertain such information. It is noted that, despite the apparent fact that the majority of companies or corporations claiming draw-back either have offices in New York or are represented by agents or brokers there, the majority of such companies actually have chosen to file their claims at other ports throughout the country. The likely explanation of this is that the New York offices are primarily sales or promotion offices, whereas the offices outside New York possess the manufacturing and bookkeeping employees where technical data are required for the companies' draw-back work.

The centralization of the draw-back activities would have a very odd appearance. It would look as though the policy of Congress was to chisel a bit on small draw-back refunds by making them burdensome to collect. We would be in the position of providing excellent facilities for the collection of duty by the strategic placement of ports of entry all over the country while making ourselves relatively inaccessible for proper refunds of duties.

There are consequences here which may not have been apparent to McKinsey & Co. Taken alone or in conjunction with the proposal to consolidate liquidation activities, this scheme operates to make all ports outside New York second-class or third-class

ports, ports with limited functions. Expressed another way, it is a partial closing of these ports, as they become inoperative for these vital activities.

The consolidation of liquidation activities requires legislation and Congress will have an opportunity to consider whether such partial closures are in the public interest. Not so, however, with the consolidation of drawback activities. Despite its drastic effect on some business operations and despite the fact that it involves the same question of service to the public, draw-back activities can be consolidated by the stroke of an administrative pen.

We have no knowledge of the position taken by the Bureau of Customs or the Treasury Department, but it appears to us that the sensible thing to do would be to wait until Congress has indicated its attitude on the consolidation of liquidation activities. Premature administrative action, though perfectly legal, might well bring a storm of protest such as aroused Congress last year in connection with the patrol dismissals.

Improvements in facilities

Such specific suggestions as are made on this subject have to do with organizational changes and are treated in another chapter as are our comments.

CHAPTER IV. CLASSIFICATION AND APPRAISEMENT

In making our comments hereon we have set out each of the recommendations made (pp. 52–54 of the report) and immediately following it our observations thereon.

1. *Review schedules of the tariff act and make legislative changes as are necessary to reduce the present complexity and to simplify the methods which cause high administrative costs*

There is room for improvement here, but it is foolish to expect any spectacular overnight transformation of the tariff act. Any changes that are made will be the result of slow, plodding work. It is all very well to inveigh against the complexity of the tariff, but it should be realized that complexity is a necessary accompaniment to preciseness in an economy such as ours. Using the tariff provisions to fit imported articles into the desired relationship with the number and variety of our domestic products and material cannot be accomplished with the use of catch-all provisions. Simplicity of tariff along the lines suggested is accomplished at the expense of precision. Even the proposal to substitute an equivalent specific rate of duty for ad valorem rates on merchandise where it appears that the values of the commodities are within a relatively narrow range should be approached with caution. (There is a certain flexibility to an ad valorem rate which should not lightly be cast aside.) There is nothing static about values; foreign prices (and therefore values) are predicated not only on the sum of the producer's or seller's costs and expenses (all variables) plus a reasonable margin of profit but also on a consideration of what the merchandise will land for in the United States and how high a price the market will pay for it. A striking illustration of the operation of this factor can be seen in the case of screenings. During the feedstuff shortage during the war years, screenings were made free of duty by Executive order. On the effective date of the decree, foreign shippers with almost perfect uniformity raised their prices by the amount of the duty abrogated.

There can be no dispute with the report in the comments on tariff provisions based on the presence in an article or commodity of a trivial component. Paragraph 1529 of the present act is an outstanding example of this type of thing. Some of the rates of duty which legally apply to merchandise because of the wording of this paragraph cannot be justified on any basis whatsoever. For example, the presence of a braid elastic instead of a woven elastic in a knitted cotton boy's suit, a difference which does not affect the cost of the article or its sales appeal, changes the applicable rate of duty from 35 percent (par. 917) to 50 percent (par. 1529). Prior to January 1, the change was from 45 percent to 90 percent. Many other kindred situations could be cited where the difference in rates of duty is even greater.

It seems to us that the best way to study the tariff for possible changes along these lines is to set up a committee with members from customs and the Federal Trade Commission, and possibly the State Department, to survey the possibilities for improvement systematically and thoroughly, reporting their recommendations from time to time to the Treasury Department for transmission to the appropriate committees of the Congress.

2. *Insure that customs personnel with administrative experience have more opportunity to participate in the formulation of future trade agreements*

This is a thoroughly sound and workable proposal. The surprising thing is that action has not been taken along these lines previously.

3. *Eliminate the present duplication of responsibility between the collector and the appraiser in the classification of merchandise*

There is no merit in this proposal. The present system is thoroughly practical and effective. All of its ramifications and implications are thoroughly understood by customs brokers, importers, and customs personnel. All legal questions concerning it have long since been resolved. To overthrow this well-established system would be extremely foolish. There would be no genuine saving from the change and the confusion and uncertainty which would result would be costly in the long run. There is no duplication of responsibility as such. Under the law the collector is solely responsible for classification. The activities of the appraiser in this respect are auxiliary to the collector's and do not lessen that officer's responsibility or enlarge that of the appraiser. What apparent duplication exists is not overly significant and is not so much duplication as the close working together of the two officers.

The classification of merchandise is an integral part of the process of computing the exact amount of duty payable on an importation. Its natural place in the customs sequence is after the quantity of the shipment has been established and its value ascertained. The logical time to determine the applicable rate of duty is when all is ready to figure the importer's dollar and cents duty. At this point all subsidiary questions of shortage, exemption, quote restrictions, etc., have been resolved and any relevant Bureau rulings or judicial decisions which have been issued subsequent to the examination of the merchandise by the appraiser (examiner) can be taken into consideration by the collector (liquidator). The time of the appraiser's examiner is now fully occupied with the examination of merchandise and the appraisement. To shift the responsibility of classification to him from the collector's liquidator should be to put a further burden on him and make the determination of the classification more expensive. The examiner is a highly specialized technician whose salary grade is anywhere from one to three grades higher than that of the liquidator, depending on the port. Further, the work of classification will not be performed any better than it is under the present system. The examiner works under a good deal more pressure than does the liquidator. The determination of the applicable rate of duty, especially among provisions with fine shades of difference, can best be performed under the conditions under which a liquidator works. Free of interruptions and given the benefit of the examiner's expert knowledge of the merchandise and its uses, by his description of the merchandise, the liquidator is in the best possible position to classify the merchandise.

The fact that in a large or small number of instances the liquidator agrees with the examiner as to classification is beside the point. That is a commentary on the competence of the appraiser's staff at the particular port. It does not justify a change from a system which is not only cheaper but which can logically be shown to be better. Even a small percentage of error amounts to a good deal of money when the sums involved in customs collection are being considered.

Though at the outset of the report, the text indicates an intention to shift the responsibility for all classification to the appraiser—that attitude undergoes a change and it is realized and conceded that on some types of merchandise, viz, those requiring involved computation to determine the appropriate rate of duty or those requiring some documentary data such as affidavits, etc., to establish the applicable rate, the responsibility for classification would have to remain with the collector. Though in the report this type of classification is referred to as involving only a small number of formal entries, the fact is that a very large number of entries would be involved. We wholly disapprove of transferring all responsibility for classification to the appraiser but the proposal to divide the responsibility is even worse. It is foolishness compounded. In many instances of composite entries covering a number of different commodities such a division of responsibility would prove downright impossible in operation.

There isn't space here to do more than hint at the legal difficulties that would ensue from any change such as is recommended. It is sufficient to say that they would be numerous and perplexing and would complicate customs administration considerably, costing both the Government and the importer time and money. Fortunately any change along these lines would require legislative approval and if the recommendation were taken seriously enough to be presented in a bill, Congress would have ample opportunity to acquaint itself with all the unsought and undesirable consequences of the change.

4. *Speed up the Bureau rulings on classification problems*

This is all right as far as it goes but a reading of the text shows that one of the ways in which it is contemplated that this speed up will be achieved is by taking less pains to furnish an exact perfect answer. This is a very shortsighted view of the matter. A prospective importer who asks the Bureau for the rate of duty on a certain article will be delighted, of course, with a prompt reply (and the reply usually is prompt). However, after he has made his calculations, bought the article and contracted to resell it on arrival, his satisfaction will be shortlived if the customs informs him that a mistake was made, that on more mature consideration, a different and higher rate of duty will be assessed on the article. Nor will his wholly justifiable wrath be lessened when it is explained to him that the classification of this article is a very technical and difficult matter involving lengthy consideration and it was thought better at the time of his inquiry to give him a rate based on what information was then at hand rather than delay replying to his letter to get all the information necessary.

5. *Eliminate foreign value as a method of valuing merchandise and broaden the application of the remaining valuation methods. Review further the possibility of using the price-paid basis of valuation*

There is room for improvement in section 402 of the Tariff Act. Much of the difficulties which the report sets forth stem from the

UNIVERSITY OF MICHIGAN LIBRARIES

literal interpretation by the courts of the words "freely offered for sale to all purchasers." If the interpretation of this language were more realistic—few commodities are freely offered in a completely literal sense any more, here or abroad, many suppliers protect their brand names and products by price fixing and other restrictive practice—most of the difficulty and delay which sometimes occur in connection with value investigations would vanish, since if certain types of restrictions are acceptable and do not affect the market value the scope of the inquiry is considerably foreshortened.

The price-paid system hasn't much to recommend it. With most of our highly competitive imports on an ad valorem duty basis—this system would have the effect of giving the big fellow, the mass buyer, the volume buyer, an additional advantage. The tariff would become an instrument whereby small business would be put under an additional economic hardship by operation of law.

The whole problem of changing the customs valuation methods is one for Congress. There are very many factors to be considered and questions of policy to be settled. Any changes made should not be made until all the consequences of the changes are thoroughly explored and understood.

So far as avoiding in any new law, language which complicates customs administration and has no particular effect on the policy underlying the provision, there need be no problem. There are any number of men in the Customs Service who could prevent that by reviewing the draft of proposed revision, once the policy adopted by Congress has been made clear.

6. Provide customs service with currency conversion rates which will make it possible to clear the present backlog of unliquidated entries and prevent further accumulations

This is somewhat outside our field but from a layman's view it does seem that even without a change in the law, the Federal Reserve bank could give more data than it does.

7. Liquidate entries on the appraiser's valuation where required information on values is provided by the importer to the best of his ability

There is the germ of a good idea here. A workable plan can be developed along these lines which will eliminate a good deal of paper work and expedite the disposition of many entries.

8. Eliminate a finding of presumptive fraud when the appraiser's value exceeds the entered value by 100 percent

We see no merit in this proposal. It is highly unlikely a businessman will misjudge the value of his merchandise by 100 percent. In the unusual case where an honest mistake of such magnitude is made, no lasting harm is done; the presumption of fraud can be rebutted by a showing of the facts to the customs authorities and thereafter the transaction is put back into the normal status of a routine importation.

9. Simplify procedures in the collection and dissemination of data by the customs information exchange

Much of what is contemplated here has already been put into effect or is in the process of adoption.

10. Discontinue the use of the consular invoice in favor of an adopted commercial invoice prescribed by the Secretary of the Treasury

There is sufficient existing authority to expand the list of commodities on which no consular invoice is required, but we think it would be poor business to eliminate the consular invoice altogether. The consular invoice is of great value in establishing the probity of the transaction. Experience has shown that many foreign shippers and suppliers can be pressured by their customers into issuing false or misleading commercial or private invoices as an accommodation but refuse to swear falsely on a consular invoice. The American consul is usually fairly well acquainted in the business community in which he is located, and this fact plus the knowledge that discovery of a false statement will be reported back to the consul with consequent damage to his reputation and standing in the business community tends to make foreign shippers and suppliers quite careful about the statements they make on consular invoices.

11. Defer customs action under antidumping provisions until evidence of injury has been established with the Secretary of the Treasury

The procedural mechanism of the Antidumping Act needs a thorough overhauling. As presently set up it is the greatest begetter of paper work, most of it ultimately of no consequence, that can be imagined. The least that should be done is as recommended in the survey: defer any customs action until the fact of injury to domestic industry has been established. We suggest that whenever the subject comes up either by congressional study or administrative review, the parties involved study closely the operation of this law as it was applied to cotton manufactures from Japan in the years prior to World War II. It is a saga of wasted effort and enmeshing red tape.

12. Provide for the immediate release of examination packages from public stores notwithstanding the fact that increased duties may be applied

Either of the alternate plans proposed in the text would be a useful improvement in service with no danger to the revenue.

13. Require the declaration of antiques at time of entry and prohibit amendments

This proposal designed to avoid the necessity for examiners making detailed study of all items on invoices of antiques is a good one. However, we do not think, as is recommended in the text, that the penalty for an incorrect declaration of antiquity should be reduced. The present 25-percent penalty is a good stiff penalty and is a real deterrent. There is a certain amount of leeway in the field of antiques. Hard and fast determinations are not always possible. Conceivably, therefore, the 25-percent penalty could be visited on an importer whose incorrect declaration results from an honest and wholly understandable difference of opinion. This situation could be taken care of by requiring the examiner to certify that in his opinion the incorrect declaration was not motivated by an intent to defraud the revenue and that there was a reasonable basis for the claim of antiquity made. In this way hardship cases could be eliminated and the penalty provision would retain it's deterrent value unimpaired.

14. Merge the handling of mail entries under a single supervisor reporting to the appraiser and combine present functions

In our judgment the foregoing recommendate could only have been arrived at on the basis of a superficial examination of the problem. There is nothing wrong with the present system whereby the appraiser's staff takes care of the appraisement activities and the collector's men handle the balance. From what we understand, the objectionable situation the McKinsey people found was overstaffing and underproduction in the mail division at certain of the large ports. These are not the fault of the system—they are the result of poor management by a local administrator which the Bureau either condoned or was in ignorance of.

The comments in the McKinsey report relative to mail divisions indicate a lack of perspective as to the functions of the collector's and appraiser's personnel performing work in the Mail Division; their relation to applicable laws and regulations, etc. The method suggested complicates rather than simplifies the administration of the Mail Division, when all aspects of the subject are understood and given full consideration.

It should be understood that large mail divisions in the custom service are few in number, and, with the exception of New York and a few others, even such so-called large divisions would consist of probably less than 10 employees in each. In this respect they are somewhat similar to the many ports of entry throughout the country. In our opinion, if a change in administration of the mail divisions appears necessary, although we believe otherwise, they should be considered on the same basis as the many smaller ports of entry in the customs service.

Mail divisions, particularly at large ports, are ports of entry in microcism. Through the transactions are limited in value and somewhat narrower in scope than those represented by the formal entry transactions, these divisions are very much like little ports themselves. The same type of work, the same interplay of reports, the same system of collection and accounting are found in the large mail divisions as are found in ports of entry. There is no more reason for combining the two separate functions of the collector and appraiser in mail divisions than there is in the ports themselves. There is no inherent inflexibility in the system which proper management cannot overcome.

We don't think these large mail divisions should be placed under either the collector or the appraiser. The employee suffers in either event. If the division is shifted to the appraiser, the collector's entry writers and clerks are shut off from their normal avenue of promotion to liquidator and entry clerk in the main office. If the shift is to the collector, the appraiser's personnel find themselves in a dead end.

Another unsound feature of the recommendations, contrary to the statement made in the report, is that the operation will actually become less flexible and more expensive. Under the present system it is the rule to operate the Mail Divisions with the minimum number of personnel required to perform the necessary activities during normal times. During peak periods, particularly the Christmas rush from October or November to the end of January, it is necessary to detail additional personnel to the Mail Division, usually openers and packers and entry clerks. Appaiser's personnel are relatively few in number in most districts. At the time of peak loads it has been possible for collectors of customs with much larger forces to find it possible to absorb the additional work falling upon his force in the Mail Division by drawing upon personnel in other divisions of the custom house and under his jurisdiction and assign them to temporarily assist in the Mail Division whenever possible. With the relatively few in the appraiser's forces, as many as half of which are stationed in some mail divisions, it will be necessary to either carry a much larger force than is normally required for appaiser's functions or hire additional temporary employees, who, incidentally, will not have the required experience to perform many of the functions in connection with mail entries.

At the smaller ports throughout the country, and in all probability they are in the majority, all the work in connection with customs, including examination and appraisement of all classes of merchandise covered by all types of entries, regardless of value, is performed by personnel under the supervision of the collector of customs, no appraiser's personnel being stationed at such ports. The functions in connection with examination and appraisement are under the nominal supervision of the appraiser located

within the collection district, the collector's personnel being designated as examiners and appraisers. This practice is in effect in those ports where the work load does not require a full time examiner and appraiser. The work is carried out economically and successfully.

It would seem therefore, that based on experience either a split force as we have now at the large ports or a force entirely under the collector as is found elsewhere in the country is feasible under the proper conditions.

Due to the limited activities of appraisement personnel, limited to examination and appraisement, at no port in the Customs Service are all customs functions under the supervision of appraisers. The activities in mail divisions are similar in nature to those at any port of entry, and involve questions concerning all phases of customs laws and regulations, therefore, for the sake of uniformity and consistency, the supervision of such mail division should be similar to ports of entry. With a full knowledge of the many complications of administration involved sound judgment should dictate that, if it is felt necessary to place such mail divisions under one head, there would be no sound reason for deviating from the normal set-up now in effect in similar cases and adopting the suggested method of placing such functions under the supervision of appraisers, with consequent dual designations and resulting time-consuming problems of administration.

However, we do not think that placing all mail divisions without exception and without regard to the amount of appraisement work required under the collector is a good idea either. We say it is the lesser of two poor choices. Better management under the present system is the real solution.

15. Require the furnishing of packing lists for certain classes of merchandise

This is a good idea. However, in the absence of such packing lists, instead of doing as the text suggests, we recommend rejecting the entry and sending the merchandise to General Order until the importer receives packing lists or makes them up himself. The method suggested in the text is that the importer be required to pay for the carting of the additional cases or packages to public stores made necessary by his failure to submit packing lists. The objection to this is that while it would be a deterrent of a sort, it would not in all cases relieve Customs of the unnecessary handling, opening, verifying, and examination of the extra cases or packages which is sought to be avoided through this recommendation.

16. Liberalize provisions for marking imported merchandise and give greater discretionary powers to collectors

We agree that the marking laws should be reexamined. Some of the special marking requirements are specially harsh and have no apparent reasonable basis today.

We think further that the responsibility of enforcing the Wool Labeling Act of 1939 on imports should be lifted from Customs. The purpose of this act is to protect the ultimate consumer, the retail-store customer, by making certain that the wool product he buys is properly identified in terms of its component material or materials. Imports form but a portion of the total wool products sold in the United States and there appears to be no reason why whatever system of checking at the retail level the Federal Trade Commission employs for domestic wool products cannot be considered as sufficient to cover imported articles. A sizable amount of paper work would be taken from Customs and irritating, and in some cases, meaningless delays, to importers would be avoided. A common example of meaningless detention of imported merchandise is where finished merchandise, for example, wool blankets, are imported by a retail store or chain without marking to indicate the name of the manufacturer or distributor, Customs is compelled to hold delivery of these packages until the importer marks the merchandise under Customs' supervision. Yet in the normal course of trade these blankets will be marked by the store with its own label or ticket before being placed on the counter for sale, a marking which would have satisfied the Wool Labeling Act requirements had it appeared on the merchandise at the time of importation.

17. Extend the time limitations on segregating commingled merchandise

We agree.

18. Extend the use of inspectors for classification and appraisement of simple entries

(1) Inspectors are designated inspector-examiners at certain ports and do perform examiner's duties in addition to their own duties. There is no single answer here which will fit all ports. The feasibility of such dual designations depends on the nature and volume of the work at the port or ports of entry within the district. A port or station whose volume consists largely of merchandise readily ascertainable as free merchandise or where the flow of dutiable merchandise is limited to a variety of merchandise where the problem of dutiable value is simple is the place where this type of operation is efficient. On the whole, we think the Bureau of Customs has used this method of dual designation wisely and has made effective use of its authority to make such designations.

(2) Increased baggage exemption: The law raising this exemption to $400 for extended foreign travel is now in effect and is likely to have the beneficial effect mentioned by the McKinsey report. The proposal to organize a permanent baggage squad at large ports may or may not be a good idea. If the squad is large enough to avoid an excessive number of calls for help from the roster of regular examiners, the likelihood is that, vessel movements being irregular as they are, there will be times when a number of these men will be standing idle. This is a local administrative problem in each port effected. Some of these ports have had permanent baggage staffs before and presumably have some experience data with which to evaluate this proposal. Whether or not a permanent staff is established, there exists a small field for improvement in the pooling of information as to the exact time of arrival of vessels. This with the judicious use of a station wagon type of vehicle could ensure that examiners would not arrive so long in advance of the actual commencement of the work as to waste perhaps an hour or more standing by.

CHAPTER V. PHYSICAL HANDLING OF MERCHANDISE

In this as in most of the chapters our comments follow the restatement of each individual recommendation.

Eliminate unnecessary package weighing by amending regulations

Approved.

Reduce weighing costs by requiring that all invoices show individual package weights, and using scientific spot checking to verify reported weights

This is already in practice in some form but the further emphasis of it in the report will have the salutary effect of prompting its broader application where possible.

Eliminate the redetermination of wool clean content and weight since there are simpler and cheaper means of accomplishing the same results

This is a practical recommendation and is already the practice at most ports outside New York.

Maintain accuracy and reduce costs by establishing a sound scientific spot checking policy and developing practical, simple techniques

We concur in the recommendation insofar as it looks to the standardization of spot checking and test weighing techniques and the extension of the practice where it can be done without danger to the revenue. Excellent too is the suggestion that a simple manual be prepared to fully acquaint the personnel with the application of this policy. The report envisages the accomplishment of these results through a newly created Department of Weighing and Engineering. Since this matter is discussed in some detail in chapter IX we reserve our comments on the method for our treatment of that chapter.

Further reduce costs by extending the use of bulk weighing

Bulk weighing is already well established and its extension waits only on the adoption of other recommendations for elimination of package weighing, invoice weights, etc.

Extend the use of public weighers and public laboratory results, thereby eliminating the need for customs work on some commodities

Public weighers: The report contemplates the use of public weighers weights for Customs purposes on certain commodities such as sugar where the public weigher presently weighs drafts alongside the Customs officer. There would certainly be no harm in further study of the matter but we would suggest great caution in adopting such a practice. The sugar scandal along about 1910 involved the collusion of public weighers. We can't see why as a matter of policy Customs should allow private persons to do its work for it. Officially determining the weight of imports is an essential part of revenue work. If the importer chooses to make his own check independently for his own purposes—that's his business.

Public laboratory results: As stated this is closely related to the plan for the adoption of public weighers weights and we disapprove of it for the same reason. Laboratory work involves considerable exercise of judgment. Many laboratory analyses are not by nature empiric. It is not at all uncommon in Customs Court litigation to find the Government analyst and the analyst retained by the importer drawing differing conclusions from their tests. There is a good deal of opinion yet as distinguished from mathematical exactness in many branches of analysis and it is difficult for the private analyst not to have, even unwittingly, a certain slant toward the opinion which is most advantageous to his client. The private analyst would have no obligation to the Government. He usually enters the picture after the importer has decided to contest a classification. It is clear to him from the start that he is being engaged to assist in upsetting the ruling. The situation is different with our own analysts. Usually their analyses are sought before a decision as to classification has been made; there has been no stand taken at this stage on which he can take a position pro or con. The Government wants the analysis as a matter of information no matter which way it cuts. The importer wants it to buttress or corroborate an opinion he has already formed. There is a tremendous difference in the two approaches.

Eliminate duplication of effort by having all sampling performed by inspectors

This applies virtually to New York since there alone is there a separate samplers' force of consequence. A curious aspect of this recommendation is the statement on page 8 of the report:

"We are of the opinion that Customs sampling is performed quite efficiently and that it cannot be greatly improved."

UNIVERSITY OF MICHIGAN LIBRARIES

In a port such as New York where the merchandise handled by the sampler is of the greatest variety requiring considerable experience and training in the identification of merchandise and distinctions in grades and qualities "sampling of merchandise is of the utmost importance to the customs service. No directions for sampling, however explicit, can take the place of judgment, skill, previous experience, and conscientiousness on the part of samplers.

"The degree to which a sample may be representative of a shipment will depend, not only on the method used, but on the care exercised by the sampler.

"Careless sampling often leads to improper classifications or appraisement, loss of revenue, and to litigation. It is obvious that costly disputes may arise if samples are not properly taken.

"The taking of samples is a problem of considerable difficulty."

All the foregoing are excerpts taken from the introduction of the Sampling Guide issued by the United States Treasury Department, Bureau of Customs in 1938.

At the present time there is no duplication of work between the sampler and inspector at the port of New York.

The inspector samples only such merchandise as he weighs, gages, or measures, while the sampler draws samples from all other merchandise whether dutiable or free. If an inspector was weighing merchandise and got a call to perform a sampling operation that did not require weighing, he would be forced to leave his laborers (usually from 2 to 4 in gang) idle, while he went to draw the sample.

The inspector, after a few years, does discharging work and a new group of inspectors has to be taught sampling in addition to learning to weigh, gage, measure, baggage duties, and other work incidental to their position. They have to teach sampling when they are just beginning to become familiar with all phases of sampling themselves.

It is practicable at other parts to have an inspector do the sampling since the variety and volume of merchandise requiring sampling is not extensive as at New York. There are certain types of complete cargoes that require on weighing at all. A ship from the Far East brings crude drugs, crude rubber, gums, skins, coffee, hemp, tapioca flour, tea, etc. This type of ship keeps a sampler quite busy. A weigher could hardly do any weighing if he were assigned to this type of cargo.

Sampling, in a port like New York, being a technical position, is more efficiently and expeditiously performed by a stable, experienced force like the samplers force rather than by the inspector with his many other duties.

The sampler is on the piers available at all times. He does not trek back and forth to the public stores. His samples are sent in by means of the messenger system which picks up permits, etc., from inspectors' offices on the piers. There are 15 samplers' offices suitably located on or adjacent to the piers. It does not appear that the committee realizes that the flow of sampling and weighing work is not as the cargo flows from the ship but as various importers make entry of their merchandise at the Custom House and the sampling and weighing orders (or permits) thereon are forwarded to the piers.

Combining sampling and weighing as suggested would be most inefficient. The work would proceed in fits and starts without any semblance of order. An inspector weighing cargo on one pier could not efficiently be interrupting his weighing to dash over to an adjacent pier to do sampling. The tendency would be to finish whatever weighing or sampling he had permits for on one pier before going elsewhere; this regardless of the fact that some of the permits on the second pier might have been lodged long before those on the first pier and the importer might be incurring heavy demurrage charges without justification.

Reduce weighing time by simplifying the automatic scale-testing procedure and eliminating marking weights on bales—Eliminate unnecessary weighing operation of tobacco which is to be manipulated

Both recommendations approved.

Increase the effectiveness of all physical handling by establishing a Methods Engineering Section in the Weighing and Engineering Department

The report gives the impression that what work of this nature is now performed is done in a haphazard, aimless manner. Without denying the plausibility of improvement, it should be pointed out that collectors are always consulted with regard to new or altered customs facilities at piers, terminals, and air fields; that automatic scale experts set up electric scales at advantageous points after consultation with pier owners and operators, instruct their use and keep them in proper condition and repair.

The creation of the Methods Engineering Section is discussed in connection with chapter IX.

Develop expeditious equipment and methods, such as the Mobilscale, fork and grab trucks conveyors, pallets, and other similar labor-saving devices

Mobilscale: From the description of this device it would be impracticable at New York. Since it is not even in existence it is difficult to comment on this mobile weighing machine. The cost of designing, developing, and constructing this piece of equipment should be considered. It would be interesting to see such a piece of weighing apparatus in operation and we would welcome the opportunity to try one here in New York. We do not believe that it would be as mobile as the present beam-type scale when operating in the close quarters and congested areas which are the rule rather than the exception on New York piers. The present type scales are always available. Unless every beam scale were replaced with a "mobilscale" these machines would often be where they were not needed. There would be delay in bringing them to the point of operation. From the description they would require an operator licensed by the State and carry plates issued by the motor vehicle bureau. It would not eliminate the need for laborers in taking tares. The elementary hammer and chisel would still be a necessity. The gasoline would have to be drained from the gas tank each night if they were to be left on the piers otherwise special garaging facilities would be necessary. The danger and ease of injuring such delicate and intricate piece of equipment as the one described would be a constant hazard and the cost of maintenance and repairs should be considered as well as the initial cost. To be effective in New York it would require at least 50 of these machines.

Fork or grab trucks: Many of the same objections we make about the mobilscale can be repeated here.

Universal weigher: Many of the same objections we make about the mobilscale and fork or grab trucks can be repeated here and in addition the use of these machines presupposes that idea that merchandise is always easily accessible and in weighing condition. Such conditions rarely exist in New York.

Conveyors and pallets: Since this equipment is already being experimented with no comment is required. Experience will provide its own comment.

There is a fundamental oversight or misconception in this report concerning the time and place when weighing and kindred activities can commence.

The writers of the McKinsey report forget that the inspector must await the arrival of a permit ordering him to weigh certain merchandise before he can start weighing. All commodities are not weighable and some that are, are not always weighed because of the type of permit issued. Cargo cannot be identified as it is removed from a vessel. Sling loads are not uniform nor do they always contain the same kind of merchandise. The difficulties and hazards of weighing in close proximity to the unlading activities must be considered. The scientific spot check is all right in theory, but to use it, the inspector must have the specified weights. Weighing against specifications has been practiced in many instances but in the normal course of business permits and specifications do not arrive until after the vessel has been discharged. In some degree these recommendations recall those made by a similar committee several years ago when it was suggested that all public store packages be put in one hatch.

CHAPTER VI. FISCAL ACTIVITIES

This chapter is so organized that it is not practicable to discuss it line by line or even page by page, but an effort has been made to tie these comments as closely to the report as possible.

The core of this chapter is the recommendation that the existing offices of comptrollers of customs be abolished and that there be substituted therefor a mobile field audit organized on a regional basis under the overall direction of a Chief Customs Auditor who would be part of the Bureau staff in Washington. It is also recommended that a system of operating checks be set up in each collector's office. However, this latter is not so much intended to serve the purpose of an independent audit as to afford some measure of assurance to certifying officers. Aside from the fact that it creates the new additional supervisory job of Chief Customs Auditor the plan of organization of the new set-up is not basically different from the present system where the various comptrollers of customs are responsible for all audit and verification work in their respective districts or regions and report directly to the Deputy Commissioner in charge of fiscal affairs.

The heart of the scheme is the proposal that procedures be instituted to prevent errors and the audit be done by spot check rather than as a thorough and complete audit and review as is presently the case. It is claimed that a sufficient audit can be provided in this manner and at less expense.

We will examine the savings first using the figures from exhibit 1 of the report. These figures show the projected cost of the customs audit at $400,000 per annum as against the current cost of $900,000 per annum, a purported saving of $500,000 per annum. It is axiomatic that the initial cost of a spot check is less than the cost of a thorough check and the spottier the check the greater the disparity in cost. No indication is given in the report as to the scope of the spot check the McKinsey people regard as adequate. There are no suggestions as to the size of the permanent staff contemplated nor is there anything to show how the estimate of $250,000 for the internal field audit unit was arrived at. However, it can be demonstrated that this figure presupposes a rather sketchy spot check with a staff of no more than 27 field auditors for the entire country.[1]

[1] Figuring seven field audit regions each staffed by a regional auditor, a stenographer and a clerk accounts for $80,119. The balance of $169,881 must provide the salaries, travel expenses and per diem of the auditors. The travel and per diem have been estimated at $1,000 per man annually. This figure and the staffing and salary estimates used are very conservative.

This small and necessary valiant group will be the force to spot check the 1,370,421 import collections, totalling almost $500,000,000, refund payments aggregating approximately $10,201,378, the 14,943 draw-back entries involving payments of more than $5,000,000 in duties and refunds as well as expenditures and disbursements involved in an annual budget of upward of $30,000,000, which are annually verified by comptrollers of customs.[3]

We will consider the suitability of spot checks for this type of audit further on, but it must be evident from the foregoing analysis of the figures that even as a spot check the projected arrangement is weak and that the saving of $500,000 on that basis is exaggerated. As a matter of fact, the entire savings is illusory for the amount of additional revenue collected annually by reason of the complete audit now performed is over $800,000 annually.

In the nature of things, even a much better implemented spot check than the McKinsey report contemplates could not be counted on to pick up anything approaching the more than 12,000 erroneous, illegal or improper liquidations and adjustments that are sifted out by the Comptroller offices yearly. Presumably, too, when an error was picked up on a spot check the field auditor would feel bound to extend his check until satisfied that all the ramifications of the error had been run down or that the error was an isolated one—a monumental, well-nigh impossible task and one which would certainly minimize the saving to be gained by use of a spot check system; nor does the proposed arrangement make as efficient use of the manpower employed as the present one. A substantial part of the field auditor's time would be spent in necessary travel within the region, time which his prototype in the Comptroller's office spends in productive work. Further, these traveling field auditors could not possibly transport with them all the reference material and data necessary to do a good job. Each of the existing Comptroller offices is equipped with a comprehensive library containing, in addition to the bound volumes of judicial rulings and Treasury decisions, complete files of Bureau rulings, Customs Information Exchange circulars, GAO letters, etc., all of which are in constant use in carrying on the work of the office. This material is kept current and suitably catalogued and, in consequence, the personnel is able to run down the authorities on a given point in short order. The traveling field auditor operating on his own in unfamiliar field offices would not have this advantage and would frequently find it difficult to determine that the authorities proffered on disputed matters were in truth the last word on the subject.

A question arises, too, as to the accuracy of the $150,000 estimate of cost of the proposed internal operating checks of Collectors' offices. We think that such operating checks in sufficient detail to be of benefit for the purpose intended would cost more than does the present system without being as effective. Several factors must be borne in mind in considering this subject. Chiefly they are, (1) such checks must include merchandise as well as financial checks, and (2) only about half of the present force of Comptrollers of Customs, exclusive of the present field audit unit, is required to maintain the present merchandise and financial checks.

1. Accountable officers should have the benefit of adequate controls over all merchandise for which they are responsible. This includes not only warehoused, general order, and seized merchandise, but also shipments received by transportation entry, and also merchandise received direct from a foreign country by highway, railroad, aircraft, vessel, or otherwise. In many instances these controls would have to be maintained at each port of entry as well as at the headquarters port.

At the larger ports these merchandise controls perhaps need not be so elaborate on account of the number of employees involved in each transaction, but controls over the smaller ports would necessarily be much more elaborate and detailed due to the greater opportunities for misappropriations, defalcations, and conspiracy. The present system of controls of merchandise has been devised to prevent such malpractices discovered in the past. The question naturally arises as to what satisfactory merchandise controls can be devised which are less elaborate and expensive than those now in use, bearing in mind that these internal controls must be maintained at each headquarters port and in many instances, at each port of entry. Such controls over actual money collections only would be comparatively simple if they were not so closely tied in with the merchandise controls.

2. Approximately half of the present comptrollers of customs employees, exclusive of the field auditors, or about 110 employees, including the proportionate share of supervisory officers, file clerks, stenographers, etc., are at present engaged in maintaining these controls. This breaks down to an average of approximately 2½ employees per collection district to maintain these controls under the present system. Any adequate system of internal control would certainly require at least that many additional employees in each collection district, with a consequent lack of savings to the Government.

All of which points to the fact that the lowered audit cost which motivates the McKinsey recommendation is a mirage—that the lowered staffing costs (based, be it noted, on a decidedly skeletal unit) would be offset by the loss to the Government of the increased duties annually collected by reason of the Comptroller's present complete verifications and liquidations, to say nothing of the loss occasioned by the less efficient use of personnel which would be characteristic of a mobile audit unit in customs work. In short, the McKinsey people would substitute for the present complete audit by the Comptroller a triple tier of spot checks (collector, internal audit, GAO) and the price or cost of this "jerry-built" structure would not be less than the cost of the present system evolved through 150 years of practical experience.

Some of the references to the General Accounting Office in the report indicate a possible confusion as to its function with relation to customs matters. The GAO performs no verification work as the term is used in our service. They may check to see if the amount of refund is computed correctly and properly paid, but GAO auditors do not possess the technical training and customs knowledge required to check the decisions and calculations entering into the ascertainment of the amount of duty, on which subsequent payments, refunds, etc., are dependent. The specialized work of liquidating (and verifying liquidations) requires considerable training and a GAO auditor equipped for auditing receipts and expenditures for all types of Government agencies could not be expected to have the technical knowledge required for verifications of liquidations in the customs service.

It may be said, of course, that the present complete audit by the Comptroller turns up decrease errors as well as those which realize the collection of additional revenue of some $800,000 annually. It is quite true that the Comptroller's work frequently results in refunds to importers and that these run in the aggregate to very large sums, sums which in many years may approximate the additional revenue collected by reason of increase errors. It may be argued, therefore, that without the present complete audit the Government would save these refunds and this saving would make up for the loss of the additional revenue the complete audit produces. This argument is not only fallacious, it is morally and ethically unacceptable.

Import trading is as old as our country and in the course of years there has grown up to service it, groups of attorneys and brokers who specialize in customs work. Most customs litigation is on a contingent basis and the gentlemen who engage in it depend for their livelihood upon overturning Customs assessments. No one at all familiar with this phase of the work would expect any significant number of these decrease errors to go unchallenged. Not only would most of the saving vanish, but the necessity for collecting the refunds by recourse to the courts—thereby increasing the work of the customs courts, the Customs Division of the Department of Justice, and the Customs personnel who process protests and appeals to the customs courts—would make the payment of these deserved refunds an unnecessarily burdensome and expensive procedure to all concerned.

Customs, as an arm of the Federal Government, is obligated to treat all with scrupulous fairness, to administer the laws entrusted to it impartially and uniformly, to make certain, as far as is humanly possible, that given the same conditions of time and commodity, each importer pays the same amount of duty, at the rate prescribed by Congress—no more, and no less. The Tariff Act is a lengthy and intricate statute, full of fine distinctions and the subject of a multitude of judicial and quasi-judicial interpretations. It is against this background that the liquidator in a collector's office makes the initial determination of the duty payable. He has before him the shipper's invoice, the entry papers (including the bill of lading and any affidavits or other documents that the circumstances of the particular shipment may require), the appraiser's description of the merchandise and report of its value and condition, the inspector's tally of over-all quantity or weight, and perhaps a chemist's analysis. Initially, he must satisfy himself that the various reports before him are sufficient for his purposes and seek supplementary information when they are not. Then he determines the quantity and condition of the merchandise to be assessed and the dutiable value thereof, resolving any differences among the shipping papers and the miscellany of official reports supplied him. Then, from the complex of interacting and overlapping provisions which is the tariff, he selects the one rate which alone is applicable to this shipment and computes the duty down to the penny. This, in bare outline, is the process for each commodity in the shipment. Many liquidations involve invoices of numerous commodities. The intricacy and complexity of his work and the pressure under which it is most frequently performed are such that no reasonably prudent man would dream of permitting work of this kind charged with a public interest, involving huge sums of money, and containing the seeds of economic unbalance, to go unreviewed. Duty assessments are meant to be precise and accurate. Unless they are, the congressional intent which gave rise to them is nullified and the tariff becomes a guide rather than a rule.

There are two other generalizations found in the report which should be dealt with at this point, i. e., (1) the criticism that the approach of the comptroller's offices is geared over much to error finding and (2) that the knowledge that the Comptroller will closely check his work tends to make the Collector's man less careful in making his original liquidation or other assessment and

[3] These figures as well as other figures used and not further documented are based on the annual averages of each of the seven comptroller offices as far as available.

UNIVERSITY OF MICHIGAN LIBRARIES

that many, if not all, of the errors now caught by the Comptroller would not have been made in the first place had the Collector's man known he was on his own and could not be sure that a subsequent check would catch any errors.

With regard to error finding it should be borne in mind that the fundamental purpose of the Comptroller's work is the protection of the revenue. This is done in twofold fashion, (1) by verifying the Collectors accounts and, (2) by verification of the liquidations to check his duty assessments. Mechanical errors, and mathematical errors are insignificant. The value of the review lies in bringing to light other types of errors, oversights, mistakes in judgment, interpretation, application, etc. Since principles and precedents are frequently involved, the monetary difference arising from a particular error is often of secondary importance—the basic concern being that the law or rule be understood and correctly applied.[3] We think that the most effective way to straighten a man out on a specific matter is to point out to him just what he has done that is wrong and why it is wrong. We know of no more pragmatic method of educating against error. The McKinsey people missed the point here. Error finding is not an end in itself, it is a means to an end.

Lacking any foundation in fact or reason is the contention that were the present complete audit of the collectors' accounts and transcations removed, the collectors' personnel would do a better job and avoid most of the errors which are now grist in the comptroller's mills. This is pure nonsense. Collectors' personnel do an excellent job and the errors found are of importance only because the aggregate sums involved are so large that even the small percentage of errors[4] that occur cause revenue differences running into seven figures annually. The quality of the work is extremely high and the complete review by the Comptroller is a factor in keeping it high. The efficiency and performance of a liquidator are judged in great measure in his error record, and this, plus the humiliation naturally attendant upon receiving error tickets routed through channels from the Comptroller, tends to keep the employee on his toes. To say that the removal of the checks would have anything but an opposite effect is running counter to human experience. In this connection the McKinsey people manage to carry water on both shoulders for in another portion of the report, in citing the advantages of a proposed system of checks of collector's fiscal accounts, they mention as one of the benefits to be gained from the system the increased alertness and efficiency that will characterize the work of collectors once they are aware that it will be the subject of semiannual review and report.

The most cogent argument against substitution of the spot check for the present complete review is the character of Customs work. It is our opinion that spot checking would not provide sufficient safeguards in an operation of this kind. To an astonishing degree Customs transactions, even in the same commodity, are different one from another. The rate of duty applicable to a commodity is the most stable factor entering into the duty assessment on that commodity. And even this may vary with the weight and value of a particular shipment as well as being subject to change through judicial or other authoritative interpretation. Factors of weight, value, quantity, conditions, and even time of entry all enter into the calculations and most frequently differ from one shipment to the next. The Tariff Act contains some 732 paragraphs, many of them so further subdivided that there are well over 3,000 specific provisions, many of these in turn interrelated in such a fashion that a modification of one broadens or narrows the application of others. The act as a whole is as broad in scope and as diverse in the range of items covered as American business, industry, and agriculture. Consequently, there is a minimum of uniformity in the subject matter of Customs transactions. There is no pattern to them which generally permits a check of one to be a check of the others. The spot-check method is not only impracticable here, but it will produce confusion and delay in the conduct of Customs business and open the door wide to fraud and collusion. Consider how the system would operate in these specimen phases of the work of a comptroller's office.

Accounts current of collector's and supporting schedules and vouchers

At present a preaudit is made at the end of each month. Before transmission to the GAO, balances on hand, current collections, deposits credited within the month, and balances carried forward are verified from supporting schedules. Erroneous deposits, as such, are called to the attention of the Division of Bookkeeping and Warrants for correction. Errors are brought to the Bureau's attention when transmitting the accounts. The whole transaction is on a current basis, resulting in prompt adjustments of differences.

Under the proposed system, the field-audit group would visit a port (except New York) not more than twice in a calendar year. The accumulation of differences during this interval would be almost impossible to straighten out. For example, many times collections are scheduled under one symbol or account and deposited under another symbol; fines and penalties incurred are not always billed; refunds due to overpayment or mitigation are sometimes neglected; incorrect rates for reimbursable services are applied, and so forth.

Draw-back and import entry liquidations

Draw-back entries are, in effect, applications for refunds of duties paid on imported materials which have been used in products made in this country and then exported. For example, imported manganese ore used in the manufacture of steel, or lead used in the manufacture of certain gasolines. Normally they involve the refund of very large sums. They are usually highly intricate in nature and customarily are handled by employees who specialize in draw-back work. The draw-back liquidator must be thoroughly familiar with the processes by which the imported article is employed in the exported product. This is necessary so that he can identify the imported material and, by following it through the manufacturing process, protect the revenue against unauthorized diversions or substitutions and determine the amount of duty to be refunded.

The nature of import entries has been sufficiently discussed hitherto to require no further outline in this connection.

When liquidations are completed in a collector's office the entries are posted in a conspicuous place in the custom house as legal notification of their liquidation. This starts the statutory period running in which the liquidation and any or all of the decisions entered into it may be reconsidered. Under section 514 of the Tariff Act such liquidation becomes final[5] and binding on all parties, including the United States, within 60 days after such posting.[6] Under the McKinsey system, even if the spot check turned up something in its semiannual check, the likelihood is that because of the passing of the 60-day period no correction could be made. Consequently, the spot check would be waste motion in most cases even when the long chance of this type of audit developing something paid off. The alternative might be to extend the 60-day period to 7 months. The difficulty here is that this would delay the final disposition of all customs transactions with consequent disservice to the business community, and in the very few occasions when the spot check produced an error, it might be too late to close the barn door.

Manifest liquidation

Under existing laws and regulations the Comptroller receives independent information as to all merchandise arriving in his district. This information is contained in plane or vessel manifests forwarded direct by masters or pilots; by carriers in copies of I. T. entries or other forms of transportation entries where merchandise entered in one district is sent to another for disposal. The Comptroller therefore knows of all imported merchandise in his district, and he is in a position to see to it that it is either entered under some type of entry or exported, or if neither, sold at public auction or abandoned.

To account for the disposition of all merchandise coming into a Comptroller district or its equivalent by spot check would invite fraud and collusion on a gigantic scale. Were a vessel manifest to be suppressed or altered and the merchandise delivered without benefit of customs, no spot check could ever uncover the transaction, as there would be nothing to check. Moreover, it would be extremely difficult and costly to follow up merchandise unaccounted for if the field auditors visited a port only twice a year.

The proposal to do away with comptrollers of customs is by no means new. The usefulness and desirability of the present system of comptrollers' offices have been examined thoroughly many times, both by Congress and by the executive department, and in every instance the conclusion has been that the system is necessary, effective, and efficient.[7]

---

[3] Sec. 16.2 (d), C. M. 1943, requires comptrollers to suspend the collector's liquidation for a manifest error in computation or for an error in rate regardless of the amount involved. Other differences under $1 are ignored.

[4] Despite the volume and extreme complexity of the work and the everpresent human factor, the national average is under 2 percent and local administrative offices are constantly striving to hammer it down further.

[5] Except in cases of clerical error.

[6] Sec. 514, Tariff Act. This section makes provision whereby importers by filing suitable protest within the 60-day period may keep the specific issue raised alive until it is settled by the courts or other authority.

[7] Over 20 years ago the then Secretary of the Treasury, Andrew Mellon, commenting on a proposal to transfer the comptrollers of customs to the General Accounting Office, wrote as follows: "It (the comptrollers' function) has been proven necessary by long years of experience and I am satisfied that if the comptrollers and their present organizations were to be transferred to the General Accounting Office, which in the nature of things would be limited to auditing functions and could not act in an administrative capacity, it would be necessary for the Treasury to erect in their stead a new organization to discharge the administrative duties which the comptrollers now perform." (Letter of March 7, 1923, to the Comptroller General.)

Extract from the Annual Report of the Secretary of the Treasury to Congress at the opening session, December 5, 1927:

"The legislation prescribing the procedure to be followed in connection with the audit by the General Accounting Office of customs accounts, referred to in the last annual report as pending in the Congress, failed of passage, as did also a substitute bill. Through conferences between representatives of the Comptroller General and the Department, however, an understanding was

It is our considered opinion that the McKinsey recommendations with regard to the work of comptrollers of customs are shortsighted in the extreme and, if adopted, would inevitably and in a short time work irreparable damage to the effectiveness, efficiency, and probity of customs operations, ramifications of which would be felt in important segments of American business and industry.

These comments have not been extended to cover that portion of the chapter which deals with the managerial aspects of the audit work. Some of the suggested changes have already been adopted—the consolidation of forms and the improvement of the internal-revenue rules regarding withholding-tax payments on pay rolls, for example. Others, such as the recommendation that the liability of certifying officers be reduced, are matters of policy for Congress to decide.

CHAPTER VII. PROTECTION, INVESTIGATION, AND ENFORCEMENT

The recommendations contained in this chapter as set out in pages 33 to 35, inclusive, and our comments are as follows:

1. Port patrol operations

(a) Reduce the amount of merchandise guarding where study indicates that other agencies should do more of this work.

The fuller treatment in the text shows that what is referred to here is the assignment of port patrol officers to prevent pilferage of private property on piers, etc. We know of no general practice of making such assignments and presumably they are local matters made as an accommodation to importers and exporters for purposes of good will. It is easy to understand the private parties' approval of such assignments. It costs nothing and because the port patrol officer can search on mere suspicion, his guarding is more effective. However, there is no justification whatever for assignments of this nature. Protection afforded private property by the assignment of a port patrol officer should never be more than an incidental benefit flowing from the assignment, never the motive for it. This is so clearly a noncustoms activity that there should be no time lost studying it. A peremptory order discontinuing such a practice, where it prevails, is called for.

(b) Increase the use of mobile patrols where practicable, thereby reducing costs.

The use of the phrase "where practicable" in this recommendation makes it incontestable. However, the text indicates that McKinsey & Co. consider that mobile patrols are practicable in large ports where they are not being used.

The port patrol force is a screen through which all articles taken from vessels arriving from foreign ports and from piers and terminals used by such vessels must pass. It is a screen, too, for all persons arriving on such vessels or having access to them. The searching of crew members, longshoremen, etc., leaving a pier is much more of a regular routine than the report suggests, and it is highly effective. Some notable seizures have been made in just this fashion, and seizures of one kind or another are made daily. To be effective at all, this screen must be operative day and night every day of the week. The limitations of mobile patrol under these circumstances are obvious. Mobile patrols are not sufficient for pier areas where vessels are moored unless there exists very favorable physical circumstances, such as the segregation of a number of piers within a high fence or other suitable barrier with but one point of exit from the area. The fact that city police use such patrols is beside the point. The problems and needs are entirely different.

(c) Expand the use of modern equipment and training to make patrols more flexible and effective.

Anything in the way of equipment and training which will increase efficiency is worth while. But care should be taken lest time and money be wasted on equipment that, while modern and the best of its type, has little practical value for customs. Training programs should be scrutinized closely to this end also. The proposal to send selected men to the Federal Bureau of Investigation schools seems to us inadvisable. The work of the port patrol officer is highly specialized. Much of the police work taught in these schools—viz, fingerprint work, criminal identification, the law of warrants and searches and seizures, investigative work—is without any value in the daily work of the port patrol officer.

(d) Change New York roll-call practices. Test out operations with no roll call. Until results of test are known, decentralize roll call and require supervisors to prepare themselves to drive cars in order to facilitate speedier coverage and inspection of personnel.

The trend is toward decentralization of the roll call. As far as possible supervisors should be required to drive their own cars. It can mean a saving in personnel with no impairment of the effectiveness of the patrol force. It might be a good idea to have another test of operations without roll call as suggested. The question could be settled for good, perhaps. On the other hand, twice in the past has the roll call been discontinued, only to be reestablished. There should be sufficient data on hand without the necessity of a third test.

(e) Standardize vessel searching practices to achieve more uniform coverage and practices.

We read "as far as practicable" into this recommendation so as to allow for local conditions and the difficulty of confirming illegal activities into rigid patterns. Standardization would require a common knowledge of varying methods and procedures so that the technique best adapted for familiar situations would be known to all. Improvement along these lines should be self-starting and not require the prodding of an efficiency survey.

(f) Deploy port patrol officers in accordance with work load to obtain greater uniformity and lower costs.

This is another way of saying that the responsible officer in the Bureau should examine staffing requirements in the various Port Patrol forces throughout the country to see that the work load and the staff maintain a proper relationship. This has probably been done now annually as part of budget preparations. If it isn't, it should be.

2. Customs Agency Service

Transfer responsibility for draw-back rate-application investigations from this organization to the Fiscal and Budget Division.

This transfer would be ill-advised, in our judgment. This work has long been easily and satisfactorily performed by the Customs Agency Service. The only reason for the proposal apparently is the feeling that this work is more closely allied to auditing and production engineering work. Actually, these investigations are, at base, fact finding in their nature, as are most investigations. The experience of men who have performed this work for years is that the requisites are simple accounting, a knowledge of customs laws and procedures, and an ability for investigative work.

3. Border operations

(a) Initiate action which will eventually organize a Federal border enforcement agency to combine the activities of all enforcement units now on the border.

This is a first-rate idea. There is opportunity for greater coordination of border enforcement work along these lines without any impairment of efficiency.

(b) Watch for evidence on the Canadian border of increased professional smuggling in the future. If this develops, increase the organization to combat it, either through the customs agency service or by reinstating a border patrol, depending upon the extent of the smuggling.

This is all right as far as it goes. It is no more than keeping tabs on the trend of illegal activities and deploying your forces most advantageously to cope with them. However, there is a certain complacent acceptance of the present virtually wide-open Canadian-border situation which we think is dangerous. On page 23, after relating the seizure at Vancouver, British Columbia, of a large quantity of opium which the smugglers were apparently intending to run in over the open Canadian border after being frustrated in attempts to land it undetected at various United States ports—the following statement is made: "This may be the start of a trend but it does not establish clear-cut evidence of increased professional smuggling." The point is that smuggling is by its nature clandestine. It does not proceed with bands playing and banners flying. Particularly with regard to narcotic smuggling does it seem to us that the reasonable probability of increased activity on the Canadian border should spur us to appropriate countermeasures at once without waiting for clear-cut evidence that such activity is and has been taking place. And that probability has existed for some time. Organized dope running is big business and it is reckless, indeed, to act on the assumption that the gentry who manage this traffic have failed to realize the remarkable opportunities implicit in our emasculated northern-border set-up. Nor should we bank too heavily on the fact that such smugglers have to get past the Canadian authorities before they menace us. Generally speaking, the final step in the illegal narcotic traffic, the distribution to the addict, takes place in large cities. Areas of dense population are the natural terminal points for this unsavory business. Sparsely settled Canada, with some 12,000,000 inhabitants in a land area greater than the 48 States and with relatively few large cities, is not the golden market for the dope-runner that the United States is. Consequently, narcotic smuggling is not the problem for the Canadians that it is for us, and we are not measuring up to our needs when we rely on their preventive measures to do our work for us.

(c) Obtain more funds so that greater use may be made of purchased information to combat smuggling.

To the extent that additional funds for informants will purchase useful information, funds should, of course, be supplied. However, it seems to us that before any such sum as the $100,000 recommended is disbursed, a study might be made in the Bureau going back over the figures for the last 10 years to see if there is any relationship between the amount of money made available or spent for this purpose and the amount of useful information obtained. The McKinsey recommendation is that emphasis on bought

---

reached for the making of audits of customs accounts in the field by the General Accounting Office. Accordingly auditors from the General Accounting Office traveled to all the ports in the United States and periodically examined the accounts of collectors of customs. The differences and disallowances resulting from these field audits were negligible and such as were reported had in practically every instance been developed by the audit at the seat of government from papers submitted to the General Accounting Office with the collectors' accounts in support of expenditures from annual appropriations. It is gratifying to have the thoroughness and efficiency of the Department's administrative examination of customs transactions through the comptrollers of customs thus confirmed."

UNIVERSITY OF MICHIGAN LIBRARIES

information as against patrolling will make possible a 25- to 35-percent reduction in the patrol force, without, however, eliminating patrolling which would be done irregularly between entry points. Having in mind the necessity for men traveling in pairs and the 24 hours a day, 7 days a week character of this type of work, it is difficult to see how any such reduction could be made without making the patrol feature of border enforcement a farce. The practice of buying information is a necessary one but it should be used carefully lest it become a crutch which will in time rob the investigative and enforcement force of its vigor and alertness.

(d) Test radar as preventive of smuggling by airplane across the Mexican border.

Good idea.

4. Organization

(a) Establish two assistants to the Deputy Commissioner to allow for closer supervision and better coordination of all Customs enforcement work.

This recommendation would create two unnecessary supervisors in an organization that is carrying a peak load of such positions. Larger allocations for speedier communication such as telephone and teletype would be more useful.

Pending the establishment of a unified Federal Border Patrol, the Patrol might well be placed under the direction of the Collectors of Customs for the districts involved. These are the officials with whom their activities are directly associated. This was the arrangement previously.

To prevent duplication and conflict, payments for information should be the responsibility of the Customs Agency Service only.

(b) Give the Deputy Commissioner increased functional responsibility over port patrol operations so that practices may be kept uniformly modern and deployment of men can be made on a basis better related to work load.

There can be no objection to this provided the responsibility for the effective operation of the port patrol force in each district is kept where it belongs in the hands of the Collector of Customs for the district. The Deputy Commissioner can be of great assistance here in coordinating the port patrol work and acting as a clearing house for information as to new methods, techniques, and procedures.

(c) Reorganize the Border Patrol in keeping with the expanded use of informants, eliminate its present military nature, and call it Border Enforcement Unit.

This subject has already been treated in part in our comments on 3 (c). Neither the change in title nor the proposed demilitarization of the Patrol are matters of major consequence though before the uniform is dropped altogether some thought should be given to the deterrent effect that the appearance of a uniformed enforcement officer has on some potential lawbreakers. A uniformed man can always work in civies if the detail requires it. In line with the comment is the report on page 33 that because of the arduous nature of this work requiring above-average physical stamina an effort should be made to staff this outfit with young men with transfer or retirement of older men; this might be the appropriate time to consider these men in connection with the 20-year retirement plan just approved by a subcommittee of the House Post Office and Civil Service Committee.

It seems to us that throughout their study of the activities covered by this chapter, McKinsey & Co. have been obsessed with the mirage of money. Naturally their function being that it is a certain preoccupation with costs is to be expected and is necessary. But they have gone farther than that. It appears as if when they approach a proposition they are predisposed toward it if it promises to be a money saver so much so that they fail to give equal consideration to the pros and cons.

The proposals for extensive use of mobile patrols in the port patrol and spot patrolling by the border patrol are designed to save money. But they cannot be justified unless they provide adequate protection. The McKinsey people justify the thinning out of these patrolling activities by accepting (p. 6) from some unidentified source the statement that most of the big seizures are made, not as the result of patrolling, but on tips from informants. This is an important point, one which cannot but influence one's attitude toward patrol work. Further, it is a point which can readily be checked. Yet primarily we think because it is a palatable fact, it is accepted without check. Actually the truth lies in the other direction.

The report mentions savings up to $100,000 per annum as possible when the roll call is abolished. The saving comes from elimination of the half-hour overtime which is an incident of roll call. It is fairly reasonable to assume that the lure of this saving is the reason for the great hullabaloo raised over the roll call. Actually this saving could be made without changing the roll-call practice at all. A simple change in the regulations permitting the port patrol officer a half-hour lunch period within his tour of duty would do the trick. Staggering of lunch periods of officers on adjacent piers and other administrative devices could prevent any lessening of the effectiveness of the patrol thereby.

CHAPTER VIII. CUSTOMS OPERATIONS AT AIRPORTS

Chapter VIII of the McKinsey report concerning customs operations at airports is wordy and critical but sketchy and inconclusive. It is critical of conditions at airports, but offers very few constructive suggestions to improve existing conditions. Most of its 39 pages are concerned with the handling of the baggage of air travelers, but it fails to even scratch the surface insofar as cargo operations at airports are concerned. The report indicates very plainly that the committee didn't learn very much about air-cargo operations in the course of their study. Anyone who is conversant with the subject knows that the handling of air cargo is a much more important and urgent problem than the handling of the baggage of air travelers, so far as customs are concerned, yet the report is eloquent in what it leaves unsaid on this subject. While air travelers are more numerous than importers of air cargo, nevertheless the latter pay far more in customs duties and the handling of their imported merchandise entails the services of two or three times as much personnel. For instance, 6 or 8 inspectors and 1½ or 2 examiners can handle the baggage situation at LaGuardia Airport, whereas it requires the services of 17 inspectors, 4½ examiners and 2 customs verifiers to cope with the cargo situation during 8 hours at the same airport. The McKinsey report (p. 4) states that, in some instances, air cargo is handled expeditiously while at other airports the procedures in effect are cumbersome. It also reports that (p. 4) exasperating delays to travelers or importers were observed. However, it never once indicates what importers suffered the exasperating delays, or where the air cargo is handled expeditiously, or what procedures are cumbersome, or where such procedures are in effect. Except for recommending the revision of "Immediate Transportation Procedures" and extending the use of informal entries, the report offers nothing to improve air-cargo operations.

LaGuardia is the largest airport of entry in the United States. At LaGuardia Airport each air line has its own space for handling imported cargo with the result that there are 21 different places where air cargo is received, examined, and delivered. These individual cargo spaces are small and lack the facilities necessary for the expeditious handling of cargo. Seventeen customs inspectors are required to supervise the receipt and delivery of cargo under this arrangement and customs examiners waste time and energy running from place to place to perform their duties. If one large cargo space with facilities adequate to handle the air cargo carried by all the air lines was provided, more cargo could be handled at considerably less expense to the customs service.

The McKinsey report is completely silent on this subject.

Several suggestions of the McKinsey committee are self-evident and should be adopted, but others are of doubtful value if not actually dangerous and should be considered carefully before being adopted. The following suggestions fall within the first category and should be adopted:

1. Air lines should be induced to improve the baggage-unloading operations (p. 12 of McKinsey report).

2. Customs policy with respect to facilities should be reinforced by establishing standards as to size, lay-out, and auxiliary facilities, and employ a competent industrial engineer to develop these standards (p. 13).

3. Modernize or add buildings (p. 13).

4. Simplify baggage declarations and provide adequate instructions to guide passengers in the preparation of these forms (p. 15).

The following suggestions of the committee are doubtful or dangerous and should not be adopted at all or not until their effects are carefully weighed:

1. Institute spot-check baggage inspection methods (p. 16). This is an open invitation to smugglers and other dishonest travelers and would be a very dangerous innovation. There is no justification whatever for spot-checking the baggage of air travelers. Because of weight and other restrictions on the amount of baggage that may accompany the passenger, the air traveler never has a great amount of baggage. The physical examination of his baggage never takes more than a few minutes unless there is something out of order. The McKinsey people concede that most of the wasting at airports is not connected at all with customs, though we bear the onus of it. Even what waiting is incident to customs would be pared to an insignificant minimum if the physical facilities were made adequate as suggested.

There is nothing in this situation that warrants adoption of spot-checking. We should not buy spurious good will by failing to do an adequate job. Further the adoption of a spot-check system, as suggested, would actually foster ill will and resentment toward the customs. The travelers whose baggage was picked for examination would feel that they were being picked out as the ones most likely to be crooked. No amount of explanation that they were the guinea pigs in a scientific spot-check would wholly mollify them nor would it dispel the idea from their minds that their more fortunate fellow passengers thought their baggage was chosen because they were suspect. To say nothing of the general impression that those who went unexamined knew someone or greased someone's palm.

2. Place one supervisor in charge of all operations at an airport (p 17). On the face of it this is a good recommendation if it really could be done. If a supervisor was created who would have charge of all operations including customs, immigration, public health, plant quarantine, etc., it might make for improvement, but inasmuch as such a supervisor could not be created in view of the number of departments of the Government involved, this recommendation does not have any merit whatever. The McKinsey recommendation merely envisages a supervisor who would supervise the activities of the appraiser's staff as well as the collector's staff at the airport. There has never

been any criticism of lack of coordination between these two groups. In fact the only difference cited by the committee is that the inspectors at LaGuardia Airport, who work for the collector, are available regularly two shifts per day, while the examiners, who work for the appraiser are only regularly on duty one shift per day. This suggestion of the McKinsey group would merely create another job with a high sounding title, with a higher grade and salary, but with little additional responsibility to go with it.

3. Combine certain inspection and appraising operations (p. 17). This recommendation contemplates training certain personnel both in inspection and examination so that one man can be authorized to perform both operations up to a given value level. This appears to be a worth-while suggestion so far as airports are concerned where relatively few inspectors are required for baggage examination and where examiners are readily available if a difficult problem arises. Its feasibility elsewhere is something else again.

In pages 20 through 23 a number of suggestions are advanced for temporary measures which will immediately relieve unsatisfactory physical conditions at LaGuardia Airport. The suggestions are quite good and their adoption would benefit the traveling public, the airlines and the customs. However, these are the stuff dreams are made of unless the air lines change their attitude overnight or unless our own administrators drop their hat-in-hand attitude toward the air lines and treat them with proper firmness where supplications are unavailing. The air lines have had this unsatisfactory physical layout pointed out to them many times but have shown no disposition to do anything about it. Of course it may be because the traveling public blames customs for their delays and discomfort and does not realize that the carriers are largely responsible through their failure to provide proper facilities.

Revise immediate transportation procedures—public store packages

On page 25 under the above headings the survey makes useful suggestions:

4. Expand use of immediate delivery permit: The survey finds that we are not taking full advantage of our authority to release merchandise to an importer immediately. As far as we know we are giving the immediate delivery permits as wide a use as possible but we are open to suggestions, specific suggestions.

5. Extend the use of informal entries (p. 25): The customs regulations authorize the use of informal entries for shipments such as samples valued at less than $100. The McKinsey committee recommends the expanded use of this type of entry up to the amount of exemptions granted a returning passenger. There are only two things wrong with this suggestion and it serves to indicate how the committee merely skimmed over the situation at the airports. In the first place the recommendation endeavors to avoid the use of formal entries rather than to improve them. Secondly, it attempts to put cargo shipments of regular merchandise in the same class as passengers' baggage. This is an erroneous idea for the reason that passengers are restricted by the customs regulations in the number of exemptions they are entitled to, whereas no such restriction applied to importers in the use of informal entries. By enabling an importer to enter larger shipments of merchandise on informal entries it enables him to escape the consequences of undervaluation, for it is only in a formal entry that an importer is required to make a sworn statement attesting to the correctness of the value shown on an invoice. With several planes arriving at LaGuardia Airport each day from Paris, London, Rome, Stockholm, etc., it would make it easier for an importer to split his shipments so as to avoid ever making a formal entry. The recommendation indicates that the committee did not attack the problem in the proper manner. If it had cared to investigate it could have very readily ascertained that the customs are examining and releasing merchandise at LaGuardia Airport on the same day or on the day following entry, whereas it is usually a week after the arrival of air shipments before an importer makes his entry. Customs certainly has nothing to be ashamed of in this record. Any criticism in this connection would seem to lie at the door of the air line, the importer or his customs broker. The time which elapses between the arrival of air shipments at the airport of entry and the release to the importer is accounted for by the slowness of the air line in issuing arrival notices and/or the slowness of the importer or his broker in making the entry, the latter in many instances based on the former.

From page 26 through to the end of the chapter are set forth a number of recommendations for bringing up to date the tariff and other laws and regulations pertaining to handling of aircraft operations, also suggestions for cost analysis of operations, etc., all of which are of a general nature and not particularly controversial. Others which deserve comment are dealt with elsewhere and our comments will be found in those chapters. Before concluding, however, we should like to point out a few statements in the text which in our view illustrate very forcefully the superficial nature of most of the surveying done on the airport work. On page 23 the following appears:

"There appear to be more passengers and more bags per plane arriving at LaGuardia than at any airport in the country. Our study showed an average of 33 passengers and 81 bags per plane compared with 11 passengers and 16 bags at Burlington, Vt." The committee would not have to study very hard to ascertain that the passengers at LaGuardia are chiefly from Europe, Africa, or South America where they stay for longer periods and require more baggage than the passengers at Burlington, Vt., who are chiefly from Canada where they stay for shorter periods and therefore require less baggage. Based on this observation and the statement that a lower percentage of passengers pay duty at LaGuardia than at Miami or Washington, the committee concludes that spot checking the examination of baggage would speed operations at LaGuardia. Apparently the committee did not undertake to study the type of passengers, the countries from which they came, or the number of undeclared or undervalued items at LaGuardia as compared with other airports before making their spot-checking recommendation.

Another example of the depth of the committee's study is found on page 19 where it is stated "that approximately 30 minutes in process time is required for the Canadian section and 100 minutes for the overseas section" in the customs handling of passengers baggage at LaGuardia Airport. Not one word is mentioned in the report about the wide difference in the problem at the two sections. Any kind of a fairly exhaustive study would have shown that only two air lines are involved in the Canadian section, that there are comparatively few simultaneous arrivals from Canada, and that the passengers present practically no immigration or public health problem, as compared with 15 or more air lines involved at the overseas section with two, three, or more planes arriving simultaneously with passengers from almost every country in the world, many of whom present the immigration and customs officers with problems of a difficult nature to handle.

CHAPTER IX. EFFECTIVE MANAGEMENT FOR THE CUSTOMS SERVICE

For the most part our comments are set out immediately beneath the recommendation. Some of the recommendations in this chapter, however, are extremely general in nature though sweeping in character and cannot be thus categorically treated.

Simplify and streamline headquarters organization—Establish regions and realine activities to attain faster, better service in the field at less cost

These two recommendations are the principal features of a drastic change proposed in the organization of the Customs Service. Generally speaking, authority is now exercised at the top (the Customs Bureau in Washington) and locally in the various collectors' offices, etc. The proposal is to drain off much of the authority from either end and concentrate it on an intermediate level in newly created regions, nine in all, each complete with regional director and staff. The proposal itself is regarded by the committee as tentative and suited for further study. It is not an economy measure since comparatively it would cost $525,000 per year more than the present system. Its special appeal to the committee lies in their conclusion that it will free the top management of customs of the burdens of administration and thus create a corps of headquarters executives who can devote the majority of their time to top-echelon planning or staff work. The effect expected is an over-all improvement in customs work. Since the committee considers that customs is now run as efficiently as the average business organization, the changes and the $500,000 or more additional cost would be counted on to improve the service to a point where its efficiency would be measurably superior to that of the majority of enterprises run for private profit.

Since the proposal is labeled tentative and subject to further study it is probably fairer to make observations concerning some of the premises and conclusions rather than express either criticism or approval.

Much of the cited work load on the Commissioner is perfunctory, not real. The number of persons cited as reporting to him personally is misleading. Most of this reporting is irregular and much of it through channels. The real work load could be lessened very appreciably by the delegation of authority to and the assumption of responsibility by the existing staff. Managerial skill would be as effective here as certain phases of the proposed reorganization.

The suggestion that collectors be given greater leeway to deviate from the regulations is an excellent one and if backed as suggested by occasional check of its use would give useful flexibility to certain customs operations. It is not true, however, to say (p. 15) that collectors lack authority. They possess great authority and their deficiencies on the score of experience in customs are compensated for in the assistant collector's background.

The principles of good organization outlined on page 17 would place certain inhibitions on the organization and location of regional offices. Because they are so closely related and occasion so much intercourse between customs offices and importers, brokers and attorneys, appraisement, classification, and liquidating activities should be located together. The logical place for such location is a port city, in most cases a seaport. It is desirable that the regions set up be roughly equivalent in area and the volume and scope of their activities. But this factor combined with emphasis on location of regional headquarters at a seaport city in most if not all instances, would mean a grouping of areas without regard to size, geographical association or similarity of

UNIVERSITY OF MICHIGAN LIBRARIES

problems and conditions which is itself a recognized principle of good organization. Of the two alternate plans for the regional organization we think that which confines the regional office to supervisory duties and leaves the administrative work at district levels, as it is presently, is the better.

The emphasis on freeing what is called the top management of the customs service from the burdens of administration so as to free them for high-level planning betrays a fundamental misconception of the nature of Government operations and more particularly customs operations. There is no parallel between the problems of industrial or commercial top management and those of the customs executives. The businessman must explore possibilities which are not open to the customs executive. He is relatively a free agent. At bottom the only limitations upon him are that he operate a legal enterprise and do so profitably. The scope for planning, for staff work is limitless. The customs administrator has no such continuing need for absorption in planning. His activities are sharply circumscribed, the work he is to do, and many of the methods and procedures which he employs, are prescribed for him by higher authority. The scope of his planning is sharply limited. On a permanent basis, therefore, the plan to divorce planning from operations by giving one Deputy Commissioner full responsibility for field operations would be wasteful.

A similar statement might be made of the various new technical jobs created. After the heavy original work of standardizing and improving spot checking and setting up useful statistical data, developing plans and lay-outs for customs facilities at airports, etc., improving the lay-out of customs houses, developing and improving material-handling devices, etc., etc., had been disposed of, the large staff of expert professional consultants employed would no longer be needed. The systems instituted could be carried on by fewer persons with much less skill. This suggests that the better arrangement would be not to add sections or divisions of such professional personnel to the customs organization but to use them on a consultant or fee basis while the need for their special services exists. Some consideration might be given to borrowing such talent for short periods from other Government agencies, engineering help from the Public Buildings Administration, airport engineers from the Civil Aeronautics Authority, just as McKinsey & Co. borrowed Dr. Deming from the Bureau of the Budget. We should be careful lest in creating more top brass we staff the customs service with Mexican generals.

Improve personnel administration, especially with reference to training, promotional opportunities, and handling of personnel actions

There is room for great improvement here along the lines suggested. The establishment of personnel policies and the issuing of directives thereon should be in the hands of a central authority with provision for review of important personnel changes and adjustments. Authority for routine personnel matters should stay at the district level subject to occasional spot check from above to insure uniformity of action.

The spirit the committee found in the Customs Service is all the more noteworthy since it exists despite gross abuses and inequities in personnel administration by some local administrators and the Bureau. When the rank and file of a competent outfit like the Customs Service are generally suspicious of the good faith of the organization's top command, personnel matters are being handled badly.

Establish a work measurement and simplification program for constant review and improvement of organization procedures and methods.

This will provide useful managerial tools.

Undertake a comprehensive public relations program to correct misimpressions concerning customs laws and regulations and to generally improve the reaction of the public to the customs service.

A useful idea. The idea of emphasizing the theme that it is American to be honest might be productive of improvement. In noncommercial matters, the weakness has been not that people are dishonest but that they regard the observance of customs laws as outside the scope of their normal moral code. Persons who are scrupulously honest and fair in all their other dealings frequently think nothing of trying to beat the customs. It is regarded as a game. In commercial matters while dishonesty exists the great problem is that of securing necessary information from unwilling or reluctant sources.

The recommendations proper do not mention a revision of the so-called 1911 act overtime which is called for in the text. Although any revision of this act will be made by Congress with full opportunity for all sides to be heard and thus there is no driving necessity for correcting the report's misstatements, the committee's treatment of the employees' side is so superficial and hostile that we cannot forego the opportunity to set the record straight in a few particulars.

To begin with, the table of overtime pay compensation shown on page 36 is not correct. The correct figures for work other than on Sundays and holidays are as follows:

Working time:	*Equivalent pay received*
Less than 3 hours but not less than 1 hour.	½ day.
Less than 5 hours but not less than 3 hours.	1 day.
Less than 7 hours but not less than 5 hours.	1½ days.
Less than 9 hours but not less than 7 hours.	2 days.
15 hours or less but not less than 9 hours.	2½ days.

The committee cites an apparently extreme instance of what it calls excessive pay for 1 hour's work. In the absence of all the facts it is difficult to know whether the charge is an excessive one. The time spent on duty is only part of the story. If an employee has to hold himself in readiness for a call all evening and must spend an appreciable part of the early morning hours traveling to the assignment, the fact that he actually worked only from 2 a. m. to 3 a. m. loses some of its importance. The committee could easily have cited another case where a custom officer working 24 hours around the clock receives as overtime 2½ days' pay, the equivalent of time and one-eighth. Further, this is not an isolated or uncommon case. It happens regularly every night in the week except on Sundays and holidays.

Comparison is made between the so-called time and one-half rates of the FEP Act and those of the 1911 act. The differences in the circumstances of the work are ignored. The FEP provisions are patterned after industrial standards of a 40-hour week with time and one-half for overtime. They are based on orderly scheduled overtime of an hour or two per day performed immediately after the ending of the normal work period, at the same desk, machine or location at which the day's work has been performed, with no necessity for traveling elsewhere for the overtime assignment. Such overtime is limited in duration so that the employee is not deprived of his normal family life at home. Its coming and duration are known well in advance and the employee has ample time to make his plans. The customs officer on the other hand is given his assignment but a few hours in advance. He may be on duty half of the night—he may be on duty all the night. The work to be performed may be at a point so distant as to disrupt all his traveling schedules and multiply his traveling time. The duration of the usual assignment and the scheduling of it are such as to have a deleterious effect on his home life.

The survey committee evidences little perception when it makes this comparison. Either that or it was sold a gold brick.

Capper Says Welfare State Is Only Short Distance From Police State

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Topeka Daily Capital of May 9, 1949:

CAPPER SAYS WELFARE STATE IS ONLY SHORT DISTANCE FROM POLICE STATE

Reviewing an address made before young Kansans in Topeka to study and practice government, former Senator Arthur Capper gave his weekly WIBW radio audience his philosophy of government and pointed to current trends. The complete text follows:

Last Monday I was honored with an invitation to address the Sunflower Statesmen's meeting in Representative Hall at the Statehouse. This is the alumni association, so to speak, of the Boys' State Government, which was making a practice run at governing Kansas for the day.

I decided to talk to these youngsters who will be running the State of Kansas in fact in a few years from now on the subject Man and His Government. I am going to tell you this afternoon the substance of what I told the Boy Staters.

My excuse for this kind of a discussion is my keen interest in the relationship of the individual to his government. Also, that in my more than four-score years—nearly half in official capacities in government—I believe I have got some ideas on what it is all about, underneath the surface struggles for position, power, and, I am sorry to say, control.

I want to talk to you as one person to another; individual to individual; not as a member of some group to a group or to members of a group.

The life, liberty, and pursuit of happiness written into the Declaration of Independence are the life, liberty, and pursuit of happiness by, for, and of the individual.

In my own collection of great Americans I carry three as the great ones. One of them, by the way, is a woman.

The three great Americans are: George Washington, who led us in our fight for liberty; Abraham Lincoln, who preserved and extended liberty; and Miss Susan B. Anthony (sister of our own Col. Dan Anthony, of Leavenworth), who fought gallantly all her life, and finally successfully, to liberate the women of America.

These are the three great ones in my book.

Abraham Lincoln believed, as did other heroes, that the purpose of government is not just to serve the people; but, above all, to preserve the liberty, the freedom, of the individual.

Government is just a means to that end.

When the functions of government are diverted to other ends, whatever the professed objectives may be, then that government is a failure, and that government should fall.

Lincoln left many words of wisdom; many epigrams that are worthy of our consideration and our following. Perhaps his greatest contribution to thought was in his Gettysburg Address.

That address was not delivered just to those of his own day and generation. It was delivered to us. It will fit our children and their children, I hope, through countless time to come.

Abraham Lincoln spoke these words to Americans of all time:

"Fourscore and seven years ago our fathers brought forth upon this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal."

There, my friends, in 29 words is the history of a thousand years of the Anglo-Saxon struggle toward a government that is the servant, not the master, of the individual; that preserves for the individual the inalienable right to life, liberty, and the pursuit of happiness—the principle of individual human liberty.

Man and his government, as contrasted to government and its men.

The basis for true liberalism is this liberty of the individual. The true liberal, of course, has a decent and conscientious regard for the liberty of other individuals—and not just for other liberals, either.

I did not always find myself in agreement with former Senator Ball, of Minnesota, but I think that upon one occasion he spoke words worthy of the attention of all of us who love liberty. He said:

"I mean liberty, not for any particular group in society, whether it be workers, farmers, business, or professional men, but liberty for all individuals as individuals. You will never find a liberal, according to my definition, talking about the masses, or the common man, or even the average man. To my kind of liberal every individual is uncommon. He is a human being with a soul, not merely a complex assembly of appetites and fears."

That is the kind of a government we have had in this country; the kind of government our forefathers created, at tremendous sacrifices.

Shall we today sacrifice this Government, because in the Old World whole peoples have surrendered themselves to dictatorships, to the still older theory that the individual as an individual has no rights, no liberty of his own, but as only one of a group, an atom in the conglomeration of a juggernaut machine known as the state—even though they call it a welfare state?

The welfare state, my friends, please keep in mind, is only a generation or so removed from the police state. As immutably as night follows day, the welfare state is succeeded by the police state. Read world history.

Do we want that?

I say no, a thousand times no.

My young friends, I told the Boy-Staters, we today, in the New World as well as in the Old, are facing a supreme struggle to maintain the kind of a government that Lincoln described.

We face a determination whether these principles, planted upon our shores some 328 years ago; emerging as a free Union of States fewer than 200 years ago; reforged in our own Civil War more than fourscore years ago, shall survive the deluge of political and economical fallacies poured into and poisoning our system from overseas these past two generations—

Or whether surrendering our own strength through the freedom and liberty of the individual, we shall perish as a Nation and return this world to another age of darkness and despair.

Government by dictatorship—the police state—is not new, whether it be dictatorship by an individual, or by a selected group, or dictatorship by the proletariat. It is older than the divine right of kings; old as the doctrine that the minority, like the individual, is absolutely at the mercy of an unrestrained majority; old as the false doctrine that might makes right.

The road to stateism, the road to serfdom, has evolved, however, a slightly different technique from that which prevailed in the Western World after the fall of the Roman Empire.

Rather the technique is that which was used to change the Roman Republic into the Roman Empire, which went after world leadership, and got world leadership—at the price of liberty and freedom of the Roman citizen.

First, the people are deprived of just a little of their freedom of choice, through being cajoled or purchased or coerced into surrendering little pieces of their individual liberty to the control of a party or a group. They are seduced by the promise that in return for surrendering some of their individual liberty (which they can get back any time they want by voting it back) they will be given security by the Government.

This so-called security is in the economics field. To provide it the state—the government—will furnish an ever-increasing amount of money to provide this economic security. This will take the form of grants, subsidies, benefits, free food, free medical services, free lodging for more and more, free recreation facilities. The Romans lumped it under bread and circuses.

Generally these promises are made in a time of depression. The accompanying controls are fastened on during a war emergency, and riveted in the postwar period in the name of preventing a depression precipitated by war and postwar inflation.

Such programs require, and encourage, huge government expenditures. Since they are started in depression periods, government rarely starts out by footing the bills through increased taxes. Instead, deficit financing (borrowing money from the people) is resorted to.

But sooner or later, increased taxation is necessary to meet the government expenditures. In the end, such taxation amounts to confiscation of the property of the individual.

Next the government resorts to price controls and rationing of goods, and undertakes to direct the operations of agriculture, and business, and industry, and the use of labor—

At this stage of the game, the individual definitely loses his liberty and becomes the serf of the State.

From that time on, the transition from the welfare state to the police state is a matter merely of time—not a great extent of time, in the life of a nation.

The point I am making is that the first steps toward depriving the individual of his liberty are taken when the individuals are cajoled, purchased, or mildly coerced into the position where the individual becomes accustomed to depend upon government instead of upon himself, to take care of his needs and provide his wants.

The Gethsemane of David Lilienthal, a Great American

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. KLEIN. Mr. Speaker, a truly great American, a man who has devoted his life to the effective practice of democratic ideals, is today walking in a Gethsemane of his own, as vague and shadowy interests of sinister shape prepare for his public crucifixion.

There are newspapers which, for the sake of selling a few more newspapers, have been willing to indulge in an orgy of sensationalism with little regard to facts.

The victim of their campaign of vilification is David Lilienthal, Chairman of the Atomic Energy Commission.

That there are employees of the Commission who gab too much is proved by the sensational headlines which have assailed the American public ever since the Atomic Energy Act was passed; that those employees have no access to secret information and cannot be trusted is proved by the wild inaccuracy of rumor after rumor flaunted on front pages.

Just to show that there is another side to the story, I am inserting as a part of my remarks an editorial from the New York Post, an article by Max Lerner published in the New York Post—from which I have made several deletions—and an editorial from the Washington Post.

[From the New York Post of May 24, 1949]

BEHIND THE ATTACK ON LILIENTHAL

New York's Hearst and McCormick newspapers, valiantly echoed by the World-Telegram and the Sun, with other voices in the wings, have enlisted in the crusade against Atomic Energy Commissioner David Lilienthal. They are contributing headlines, editorials, and bedtime stories.

This isn't a local enterprise.

It is important that the country understand the nature of the drive against Lilienthal:

1. This is an attempt to destroy a man whose name and works symbolize civilian—rather than military—control of atomic energy.

2. This is an attempt to destroy a man whose personal credo is liberalism and who has refused to surrender his principles to obtain congressional favor.

In the campaign against Lilienthal the overtones of intolerance are inescapable.

The ugly weapon of religious prejudice is being cynically exploited in the cloakrooms and barrooms of Washington.

We make this charge with full awareness of its solemnity. We don't believe in looking for bigotry under beds. Nor do we believe that all of Lilienthal's critics are deliberately using this device. There is honest dispute about some phases of the AEC's activity.

But we are convinced that this furiously fake hysteria could not have been engineered without whispered words of prejudice.

It was an open secret in Washington that the weapon of anti-Semitism was used in the initial fight to block Lilienthal's confirmation.

It is being used again.

The campaign against him is cloaked in charges that he is soft toward Communists and negligent in the protection of atomic secrets. His anti-Communist convictions are well known; and J. Edgar Hoover has conceded that no espionage was involved in the recent mystery of the missing ounce of uranium.

On their merits the current accusations against Lilienthal would be 1-day newspaper escapades.

But he is a liberal. He is an independent public official who refuses to play Washington parlor games. He is a Jew. In the real world these are explosive political qualities.

So the slanders are intense and commonplace, the atmosphere of frame-up grows and the lynch spirit rises.

UNIVERSITY OF MICHIGAN LIBRARIES

The big brass and the Republican politicos are playing for great stakes. They are fighting to revive military domination of the atomic program and to crucify a conscientious liberal commissioner.

That is the real story behind the scare headlines.

[From the New York Post of May 25, 1949]

LILIENTHAL AND THE GOBLINS

(By Max Lerner)

WASHINGTON.—The Washington landscape is thick with congressional investigations of David Lilienthal. They are such eager beavers that they get in each others' way and stumble over each other. Why are they after the scalp of the Chairman of the Atomic Energy Commission?

The most persistent explanation you get in Washington circles is that there is a combined senatorial and military clique that wants to take atomic energy away from civilian control and turn it over to the military, as in the palmy days of General Groves.

Since the air here is filled with inquiries, I decided to do some inquiring of my own. The only man who can make an authoritative statement on this issue of military control of atomic energy is the National Defense Secretary Johnson. I knew that he is a square-shooter who doesn't mince words in his statements.

I went to see Secretary Johnson. I told him that in the whispering galleries of the Capitol the issue of military control was being used in an underground way. It is being used as a stick with which to beat the Lilienthal civilian dog.

Secretary Johnson was forthright in his answer. "You can say for the National Military Establishment," he told me, "that we have had no desire to handle the matter. We have none now. We want none of it in the future." He added with a grim smile, "We have plenty of jobs of our own to handle." And finally, "If there is anyone in this organization who is sabotaging this policy of ours, I'd like to know about it."

That is straight enough. I hope it silences at least one of the arguments of the hate-Lilienthal movement.

The get-Lilienthal crowd distrusts something else in him even more than his pride and his New Deal past. They fear his emphasis on the unfettered scientific spirit, his own creativeness and the creativeness of the men with whom he surrounds himself. The typical Lilienthal-hater knows that we are maintaining our pre-eminence in the world on all atomic research, but that knowledge galls him all the more. Since he cannot fight Lilienthal on the level of creativeness, he fights him with the brass knuckles of politics.

For once the get-Lilienthal crowd may succeed. The big weapon they have against him is the awe in which everyone stands of anything atomic. "I appeal to you," Lilienthal pleaded with the subcommittee on the question of the isotopes exported to Finland, "not to let this get to be a matter of public fear." He had put his finger on the core problem. Whenever a magic word like "isotopes" or "uranium" was uttered, the eyes of everyone in the committee room took on the glazed look that the worshippers in the exotic cults of Isis and Cybele must have had centuries ago in Asia Minor.

The religious mysteries of today have become the atomic-energy mysteries. The incalculable destructive power of the atom bomb has become merged in our minds with the incalculable destructive power of God. Very few, except the scientists, know the present power of fissionable material. None, not even the scientists, know its potential. We prostrate ourselves before the unknown and the unknowable. And, as so often happens, behind the screen of this mysterious cult we go about tearing savagely into shreds the men and causes we hate anyway.

Atomic research and atomic security are no longer, as other things are, matters for fallible men to discuss with fallible men. They have been taken out of this world. The American people are being told that unless they get superhuman perfection, with never the slightest error and never the slightest leak, the goblins will get them. That is the heart of the Lilienthal story. It is a goblin story.

[From the Washington Post of May 26, 1949]

SECRETS OR SENSATIONS

To the extent that the congressional inquiry into atomic security serves to put the Atomic Energy Commission on its toes, the current rash of finger pointing may have a useful result. Chairman Lilienthal now has admitted that the Commission was derelict in not reporting to the FBI at once the loss of a minute quantity of uranium. Certainly this indicates lax security checks. But Mr. Lilienthal hardly can be charged personally with a violation of security regulations about which he was not even informed until late. In this respect his willingness to assume guilt merely furnishes ammunition to the vindicative sensationalists who are out to crucify him—and civilian control of atomic energy.

The point to remember—and it cannot be emphasized enough—is that the security value of the missing uranium is almost precisely nil. No atom secrets can be learned from it. Most of the lost U–235 has been recovered and positively identified through analysis of laboratory wastes. It is probable that there is a perfectly natural explanation for the disappearance of the bottle originally containing the smidgeon of U–235. The bottle was similar to thousands of other bottles at the Argonne laboratory. It could easily have been broken or accidentally discarded. Laboratory personnel were negligent in trying to clear up the mystery themselves instead of immediately notifying the FBI. But this was carelessness, not conspiracy.

It is disingenuous to attempt to magnify these circumstances into a full-blown security scare. Likewise, it is pure maliciousness to imply, from an off-the-cuff remark by AEC General Manager Carroll Wilson, that atom secrets have been stolen. Mr. Wilson was asked a hypothetical question whether any AEC plans have been stolen. He replied that out of millions of documents probably some have been taken. Certainly such a statement involving vast numbers of nonsecret papers cannot fairly be regarded as an admission that atomic secrets have been stolen.

Altogether, the attacks on Mr. Lilienthal and the irresponsible and undocumented charges that the AEC is shot through with Communist sympathizers are indicative of a fear obsession with a new force that the inquisitors know very little about. There is a great need for more intelligent criticism of the Atomic Energy Commission—and in this respect the Joint Commission on Atomic Energy has been a suppliant rather than the watchdog intended by the Atomic Energy Act. But more intelligent criticism—and understanding—depend on limiting, rather than enlarging, the areas of secrecy. The danger, from the sort of hysterical nonsence now being spread, is that atomic energy may be walled off permanently from the people in a military preserve from which it cannot be extricated.

Progress and Perils in Flood Control and River and Harbor Improvements

---

EXTENSION OF REMARKS

OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks, I include the following address delivered by me at the annual luncheon of the National Rivers and Harbors Congress, Washington, D. C., Mayflower Hotel, 12:30 p. m., Friday, April 8, 1949, to wit:

The advance of the United States in flood control since the policy was adopted in 1936 has been marvelous. The planning and construction of improvements have been declared, in all the flood-control and rivers and harbors acts passed since 1928, to be the function of the Corps of Engineers of the United States Army. I am glad to report that the last session of the Congress made the largest appropriation in dollars for flood control, rivers and harbors, and reclamation in the history of the country. While the appropriations are large, the benefits are still larger.

But progress is always subject to attack. It has opposition today. The adopted policy and the progress that has been made under that policy are under attack.

APPROPRIATIONS

First, there is the peril of inadequate appropriations. Whenever the Committees of the Congress on Appropriations consider flood-control and river and harbor improvements, the spokesmen for economy are vocal. The advocates of improvements must take nothing for granted. The appropriations for the next current year have just been passed by the House. There was an arbitrary reduction of 15 percent, and I put it mildly when I say that the reduction was wholly unjustified. The reasons assigned were not even ordinary excuses. The committee admitted that all the projects were sound; that the budget requests were in order. They undertook, first, to eliminate unencumbered balances contrary to the policy that has always obtained. Secondly, under the guise of reduction in the cost of construction, the House Committee on Appropriations arbitrarily reduced budget recommendations 15 percent. There is one silver lining in the sky. The House committee definitely promised that in the event additional appropriations were necessary, deficiency appropriations would be made for the 15-percent reduction. The committee overlooked the fact that costs have been increasing for the past few years and that less work could be done therefor. The committee, instead of discouraging, should encourage more work being done for the dollars appropriated now. A second and a more serious error was committed by the House Committee on Appropriations. They arbitrarily reduced the budget estimate by what they determined to be the amount of the unencumbered balances of previous appropriations. For nation flood control there was a reduction of $50,000,000; for rivers and harbors a reduction of $25,000,000. I emphasize that the peril of unreasonable and inadequate appropriations must be met.

The appropriation bill for civil functions is now pending in the Senate. The members of the National Rivers and Harbors Congress

should contact their Senators in behalf of making at least the appropriation recommended by President Truman in his budget message.

The program in flood-control and river-and-harbor improvements has another peril. Four years ago the advocates of a Missouri Valley Authority were on the march. Today the superficial planners, following the floods along the Columbia River in 1948, are again on the march. They sound a lesser note on the Missouri Valley Authority but a higher note on the Columbia River Authority. The constructive provisions of the Flood Control Act of 1944 repudiated a Missouri Valley Authority and wisely provided for reclamation works of the upper Missouri River and its tributaries to be planned and executed by the Bureau of Reclamation, and the flood-control improvements in the lower stretches to be planned and executed by the Corps of Engineers. The adopted policy in the Columbia River Basin, as well as in all other river basins, provides not only for navigation but for the generation of electric energy and for furnishing water to arid lands by irrigation. The policy also provides for cooperation by the Department of Agriculture and the War Department.

The Bonneville Dam with its power, and Grand Coulee with both power and reclamation, have been constructed. Other projects are under construction by the Corps of Engineers and Bureau of Reclamation. A valley authority would deprive these established agencies of their functions in the Columbia River Basin. The proposals for other valley authorities have been repeatedly rejected by the Congress. I believe that Congress will reject again the proposal of bureaucracy to ride the rivers. There are many reasons why the adopted policy of flood control and reclamation in the Columbia River Basin should not be supplanted and replaced by an authority. The control of Congress would be surrendered. Bureaucracy would be increased. Revolving funds would be provided over which Congress would have no control. Activities would be promoted which many patriotic Americans do not consider proper governmental functions. A valley authority is unnecessary to coordinate the activities of the Bureau of Reclamation and Soil Conservation or the activities of the Corps of Engineers and Soil Conservation.

But there is another reason why I oppose valley authorities. The Corps of Engineers and the Bureau of Reclamation would be deprived of their functions.

Bills for the reorganization of the executive departments are under consideration. It is proposed to strip the Corps of Engineers of their civil functions. Such efforts have been made for 20 years. President Hoover submitted a reorganization plan to Congress in 1932. It was disastrously defeated. Congress has rejected all suggestions for placing the Corps of Engineers under any supervision except the Department of the Army. Such proposals, wherever and whenever they appear, should again be defeated. There are many reasons why the Corps of Engineers should continue to execute flood-control and river-and-harbor improvements under the Department of the Army and why their functions should not be transferred to another agency. Their record is unexcelled. That record is fair and spotless. It has never been tainted by fraud or corruption. Their experience in peacetime construction is essential for their construction in time of war. They have the experience but they also have the character and the ability. I do not believe that Congress will strip the Corps of Engineers of their civil functions.

NATURAL RESOURCES

The natural resources of the United States have made possible the growth and development of this country as the most powerful nation in history. Among the most important of these resources are rivers and lands. When they are exhausted they will not renew themselves; they are lost forever. The arid lands of the Middle East and of China, which were once fertile and well-watered, are a warning that our resources must be preserved.

The conflict between the use and misuse of land and water is as old as the Biblical contest between light and darkness, and it is as new as atomic energy.

We are acutely aware that our natural resources are imperiled. We know that our soils are being neglected. We know that our minerals are being exhausted. We know that our petroleum reserves are being depleted in excess of new discoveries. We are determined to preserve and conserve our natural resources.

AMERICA

When we improve our rivers, when we conserve our lands, we are building America. In the Middle Ages magnificent cathedrals were built in Europe. They were not only artistic wonders but represented the spiritual aspirations of the peoples who contributed to their construction. They symbolized the yearnings of the great body of people of the Middle Ages toward high and noble ideals. They confirmed the people in their faith to build always upward toward the stars.

When we build America we are building the great cathedral of freedom, for freedom is the hope of peoples in all the world. As we build America we are building toward a fairer day. As we build America we are promoting the hope and faith of the lovers of freedom in all lands that they too, as they look toward the stars, may build the cathedral of freedom in their own lands.

Fifty years ago it was a proud boast of an Englishman that he was a citizen of Great Britain, on whose possessions the sun never set. Today, as the United States has reached the highest pinnacle of power of any nation in human history, the proudest boast of any man is, "I am an American." As we build for ourselves and for the future, we must build wisely and well. Above all, America must be preserved.

Questions and Answers on Proposed Price Support Program

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 26 (legislative day of Monday, May 23), 1949

Mr. HUMPHREY. Mr. President, at a joint hearing of the House Committee on Agriculture and the Senate Committee on Agriculture and Forestry held on April 7, 1949, Secretary of Agriculture Charles F. Brannan presented recommendations for changes in the price support program. I have requested from Mr. Brannan further explanation of his program. In response I received 46 questions and answers which serve in the nature of an explanation. I ask unanimous consent to have these printed in the Appendix of the RECORD.

There being no objection, the questions and answers were ordered to be printed in the RECORD, as follows:

BRANNAN FARM PROGRAM

1. What is the purpose of the proposed price-support program?

Briefly, it is designed to provide American farmers with a sounder and more effective farm program than is now available to them. At the same time it aims to assure consumers of plentiful and steady supplies of agricultural products at reasonable prices.

2. What are the main features of the proposed program?

It offers a strong attack against national depression, which is apt to start in the farm segment of the economy. It offers a way to start bridging the wide gap between the incomes of farm people and the incomes of town and city people. It offers a direct attack on the problem of surpluses.

The proposed program is largely based on evidence that there is a level of farm income below which it is not in the public interest to permit that income to fall. It would establish what that level is, in actual dollars, each year and provide price supports reflecting that minimum income standard. As a direct attack on surpluses, it would encourage the consumption of farm production, which has been and is still being expanded by means of the indivdual enterprise and scientific knowledge of American farmers. The program would encourage farmers to increase the efficiency of their production, improve the quality of their products, and market in an efficient and orderly manner.

3. What is the main difference between the approach of the program now in effect and that of the program that is now proposed?

The program now in effect concerns itself primarily with the prices of individual farm products. The program that is proposed carries a definite and realistic income objective and uses price support as a means to that end.

4. Why does the proposed program place so much emphasis on farm income?

It is income that counts with any farmer, worker, or businessman. A farmer spends out of his total income and everybody profits by that spending. Experience has demonstrated that farmers need to have a reasonably stable income at a fair level in order to maintain a healthy agriculture, which is necessary to all economic groups.

5. Why is maintenance of farm income and purchasing power in the public interest?

It is a major positive step that can be taken to help prevent depression, build bigger markets for industrial goods, assure jobs for workers, maintain high-level production of farm commodities, conserve natural resources, maintain reserves for national security, and strengthen the rural community and the Nation as well.

6. Isn't the idea of gearing price supports to a minimum level of farm income something new?

There is nothing new about this income idea except the degree of emphasis in the proposed program. Parity income as a desirable objective has been stressed repeatedly in agricultural legislation enacted by the Congress since 1933. However, programs have had to work toward this objective indirectly, pending the development of more direct methods. The proposed program is the first atempt to establish price support levels in terms of an income objective.

7. What means would be employed to prevent farm income from falling below the desired minimum level?

UNIVERSITY OF MICHIGAN LIBRARIES

All of the devices now being used to support prices would be available for use in the proposed program. These include commodity loans, purchase agreements, marketing quotas, acreage allotments, marketing agreements and orders, direct purchases for school lunches and other related distribution, diversion of excess supplies to byproduct uses or to encourage new uses or develop new markets, and encouragement of exports. The proposed program also provides for the use of production payments, particularly in the case of perishable commodities, so as to encourage maximum consumption by consumers without depriving farmers of a reasonable return from their products.

8. In what specific ways does the proposed program differ from the program now authorized by the Agricultural Act of 1948?

The essential differences are these: (1) The proposed program concerns itself with income from farm production, whereas the Agricultural Act of 1948 emphasizes price without regard to any minimum level of income; (2) the proposed program would provide effective support for more commodities at a generally higher level than is available under present legislation. Specifically, it would afford more definite assurance of support for certain perishable commodities, such as meats, whole milk, eggs, and others which have major importance in the farmers' income and in the consumers' diet. The Agricultural Act of 1948 has a general prohibition on the use of Commodity Credit Corporation funds for the support of perishable commodities. Both the proposed program and the Agricultural Act of 1948 assume continued use of section 32 funds for surplus disposal operations; (3) the proposed program puts more emphasis on encouraging shifts in farm production, particularly toward livestock production, as one important means of overcoming the problem of surpluses. It puts more specific emphasis on conservation as a requirement for price support; (4) the proposed program follows the long-established national policy of encouraging family farming, and in order to avoid the use of public funds to encourage big-scale, industrialized farming, it introduces the idea of placing an upper limit on the amount of commodities on which any one farm can get price support.

9. Does this proposed program mean more Government control and regimentation of farmers?

Definitely no more than farmers are willing to impose on themselves by referendum and certainly no more than will be required under the Agricultural Act of 1948. Moreover, the proposed program offers a better opportunity of avoiding the use of controls than is now the case. In the first place, it aims at a balanced agriculture. It would provide the incentives and the assurances that many farmers need in order to modify their production pattern in keeping with good business and farming practices. Secondly, controls would be avoided for many farm products by the use of production payments paid to farmers who voluntarily complied with the conditions that would be specified for the particular crop or product. Those farmers who did not choose to comply would simply forego receiving the payment. It should also be noted that the proposed program would seek directly to encourage consumption and thus delay or prevent the accumulation of surpluses which call for the use of production or marketing controls.

10. Does the proposed program actually guarantee a specific level of income to farmers?

No; neither to an individual farmer nor to all farmers as a group. This would, of course, be impossible unless weather and other crop conditions could be guaranteed. If a farmer is unable to produce a crop, price supports are meaningless to him. The program would, however, establish a minimum income standard as a goal, and price-support standards for individual crops would be set in line with the aim of achieving the income standard.

11. Why should agriculture as an industry need this proposed farm production and price-stabilization program?

Agriculture is basic to our free enterprise system, our democratic way of life, and our very existence. It is a major segment of our economy and affects all other elements involved in the prosperity of the Nation. It is conducted by millions of individuals operating independently, with only limited bargaining power. Farmers hold production much more even than do other producers generally. In consequence, farm prices are far less stable than industrial prices. When farm prices and income go badly out of line, the entire economy feels adverse effects. These facts, and others, make it desirable and necessary to develop an effective national program for maintaining a healthy agriculture.

12. Would this proposed program subsidize consumers?

No; this is a price-support program and not a consumer-subsidy proposal. It provides methods for supporting prices so as to overcome the problem of commodity surpluses by encouraging consumption. There is a considerable difference between (a) subsidizing consumption with the hope that the benefit will trickle down to the farmers and (b) supporting farm commodity prices in ways which will give consumers the most for their money. This proposed program aims to serve both the farmer and the consumer on a basis that is fair to each group.

13. What would be the effect of the program on the city workers?

A fair and stable level of income to farmers would add to the demand for the products of labor. It would make industrial jobs more secure by building a better market for manufactured goods. Also, a larger volume of farm produce will increase the jobs of processing, distributing, and otherwise handling the resultant food.

14. What would be the effect on the taxpayer?

By strengthening the Nation's defense against depression, the proposed program could help to save the taxpayer the enormous expenses of relief and other measures to overcome the effects of depression. The proposed program is frankly on the side of preventing rather than curing depression.

Except in case of depression, prices of most farm commodities should usually be above support levels, and of course it is only when prices are actually supported that public funds are used.

With supports in effect on perishables, the proposed program methods would offer taxpayers a great advantage over other methods. Under the present system, prices for perishables are supported through Government purchases which take supplies out of the market and raise market prices for the balance remaining for sale. Therefore, when the consumer buys he not only pays this higher market price, but also, as a taxpayer, pays for the cost of the Government purchase operation. Under the proposed program, however, market prices would be permitted to seek their own level. The consumer would thus get the advantage of the plentiful supply on the market at the price established by supply and demand conditions. The producer would then receive a production payment representing the difference between the average market price and the support price level.

15. Is the proposed program a complete program for agriculture?

No; but it is the core. The whole farm program applies not only to farm production and income, but also to farm credit, rural electrification, scientific research, and extension work, crop insurance, soil conservation, forestry, rural housing, and other matters.

GENERAL MECHANICS OF PROGRAM OPERATIONS

16. What is the base period used in calculating the income-support standard under the proposed program?

The first 10 of the most recent 12 years.

17. Why is a 2-year lag suggested in the base period?

To give Congress opportunity to examine the plans for operations, and to give farmers ample advance notice of the program that is to be followed for the year.

18. Why is a changing base period proposed?

In order to keep the price and purchasing power relationships on a moving, up-to-date basis.

19. Would the level of price support be announced in advance of the season?

Yes, the price-support level for specific commodities would be announced in advance of the marketing season for the commodity, and, if possible, before the planting season. This is desirable if the program is to have its full effect in securing proper adjustments in production.

20. Would all commodities be supported at the full support level?

A priority group of commodities would be supported at the full support level; others would be supported in line with or in relation to the full support level, depending upon the funds made available by Congress, the ability of producers to keep supplies in line with demand, and other relevant factors. The commodities that would have priority in the expenditure of funds are corn, cotton, wheat, tobacco, whole milk, eggs, farm chickens, hogs, beef cattle, and lambs.

21. Through what means would the farmer get price support?

Generally through loans and purchase agreements at support levels on commodities which are storable, and through production payments on perishable commodities.

PRODUCTION PAYMENTS

22. What is meant by production payments?

It is a direct payment that would be made to farmers and would represent the difference between the average market price for a commodity and the price-support level for that commodity.

23. Would all producers of a commodity supported through production payments get the same rate of payments?

As a rule, all eligible producers would get the same rate of payments. Any farmer who could exceed an average market price by quality of product or good bargaining would benefit to the extent that his selling price exceeded that average market price.

24. Where and how would production payments be made to producers?

At country offices of the Production and Marketing Administration upon presentation of required information and approval by the county committee.

25. How would it be determined who is eligible for payments and for how much? Who would check?

The already established county and State farmer committees would perform these operations.

FARMERS' RESPONSIBILITIES UNDER THE PROGRAM

26. What are the farmers' responsibilities under this program?

Farmers would be responsible for reasonable undertakings to accomplish the over-all objectives of a sound farm program in the

interests of the public and of their fellow farmers.

27. Would farmers be required to carry out soil conservation work to be eligible for price support?

Yes. To be eligible, farmers would meet reasonable conservation requirements locally adapted and approved by local committees. This would encourage conservation farming and help increase output of meat animals, dairy products and other commodities needed to improve consumer diets as well as maintain farm income, which is an aim of the proposed programs.

28. Is the proposed requirement that a farmer adopt minimum and sound soil-conserving practices in order to qualify for price support something new in agricultural programs?

No. The principle was embodied in the Soil Conservation and Domestic Allotment Act of 1936, which conditioned payments upon the observing of reasonable soil conservation requirements. The same principle prevailed in the Agricultural Adjustment Act of 1938. It should also be noted that an effective income-price support program should enable a farmer to operate with more regard to soil conservation than he could otherwise.

29. Would the proposed program lessen the farmer's responsibilities for producing and marketing his products?

No. The farmer would sell his products to a market of his own choosing. To the extent that he could grow quality crops or otherwise make his product attractive to the consumer he could command premium prices.

30. Would marketing quotas be imposed without approval by producers?

No. Such devices for assuring orderly production and marketing would not be imposed without approval of two-thirds of the producers voting in a referendum.

31. Under the proposed program, would there still be a danger that guaranteed prices would cause farmers to produce perishable commodities for which Government purchases provided the only market?

No. The use of production payments would stop that. Under the proposed plan, prices received by farmers for perishables would seek their own level through the forces of supply and demand in the market, and the Government would make up the difference between the average market price and the support level. This payment would go only to those farmers who complied with the conditions as to production that were specified for the particular commodity.

STORABLE COMMODITIES

32. Would all storable commodities be supported?

Storable commodities that would have first priority for price support would be corn, cotton, wheat, and tobacco. Other storables would be supported in line with or in relation to the priority group, taking into account the available funds, the ability of producers to keep supplies in line with demand, and other relevant factors.

33. What methods of support would be used for storables?

Generally, the same methods as are now used—loans and purchase agreements.

34. Would it be necessary to continue the authority for imposing marketing quotas and acreage allotments?

Yes, marketing quotas and acreage allotments should continue to be available or provided for commodities such as tobacco, cotton, wheat, rice, corn, and peanuts, with improvements based on experience. These are a fundamental part of the program and should continue. Authority should be available to extend such controls to other commodities as circumstances may require and with the approval of producers.

Acreage allotments and marketing quotas would be applied only to commodities for which price-support programs were in effect—and then only when they are necessary to keep supplies in reasonable balance with demand.

NONSTORABLES

35. What are considered nonstorables?

This term is intended to include highly perishable commodities and also those for which storage is extremely costly. This would include most fruits and vegetables, and meat animals, and dairy and poultry products.

36. How would nonstorable commodities be supported?

Farm returns on these would be supported primarily through production payments. Direct Government purchases, however, could be made to relieve the price-depressing effects of local market gluts, particularly for those commodities not directly supported through production payments or other devices. Purchases of commodities supported by production payments may also be made to prevent waste or total loss of products. Diversion programs could be used in certain circumstances. In general, purchases would be made only to the extent that satisfactory outlets were available. Such outlets include school-lunch programs.

37. At what level would perishables or nonstorable commodities be supported?

Certain items such as whole milk, eggs, farm chickens and the meat animals—hogs, beef cattle, and lambs—would be included in the first priority group. As such they would be supported at not less than the full support-price standard, except as adjustments might be required to maintain desirable feeding ratios. The level of support for other nonstorables would depend upon the funds available, the ability of farmers to maintain supply in relation to demand, and other relevant factors.

38. What devices would be utilized to curtail wasteful production or disorderly marketing of perishables?

The primary devices would be production payments, conditioned on compliance with production goals, or the use of marketing agreements and orders such as those currently utilized for many fruits and vegetables and for fluid milk.

39. How would production payments assist in increasing consumption of perishables?

The use of production payments would allow free interplay of supply and demand in the market place, thus resulting in lower prices to consumers on items in abundant supply than would be possible under a program of artificially maintained prices. Lower prices would permit consumers to utilize more of these products.

ENCOURAGEMENT OF FAMILY FARMS

40. Is there any limitation under the proposed program on the quantity of production from any farm that may be eligible for price support?

Yes, support would be limited to a prescribed volume of production, or 1,800 comparative units per farm, except under some conditions. More than 98 percent of the farms would be eligible for support on their entire production.

41. What is the meaning of the term "comparative unit"?

A comparative unit of any commodity is that amount of the commodity which has a value, at its support-price standard, equivalent to that of 10 bushels of corn.

42. Why is such a limitation desirable?

So that public funds will not be used to encourage the development of extremely large-scale, industrialized farming contrary to the long-established national policy of encouraging family farming.

43. Is the limitation on the amount of support per farm something new?

Not in principle. Congress in previous agricultural programs has set limits on the amounts of aid that could be given any one farm. The proposed program merely sets the limits on price supports in a way which will not foster the development of something other than family farming.

44. Why is the 1,800-unit figure fixed as the point beyond which the benefits of the program would not be provided?

This is the figure that approximates the present maximum size of those efficient farms on which the family provides a considerable part, if not the bulk, of the labor supply.

45. If acreage allotments and marketing quotas are in effect for a commodity, would full support apply to quantities in excess of 1,800 units?

If the allotment and quota permitted a production by a specific farmer in excess of 1,800 units, the entire amount for that crop would be eligible for support. However, under these circumstances, nonquota crops produced on this farm would not be eligible for support.

46. What would be the effect on desirable diversification of production in certain areas of the extension of support to all units produced under acreage allotments or marketing quotas?

Until the maximum-sized family farm, as defined by the 1,800-unit limitation, is reached, the program would tend to encourage diversification by broadening the group of commodities being supported. The program is designed to be of greatest service to the family farm. The great bulk of farms are smaller than 1,800 units. However, the program would not adversely affect the diversification practices of large-scale producers.

Novel Case Under Taft-Hartley Law Shows the Danger of Legal Mix-Ups

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. MULTER. Mr. Speaker, I commend the following editorial which appeared in the Brooklyn Eagle of May 23, 1949, to the attention of my colleagues:

NOVEL CASE UNDER TAFT-HARTLEY LAW SHOWS THE DANGER OF LEGAL MIX-UPS

A most interesting case under the Taft-Hartley law has come up. It gives an indication of the potential for legal mix-ups contained in the provisions of the law. This hidden danger of future legal embroilments is one of the reasons why we believe the law should be changed.

In the first ruling of its kind a Labor Board examiner absolved the AFL National Farm Labor Union from charges made by General Counsel Robert N. Denham. The General Counsel obtained an injunction against the union for picketing the DiGeogio Fruit Corp. in a long and bitter strike that has been going on at Bakersfield, Calif. The charge was that the picketing violated the secondary boycott provision of the law.

Previously, Denham had denied the union the right to file an unfair labor practice against the company on the ground that its members have no rights under the law. Farm workers are excluded from protection or use of the Taft-Hartley law.

UNIVERSITY OF MICHIGAN LIBRARIES

The examiner, A. Bruce Hunt, ruled that if the workers could not violate other sections of the law, because they had no standing under it, they could not violate this single section concerning secondary boycotts.

In effect, the examiner held that if, for no fault of their own, these workers are denied protection under the law they could not be subject to its penalties.

What the outcome of the controversy may be is not yet discernible. The one point we would stress in regard to it is the fact that it might have been 2, 5, or 10 years before this booby trap would have been discovered if the current case had not brought it to light. There are other hidden possibilities in the law as it stands today. The potential cause should be removed by substituting for it is a well-rounded and evenly balanced piece of legislation.

Even so obvious a part of the law as the ban on the closed shop is not without this dubious characteristic. Some smart attorneys, knowing the cumbersome and slow-moving process of the Labor Board brought on by the increase of cases under Taft-Hartley, came to an agreement for management and the unions on a compromise closed-shop contract. The assumption was that the article in the contract was at least legally doubtful. The contract would run but 1 year. By the time the Labor Board got around to considering any case that might come up the year would be up and the life of the contract would be renewed in the light of whatever developments might have taken place in the meantime.

Any law that makes such subterfuges necessary or feasible stands in need of correction.

Forgotten Guam

EXTENSION OF REMARKS

OF

HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article entitled "Forgotten Guam," by Doloris Coulter, editor of the Guam Echo.

Mr. Speaker, the Public Lands Committee has had before it legislation relating to Guam and Samoa. It would seem that this great country has neglected these fine people. There are many complaints that the Navy and our Government have not been meeting their responsibility to these people and extending to them the rights that they should have.

FORGOTTEN GUAM—INVESTIGATION BY OUR LEGISLATORS IS URGED, OR ENACTMENT OF LEGISLATION

To the EDITOR OF THE NEW YORK TIMES:

Since 1901 the people of Guam have been petitioning the United States Congress for definition of their political status. The most recent of such petitions was personally presented by Guam Assemblywoman Concepcion Barrett to the House Subcommittee on Territories and Insular Possessions at an open hearing on May 5. A few of our Congressmen are keenly aware of the need for answering that petition with enactment of an organic act. But for the most part, as you state in your editorial of May 16, "Congress has not yet come to grips with the need for adopting an organic act for Guam." This is an anomaly to the 26,000 Guamanians.

For years civilian administration, as would be provided under all organic acts now pending, was actively opposed by the Navy, which since 1898 has governed Guam. But since the war, agreement has been reached between the Departments of Navy, War (this was before unification of the armed forces), State, and Interior to transfer the administration of Pacific island peoples to a civilian agency. Testifying before the House subcommittee on May 5, Capt. P. G. Hale, Chief of the Office of Island Governments, supported organic legislation which would do exactly that. No one opposed the legislation, at least in principle.

The committee, however, seems reluctant to act until it sees things for itself. There is no indication that action, favorable or otherwise, will be taken until after a trip is made.

A joint investigation of Guam, Samoa, and the Trust Territory was planned by the House and Senate last year. Plans were all set for the committee to depart, November 9. Then, suddenly, a week before election, the trip was called off. In view of this experience Guamanians are wondering what assurance they have ever of being visited by United States legislators.

Resolutions for separate investigations by the House and Senate have been introduced in the Eighty-first Congress. To date they have not been heard by either side.

If an investigation is all that Congress can promise Guam this year, then that investigation should be set up and secured beyond doubt. If busy legislators are lukewarm to a 9,000-mile trip to spend a few hours on an island, then it might be suggested that organic legislation for Guam, to which there is no known opposition, be enacted without further delay.

Guamanians, tired of waiting for Congress to come to them, now are considering a resolution that would appropriate $10,000 for two delegates to go to Washington. This should indicate how the people feel about their island, which the New York Times 3 years ago called forgotten Guam.

DOLORIS COULTER,
Editor, Guam Echo.

WASHINGTON, *May 16, 1949.*

Aid for China Better Late Than Never

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include an article by Joseph Alsop from the Washington Post of May 23, 1949. If this article is correct in its report that the Administration is at last waking up to the magnitude of the disaster to which its do-nothing no-policy in China is inevitably leading and has decided to find a way to do something effective about it rather than just try to justify its failures, it is the best news out of the State Department since VJ-day.

If it has been decided to prevent the other parts of Asia besides China from falling into Soviet hands, one wonders why the Department insists on doing things the hard way. It is certainly better to begin to resist on our 10-yard line, or even on the 1-yard line than not at all; but why did we not resist when we were on the 50-yard line? And why do we not start resisting in earnest now while we are still on the 20-yard line with the easiest part of China to defend still in the hands of friends? It does not make sense to deliberate further or stall around when every day lost makes the task that much harder.

AID FOR CHINA BETTER LATE THAN NEVER

(By Joseph Alsop)

For four long, sorry years American policy in the Far East has floated, to put it plainly, like a chip of driftwood on a sluggish open sewer. The result has been the disaster in China. But this disaster has at least had a certain shock value. It has at least just led to the decision to formulate a clear, non-floating far eastern policy. And this is a great gain, even although it is not yet known precisely what the new policy will be.

The decision has just been taken with the blessing of President Truman. Ever since he took office, Secretary of Defense Louis Johnson has been pressing for a positive definition of our far eastern interests and program. Last week he is understood to have raised the question again, pointing out the need for some sort of action before policy making was suspended by the departure of Secretary of State Dean Acheson for the Council of Foreign Ministers.

Concurrently, the State Department was also moving away from its previous hand-wringing passivity toward the Far East. Other influences were no doubt at work as well. At any rate, Acheson wisely agreed that we could no longer go on "waiting for the far eastern dust to settle," as the earlier attitude was euphemistically described.

The chances are rather heavy that this does not mean any serious effort will be made to save the remains of non-Communist China. The task in China seems to be regarded as too difficult, even although Maj. Gen. Claire L. Chennault's visit to Washington, to urge aid for China, helped to bring the matter to a head. On the other hand, the new decision very definitely means that all the rest of Asia will not be permitted to fall into the grip of the Soviet Union without protest or obstruction from this country.

This was, hitherto, the great danger. As General Chennault very cogently argued, the loss of China directly threatens all of southeast Asia. And of the wide, rich territories of Indochina, Siam, Malaya, Burma, and Indonesia should all be permitted to go the way of China, then both Japan and India would also be directly imperiled. Now, however, a line will be drawn somewhere to halt this process of Soviet conquest in the Far East. This is a great turning point, like the turning point when a line was drawn at the Greek and Turkish borders, to halt the process of Soviet aggrandizement in Europe and the Mediterranean.

So far as is known, the difference between the situation 2 weeks ago and the situation today is simply that the need to draw such a line and defend it has at last been agreed upon in principle. It seems unlikely that the line itself can be chosen without further study. The places to watch, however, are Indochina, which is the political key to southeast Asia, and Formosa, which is the strategic key to our own island Pacific defense line of Japan-Okinawa-Philippines.

Better late than never is the only possible comment. But why so late? is a question that may well be asked. The answer goes back to the period of 1941–44. That was the time when Gen. Joseph W. Stilwell and several of the most influential members of the State Department Far Eastern Division were, for varying reasons, pursuing a sort of private war against the government of Generalissimo Chiang Kai-shek.

The battles of those days ended with Stilwell's replacement by Gen. Albert C. Wedemeyer. But their effects lived on. On a lower level, the majority opinion in the State Department Far Eastern Division continued bitterly opposed to any effective aid to the anti-Communist forces in China. And on the highest level, General Stilwell's bitter personal hatred of Chiang Kai-shek and his government also left its heritage.

General Stilwell's friends and sponsors were Secretary of War Henry L. Stimson and General of the Armies George C. Marshall. Neither would listen to anyone but Stilwell about China in the 1941-44 period. Because of his China mission and his subsequent appointment as Secretary of State, General Marshall dominated our Far Eastern policy from the end of the war until last January. And in Nanking and in Washington, General Marshall adhered equally inflexibly to the opinions he had previously formed.

In Nanking, the representations of General Wedemeyer went unheard. In Washington, although Under Secretary of State Robert A. Lovett was allowed a free hand in all other fields, he could do nothing to secure decisions on Far Eastern policy. Marshall simply sat on the whole problem.

Secretary Acheson took office under the influence of the views of General Marshall, whom he deeply and very naturally admires. There was grave danger that our Far Eastern policy would continue to float, even after China had been lost. But now, fortunately, a different course has been chosen. Thus it is time to let bygones be bygones, and to prepare for the arduous and probably extremely disagreeable tasks of the future.

Blue Mold in Tobacco Plants

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. BURDICK. Mr. Speaker, as the years pass it is becoming increasingly difficult to produce healthy tobacco plants. A few years ago, blue mold in these plants was unknown in many sections of the country. Today, it seems to be spreading and literally millions of dollars are lost annually by the tobacco growers of the South.

Those who have continued to use natural fertilizer have escaped this scourge in a large degree, but those who rely on commercial fertilizer as now manufactured are increasing their troubles. The fault lies in the fact that the commercial fertilizers now manufactured contain too much acid content and not enough animal matter. Fertilizers can be manufactured more cheaply by limiting the animal and plant life matter and increasing soluble nitrogen; and profit, and not the success of the planter, is what concerns the manufacturer. If this kind of fertilizer is not outlawed, the tobacco raiser will eventually find himself entirely out of business.

William G. Holman, 305 B Street NE., Washington, has spent years investigating this important matter, and has developed a fertilizer that is blue-mold proof, but he has been unable to convince Congress that he should have some financial assistance in putting this product on the market. Trial after trial has been made of this product, and in each and every case, the plants come through without blue mold. He is rendering, at his own expense, a great service to the tobacco growers of America, but has reached a point where he must have some assistance, or give up the fight for the preservation of the great tobacco fields of the South. Even experts in the Department of Agriculture have turned thumbs down on his getting any assistance from Congress, when they know that through his efforts several fertilizer manufacturers have been indicted for dishonesty in representing their products and have been found guilty. Scientific experts, generally, do not always have common sense in matters of practical importance.

In the Richmond Times-Dispatch of May 24 there appears an article by Mr. Holman that deserves public attention. It is:

HOW TO PREVENT BLUE MOLD FROM DESTROYING TOBACCO

EDITOR OF THE TIMES-DISPATCH:

Reports have recently come to me from county agents indicating that more tobacco plants are being destroyed by blue mold this year than was the case in 1945, when a large majority of the farmers in twenty-odd Virginia counties were forced to drive 100 to 150 miles into North Carolina to get the plants with which to plant their crops. They may not be able to do that this year because of a shortage of plants in North Carolina.

Isn't it about time the farmers asked their Representatives in Congress to help me get a hearing on my bill, and an opportunity of proving that I know how to prevent the destruction of tobacco plants by blue mold by the proper feeding of the plants?

I wrote and had introduced in Congress a fertilizer-labeling bill patterned after the Pure Food and Drugs Act and the Wool Labeling Act, which limits the amount of soluble nitrogen in fertilizer and enables the farmer to know what materials are used in making it, and how many pounds of each material, and I have been waiting for 4 years for an opportunity to prove that an excess of soluble nitrogen in fertilizer is the cause of plant diseases, is forcing the farmers to use entirely too much fertilizer per acre, and that it is believed by eminent medical scientists that food crops grown with it may have something to do with the great increase of vascular and degenerative diseases.

Wouldn't it be a good idea to ask our candidates for governor whether they would be willing to use the influence of their office to help me get a hearing on this bill, that means so much to the health and welfare of the people?

WILLIAM G. HOLMAN.

WASHINGTON, D. C.

Proposed Columbia Valley Administration

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, May 26 (legislative day of Monday, May 23), 1949

Mr. KEFAUVER. Mr. President, it recently was my pleasure to visit the vast Pacific Northwest. There I had the honor of speaking at banquets and other meetings in Spokane, Tacoma, Seattle, and Portland. My subject was the great Columbia Valley Administration, as proposed by the President of the United States and sponsored now in the Senate and House by a considerable number of Members of the Congress.

The enthusiastic responses which I met everywhere, Mr. President, indicated to me that the men and women of the Northwest are eager to have their region receive the benefit of CVA. These people were anxious to hear of what has been accomplished by the Tennessee Valley Authority. They hope to see the Northwest aided, as the watershed of the Tennessee has been aided.

I hope that I was able to bring a message which enlightened the people of the Northwest on the great strides made by the TVA. I met people throughout the region who are working hard for CVA—ex-Senator C. C. Dill, of Washington, a former distinguished Member of this body; State Senator Austin F. Flegel of Oregon, one of his State's leading industrialists; associates of Senator Magnuson, Representatives Hugh Mitchell and Henry M. Jackson; yes, and many others who are enlisted in the cause of the CVA.

At this point I ask unanimous consent to have printed in the RECORD a somewhat extensive article on the entire Columbia Valley Administration proposal by Richard L. Neuberger, a well-known Northwest writer and analyst. The article appeared in the Sunday editorial section of the St. Louis Post-Dispatch for May 15, 1949. It cites the genuine need in the Northwest for an agency such as CVA, which will coordinate activities on that great hydroelectric stream, the Columbia.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the St. Louis (Mo.) Post-Dispatch of May 15, 1949]

RIVER AUTHORITY FOR THE NORTHWEST—YOUTH BATTLES OLD EXPLOITERS IN COLUMBIA VALLEY—FARM LABOR GROUPS UNITE IN SUPPORT OF CVA MEASURE NOW BEFORE CONGRESS—CONTROVERSY FOLLOWS PATTERN OF THE MISSOURI VALLEY AUTHORITY FIGHT AS ARMY ENGINEERS AND RECLAMATION BUREAU FORM NORTHWEST INTERAGENCY

(By Richard L. Neuberger)

SEATTLE, WASH., May 14.—From the continental divide to the sea, the administration bill for a Columbia Valley Authority has become the dominant political and economic issue in the Pacific Northwest. This measure, patterned after the TVA and personally endorsed by President Truman, has been introduced in both branches of Congress under a sponsorship which included notably three youthful New Deal Democrats from the State of Washington.

Adherents of CVA discern significance in the fact that Senator WARREN MAGNUSON is only 44 years old, while Representatives HUGH B. MITCHELL and HENRY M. JACKSON are a mere 42 and 33, respectively. These men claim that the issue of a regional authority for the vast basin of the Columbia is a struggle between the new generation of northwesterners and the groups which have exploited the resources of the area for more than half a century.

In general, the controversy fits a pattern familiar to the Missouri Valley and other sections of the Nation where coordinated

UNIVERSITY OF MICHIGAN LIBRARIES

river administrations also have been advocated.

All branches of organized labor in the Northwest favor CVA. So do the two largest farm organizations, the Grange and the Farmers' Union. The Democratic Party, once somewhat reluctant, supports the project without reservation, now that the President has made it an objective of his second term. Indeed, party committees in Portland and Seattle, given their choice of a wide variety of Democratic speakers for Jefferson Day banquets, quickly united on Senator ESTES KEFAUVER, of Tennessee, and insisted that he talk about TVA.

The Republican Party is alined nearly as solidly in opposition. Even before the President's bill took final form, the GOP Governors of Washington, Oregon, and Idaho held a conference at Pocatello and contended the region could best be served by existing agencies. By this is meant a quartet consisting of the Corps of Engineers, the Bureau of Reclamation, the Bonneville Power Administration and the Fish and Wildlife Service.

However, the quartet does not always sing in harmony. Dr. Paul J. Raver, Bonneville chief and former Illinois State commerce commissioner, is on record for CVA. The Engineers and the Reclamation Bureau have formed a Northwest Interagency Committee reminiscent of the Pick-Sloan plan in the Missouri Valley, yet these two temporary allies have not settled their quarrel over which should construct the Hell's Canyon Dam on the Snake River, main tributary of the Columbia.

Furthermore, biologists of the Fish and Wildlife Service are charging that Army proposals for a series of navigation projects on the Snake could mean the complete destruction of the $15,000,000 annual Chinook salmon runs.

DUPLICATION OF EFFORT HAS BECOME A FINE ART

Along the Columbia's picturesque 1,200-mile course, duplication of governmental units has become a fine art. Three separate agencies are directly involved in the operation of Bonneville Dam. The Army engineers have charge of the physical functions, such as the ship locks and powerhouse. The Bonneville Power Administration, in turn, wholesales the energy produced under Army supervision. And the Fish and Wildlife Service advises on the effectiveness of the $8,000,000 salmon ladders and elevators.

Upstream on the same transmission network, another influence is added—the Bureau of Reclamation, which manages the world's largest generating plant at Grand Coulee. An exchange of orders among these bureaus is required when more power is needed on the 230,000-volt lines to the factory at Hanford producing plutonium 239 for atomic energy. It took several days of interagency memorandums to float free a wheat barge impaled on rocks at low water, midway between Bonneville and Grand Coulee.

This sort of confusion is cited by Senator MAGNUSON and Congressmen JACKSON and MITCHELL as the most pressing argument for CVA. They have as a prominent ally Senator JAMES E. MURRAY, Montana's 73-year-old Democrat, who hopes someday to see both CVA and MVA functioning in the two great watersheds which divide his State.

The first break in the straight party division on the issue of CVA occurred recently when 43-year-old HARRY P. CAIN, flamboyant Republican Senator from Washington, surprisingly joined in sponsorship of the administration's bill. This astounded friend no less than foe, for CAIN has been hostile to virtually every objective of the Democratic regime. Adversaries of CVA obviously were caught off base.

CVA's regional adherents immediately claimed CAIN was getting on the bandwagon. "Senator CAIN never introduced a Truman proposal before, so this shows how popular CVA is with the people," said Ronald E. Jones, of Brooks, Oreg., Farmers' Union president and a director of the League for CVA.

Some strange alliances have taken place in an effort to stave off CVA. Appearing before a committee of the Oregon State Legislature, a delegation from the Portland Chamber of Commerce praised the Bonneville Power Administration and urged that it be left in charge of marketing Columbia River water power. Yet the State Grange pointed out that when the late President Roosevelt proposed creation of the Bonneville Power Administration in 1938, the Portland Chamber of Commerce sent a delegation 3,000 miles to the National Capital in an attempt to defeat his proposal. This delegation wanted the Army engineers to rule power sales.

"Whenever an advance is suggested in the regional development of the Northwest," claims Morton Tompkins, Willamette Valley tomato grower who is master of the Oregon Grange, "those resisting the progress ask extra authority for the Army engineers. Yet I, for one, know accurately that the Army engineers have failed utterly in checking floods in the Willamette Valley."

Although some local differences are visible, the CVA bill of the Truman administration follows closely the route pioneered on the opposite side of the continent, in the valley of the Tennessee River.

Three directors, each paid $17,500 annually, would have sovereignty over the project. They would be appointed by the President and confirmed by the Senate. Labor, industry, and agriculture would be represented on local advisory boards. Western water rights would be protected; this means CVA could not intervene between a rancher and his contract to divert water from a tributary of the Columbia for irrigation. Immense areas of the Northwest are sagebrush uplands. They will grow crops only when threaded with canals.

In dimensions, the pupil would be greater than the master.

The watershed of the Columbia encompasses 259,000 square miles, compared with 41,000 drained by the Tennessee. The Columbia carries down to the ocean 160,000,000 acre-feet of water; this exceeds by four times the annual discharge of the Tennessee. Furthermore, the Columbia, champing in granite gorges, locks within its valley 40 percent of all the potential hydroelectric power of the United States.

COLUMBIA POTENTIALLY GREAT PRODUCER OF POWER

Because the last lingering headwaters of the Columbia rise at nearly 10,000 feet and surge all the way to the brackish tides of the Pacific, it is the Nation's greatest stream for the production of kilowatts. Its ultimate capacity is 25,000,000. The Tennessee and its feeders, on the other hand, are limited to a maximum output of approximately 4,000,000 kilowatts.

The Pacific Northwest Development Association is the principal organization devoting all its energies to denunciation of CVA. Its directors include leading figures in business and industry. Appearing before legislative committees, officials of the group have declined to reveal their specific sources of financing.

However, Bonneville officials maintain that a preponderance of the development association's funds stems from private utility corporations. In 1946 and 1947, according to Nelson C. Hazeltine, director of information for Bonneville, the Pacific Northwest Development Association received substantial contributions from the Washington Water Power Co., Idaho Power Co., Northwestern Electric Co., and Portland General Electric Co.

The principal speaker appearing under the auspices of the association has been a novelist named Robert Ormand Case. A few years ago Mr. Case wrote River of the West, a propaganda tract about the Columbia paid for by the Pacific Power & Light Co. Mr. Case denounces the CVA bill as "socialism," and predicts that two of the three directors appointed by President Truman may be Henry Wallace and GLEN TAYLOR, the recent candidates of the Progressive party in the national election.

This has impelled James T. Marr, secretary of the Oregon State Federation of Labor, to comment that Mr. Case evidently is still writing fiction.

Utility companies in the region are worried. Their lobbyists stormed the recent legislative sessions of Washington and Oregon to inveigh against CVA memorials. For many years private power corporations in the Northwest have been fighting a rear-guard action in opposition to strong public-ownership sentiment. Only last week the City Council of Tacoma adopted an order for condemnation of nearly 25 percent of the generating capacity of the $144,000,000 Puget Sound Power & Light Co.

Frank McLaughlin, president of Puget Sound Power & Light, has called the Tacoma order the most destructive of private business ever issued in the States of Washington. Since 1944 the company has been the victim of successful condemnation suits by public-utility districts in five counties. In addition, the recent Washington legislature enacted a State power authority bill giving the districts the right to acquire private-utility property through negotiation.

This is the emotional atmosphere in which the struggle over CVA is being waged. Power-company executives publicly tell men in other industrial activity, "If we go, you'll be next."

Despite this approach, CVA is winning converts among conservative ranks. E. B. MacNaughton, 68-year-old chairman of the board of the First National Bank of Portland, told a rural audience in recent days that "the Pacific Northwest has nothing to fear from a Columbia Valley Authority similar to TVA."

MacNaughton pointed out that many leading businessmen were opposed during the 1930's to the construction of the great dams at Bonneville and Grand Coulee. "We were all wrong," he confessed. "Where would we have been in the war without these splendid projects?"

MacNaughton also is president of the Oregonion Publishing Co., and this dominant Republican paper in Oregon, once hostile to CVA, has editorially admitted that some form of CVA is essential to end the bickering and confusion among competing Federal bureaus on the Columbia. The Oregonian has been particularly critical of the lack of a unified plan from the Army engineers for protecting fish runs on the Snake and Salmon Rivers of Idaho, where the bulk of the Chinooks now seek spawning grounds.

RANCHERS WANT WATER—OTHERS, LOW FREIGHT RATES

Sentiment among the rank and file of people on CVA is still difficult to assay. A multitude of conflicting interests is involved.

Ranchers in the mountain glens of Montana are more concerned over the use of water at home for reclamation than in increasing the output of dams far downstream. This is why the Hungry Horse Dam rises now near the source of the Flathead River system, practically in the lee of the Continental Divide. In fact, as Lewis and Clark discovered 145 years ago, the Missouri and the Columbia are nurtured on opposite slopes of the same mountain ridge.

Nearly a thousand miles separate Hungry Horse Dam from the Columbia's white-capped union with the sea. Over much of this vast area, power is the principal issue. New industries are needed to absorb thousands of newcomers from the East and Middle West. With neither oil wells nor

coal mines, the region possesses only a single energy base—hydroelectricity.

Yet, in the farming valleys power is secondary. Irrigation reigns paramount. The sagebrush desert will blossom like the Garden of Eden, if it is watered generously 12 months of the year.

In the long slot of the Columbia Gorge, towns have protested for decades against exorbitant freight rates. Today barges can ascend the river into the heart of the Inland Empire, a feat made possible by the world's highest lift docks at Bonneville. Rail charges have been driven downward. But at the brackish mouth of the Columbia, navigation is anathema. The fisherfolk, many of them of Finnish or Norwegian descent, fear that such apparatus as locks portends the doom of the salmon.

Proponents of CVA are stressing the present reliance of the Northwest on one industry—lumber. Seventy-one cents out of every Oregon pay-roll dollar originate in forest products. An ominous warning from Lyle F. Watts, Chief of the United States Forest Service, points out that half the sawmills in Oregon and Washington have only sufficient timber for another 8 or 10 years of cutting at the current pace. Ghost towns and measureless hillsides of stumps are the possible future.

Representative MITCHELL contends that only CVA can assure sufficient power production to provide alternative sources of employment.

Conservation and Development of Our Land and Water Resources

EXTENSION OF REMARKS
OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. COOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I take pleasure in submitting a splendid speech recently delivered by Mr. Ralph R. Will, of the Office of the Secretary, Department of Agriculture, entitled "Conservation and Development of Our Land and Water Resources":

It is my privilege to express to this convention of the National Rivers and Harbors Congress the deep interest of the Department of Agriculture in the work of your organization. We are aware of the important service your progressive group has rendered through the years in helping to formulate and implement our modern concept of land and water use and conservation.

Within the past decade or so we have seen a remarkable broadening of the interests of organizations and individuals in the development, utilization, and conservation of our natural resources. No longer do we think in terms of flood control alone, or of navigation alone, or of any other single phase of resource development. We think, rather, in terms of broad multiple-purpose programs because we realize that all phases of such programs are interdependent and that their ultimate success depends upon a comprehensive, integrated, and unified approach. This principle has been eloquently set forth by eminent authorities and I mention it here as a premise to my remarks rather than as a point to be argued and substantiated. What I want to discuss with you today is the impact of these modern concepts and their resultant demands upon the public agencies, particularly the Department of Agriculture. I want to tell you something about our current problems in program administration and about what we are doing to meet those problems. Also I want to ask your advice.

With regard to land and water resources, the basic purpose in the Department, as set forth in legislation, is to serve agriculture and the Nation in ways that will help (1) to provide adequate production of farm, range, and forest products, (2) to conserve resources, and (3) to assist in controlling floods. Fulfillment of this broad purpose, or any of its three facets, depends (1) upon close coordination of the Department's work with that of other Federal agencies, (2) on Federal cooperation with State and local agencies, and (3) most important of all, on working with the people, particularly private operators, who control and use land and water resources.

A little later I will discuss interagency relationships and problems and what is being done about them. But first I wish briefly to discuss the importance of our departmental relationships with farmers, ranchers, forest operators, and other land operators.

Under our pattern of private ownership and operation, which has values important to our society, the primary factor in determining how agricultural resources will be utilized and conserved is the farmer. Governmental programs of service should assist, influence, and facilitate his operations, and not control or dominate them. Under this principle, public agencies cannot install their programs in the sense that the engineering agencies install physical improvements in rivers and harbors. Only in the sense that agricultural programs are accepted by the farmers on a belief among them that conservation measures are practical on their individual farms and essential to farm prosperity and well-being, will these programs be successful. Needless to say, the management of public lands is important, particularly in the western watersheds. But the efficacy of management policies on public lands depends largely and properly upon the understanding and cooperation of private operators who use these and adjacent resources.

The Secretary of Agriculture, in his 1948 report, said, in part: "Conservation of agricultural resources is an integral part of agriculture as a whole and cannot be treated as a separate problem. Conservation emphasizes long-run needs such as depend for their fulfillment partly on day-to-day farming operations. The farmer has only one farming operation in which he must take care of his financial needs and at the same time do what he can to conserve soil and water. He cannot have two operations, one for production and one for conservation. Governmental programs in support of this farming operation must recognize varied demands upon the farmer. They must coordinate research, education, technical aid, and financial assistance in the never-ending task of establishing goals adjusted properly for production combined with conservation."

In this fashion the Secretary of Agriculture has nailed down the principle of inseparability of agricultural production and conservation, with the attendant proposition that governmental programs for soil and water conservation depend primarily for their application upon the proper utilization of crop lands, ranges, and forests by private operators.

As you will observe, the Secretary has stressed the need for a properly balanced program of work. This is a problem in program coordination both among and within various Federal agencies. There is need for broadly coordinated governmental action to meet the needs of general resource development; and there is a parallel need for coordination within the special field of agricultural development. Agriculture itself, as a multipurpose endeavor, requires several kinds of governmental aid. We cannot rely within the Department of Agriculture upon any one type of service or any one Department agency. The farmer has one comprehensive farming operation put together out of many parts. Likewise, the Department must have one coordinated program, put together out of numerous types of service to land users.

I will mention just a few of the things we are doing in the Department of Agriculture to help in conserving land and water resources. I will not try to give a full account; that was done effectively by members of the Department who appeared before this body last year and the year before. Their reports are in your records. I will simply offer a brief progress report on some of our current efforts.

Intense public interest in rivers and their watersheds in recent years has developed a strong drive toward resource conservation and development on a river basin basis. This trend has necessitated some new thinking and administrative practice within the Department of Agriculture. Our programs are established for the most part on a national functional basis. The past few years, however, have seen marked progress toward the coordination of these programs so as to make them serve the needs of particular river basin areas where special resource development undertakings have been authorized by the Congress.

It has not been easy to adapt agricultural programs to special river-basin needs. Completely to regionalize national agricultural programs for production and conservation would not be advisable as there are important overriding national interests to be served. The modern economy with its wide and close integration contains many component parts that are highly interdependent. National safety and well-being call for Nation-wide agricultural programs to assure adequate food along with proper conservation of resources. The Department has traditionally pursued a decentralized administrative program; it has worked with and through State agencies and local farmers' groups. Local as well as national interests have been served in this way and the administration has been improved. But control has remained to hold general policies in line with general or national safety and prosperity. Specifically the adaptation of the Department's work to the needs of specially authorized river-basin programs has involved systematic effort to safeguard national interests and objectives.

To more fully give you the Department's views on the question of developing river basin programs and to tell you more about what the Department is currently doing about the matter, I quote further from the 1948 report of the Secretary of Agriculture, as follows:

"The Department favors multipurpose development of an area or region. It participates for this purpose in the work of the Federal interagency River Basin Committee and the Missouri and Columbia River Basin Committees. * * * In the Missouri Basin the committee * * * has detailed plans for the comprehensive development of both land and water resources. A program covering the activities of all the participating agencies calls for an acceleration of regular agricultural activities by various Federal and State agencies to bring them in line with the stream engineering by the Bureau of Reclamation and the Corps of Engineers. * * * Nine agencies of the Department of Agriculture and the agricultural and forestry agencies of the States have pooled knowledge and technical resources to prepare a comprehensive agricultural plan for the Missouri River Basin which will integrate the activities of all these agencies to develop, utilize, and conserve the agricultural resources of the

UNIVERSITY OF MICHIGAN LIBRARIES

basin. The purpose of the program is to promote a stable and prosperous agriculture, to conserve and improve soil, build up and protect forest resources, enlarge and improve the farm plant through irrigation and drainage, reduce flood and sediment damages, enhance recreation, and help to protect and restore fish and wildlife."

I dwell on this special effort in the Missouri Basin because similar river-basin programs eventually may cover other parts of the country. Largely without precedent, and requiring not only a plan but techniques and procedures for the creation of a plan, our work in the Missouri River Basin should blaze a new trail for agricultural counterparts to the authorized Pick-Sloan engineering program and similar programs now being formulated in other basins. The Department of Agriculture assumes that waters in the river channels and the lands of the watersheds should be developed together. While the proposed agricultural program plan for the Missouri Basin will complement and support the river-channel engineering program, it also constitutes a coordinate and justified part of the over-all development effort.

The Department of Agriculture sees need for a comprehensive agricultural program phase in other river basins that may become the scene of broad multipurpose developments. In all river-basin programs up to now, the agricultural and forestry land-use phase has unfortunately lagged behind the river-channel improvement phase. This deficiency, apparent to all careful observers, constitutes the principal weakness in the carrying out of resource development work through the existing functional agencies of Government. The problem is to eliminate this weakness without at the same time causing some other, possibly worse, defect.

Existing Federal and State agricultural agencies should be able to deal effectively with their phases of comprehensive resource development work through the agriculture pattern established for the Missouri Basin. Agricultural agencies would perform for the most part the same kinds of services which they usually perform. The distinctive new feature would be an adaptation of the agricultural functions to particular basin needs and to the schedule of channel improvements. This would mean increased public expenditures in the immediate future; but it would promise an adequate return eventually on the public investment.

Progress in developing the agricultural program for the Missouri Basin has encountered problems and obstacles, most of them inherent in the existing authorizations and procedures. Some of these handicaps remain, but they are not insurmountable. Our plan for the Missouri Basin, after 1 year's intensive work, is now near completion. It will soon be ready for submission to the governors of the Missouri River Basin States, to the Budget Bureau, to other interested Federal agencies for review and comment, and subsequently to the Congress for final consideration.

I have dwelt upon only a few of the aspects of this broad subject. The delegates to this convention are well informed as to its general nature. Nevertheless, I hope that the account I have given of the Department of Agriculture's concept of its task will have a useful concrete application to the convention's work and discussions. Permit me to say again, we are all in just the early stages of this endeavor and I take this opportunity, on behalf of the Department of Agriculture, to solicit the support and suggestions of your organization and its members with regard to the policies and programs of the Department of Agriculture. It is the Department's sincere desire to make its services effective, to the fullest possible extent, in the conservation and development of our land and water resources.

The Story of Negro Mountain

EXTENSION OF REMARKS
OF

HON. ANTHONY CAVALCANTE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. CAVALCANTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Arnett G. Lindsay, an eminent Negro scholar, entitled "The Story of Negro Mountain," situated in Somerset County in my congressional district:

[From the Negro History Bulletin of April 1949]

THE STORY OF NEGRO MOUNTAIN

(By Arnett G. Lindsay)

A few years ago, our attention was attracted to the sign "Negro Mountain" at the peak of a broad gently sloping plateau on United States Highway No. 40, 4 miles north of the Mason and Dixon's line or approximately 70 miles southeast of Pittsburgh, Pa. So intrigued were we by the sign that we lingered in the nearest township, Elk Lick, Pa., for an hour or more during which we inquired of its settlers why the plateau was called Negro Mountain.

Surprisingly, however, no one knew the origin of this provocative name; at least, no satisfactory explanation was forthcoming. Could it be that this bit of history or community tradition had been entirely forgotten? Or was this in further substantiation of the trite saying in historical circles that "Pennsylvania has everything, but the difficulty is that few people know where to find it"? Our curiosity, needless to say, was further aroused; we determined then to locate all available evidence bearing on the origin of the name of this not new but too little-known mountain.

Had some Negro distinguished himself on this mountain? When did it occur? What was his name? What adventure merited this honor? We sought the answers to these questions by first addressing a letter to the commissioners of Somerset County, Pa., in which Negro Mountain is located. One of them in reply[1] wrote that "the name, as I have heard from some person or perhaps read in some historical account, but which I have not been able to locate today came from a Negro slave of some Virginian who was traveling west over what is now the national highway (U. S. No. 40) in the early days when it was Braddock's road over the mountain. On the top of this mountain range, they were surprised by a band of Indians. The Negro, at a risk which cost him his own life, held off the Indians until the others could get in position to defend themselves and repulse the attack. He was buried on the spot where he fell and the mountain was afterwards called the Negro mountain or later, Negro Mountain.

This information was checked soon thereafter with the local history records of Somerset County, Pa., in the Library of Congress. There, were found three accounts concerned with the naming of this mountain range. One was in substantial agreement with the report furnished by the commissioner; the other two accounts, however, recited different adventures of a Negro who was owned by or was the companion of white hunters. On further inquiry, also we were informed that several interesting legends and community traditions persist regarding the naming of Negro Mountain. All of these sources were agreed, however, on the point that some Negro distinguished himself either in a heroic attack against the Indians or on some sort of hunting adventure. A more complete version of the account related above by the commissioner recorded the fearless adventure of Capt. Andrew Friend,[2] pioneer hunter and Indian fighter who migrated from Virginia to this (Turkeyfoot) area and whose exploits rivaled those of Davy Crockett or Daniel Boone. The story told how Captain Friend, imbued with the "westward ho" spirit, frequently went on hunting expeditions into the western wilderness of Pennsylvania and returned as often as the proverbial postman. It was Captain Friend's custom to journey with other settlers as far as the meeting of three rivers in search of deer, elk, panthers, wild turkeys, and other animals. They were reputed to be much more adventurous than any other hunters in the area. Invariably, Captain Friend took his faithful Negro slave on such expeditions. This account stated further that the hunting party set out on one of these trips not only to hunt wild animals, but also to explore the surrounding countryside. They proceeded therefore at great peril to Fort Cumberland which, at that time was quite an advanced frontier settlement and in a region forbidden to white men. It was believed that this expedition occurred doubtless during the period of the French occupation of this territory—a time when the Indians were decidedly hostile to any further encroachment on their lands.

This account related that Captain Friend, accompanied by his Negro slave and one of his white companions, whose life Friend had on a former occasion saved, were attacked on their return by a considerable number of savages. Where the attack began is not recorded, but it is believed that they were compelled to retreat from the peak of this mountain range, during the withdrawal from which they encountered a still larger number of Indians. In this engagement, the Negro slave, equipped like his companions with hatchet, tomahawk, and other hunting weapons of that era, displayed "great bravery" in repelling the Indians.

This Negro was described as a powerful man and of gigantic stature. He held off the Indians as long as he could, falling back only when compelled to do so. His companions also defended their positions, but they too retreated strategically. Late one evening, however, the Negro slave was mortally wounded far up the mountain. Captain Friend and his previously befriended companion attempted to carry the slave from this dangerous peak to a less conspicuous section of the mountain range, but his huge body could not be easily handled. They succeeded finally in pulling him off the main trail where they sheltered him during the night from the Indians and the inclement weather in a hastily prepared chestnut log. The Negro, however, aware of his serious condition, urged Captain Friend and companion to continue their retreat, but they refused to desert him. Instead, they concealed themselves in the dense underbrush off the main trail. Before daylight the Negro in great pain died, but to his companions he was merely absent in body but present in spirit. With hatchets and axes a grave therefore was quickly improvised in the bottom of a hole left by the roots of a fallen tree in which this Negro slave was reverently buried on the mountain range. Neither the name of Captain Friend's companion nor that of his Negro slave is recorded. But in appreciation of the heroic and faithful service of their deceased companion, this account concluded that the mountain was thereafter called Negro Mountain. Captain Friend and his companion reached Fort Cumberland in safety, but they had learned

[1] Ernest C. Johnson, Letter, February 17, 1947.

[2] W. H. Koontz, E. Howard Blackburn, and William H. Welfley, History of Bedford and Somerset Counties, Pa. Vol. II, pp. 39–65.

that the blood of all brave men is of one color.

Another account[4] related the story of a different owner of a Negro—a hunter named Jacob Castleman who maintained a camp near the town of Meyersdale, Pa. In this camp, Castleman after whom the Castleman River takes its name, kept a Negro servant who was said to have been "almost as expert a woodsman as was his master"—a man after his own heart. On one occasion long before settlers had come into this area—this Negro was sent along with a neighboring hunter on an errand to the Turkeyfoot region. There, a band of Indians, doubtless under the leadership of Pontiac, succeeded in separating these two hunters. In a heroic effort to carry out their mission the Negro was pursued up the mountain, whereas his companion was chased toward the river. And although this Negro was never heard of afterward, the story stated that he was killed on this mountain. Nor was it definitely known what happened to his companion, but it was believed that he escaped. The account concluded nonetheless that in recognition of the skill and bravery of this Negro servant, the plateau from that time on was called Negro Mountain.

Still another account[4] briefly recorded the bold adventure of a Maryland hunting party which included a giant Negro. This man displayed unusual bravery on the mountain range under discussion, but was killed after he led a devastating attack against the Indians. This battle occurred during the French and Indian War and was fought under the leadership of Col. Thomas Cresap. This account also concluded that in appreciation of a Negro's bravery his comrades named the plateau Negro Mountain.

In addition to these accounts, each telling of a different adventure about a Negro, several traditions persist, especially the frequently heard but unauthenticated one, that the name of this mountain stems from its strategic location as an Underground Railroad Station—4 miles north of the Mason and Dixon's line—and was well known as a refuge for runaway slaves. But the slaves' bitter struggle for freedom in which the "Underground Railroad conductors" played a major part, reached its climax several decades after the aforementioned expeditions.

It is not our purpose here to evaluate these conflicting accounts and unsubstantiated traditions nor to appraise their relative historical merits. And although traditions which are handed down by earlier generations are important aids to history, their claims should be carefully scrutinized before they are seriously considered or incorporated into the community's history. It must be admitted that in their use of the quill and inkpot, the early settlers of Somerset County, Pa., in recording church, State, and private records of their history are spare to the point of incompletion. On the other hand, some of the accounts which were recorded in colonial times not only reported different versions of the same event, but also overlapped almost to a point of confusion. Significantly, however, all extant records of these adventures agreed at least on the point that a Negro on some sort of heroic adventure, distinguished himself on this mountain range. Notwithstanding this agreement, we have not found this history-making adventure connected with any account recording the colonial development of Pennsylvania. Nor have we located any record of these expeditions summarized or pointed out in any historical account of Somerset County, Pa.

Negro Mountain is located between the Allegheny and the Laurel Hill Mountains. It constitutes a considerable elevation running in from the State of Maryland through nearly half of Somerset County and forms a dividing ridge for the surrounding waters. Prior to 1749, this area seemed to have been untrodden by the foot of white men. Then, Christopher Gist,[5] an agent of the Ohio company and a surveyor from North Carolina, journeyed to this region to discover these lands and chose the southern route which was known as Nemacolin's trail. On this adventure however, he merely skirted this mountain range. Nevertheless, this trail later became the shortest distance between the Atlantic settlements and the Ohio Valley. Soon thereafter (1754), Lt. George Washington[6] who was stationed at Wills Creek (Cumberland, Md.) in command of an expedition to occupy the forks of the Ohio (Pittsburgh) was credited with cutting the road, later known as Braddock's road, through the southwest part of Somerset County, approximately where U. S. No. 40 is now contructed. In doing so, Washington also circumvented the mountainous plateau which was later called Negro Mountain. In both of these instances, roads were constructed along the natural routes—paths which had been blazed by the Indians. Historical accounts, on the other hand, seem vague and uncertain about the precise time Turkeyfoot Road was laid out—the road leading to Elk Lick, Pa., and over Negro Mountain.

Four other mountains are located in Somerset County as follows: (1) the Great Allegheny forming the boundary of the county on the northeast and passing through the southeastern part; (2) the Little Allegheny forming the southeastern boundary; (3) the Savage Mountain on the southeast between the Great and the Little Allegheny; and the Laurel Hill Mountain forming the western boundary. As a result of these physical characteristics providing excellent water supply and drainage, it is said that few counties of Pennsylvania are better watered. The entire region has superior grazing land consisting chiefly of loam. It is said that the finest butter in the world—known as glade butter—is made in this area.[7] Somerset County is also known for its remarkable beauty, its picturesque nooks and its changeable climate. Frost, for instance is not uncommon in June and early September.[8] So impressed was the poet Riley with its topography that he was inspired to muse as follows:

" 'Mongst the Hills of Somerset
Wis't I was a-roaming yet
My feet wont get usen to
These low lands I'm tromping through—
Up there where the mountain air
Could reach out and katch me there
Snatch my breath away and then
'Rensh and give it back again
Fresh as dew and smellin' of
The old pinks I ust to love." [9]

One of Pennsylvania's primary forest fire towers is situated on Negro Mountain.[10] It was erected in 1921 by the department of forests and waters on a ground elevation of 3,190 feet above sea level, the highest altitude of all the 116 observation towers in Pennsylvania. All of these towers are strategically situated throughout the State, but Negro Mountain tower, 60 feet high, commands a view of thousands of acres of woodland in Somerset and adjacent counties. Together, they serve as a unique system of protection against forest fires in Pennsylvania.

Mount Davis,[11] the highest point in Somerset County, as well as in the State of Pennsylvania, is also situated on Negro Mountain—3,212 feet above sea level. Here a recreation park was erected during the years 1933–38 and used as a CCC camp. During that period a log cabin was built and maintained during the summer months for the convenience of travelers. At one time the information was widely known that this cabin could be occupied without cost for a day and a night on a first come, first served basis.

Early settlements were attempted near Negro Mountain in this area known as Turkeyfoot, by Virginia, Delaware, and New Jersey pioneers, but most of the settlers except the Germans were dispersed by Indians during the Revolutionary War. Even today, the number of inhabitants of this area is small—in fact, the entire population of Somerset County was only 84,957 in 1940, of whom only 167 were classified as Negroes.[12] Admittedly, it is not known whether the Negro after whom this mountain is named was one of the inhabitants of this county or whether he migrated or was brought to the county by his master or owner, but he deserves some honor and should be proudly called, like its other inhabitants one of the "frosty sons of thunder."[13] The constituents of Somerset County in particular and the State of Pennsylvania in general will do well to claim this unknown Negro as one of their valiant sons. No one can deny that he distinguished himself on the "roof garden of Pennsylvania." And although the appropriate marker—Negro Mountain—has been placed at the peak of this plateau and the highest fire tower in the State has been designated by the Pennsylvania Department of Forests and Waters as Negro Mountain Tower, too few persons know why these laurels were given. Truly, it may be said also that he laid down his life for his friends. And finally a toast offered on another occasion by William Lyman, of Pottsville, Pa., may serve as a fitting eulogy for this unknown Negro and enable us to end appropriately this account, as follows:

Old Pennsylvania, her sons like her soil, rough inside, but solid stuff within, plenty of coal to warm her friends, plenty of iron to cool her enemies.

Up to You

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from

UNIVERSITY OF MICHIGAN LIBRARIES

the Atlantic News-Telegraph of May 1, 1949:

UP TO YOU

The financial future of the Nation is up to the individual citizen. If he is careless where Federal spending is concerned, the Congress which represents him and reflects his attitudes, will be equally careless with its spending. If the individual citizen demands a strict accounting and a dollar's full value for every dollar spent, the Congress will in time become equally careful about its spending.

There are evidences on every hand which point both to the need for curtailment of Federal spending and the opportunities to do so. The Hoover Commission has pointed out to the Congress and the administration possibilities for savings which would eliminate the threatening deficit if put into effect at once. If a similar program were to be presented to the average businessman in connection with his business, he would not hesitate a minute to put it into effect. Not so with Government. The Federal spending bodies have to consider the angles. If they cut spending, they make enemies. Strong enemies in the right quarters can mean political death. So, if a government is to put through economies, it must be impressed upon those in authority that the majority wants economy.

This is not easy to do, for there are few people with the courage to fight Federal spending which benefits them or their community. Until people develop this courage, spending will continue, for if spending is to be curtailed, everyone must sacrifice in the matter of Federal aid for his favorite project.

However, there are signs that point to a growing desire for economy—both in Congress and among the citizens of the land. The debt is so huge that some people are growing fearful of the economic consequences of such a weight on the shoulders of the Nation. The threatening deficit is causing others to worry. With some pressure from the people right now, savings might be accomplished. Every citizen can help by demanding economy of his representatives and by not demanding Federal cash for everything which he wants or his community would like to have.

Connecticut Valley Unified Planning and Development Administration

EXTENSION OF REMARKS

OF

HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I insert herewith a resolution by the Assembly of the State of Connecticut petitioning the Congress to establish in the Connecticut Valley a unified planning and development administration. This could be accomplished by the passage of H. R. 4701, which I have introduced.

Resolved by this assembly:

Whereas the tremendous losses to the Connecticut Valley, its environs, and the Nation from floods and pollution and from the failure to develop to the fullest the potentialities of the Connecticut River and its tributaries for power production, city supply, recreational, and other purposes, and the attendant business and industrial losses, are matters of common knowledge; and

Whereas techniques of governmental administration for the multipurpose development of river valleys have now been thoroughly tried and tested in various areas of the country, and with the most conspicuous and enduring success in the Tennessee Valley: Now, therefore, be it

Resolved by this senate, That it urge the Congress of the United States to take measures with the greatest dispatch to establish in the Connecticut Valley a unified planning and development administration like that of the Tennessee Valley Authority adapted as local conditions may require to promote the greatest wealth and prosperity of the region and the Nation; and be it further

Resolved, That a copy of this resolution be transmitted by the secretary of the State of Connecticut, to the President of the United States and to all Senators and Representatives for the State of Connecticut now serving in the National Congress.

Given under my hand and the seal of the State, this 17th day of March, in the year of our Lord 1949.

CHESTER BOWLES,
Governor.

Admission to United States of Stateless Polish Soldiers

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution:

MAY 26, 1949.

Miss FRANCES T. MAYKOWSKI,
Secretary, League of Polish Societies,
Paterson, N. J.

MY DEAR FRANCES: I have been glad to present to the House the resolutions adopted by the League of Polish Societies of Paterson, N. J., at the mass rally in Paterson, Saturday, May 21, 1949, in observance of the one hundred and fifty-eighth anniversary of the adoption of the Polish constitution.

As one who is supporting the movement to provide for the admission into our country of the stateless Polish soldiers who fought on the Allied side during World War II, desirous also of assisting those Polish seamen now in our country who cannot return to their native land because of the Communist domination, I am very glad to have this testimony.

With every good wish for you, Mr. Sierakowski and my other friends of the league, believe me.

Very sincerely yours,

GORDON CANFIELD,
Member of Congress.

We, American citizens of Polish origin, with a fierce love for freedom, and for decency among God fearing men, gathered at a mass rally sponsored by the League of Polish Societies of Paterson, N. J., Saturday May 21, 1949, in observance of the one hundred and fifty-eighth anniversary of the adoption of the Polish Constitution, which set a new mark in liberalism in Europe, do hereby publicly proclaim that we shall extend our every effort to preserve and promote our American way of life: Therefore be it

Resolved, That we strenuously urge the immediate adoption by the Congress of the United States of a law to provide for the legal entry of all Polish seamen who are presently in this country and who have fled from their ships because of imminent threats of being returned to communistic Poland; and be it

Resolved, That the Displaced Persons Act be amended to provide for the admission into this country of the 30,000 stateless Polish soldiers who fought so gallantly and for the common good of all mankind on the allied side when their own cause was lost; have earned this priority without regard to quota restrictions; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, Harry S. Truman, Senator H. Alexander Smith, Senator Robert C. Hendrickson, Congressman Gordon Canfield, and to the press

ANTHONY SIERAKOWSKI,
President.
FRANCES MAYKOWSKI,
Secretary.

Frankfurter, Niles, Laski: Three of a Kind—Common Background Is Left-Wing Forum

EXTENSION OF REMARKS

OF

HON. EDWARD H. JENISON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. JENISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following article which appeared in the Chicago Tribune under date of May 22, 1949. It was written by Mr. Walter Trohan, distinguished newspaperman and head of the Washington bureau of the Chicago Tribune Press Service. The recent history of American Government and its current trend make Mr. Trohan's article a timely revelation of common background for certain leaders who have exerted and continue to exert powerful influence. Mr. Trohan's report is worthy of reading and reflection by all Members of Congress dedicated to the task of preserving the traditional freedoms of the American system.

FRANKFURTER, NILES, LASKI: THREE OF A KIND—COMMON BACKGROUND IS LEFT-WING FORUM

(By Walter Trohan)

WASHINGTON, May 22.—Three men, who play a major role in ruling America and Britain from behind the scenes, have a common background of more than a quarter of a century in a Boston left-wing forum.

The men are Supreme Court Justice Felix Frankfurter, White House Administrative Assistant David K. Niles, and Harold Laski, British Labor Party official.

The forum is the Ford Hall Forum, which was launched in 1908 by the Boston Baptist Social Union under terms of the will of Daniel Sharp Ford, owner of the magazine, Youth's Companion. The union withdrew financial aid from the forum in 1928, necessitating reorganization of the forum.

LASKI LECTURES OFTEN

Niles, who had directed the forum for years, was one of the directors of the 1928 organization and still plays a part in the forum. Frankfurter and Laski were lecturers

at the forum. Laski appeared frequently from 1916 to 1920 when he was visiting professor at Harvard, where Frankfurter taught law. Frankfurter is a member of the forum's general council.

Through the forum Laski expounded his planned economy, inculcating Niles and Frankfurter with what has since become British socialism. Laski was one of the handful of British Socialists, organized in the Fabian Society, who set out to capture the British Government years ago.

Part of the program of the British Socialists was to capture labor unions by infiltration and to attract influential intellectuals. The strategy worked so successfully that at the end of World War I Laborites won the Government and swallowed up the old Liberal Party. Conservatives wrested control from the Laborites. After World War II the Laborites returned to power.

THEORIES ARE ADOPTED

In his forum lectures Laski advanced theories which have since become New Deal doctrine. He taught American left wingers how to bore into the Democratic Party and into labor.

Since the end of the war one wing of New Dealers has been active in Americans for Democratic Action, which they feel may well become the American Fabian Society. This group is following the British's society's pattern and hopes some day to control the United States.

Last month the Cambridge, Mass., school committee barred Laski from speaking in a public school hall on the ground that he is pro-Communist, anti-Catholic, and anti-religious.

Laski is a frequent visitor to the United States. On these trips he confers regularly with Frankfurter and plots strategy of world socialism.

FRANKFURTER'S INFLUENCE

Frankfurter, one of Laski's most enthusiastic converts, is regarded as one of the most powerful behind-the-scenes figures in the United States. The late Gen. Hugh S. Johnson characterized him as "the most influential single individual in the United States."

Frankfurter had tremendous influence on the late President Roosevelt. Johnson said the Vienna-born law professor was powerful because he engineered one of "the cleverest infiltrations (of purposeful officials) in the history of our country."

Hundreds of graduates of Frankfurter's law classes were given top-ranking jobs in the Government. Thousands of others had lesser posts. All were crusaders for Laski socialism through the latter's disciple, Frankfurter. Johnson called these proteges the Happy Hot Dogs.

In his forum lectures Frankfurter championed Sacco and Vanzetti, Communists who were tried for murder and executed. He lengthened his lectures into a book in which he declared the political beliefs of the men had been permitted to prejudice their chance for a fair trial.

At the time, Frankfurter was active in the forum, the late President Theodore Roosevelt warned the American people that Frankfurter was taking a Communist attitude "fraught with mischief to this country." The warning was sounded in an open letter to Frankfurter, published on December 19, 1917.

Theodore Roosevelt wrote that Frankfurter, then counsel to President Wilson's mediation commission on Tom Mooney, Communist who served 22 years in prison for the 1916 San Francisco Preparedness Day bombing, had taken an attitude "which seems to me to be fundamentally that of Trotsky and the other Bolshevik leaders in Russia."

ADMIRES SOVIET EXPERIMENT

At the time the late President was writing, Laski and Frankfurter were active together in the forum. Laski, professor of political science at London University, has long been an admirer of the Soviet experiment. During the war he frequently said that the war was an opportunity for social revolution in England. This opportunity was realized in the Labor Party victory.

Frankfurter, who regards Laski as his political mentor, is still a power in America. His closest friend is State Secretary Acheson. The two walk and talk together every morning.

He exerts strong influence on the White House through Niles. Frankfurter got Niles into the Federal scene as WPA representative in Boston. The Justice sold him to the late Harry Hopkins, for years the No. 1 White House intimate in the time of Franklin D. Roosevelt.

NILES COMES TO WASHINGTON

Frankfurter then brought Niles to Washington, introducing him to President Roosevelt as a "good practical politician." Niles proved to be a rank amateur in master minding the ill-fated attempt of the White House to purge Democratic Senators who opposed the New Deal Court-packing plan. He was equally unsuccessful in attempting to purge prewar noninterventionists in the 1942 congressional primaries.

Niles has the President's ear and is conceded to exert great influence for Frankfurter in the White House. Like the Justice, he shuns the limelight, preferring to operate without publicity.

Herring or Faces?

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Mount Vernon News of May 16, 1949:

HERRING OR FACES?

According to a speech made in Congress by Representative J. HARRY MCGREGOR, of the Seventeenth Ohio District, J. Edgar Hoover, Director of the FBI, is authority for the statement that there are 825,000 American Communists and fellow travelers in this country, all potential spies, traitors, or saboteurs.

Pursuing this topic, Mr. MCGREGOR added he had information that 8,881 employees have been dismissed from the Federal service within the last few months because they failed to pass the test of loyalty investigations.

The investigation brought to light, Mr. MCGREGOR said, that 21 persons suspected of espionage, 45 Communists, and 108 suspected of subversion were on the State Department's pay roll.

Yet, last fall, President Truman referred to the congressional spy investigation as a "red herring," and he has since stated that his opinion has not changed.

The information cited by Mr. MCGREGOR in this speech, and revelations that have been made in other quarters in the matter of Communist activities in this country make it appear as though "red" should be disassociated from the word "herring" and transferred to the faces of those who have contended that there is no menace in the presence of so many Communists in our midst—many of them, it has been proven, in a position to do the country incalculable damage.

Need for Single Bureau for Various Services to the Blind

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. BOGGS of Delaware. Mr. Speaker, I wish to direct attention to the fact that I have introduced a House Concurrent Resolution to the effect that it is the sense of the Congress that there should be established in the Federal Government a single office or bureau for services to the blind.

At the present time, Mr. Speaker, the various Federal programs for aiding the blind are being handled by nearly a dozen bureaus and agencies.

The Federal Security Agency has responsibility for the administration of six services to blind persons in five departments, namely, Office of Education, Special Services; Social Security Administration, Public Assistance Division; Employment Service, Department for the Handicapped; Office of Rehabilitation to which the administration of the Randolph-Sheppard Act has been delegated in addition to the Rehabilitation Act; Public Health Service as concerned with research as to causes of blindness and methods of preventing blindness.

It should not be difficult for us to visualize the confusion that has developed in the minds of the average blind person seeking guidance and assistance when that person makes an inquiry for help from the Federal Security Agency and does not direct the inquiry specifically to one of the five departments. This person will begin to receive replies from the first unit to which the inquiry is routed, and the various replies will continue to be received several months after the inquiry is first made.

For example, Mr. Speaker, suppose a letter addressed to the Federal Security Administrator is first directed by a mail clerk to the Public Assistance Division of the Social Security Administration. Pamphlets and a letter will simply be sent to the individual with a statement that the letter is being forwarded to one of the units in the agency for such information as may be available. Days and weeks may pass and finally a letter is received from the Office of Vocational Rehabilitation, also accompanied with pamphlets and a letter, stating that it is being referred to one of the other units, Office of Education, Employment Service of Public Health. Eventually this blind person receives an assortment of disconnected Government materials that are related to each other only in the fact that the word "blind" is found in all of them. If perchance this person should be so unwise as to have simply addressed the communication to the Federal Service for the Blind in Washington, D. C., the letter may land in the Library of Congress; in the Treasury Department; in the Interstate Commerce Commission; or the Surgeon General's Office of the

UNIVERSITY OF MICHIGAN LIBRARIES

Army or Navy, and eventually this person receives a considerable assortment of referral letters and a wide variety of Government publications. All our social agencies and blind persons themselves want to avoid this confusion and unnecessary expense.

I am informed that the Federal Security Agency has never held a staff meeting of the persons charged with responsibility for services to blind persons within that Agency, and there is no contact between these various departments that would enable each administrator to understand the policies and philosophies of the others in order that all services might be coordinated and duplication avoided.

The problems of persons going blind constitute a major social and economic problem in our country. I am told that 30,000 people are going blind in our land every year. Our expenditures for public assistance are increasing rapidly, and I am informed that conflicting points of view between the Public Assistance Administration and the Rehabilitation Administration serve to neutralize the benefits to blind persons when applied to the individual.

I concur with my colleagues in the Congress that bureaucracy must not increase and that the expense of our Government must be reduced. I believe, however, that the creation of a Federal bureau or office for the blind in the Federal Security Agency will reduce the cost of administering service to blind persons and will increase the benefits they receive. At the same time it will eliminate the confusion that exists in the minds of our blind citizens.

The Federal Security Administrator has authority to delegate the administration of these various services to any individual in the agency. Additional appropriations for administration are not required. Separate departments for the blind in the Federal Security Agency under the leadership of one director having responsibility for all services in which Federal funds are involved would automatically bring about the coordination of these various services and the elimination of conflicting administrative policies.

I believe that you will agree with me that sudden blindness is a sufficient disaster in the life of any person and that an intelligent government should not further confuse this person by such a multiplicity of services as we now have.

Mr. Speaker, I would like to point out that I have introduced a concurrent resolution expressing the sense of the Congress to the President on this matter instead of a bill for the following reasons: The Congress is about to give the President authority under certain conditions to reorganize the executive departments and agencies of the Government. Consolidation of the various Federal services for the blind will therefore be possible through appropriate action of the Chief Executive. Therefore, it appeared desirable to me to have the President know that the Congress is desirous of such consolidation of services, but not to prescribe precisely how this should be accomplished.

I may also add, Mr. Speaker, that I have a very deep interest in the blind and in work for the blind. This may be attributed in a large measure to the fact that it is my privilege to be very closely acquainted with the executive secretary of the Delaware Commission for the Blind. And incidentally, I would like to say parenthetically that in the State of Delaware, as in several other States, all services for the blind are consolidated in a single agency, and the results achieved by such an arrangement have been remarkable. I am confident that similar results can be achieved on the Federal level if the action recommended in this concurrent resolution I have introduced is carried out.

But with further reference to the executive secretary of the Delaware Commission for the Blind, let me say that Dr. Francis J. Cummings is one of the most outstanding workers for the blind in the United States and one of the outstanding authorities on the subject of the needs of the blind and their rehabilitation. Last year an international conference on work for the physically handicapped was held at Mexico City. It was at the invitation of the Department of State that Dr. Cummings represented the professional workers for the blind of the United States.

Dr. Cummings is a graduate of the University of Delaware, has studied abroad, and has earned a doctor of philosophy degree. Dr. Cummings is the national president of the American Association of Workers for the Blind, and, Mr. Speaker, Dr. Cummings has another reason for his realistic understanding of the problems and the needs of the blind. This is so because Dr. Cummings is totally blind. His achievements, in spite of this very great handicap, are and will continue to be an inspiration to all who suffer blindness, and to all who know him.

Before They Go

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of May 24, 1949:

BEFORE THEY GO

The probe of the reasons why former Defense Secretary Forrestal was left unattended is an anticlimax to a tragedy out of which can come some good.

No probe is needed why Mr. Forrestal committed his irrational act. He died because of the burden of serving his country was too great. Unfortunately, he waited too long before dropping the load which he tried to carry on his spare shoulders in behalf of his fellow citizens.

The encomiums which are now raining down upon his memory will please his family. The great work which he did during and after the war has not been overlooked. In death, he will be remembered.

Mr. Forrestal as an overburdened public servant was not the exception. One might almost say he was the rule. A roll call of men who have broken or impaired their health, while trying to solve immense national and international problems, would be endless.

To mind immediately comes the names of Cordell Hull, James V. Byrnes, Gen. Bedell Smith, General Eisenhower, and General Marshall.

Likewise, the public will recall that Theodore Roosevelt, the strenuous President, was dead at 60. At the same age, Calvin Coolidge suddenly passed away. Franklin D. Roosevelt was but 63 when he succumbed in office. Ex-Senator David I. Walsh died before his time.

Currently in the White House is a President who arises shortly after dawn and fills a full day with activity. His health is reported to be excellent. But it can hardly continue to be as he maintains his present program, a program which the Office imposes on him.

In Congress are hundreds of men from all walks of life who labor harder at being public servants than they ever would in private enterprise. Lawmaking is nothing compared to the time they give to committee meetings, visits and letters from constituents, job hunting and fact finding for voters.

In no less a measure is the work load given to the average governor, mayor, legislator, alderman, city councilor, or selectmen.

It is not enough to be at everyone's beck and call. They have little privacy, little home life. But worst of all is the censure, the criticism, and even the unfair vituperation they are subjected to by the disgruntled, who expect miracles which they cannot work themselves, from fellow mortals.

Is it any wonder that more successful businessmen do not enter what is called politics? Mr. Forrestal's death will not help things in that direction.

But for those who are in it the tragic passing emphasizes that a little more applause for the public servant laboring around the clock for fellow citizens would not be amiss—especially while those servitors are alive.

The Victor Reuther Shooting

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. JAVITS. Mr. Speaker, Americans will deprecate this dreadful tragedy which has now met the two Reuther brothers, Walter and Victor. Our Federal authorities, notably the FBI, must leave no stone unturned to discover their assailants. We cannot tolerate such acts, for they jeopardize the very basis of our freedoms and of our democratic system. Appended is an editorial on this subject from today's New York Herald Tribune:

THE REUTHER SHOOTING

The nearly fatal shot fired at Walter Reuther a year ago has been repeated in shockingly similar circumstances in the attack upon his brother Victor. Again there was the blast out of the darkness, the lack of any ostensible motive, and almost the only clue a motor speeding away in the night. The criminal responsible for the first assault has never been seized, and the country is left to wonder whether the same person is guilty of both, as well as what perverted feelings could have bred so vicious and miserable a deed.

The two brothers have been in the forefront of the passionate labor struggles of these years: Walter the organizer, the fight-

er; Victor the more studious of the two, laying the ground work of theory for labor's drive and holding in the United Auto Workers the post of educational director. Together during their travels as young men they formed the resolves which have since guided their careers. Undoubtedly, they have made enemies, among the Communists and left wingers whose defeat has been the condition of their rise to power, as well as among obscurantist reactionaries. It is possible that their assailant may be found among such extremists; the more natural disposition is to look upon the shootings as the act of some irrational or crazed individual. The bitterness bred of industrial strife goes deep, yet it is improbable that any minority could be so stupid, to say nothing of being so dastardly, as to attempt systematic murder. There is widespread sympathy for Victor Reuther, and there can be no rest until the case is solved.

Planning for Unemployment Relief

EXTENSION OF REMARKS
OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. PATTERSON. Mr. Speaker, I have received from the Federal Works Administrator, Maj. Gen. Philip B. Fleming, a reply to my communication addressed to him which requested information relative to the programs of his agency in view of the increasingly serious unemployment situation in the Nation.

General Fleming has outlined in his reply the types of program in which he is most vitally interested, and which are before the Congress, in legislative form. While these by no means constitute a complete solution to the problem, they are an effort to plan in advance for future economic dislocation. It is to be hoped that much of the work can be held in a stand-by status; but I believe it essential to give legislative acquiescence to the program generally.

General Fleming has broken down his recommendations under headings of "Advance planning program," "Water pollution control program," "Advance planning of Federal building," and "Federal-aid highway program."

I feel that his reply will be of value to the Members in consideration of the problem facing us and, for that reason, I am including both my letter to him and his answer:

MAY 13, 1949.

Maj. Gen. PHILIP B. FLEMING,
Administrator, Federal Works Agency,
Washington, D. C.

DEAR GENERAL FLEMING: In time of general unemployment, with a dire need for work facing our population, it would undoubtedly be incumbent upon the Federal Works Agency to lay plans designed to accelerate employment and, at the same time, to construct worth-while projects in conformity with the need for the same.

There are presently unemployed in the State of Connecticut tremendous numbers of people who foresee little likelihood, in the immediate future, of a return to work. Industrial orders have declined at an alarming rate, and as a vast majority of our citizens depend upon industry for their livelihood, present conditions are alarming.

As an agency properly concerned with a Federal program of construction and works, it is to be hoped that some consideration has been given to this problem facing Connecticut and, I am certain, many other areas of our country.

I would appreciate being informed as to what action has been taken administratively to prepare for submission to the Congress a plan for Federal works participation to alleviate this situation.

If, to date, no definite action has been scheduled, may I be informed as to what may be contemplated along these lines to counteract the serious unemployment now prevalent.

Sincerely yours,

JAMES T. PATTERSON,
Member of Congress.

FEDERAL WORKS AGENCY,
Washington, May 23, 1949.

Hon. JAMES T. PATTERSON,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN PATTERSON: You are correct in your assumption that the Federal Works Agency should be concerned with gearing the public-works program of the Government into the employment cycle. When the Federal Works Agency was created 10 years ago, two of the most important organizations incorporated into it were the Public Works Administration and the Work Projects Administration. Though I have had the responsibility for the liquidation of those agencies, accomplished several years ago, their original inclusion in the Federal Works Agency makes it reasonable for you to state, as you do in your recent letter: "In time of general unemployment, with a dire need for work facing our population, it would undoubtedly be incumbent upon the Federal Works Agency to lay plans designed to accelerate employment and, at the same time, to construct worth-while projects in conformity with the need for the same."

While a public-works construction program is no cure-all for general and widespread unemployment, if it can help to stabilize the construction industry, it will have made a mighty contribution.

In reply to your inquiry regarding the current status of plans for public-works programs which might be used to accelerate employment, let me say that the Federal Works Agency is concerned with the following types:

1. ADVANCE-PLANNING PROGRAM

Under title V of the War Mobilization and Reconversion Act of 1944, the Federal Works Agency was authorized to make non-interest-bearing loans to State and local governments for plan preparation of needed public works.

One purpose of this program was to induce local governments to examine their own capacity to finance needed projects as well as to encourage the building up of a reserve shelf of plans ready for use when conditions warranted such construction.

When this authority expired on June 30, 1947, advances of $56,000,000 had been approved for the blueprinting of nearly 7,000 State and local public works whose total cost was estimated at $2,565,120,333 of non-Federal funds. Application for some $31,000,000 in loans to plan projects with an estimated cost exceeding $1,000,000,000 were pending approval.

The public works being planned are those most needed by our communities. They are of virtually every kind, except housing. Sewer, water, and sanitation facilities predominate among major-project types, with schools and other educational facilities ranking next in volume.

In the State of Connecticut 48 projects with an estimated total cost of $31,500,000 were approved. Advances of $731,000 were made to plan these projects. As of March 31, 1949, plans for 33 projects to cost a little over $20,000,000 had been completed and 7 projects to cost $3,500,000 had been put under construction.

In Naugatuck $7,500 was advanced to plan a school costing $413,000. The plans have been completed and the loan repaid.

Bills to reinstate this advance planning program are pending before both the Senate (S. 707) and the House (H. R. 3086). They would authorize appropriations of $50,000,000 a year.

I have just been advised by the Director of the Bureau of the Budget that with certain relatively minor amendments S. 707 is in accord with the program of the President.

It has long been my belief that we need a much larger reserve of State and local public works than we now have. Quite apart from the possible need for public works to stabilize the construction cycle and to help bolster the business cycle, we need more advance planning merely to assure the wise selection and orderly flow of public construction.

Water-pollution-control program

This program authorizes for each of five successive years, beginning July 1, 1948, the sum of $22,500,000 for construction loans and $1,000,000 for grants for planning to aid State and local governments in the construction and planning of needed sewage-treatment plants. So far no money has been appropriated for loans and only $400,000 has been appropriated for planning grants.

2. ADVANCE PLANNING OF FEDERAL BUILDINGS

While there has been no concerted program of advance planning of projects in the Federal Government for use as a reserve, legislation is now pending (S. 714) which would authorize the Federal Works Administrator to acquire sites and make comprehensive plans for Federal public buildings outside of Washington. An appropriation of $40,000,000 is authorized for this purpose. This sum would provide sites and plans for construction to cost about $450,000,000. This would give us a start on this program. The bill also authorizes $30,000,000 for major repairs to Federal buildings outside the District of Columbia.

S. 714 has passed the Senate and a rule has been granted which should bring it before the House of Representatives in the near future.

In this connection, I might point out that for a number of years, both during and since World War II, the normal program of Federal building was sharply curtailed to give priority to needed war construction and housing. The FWA now feels that the time is at hand when the Federal Government should get back into a more normal program calling for about $75,000,000 in annual construction of Federal buildings.

3. FEDERAL-AID HIGHWAY PROGRAM

Under this program the sum of $450,000,000 in Federal-aid funds is authorized for each of the fiscal years 1950 and 1951. This program is administered by the Public Roads Administration of the FWA.

In addition to these formal programs, the Federal Works Agency, through its constituent, the Bureau of Community Facilities, is constantly studying the employment possibilities in public-works programs which might take the place of the former PWA and WPA programs. A cadre of men who are familiar with these programs is carrying on this study. Their number is very limited, and the Federal Works Agency has proposed that we be authorized to carry on a continuing study which would enable us to maintain an up-to-date inventory of the capacity to expand State and local public works.

I might also add that we are in constant touch with the Council of Economic Advisers on current trends in the economy. As you may realize, an over-all approach is needed to overcome economic declines. Public works has an important place in that program. I

UNIVERSITY OF MICHIGAN LIBRARIES

would suggest that the passage of the advance planning bills would be a wise move and would decidedly augment the volume of worth-while public works that could be put under way speedily in case of emergency. A decision to embark on a wide-scale public-works program would be a major act of Congress.

I appreciate your writing to me on this problem because it has long been of concern to us here in the Federal Works Agency. Along that line, I enclose a reprint of a talk I gave on this subject before the Chicago Building Congress on March 10 last.

I trust this reply outlines satisfactorily what the FWA has done and can do under present circumstances.

Sincerely yours,

PHILIP B. FLEMING,
Major General, United States Army,
Administrator.

Committee on Un-American Activities

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. MULTER. Mr. Speaker, many of my colleagues, like myself, were fearful at the opening of the current session that our Committee on Un-American Activities, unless restrained by formal rule, might pursue the same method of procedure which brought upon the committee much criticism for its activities during the Eightieth Congress. I am more than pleased to say that under the chairmanship of our distinguished colleague the gentleman from Georgia [Mr. WOOD], without the adoption of any such rules and regulations, the committee has been operating with due and full consideration of the American tradition of fair play. Persons in and out of public office are no longer being besmirched by that committee, and unfounded accusations no longer emanate from it. Typical of the fairness of its procedure is a letter written by the chairman of the committee to Rev. William C. Kernan, director of the Institute for American Democracy, which follows:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON UN-AMERICAN ACTIVITIES,
Washington, March 24, 1949.

Rev. WILLIAM C. KERNAN,
Director, Institute for
American Democracy,
New York, N. Y.

DEAR FATHER KERNAN: On December 18, 1948, during the Eightieth Congress, the Committee on Un-American Activities, under the chairmanship of the Honorable J. PARNELL THOMAS, caused to be published a document entitled "Citations by Official Government Agencies of Organizations and Publications Found To Be Communist or Communist Fronts."

On page 51 of the document referred to, there is contained a statement regarding the Institute for American Democracy which is based on the 1948 Report of the California Committee on Un-American Activities. The statement mentioned cited the Institute for American Democracy as a Communist front.

This citation, which was originally made by the California Committee on Un-American Activities in its 1948 report, has been corrected through a letter which the Honorable Jack B. Tenney, Chairman of the Senate Fact-Finding Committee on Un-American Activities in California, directed to Mr. David Robinson, assistant national director of the Anti-Defamation League, on December 6, 1948. A copy of this letter was recently made available to me as the present chairman of the House Committee on Un-American Activities. Senator Tenney's letter to Mr. Robinson indicates that the Joint Fact-Finding Committee on Un-American Activities of the California Legislature had erroneously cited the Institute for American Democracy as a Communist-front organization.

I, therefore, wish to express to you my sincere regret that the Committee on Un-American Activities of the United States House of Representatives, based upon the facts mentioned above, incorrectly included the name of your organization in its Citations booklet. I hope that this letter will serve to mitigate the effect of any adverse publicity which your organization has received as the result of the erroneous citation and that it will also serve to prevent any unjust accusations against your organization from occurring in the future.

Sincerely yours,

JOHN S. WOOD, *Chairman.*

Mr. Speaker, I commend the committee and its chairman for the forthright manner in which they sought to right a wrong that had been done this organization and those connected with it.

Second-Class Postage Rates

EXTENSION OF REMARKS
OF
HON. HAMILTON C. JONES
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. JONES of North Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the House Post Office and Civil Service Committee on May 20, 1949, in regard to increasing second-class postal rates:

Chairman MURRAY and members of the House Civil Service and Post Office Committee, I appear before you this morning to speak briefly in behalf of the North Carolina Press Association and the affiliated organizations of the Western and Midwestern North Carolina Weekly Press Association.

It is apparent from investigation that I have made and from the data that has been submitted both in the record of the hearings before your committee that the proposed increased rates for second-class matter would be practically prohibitive and result in many small papers and larger ones, for that matter, being dangerously near the brink of insolvency.

I have in my district in the Tenth Congressional District of North Carolina many small newspapers whose very existence and continuance depends upon the circulation in rural sections and for this reason, reasonable second-class rates as now exist are absolutely necessary to the continuation of the publication of the regular weekly papers. This is also true of the larger papers not only in my district but in the State of North Carolina and elsewhere and I earnestly protest the rates as now proposed in the new bill and ask that they be so reduced that it would make it practicable for many newspapers to continue in business. In many instances they have a hard enough time anyhow.

I know that this committee would not want to in anywise seriously cripple the circulation of news and information which is so necessary to mold public opinion of some of the soundest groups of people in our Nation by imposing upon the newspapers, upon which they depend, an impossible cost of distribution of their papers. This would be the result in case the proposed rates were adopted.

Speaking before the Senate Post Office and Civil Service Committee, Mr. Charles McD. Puckette, representing the Chattanooga Times of Chattanooga, Tenn., and 387 members in 14 States from Virginia and West Virginia to Texas and speaking for 229 daily papers having a circulation of less than 20,000 copies, said in part, "that no increase in cost of any part of newspaper publishing has approached the increases which have been proposed in this bill. We have had no increase in wages, materials, or services even close to this percentage of increase. No common carrier or utilities subject to regulations has asked for such an increase and no private competitor has ever sought such an increase.

"Since the pending bill was introduced, our newspapers have calculated the effect of the proposed rates on their services to readers reached by the mails, almost wholly on rural free delivery routes.

"The increase would range from 125 to 300 percent and upward. The Post Office Department itself cited the case of one newspaper—the Emporia (Kans.) Gazette—whose second-class costs would rise 600 percent. We submit that merely to mention such increases is to prove that the pending bill is hardly one to offer a basis of discussion.

"If I thought that we were making a profit, and by an increase of rates we were endeavoring to get part of that profit, I would not be here asking you to reconsider this bill. We lose money on rural free delivery circulation if we charge a fair price for it, $10 a year, but we lose money on rural free delivery circulation, only charging against it newsprint cost and our cost of getting it to the subscriber.

"There is this point, too, that while we have had no increase in postage rates since 1925, our postal costs have increased 150 percent. Since 1925 we have been obliged, because of trains have been taken off, to put 84.13 percent of all of our rural free delivery circulation on our own trucks, cart them out to these post offices, and put them in there. Our postage costs, therefore, have risen 150 percent since 1925, although the Post Office Department, of course, has not received that. We have been obliged to pay for that out of our own pocket. I think at that point we should have some consideration for these rates."

Speaking to the same committee and on the same point, Mr. Frank A. Daniels, representing the Southern Newspaper Publishers' Association and the News and Observer, of Raleigh, N. C., as its manager, said in part: "I represent the Raleigh News and Observer, a paper of 100,000 circulation in Raleigh, N. C., which is owned and operated by our family.

"Up to about 25 years ago, we had a very simple matter of distributing our newspaper. Because we are in an agricultural area, we are the only morning newspaper in an area of about 175 miles east of Raleigh.

"Up to 25 years ago, the Post Office Department, because of the train service, could distribute for us. Today that is impossible. Even first-class mail in North Carolina, because of the curtailed train service, takes anywhere from 36 to 48 hours to go 75 miles. And we have been forced to put on trucks.

"Today we are mailing 38,000 copies of our paper every day. Seventy-five percent of those papers are put into small post offices, that are the point of final delivery, by our

trucks at our expense, and we pay all of the money and do, according to my thinking, seven-ninths of the work of the Post Office Department. We pay the Post Office for those papers $40,000 in the mailing. Our costs in delivering those bundles and bags, properly stamped and delivered in best Post Office procedure—not usual Post Office procedure, but the best Post Office procedure—it costs us $37,000 to put them there. In other words, it costs us about $78,000 to deliver those papers, although we only pay the Post Office Department $40,000.

"We are completely dependent on the Post Office Department for the distribution of 38 percent of our circulation. We are agricultural, we are in the tobacco part of the country, and the only way those people can get the paper is by rural free delivery.

"We are not interested in any mail going into any town. It is my thinking, and I think the thinking of Congress, that the rural people are entitled to every service that the urban person is entitled to. The only way we can continue to serve those people, if the postage rates are advanced, is to materially advance our cost of our paper. We are already getting all we think the traffic will bear on rural routes.

"That is particularly necessary in our case because being in a comparatively small town, for a circulation as large as ours, we do not have the advertising income that the average newspaper has.

"We believe, sir, that the Post Office Department is making a substantial profit on the distribution of our second class mail, of our newspaper, and also of the other morning newspapers of North Carolina."

These statements which I have quoted at length because they can present the matter better than one not experienced in the business, are convincing that the excessive rates as proposed for second class mail matter by the Post Office Department would be ruinous to many newspapers not only in North Carolina, but in the United States generally. I know it to be a fact that any considerable burden added to the daily newspapers in western North Carolina would cause a great number of them to have to discontinue their publication.

In conclusion, I appeal to the committee that if it deems it necessary to make an increase in second-class postal rates that it consider the vital effect that this increase will have on the continuance and operation of many newspapers which means everything to so many splendid rural communities in our Nation, and make their increases very reasonable.

Our most excellent Post Office Department which has encouraged the propagation of news to all of our people throughout the years should and, in my opinion, will be the last to discourage it by imposing excessive postal rates.

At the joint meeting in Morganton on March 26 of the two weekly affiliates of the North Carolina Press Association, the Western and Mid-Western Associations, the following resolution protesting the proposed excessive advances in postal rates was unanimously adopted:

"The Western North Carolina Weekly Press Association and the Mid-Western Weekly Press Association, in joint meeting in Morganton, N. C., this March 26, 1949, have this day unanimously adopted the following resolutions:

"First, we oppose Senate and House Resolution No. 2945, which seeks to abolish free-in-county newspaper circulation, raise postal rates to unreasonable proportions, and place a certain censorship on the contents of newspapers.

"Therefore, we definitely oppose, first: the placing of postmasters or their representatives in authority to be sole judge of what is advertising and what is news matter. Second: the extremely high rates proposed in the bill which would eliminate the small publisher from a needed and most important business and civic position in America.

"We agree that there should be an adjustment of postal rates and do agree to the elimination of the free-in-county privilege and also would not oppose a 10-percent increase in the first year, a 10-percent increase the second year, and a 10-percent increase the third year rate, making a total of 30-percent increase over present rates in a 3-year period.

"We respectfully ask that these resolutions be sent to our Senators and Representatives for their consideration and ask that these facts be given in committee hearings.

"WEIMER JONES,
"President, Western North Carolina Weekly Press Association,
"CHARLES H. MEBANE,
"President, Mid-Western Weekly Press Association,
"S. T. HENRY,
"B. ARP LOWRANCE,
"HARVEY LAFFOON."

Max Leuchter

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. HAND. Mr. Speaker, southern New Jersey has recently lost one of its outstanding citizens, Mr. Max Leuchter, the editor and publisher of the Vineland Times-Journal. In the vigorous prime of his life, he was removed from our midst suddenly and shockingly.

I cannot better express the loss that we all feel than to include an editorial of a friendly competitor, the Millville Republican:

Death, as it must to all men, came to Max Leuchter, a nobleman of the Fourth Estate. Mr. Leuchter was publisher of the Vineland Times-Journal.

No newspaper publisher ever had more devotion or more determination for his profession than did Mr. Leuchter. His newspaper was his life. Energetic and discerning, he wrote for his newspaper a daily column that was first with most of the readers. He had a very human style of writing that made it easy to read. Yet he brought to his column a new thought or a different slant which stimulated the mind.

Mr. Leuchter was a most tolerant man. He was kindly and friendly. He had a high sense of honor. He had a keen mind. He was courageous. He was helpful. He had a dogged persistence for the right.

Success came to Mr. Leuchter in the newspaper field. But it was not easy. He had fought hard. He had planned well. He was a good executive. And he knew the newspaper business. Through the years his newspaper eventually became the only daily newspaper in Vineland. The Times-Journal is one of the finest small-city daily newspapers in the country. It is doubtful if there is as good a newspaper in all the 48 States published in a community the size of Vineland. The Times-Journal is Max Leuchter. And Max Leuchter was the Times-Journal.

When death came to Mr. Leuchter he was not at the height of the success he would have reached, for he was still planning to improve and enlarge his newspaper. He was never satisfied with things as they were, he was always pushing forward, planning for the things he now cannot realize. To his family, his business associates, and his friends he has left a noble heritage.

On American Constancy

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. JAVITS. Mr. Speaker, the appended article by Walter Lippmann sounds a challenging note for all Americans concerned with foreign policy. It involves probably an outstanding hallmark of the position of world leadership which the United States now occupies:

TODAY AND TOMORROW
(By Walter Lippmann)
ON AMERICAN CONSTANCY

Once again, when they see how the Appropriations Committee cut the ECA funds, our European friends will find reasons to doubt the constancy of this country. That is their perpetual worry, anyway. They have never forgotten what Woodrow Wilson promised them and what the Senate and the Harding and the Coolidge administrations did to the League of Nations, the peace treaties, the war debts, the tariff and recovery. No matter how many times the Senate by nearly unanimous vote approves the UN Charter, the Atlantic Pact, the European recovery program, the memory of the first American withdrawal is not effaced.

Yet, that cannot be the whole explanation of the nervous distrust which is to be found in every friendly European capital. There is also a deep feeling that a country which has swung in so short a time from isolationism to globalism is bound at some time to swing back at least some part of the way.

Europeans remember that in 1939 it was unlawful even to sell arms to Great Britain and France. When they realize that since the end of the war the United States has in the form of loans and grants provided the Marshall plan countries of Europe alone with $19,000,000,000, they are bound to ask themselves how long that kind of thing can be expected to go on. The greater part of the funds cut this week out of the ECA appropriations can probably be restored. But the fact remains that the policy of large contributions does not rest on solid congressional and popular foundations.

It rests on the feeling of crisis mixed with varying but lesser proportions of humanitarianism and enlightened self-interest. All observers are agreed, I believe, that without the Czechoslovak coup and the death of Masaryk the passage of ECA through Congress would have been slower and harder, and that but for the Berlin blockade the authorization of the second installment would have run into much more serious examination by Congress.

There is, therefore, good ground for the anxiety as to what will happen to these programs of assistance if the Soviets have really decided to relax the European crisis, or indeed to resolve it by a military withdrawal from Germany.

The problem for Europe and for America will then be how to find a permanent, not merely an emergency, basis for the two great elements of our European policy. The one is the American guaranty that military aggression cannot be committed without the certainty of war with the United States. The other is that the imbalance of exports and imports between North America and Europe must be righted—for the time being by ERP but in the longer run by American and private investment abroad.

UNIVERSITY OF MICHIGAN LIBRARIES

For in no time that we can foresee—no matter how conciliatory the Soviets may be—will Europe be secure without the American guaranty or solvent without some special financial arrangements by the United States.

It is easier to sustain these policies in an atmosphere of crisis and of fear, and if the Soviets are going to be as dull-witted as Mr. Vishinsky's opening proposals might indicate, we shall no doubt get along somewhat longer as we are. But we must suppose, at least as a matter of prudence, that the Soviets will not always be stupid, and if they are not, then we shall have to found our policies on generosity and enlightened self-interest, rather than on fear and anxiety.

If the European situation is no longer in crisis by next winter, the continuation of European assistance on a large scale will require a very considerable change in the emphasis, and probably also in the working theory. Broadly speaking the American people will have to be convinced that if they are not paying for a cold war, they are making a contribution to construct a decidedly better European system than that which has produced all the calamities of the twentieth century.

The Men Who Came Back

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the New York Post of May 20, 1949, again directs attention to the rebuilding of German cartels, which should be stopped:

THE MEN WHO CAME BACK

German industrialists and financiers who held hands with Adolf Hitler continue their phenomenal come-back. They were a drab-looking body of troops on VE-day, but they refused to admit they were licked. Although they suffered minor inconveniences, spiritual emptiness, and servant trouble, they clung to the belief that better times were ahead. Now their faith in themselves—and in us—is being vindicated. They are living in the style to which they had grown accustomed when Hitler was in flower.

Within the last 48 hours two dispatches from Frankfurt have told terrible stories. Charles H. Collison, deputy chief of the decartelization section of American military government, has been fired. His ouster occurred a day after the disclosure that Alexander Sacks, an attorney in the same branch, has been ordered to stand trial for insubordination.

Both men are clearly guilty of the same offense. Several months ago a civilian investigating commission was appointed by then Army Secretary Royall to explore charges that AMG has scuttled the American promise to smash Germany's industrial trusts. Collison and Sacks went before the commission and told what they conceived to be the truth.

They accused high AMG officials of treating our anticartel pronouncements as whimsical scraps of paper. They documented their case. They named names. They said Germany's industrial magnates were resuming business at their old stand with the blessing of American occupation officials.

Collison is a former corporation lawyer. Sacks is an ex-Justice Department trust-buster. Despite the disparity in their backgrounds they reached the same judgment and they refused to remain silent.

The investigating body, headed by Federal Trade Commissioner Garland Ferguson, submitted its report to Royall on the eve of his resignation. It unmistakably upheld Collison and Sacks.

Now the star witnesses are being punished and the officials whom they exposed are unmolested.

Richardson Bronson, chief of the decartelization section and one of those most sharply criticized in the Ferguson report, is permitted to fire Collison in the third act of this weird fantasy.

Hitler's former industrial admirers no doubt regard all this as proof that sanity and statesmanship have triumphed in America.

We believe it calls for a full-fledged Senate inquiry. It may be significant that these reprisals have occurred on the eve of John J. McCloy's appointment as high commissioner of Germany. Perhaps the survivors did not want him to know where the bodies are buried when he arrives on the scene.

Some aspects of the problem of Germany are painfully complex. But two things are clear. The first is that we cannot help promote democracy in Germany if we return political and economic power to the Society of the Respectable Friends of Adolf Hitler. The second is that we cannot maintain our moral leadership in the rest of Europe if we break the hearts of our liberal labor and Socialist allies in Germany.

Our new romance with the old German industrial crowd is inevitably being pictured as a clue to the kind of postwar world we are trying to create. These stories will be used against us everywhere.

We do not know whether stupidity or scandal is responsible for our retreat. We do know that the old Truman committee, always characterized by its independence of big business, would have tried to find out.

There is urgent need for fearless investigation by a similar Senate body now.

Waste in Government Must End

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the Cincinnati Enquirer of May 22, 1949:

WASTE IN GOVERNMENT MUST END

(By Louis Bromfield)

No two measures coming before the American people ever have been of greater importance to their welfare than the report of the Hoover Commission and the armed forces unification law. Some action has begun on the former; and it is already abundantly clear that the present armed forces unification law is almost wholly inadequate in the hands of any but a strong Secretary of Defense, and even under such a condition lacks the teeth to make it effective.

Both measures are concerned primarily with efficient, economical, and sensible government, and as such can largely guarantee our Government and our economy against that decline and collapse for which the Moscow oligarchy wishes so passionately.

It is not more taxes and more restrictions and more kept and prostituted citizenry which will save us, but more intelligent, honest, and sensible government and less taxes, less restrictions, and more decency.

I have written about the Hoover report before now. One of its important aspects is the emphasis upon the colossal waste of the armed forces and, in particular, that of the Army.. Any GI knew all of this. He saw it on every side both here, at home, and on the beaches and deserts of half the world. Waste at the front and even some degree of waste at home in wartime is unavoidable, but in peacetime there is no excuse for that waste to be continued.

For this waste there obviously are three reasons: (1) The lack of coordination and the duplication of effort among the various branches of the armed forces; (2) the inadequate education provided by military and naval training establishments; (3) the jealousies and rivalries between services, which are given precedence over the welfare of the citzenry and in many cases the efficiency of operations in naval and military fields.

The first reason is known to everyone. The second is less well known, but has earned at times for the Naval and Military Academies the name of "trade schools" where young men were prepared only for war and richly imbued with the traditions, jealousies and rivalries of their special services. Moreover, they had constantly before them a considerable number of bad examples in the form of high-ranking officers with their petty cliques and snobberies.

All this is no criticism of the genius and gallantry of some of our leading Army and Navy men; yet one does not have to be extravagant and inefficient in order to be brave or even to be a good commanding officer. In most cases, we were extremely fortunate in the caliber of the top-ranking officers in our recent war. As a rule, however, these are not concerned primarily with efficient administration, but with tactics and logistics.

On the administrative side, the war cost us perhaps as much as a third more than it should have through lack of coordination, organization, and efficiency, and for that we now are paying heavily and our great-grandchildren will still be paying unless Congress provides a bill with teeth in it which achieves real unification.

During a war the officers of the armed service are given great freedom, and, consequently, get out of hand. Today most of them are unwilling to surrender one jot or tittle of the special privileges allotted them in time of war. Their lobbies and their intrigues are among the most powerful in Washington.

But underneath it all lies one important factor little realized by the average citizen: That while the armed forces clamor for more and more recruits and more and more mechanical means for defense against other nations (which shall be nameless, since they need no names), the constantly increasing appropriations, the waste, and extravagance are encouraging from behind, the specific kind of peril which Soviet Russia predicts and prays for—our economic collapse and disintegration and the triumph of the Communist ideology.

We have in the Office of the Secretary of Defense a man of character, of proven experience and achievement, and, above all, a man of courage. His name is Louis Johnson. To date his record has been excellent, despite the attempted smears by armed forces lobbies. Nevertheless, the law still does not give him enough authority to clean up the Augean stables of inefficiency and waste which leads the armed forces, with existing appropriation of $15,000,000,000, to ask constantly for more. Fifteen billions is a lot of money, my friends; more than it took to run the whole Government before the war. I suggest that you and your Congressmen do something about it.

Part of the tactics in the cold war has been the constant support by Soviet Russia of the demands for more and more money from our own American armed forces. There is more than one way of bringing a proud and rich country to the dust.

Katherine Lee Writes Timely Article in Superior Telegram

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. O'KONSKI. Mr. Speaker, I wish to insert in the RECORD a statement by Katherine Lee, of Spooner, Wis., which contains more common sense than I have heard in Washington for a long time:

SPOONERITE ASSERTS ELDERLY AMERICANS SUPPORT BRITISH

SPOONER, WIS., *April 18, 1949.*

To the TELEGRAM:

It is a known fact that Social Security is here to stay and that it is intended to provide elderly citizens with a means of livelihood in their declining years. Yet we seem to forget in viewing earned social-security benefits, that the formula used in computing them has never been changed since the law was first passed.

Meanwhile the cost of living index has increased considerably. It is common knowledge that persons gainfully employed are having a difficult time in making both ends meet.

The Congress of the United States has ignored the elderly citizens of America who, by their labor and taxes built this great Nation. "Yes, we have forgotten them in turning our attention to world problems."

Hardly a day passes that we have not heard on the radio of the poor, unfortunate people abroad. When you pick up your daily newspaper it is not uncommon to find full-page advertisements directing your attention to the needs of millions of persons abroad.

The House approved an appropriation of $16,000,000 for destitute displaced Arabs and Jews in the Middle East, but there is not one word said in defense of millions of "our own American citizens" who are on starvation diets and restricted in many instances to one scanty meal a day.

Let us examine for a moment the amount of financial assistance we have given to the peoples of the world. According to the United States Department of Commerce, from March 11, 1941, to December 31, 1946, in the form of lend-lease aid alone, the American taxpayer contributed $50,243,996,159. In addition, we have contributed toward world recovery since July 1, 1945, the sum of $25,495,052,923 which has been allocated as follows:

United Nations relief and rehabilitation, $2,700,000,000; United Nations Organization, $41,426,162; lend-lease (postwar), $2,163,000,000; International Bank, $635,000,000; Export-Import Bank (loans authorized), $2,258,300,000; loans to Great Britain and Philippines, $4,390,000,000; War Department (grants for relief), $1,771,926,293; surplus property sales (credits intended), $1,148,000,000; Greek-Turkish loan (authorized amount), $400,000,000; relief in occupied area (Army), $2,230,000,000; International Relief Organization, $71,073,000; Economic Cooperation Administration, $4,754,000,000; other appropriations for foreign or international objective by Eightieth Congress, $300,000,000. Total, $25,485,052,923.

With the passage of the Marshall plan by the Eightieth Congress, we have obligated ourselves to spend what may amount to more than $17,000,000,000, which, no doubt, will be only a starter in bailing out Europe from its financial mess.

When you add together all of these sums for foreign aid you have the almost unbelievable total of over $90,000,000,000 being sent abroad to help foreign nations.

Yet in 7 years we have sent abroad this huge sum which should not be such a bad record in the eyes of foreigners for a Nation that has been called repeatedly a race of Shylocks.

In some States many recipients of old-age assistance receive $10 to $15 a month and are told to live on such an allowance.

Yet at the same time Great Britain has been paying by comparison $33 monthly to each needy person. Our gifts to the British Socialist Government in recent years have averaged $1,500,000,000 annually and in dispensing money under the European recovery program Great Britain will receive approximately one-third of the money that American taxpayers are contributing to support the so-called Marshall plan.

It is a ridiculous situation to realize that American taxpayers are doling out billions of dollars to foreign nations and permitting them to pay to the needy nearly three times the amount we expend for our own elderly citizens.

The answer is so apparent that it is an insult to question one's intelligence to even ask such a ridiculous question. Yet that is exactly what we have been asking the elderly citizens to do the past several years.

I feel it is needless for me to continue to describe the plight of our elderly citizens of this Nation.

Mrs. KATHERINE LEE.

Will There Be a Fourth Reich?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. MULTER. Mr. Speaker, more and more do we find the Nation-wide press calling the attention of the American public to the rebuilding of world-wide trusts. The following article again points to the German situation, which I have so frequently called to the attention of the House. This article appeared in the New York Post of May 23, 1949:

WILL THERE BE A FOURTH REICH?

(By Max Lerner)

Secretary Acheson starts the four-power conferences at Paris today with the typical no-compromise public vow which has become standard ritual for every American Secretary of State. But we have a right to ask, "No compromise on what?" How can we tell unless we know what our Government considers the most crucial issues in getting a solution of the German problem?

The two issues the State Department has been drumming on loudest—whether Russia will accept the American-sponsored Bonn constitution for eastern Germany and whether Russia will accept UN supervision of free elections in eastern Germany—are obviously of secondary importance. Only a confused American people could be soft-minded enough to regard these as the crucial issues.

Look at the Weimar Republic, before Hitler. It had a constitution not too unlike the one just drawn up at Bonn, and it had free elections, yet it ended in dictatorship, war, and genocide. If we want the German problem settled, surely we need something more.

We need to keep our eyes less on German politics and more on German economics. The biggest industrial plant in Europe is the German, and the heart of German industry is the Ruhr Valley. German constitutions and regimes come and go, war follows peace and peace follows war, but the Ruhr industries go on regardless.

We have appropriated $3,000,000,000 in American funds to help rebuild German industry, and one way or another more billions will be added to them. For what purpose? Up to now it looks as if our purpose is to restore the status quo ante in German industry—before Hitler lost his big gamble. We seem to be handing Germany back, if not to the Ilse Kochs quite, then to their brothers under the skin. I mean the men whose principal contribution to the manufacturing arts was the art of turning a nation into a jungle and human beings into animals and victims. I mean the men who not only worked with Hitler but who made Hitler because it was they who paid Hitler.

The big question about Germany today is whether, regardless of constitutions and elections, we are helping to prepare for a fourth Reich. I don't mean Nazi armies and storm troops, although nationalist groups are reported as marching in the streets again. I do mean a set of centralized industrial controls, in the hands of the finance and cartel kings, whose aim is to help neither America nor Russia but to prepare to run Europe again for Germany. Already they are showing themselves adept at playing the big two off against each other.

You can find the picture of the emerging industrial controls in the Ruhr in a brilliant staff article in the current issue of the Reporter, the new Max Ascoli magazine. It shows in convincing detail the power structure within a typical German vertical combine, "Vereinigte Stahlwerke."

The German cartelists—the steel barons and bankers, men like Dinkelbach and Henle and Falkenhausen—depend on us to hand a rebuilt Ruhr back to them. If the Paris talks fall through, and German partition and military occupation remain, they figure that our generals and high commissioners will trust only German capitalists as an anti-Russian bastion. If the armies are withdrawn and Germany is unified, they figure that free elections will mean the return of a reactionary government. Either way they can't lose.

They hope to get more money from us, either through the Marshall plan or from investments by our private bankers, as in the 1920's. They know that once we have so much invested in their control of the Ruhr industry, we will have a stake in perpetuating their power. We won't be able to support the French economy or the British economy against theirs.

Thus, they plan, with our help, for Germany to run Europe again. Our answer—if we care about democracy in Germany and peace in Europe—must be a plan whereby Europe can run Germany. To explain that will take another column.

Displaced Persons

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include a letter to

UNIVERSITY OF MICHIGAN LIBRARIES

the editor appearing in the Washington Evening Star of Monday, May 23, 1949:

TEXTILE UNION OFFICIAL PLEADS FOR ADMISSION OF DISPLACED PERSONS

To the EDITOR OF THE STAR:

In your issue of April 29, there was a letter signed "Forus," strongly objecting to the admission of displaced persons to the United States.

If anybody should be concerned about the admission of displaced persons it certainly should be organized labor. And yet, the American Federation of Labor, the Congress of Industrial Organizations, the United Mine Workers of America, the International Association of Machinists, and Rail Labor Unions have all gone on record favoring the admission of 400,000 displaced persons to the United States, with no strings attached. This stand is simple, American, humanitarian, and unselfish.

William Green, president of the American Federation of Labor, said on March 1, 1949: "It is our firm belief that the United States should admit 100,000 DP's for 4 years. We feel that this would be both morally and economically sound, and certainly should have no adverse effect on our economy."

Philip Murray, president of the CIO, said on March 3, 1949: "The United States should admit 100,000 displaced persons for 4 years. I wish to emphasize again that the interests of labor, in terms of employment or otherwise, are not in the least threatened by the admission of this handful of people."

Proper and equitable displaced persons' legislation has been on the legislative program of organized labor for more than 3 years, and we criticize the law now on the statute books as being inadequate, discriminatory, and practically unworkable.

MAJORITY ARE WOMEN AND CHILDREN

Almost 60 percent of the displaced persons are women and children. The majority, therefore, will be consumers rather than breadwinners. In effect this means that the displaced persons to be admitted to this country will stimulate employment by adding to the total and productive activity in our country.

Our friend "Forus" says in his letter that "it seems improper that our citizens, who have been struggling in low-grade positions for a long time, including farm labor, should be displaced by these displaced persons." That many Americans are struggling in low-grade positions is undeniably true; but that DP's are displacing these people is not true. So far there is no record of any DP who has displaced any American worker, whether that worker was struggling in a low-grade position or taking it easy in a high-grade position.

Furthermore, "Forus" believes that displaced persons "will not be so anxious to come to this country if they were required to do some real manual labor." The unfair inference is that displaced persons are lazy and shiftless and just no good.

Well, let us see who the displaced persons really are. They are the survivors of Nazi concentration camps, of slave labor battalions and of religious persecution. They have no home and no country they can call their own.

Three and one-half years after the war there are still almost 1,000,000 of these men, women, and children, most of them living in the occupied zones of Germany, Austria, and Italy. These victims of barbarism and terror do not wish to and cannot return to their homes of origin, now in the Soviet sphere of influence, because they fear oppression for religious or political reasons.

MANY SKILLED WORKERS INCLUDED

The bulk of the displaced persons are skilled and self-supporting. The skilled category in which there are significant numbers among the displaced persons are blacksmiths, painters, bakers, joiners, butchers, carpenters, electricians, auto and truck mechanics, locksmiths, shoemakers and tailors. There are about 63,000 agricultural workers, etc.

It seems reasonable to assume that people equipped with such skills, who fought fascism and have rejected communism, and who for years have suffered the many hardships of a detention camp rather than go back to their lands of origin behind the iron curtain, are not exactly delicate when some real manual labor is to be done.

During the war years this country lost more than 900,000 regular quota immigrants who could have come in but didn't because of the war. Even if 400,000 displaced persons are admitted during the next 4 years, this country would still be short of some 500,000 regular immigrants who could not enter the country during the war years.

To mouth sympathy for displaced persons but to let them rot in detention camps is sheer hypocrisy. Let us demonstrate both our faith in the soundness of the American economy and true American idealism by promptly enacting legislation which will enable this country to bring here our fair share of displaced persons.

JOHN W. EDELMAN,
Washington Representative, Textile Workers Union of America, CIO.

Does Politics Pay?—Newspaper Writer Asserts "Take" of Congressmen Runs to $50,000 a Year

EXTENSION OF REMARKS
OF
HON. EDWARD H. JENISON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. JENISON. Mr. Speaker, because it is possible that many Members of the House of Representatives will be surprised to learn of the extent of their compensation, I am including herein, under leave to extend my remarks in the RECORD, an article from the Chicago Daily News of May 23 which makes the rather surprising charge that Congressmen "take" their Government for $50,000 yearly rather than the actual $12,500 per year plus a tax-free $2,500 expense fund. The article is written by Mr. Robert S. Allen in his syndicated column published in many metropolitan newspapers, in addition to the Chicago Daily News. Here is his article, with its somewhat astonishing logic and conclusions:

POLITICS CAN PAY—"TAKE" OF CONGRESSMEN RUNS TO $50,000 A YEAR

(By Robert S. Allen)

WASHINGTON.—The popular expression, "It's nice work if you can get it," has bull's-eye application to Congressmen.

With the $3,000 clerical boost they recently voted themselves, their total annual "take" now makes a Congressman the highest-paid United States official next to the President.

With a Congressman's salary, tax-free expense fund, and other allowances, his total cash "take" comes to $31,850 a year.

And that figure does not include free offices, equipment and other facilities—both in Washington and in his home town—free medical care, free flowers, free postage, cut-rate prices on stationery and numerous other articles in the House stationery room (virtually a PX), and 20-cents-a-mile travel expenses to and from his home. For west coast Members the last item amounts to $1,200 for each session.

HIS "TAKE" LISTED

The itemized list of a Congressman's "take" as a result of the latest boost is as follows:

Salary	$12,500
Tax-free expense account	2,500
Clerical hire	16,300
Telegrams and long-distance telephone calls	500
Air mail	50
Total	31,850

This sum, combined with the other free facilities, brings the total cost to taxpayers of maintaining a congressman to at least $50,000 a year.

In addition; congressmen now have a generous pension system. It is voluntary and they become eligible after serving three terms (6 years) and reaching the age of 60. Members pay $62.50 a month. After 6 years, they are entitled to a pension of $1,875 a year as long as they live. The more they pay in, the bigger the pension, up to a maximum of $7,500 annually.

FAMILIES GET CARE

The free medical care applies not only to Members of Congress but to their families. On occasion, even lame-duck congressmen benefit from this system.

In recent weeks, two former Members of the House were given free medical care in one of the Capital's big military hospitals. In its operation, this system is pure socialized medicine. Its cost runs into several hundred thousand dollars annually.

A major feature of the system is a large and fully equipped clinic maintained on Capitol Hill for congressmen. This clinic has three full-time doctors and a number of other attendants. The service is free to Members of Congress and their families. The same applies to the other medical care they get in either the Army's Walter Reed Hospital or the Navy's Bethesda Hospital.

VETS GET IN FREE

Their only charge in these institutions is $8.75 a day for bed and board. Everything else is free, including surgery, nursing, and medicine. Also, if a Member of Congress is a war veteran, he can even get the Veterans' Administration to pay the $8.75 charge if he wants to. Some do.

Another source of cash income to Members of Congress is the widespread practice of nepotism. It is estimated that at least half the Members of the House and 40 percent of the Senate have relatives on their congressional pay rolls.

In some cases, these relatives actually work for their salaries. A number of them don't; some don't even live in Washington.

KICK-BACKS TAKEN

Occasionally, Congressmen further enrich themselves by taking kick-backs from their clerical help. Representative THOMAS (Republican, New Jersey), former chairman of the House Un-American Activities Committee, is awaiting trial on an indictment on this charge.

Congressmen pay for their food in Capitol dining rooms, and for their barbering and shoeshines. Senators get the latter service free. There is no limit on the franking (free mail) privilege of Members of Congress.

The latest $3,000 increase in clerical hire for Congressmen also included a separate $500 item for telegraph and long-distance telephone service. Like the other emoluments and accommodations, these allowances are tax-free. The increase was voted by a resolution that was not subject to Senate concurrence.

Under the resolution, Congressmen can employ as many clerks as they wish and fix

their salaries up to a maximum of $5,000 a year.

It sure is nice work if you can get it.

Mr. Speaker, to be fair, it would seem even Mr. Allen should concede that while it may be true that it costs the taxpayers $50,000 per year to maintain some Congressmen, it is not accurate to imply each Congressman gets that much.

To be fair, Mr. Allen should point out that funds allotted for clerical hire revert to the Treasury if not used for office employees. The sum, whether it be the present $13,300 or the contemplated $16,300, goes to employees of the Government, not to the Congressman. Many Congressmen find it possible to operate their offices with less than the maximum appropriation. The total saving is considerable.

Even by adding Mr. Allen's maximum figure of $16,300 clerical hire to the $15,000 salary of the Congressman, the total still falls nearly $20,000 short of the sum alleged. It is doubtful if even the complete run of free services listed by Mr. Allen would account for such a sizable spread. He overlooked one item, however, and I am glad to report it to him. He pointed out truthfully that Senators get their barbering free while Congressmen pay for it. Actually, Congressmen get their barbering at half price. Haircuts are only 50 cents. But like many of my colleagues, I am bald headed. Therefore I am really getting only justice—justice that might well be extended to regular barbershops everywhere where bald-headed men long have taken a trimming—but at full price.

Tributes to the Late Samuel R. Young

EXTENSION OF REMARKS

OF

HON. JOHN C. STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Friday, May 27 (legislative day of Monday, May 23), 1949

Mr. STENNIS. Mr. President, tomorrow, May 28, would have been the fifty-first birthday of the late Samuel R. Young, formerly executive assistant to the Postmaster General. Mr. Young, who was a native of Hermanville, Miss., served for many years in the best tradition of Government service. As a tribute to this distinguished public servant, I ask that there be printed in the Appendix of the RECORD, the following articles from the National Rural Letter Carrier, the Postmasters Gazette, and the Jackson (Miss.) Daily News.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the National Rural Letter Carrier of December 25, 1948]

SAMUEL R. YOUNG DIES; EXECUTIVE ASSISTANT TO THE POSTMASTER GENERAL

All rural carriers, especially those who were at St. Paul this past August, will regret to learn of the passing of Samuel R. Young, executive assistant to Postmaster General Jesse M. Donaldson. He had been ill for several weeks at Garfield Hospital, Washington, D. C.

Mr. Young attended the national convention, along with a number of other postal officials, and visited with hundreds of rural carriers during his stay in the Twin Cities. His genial manner attracted everyone, so that he was greatly liked and a very welcome visitor.

Mr. Young served in the Post Office Department for 30 years, and before his appointment to the executive post last February was special assistant to the Postmaster General.

A native of Hermanville, Miss., Mr. Young came to Washington in 1917 as an employee of the Bureau of War Risk Insurance. He joined the Post Office Department as a clerk in January 1918.

Mr. Young served in the Navy during World War I. He returned to the Post Office Department in 1919, leaving in April 1922 to become secretary to Representative Percy E. Quinn, of Mississippi. Three years later he became secretary to Senator Pat Harrison, of Mississippi.

MEMBER OF BAR

During this period Mr. Young studied law at Southeastern University. He became a member of the bar of the Supreme Court of the District of Columbia, Court of Appeals of the District of Columbia, Supreme Court of Florida, United States Court of Claims, and the Supreme Court of the United States.

Mr. Young joined the Bureau of the Chief Inspector of the Post Office Department in July 1931. He served successively as clerk, supervisor, and assistant section chief before being appointed an inspector in 1935.

He gained wide recognition that year in proving the Jacob Baker Estate was a fraud set to trap the gullible. The group running the estate sent letters to all persons named Baker advising them a huge estate in Pennsylvania in coal, lead, zinc, and iron properties, plus $800,000,000 in cash, was ready for distribution among the heirs. Each prospect was invited to have his genealogy tracked down for a modest fee.

Inspector Young broke the case after visiting all of Pennsylvania's 67 counties and checking wills and deeds there. The proof gained through his efforts resulted in the conviction of 29 persons.

After only 7 years as an inspector he was appointed assistant chief inspector in 1942.

EDITED POSTAL STATUTES

Another of his achievements was editing the compilation of Postal Statutes. He also drew up the index which relates the Postal Statutes to the Postal Laws and Regulations. The book, the result of 2 years' work in collaboration with former Inspector in Charge C. E. Caine, is widely used throughout the postal service.

Two of Mr. Young's hobbies were astronomy and stamp collecting. Though he took up astronomy a comparatively short time ago, he came close to professional skill and knowledge in the field. Self-taught, he installed a card system that added to his knowledge of the field with unusual rapidity. He had a good library on the subject and had prepared an information folder for ready reference on known heavenly bodies and astronomical hieroglyphics.

COLLECTED RARE STAMPS

His stamp collection includes specimens from all parts of the world, among them many first-day covers. Last August Mr. Young combined a tribute to both hobbies by delivering the principal address at Mount Palomar, Calif., on the occasion of handling the first-day sales of the new 3-cent stamp commemorating the Palomar Observatory. The observatory houses the 200-inch Hale telescope, largest in the world.

Survivors are his widow, the former May Boardman, of Washington; his mother, Mrs. M. M. Young, of Jackson, Miss.; and three sisters, Mrs. J. P. Martin, of Jackson; Mrs. Robert Perkins, of Belzoni, Miss.; and Mrs. Hulon H. Shows, of Los Angeles. Mr. Young lived at 1530 Sixteenth Street NW.

[From the Postmasters Gazette for February 1949]

NATIONAL ASSOCIATION LOST A GREAT FRIEND WHEN BOB YOUNG DIED

Brief mention was made in the January issue of the passing of Samuel R. Young, Executive Assistant to the Postmaster General, who died December 11 from a heart ailment with which he was stricken just before the national convention in New York.

Better known as "Bob" Young, the late executive assistant was widely known among the postmasters of the United States and was highly esteemed by them, especially members of the National Association of Postmasters. He attended many State conventions and was outspoken in his appreciation of the National Association of Postmasters and its present leadership. He was probably the most brilliant orator in the entire Post Office Department. A man well versed in postal affairs and in other useful information, he had a lovable, genial personality which won him friends wherever he went. He was likewise highly esteemed by Postmaster General Donaldson and other high officials of the Department. He will be greatly missed both in the Department and outside.

Born in Hermanville, Miss., in 1898, Mr. Young went to Washington in 1917 as an employee of the Bureau of War Risk Insurance. He went to the Post Office Department as a clerk in 1918 and dropped out to serve in the Navy during World War I, returning to the Department in 1919.

In 1922 Mr. Young temporarily left the Department to become secretary to Congressman Percy E. Quin, of Mississippi, and in 1925 became secretary to United States Senator Pat Harrison, of Mississippi. Meanwhile he was studying law at night at Southeastern University and later became a member of the bar of the District of Columbia and of the Supreme Court of the United States.

Never able to forget his early experience in the Post Office Department, Mr. Young returned in July 1931 as a member of the Office of the chief inspector, with his eyes focused on the hope of becoming an inspector. He met the requirements of experience and went through successive grades as a clerk, supervisor, and assistant section chief before being appointed an inspector in 1935. Later he became assistant chief inspector when Postmaster General Donaldson held the position of chief. Before that he had been inspector in charge of the Washington division.

In 1945 Mr. Young was appointed Special Assistant to the Postmaster General by Robert E. Hannegan, at that time head of the Post Office Department. He held that position until the early part of 1948, when Mr. Donaldson appointed him as executive assistant.

Outside of his post-office hours, Mr. Young found time for a great deal of research work in legal matters pertaining to the Post Office Department and authored more than one book of great value.

He was also an amateur astronomer of more than ordinary ability. He maintained an observatory in his home which was equipped with many modern astronomical instruments. He contributed stories on astronomy to Washington newspapers and often made talks on this subject over the radio.

[From the Jackson (Miss.) Daily News of November 3, 1948]

MISSISSIPPIAN IN WASHINGTON

One of Jackson's favorite sons is being compelled to take the rest cure as a penalty for too great zeal in the prosecution of duties relative to the Post Office Department and other activities more or less connected with his job.

UNIVERSITY OF MICHIGAN LIBRARIES

The Honorable Samuel Robert Young, executive assistant to the Postmaster General, has been burning his energy at such a rapid rate, he found it expedient to enter Garfield Hospital a few weeks ago, where he will remain until doctors pronounce him ready to resume his customary schedule. He will chafe no doubt at the restrictions, because he has been one of those eager souls who can't help extending themselves above and beyond the actual call of duty, until nature calls a halt and makes them slow down.

Mr. Young, not only a prominent Mississippian but a national figure as well, has been coming up the ladder of fame since World War I when he enlisted in the Navy at a very early age. An employee of the United States Veterans' Administration, later secretary to Representative Percy Quin, then to Senator "Pat" Harrison, he studied law in Southeastern University and became a member of the District of Columbia Bar and the United States Supreme Court. But his chief claim to fame arises from his long service with the Post Office Department. First clerk, supervisor, assistant section chief, and in 1935, inspector, he attracted wide attention in the fraud case of the Jacob Baker estate, in which prospective claimants were told of millions of dollars alleged to be tied up in vast coal and iron properties in Pennsylvania. This sum was ripe and ready for distribution to heirs, who for a monetary consideration were invited to take advantage of the services of the promoters of the project. Mr. Young visited 67 countries in extensive research, which proved that the estate did not exist and which brought the perpetrators of the fraud to justice. He has been the editor of many Post Office publications and collaborated with another official in indexing and digesting postal decisions. His book is used in the postal service and is frequently cited by the courts.

Since his appointment last February to the office of Executive Assistant to the Postmaster General, he has been adding new laurels to his fame. He is a brilliant speaker and has been much in demand at various postal conventions throughout the Nation. One of the most interesting was in August, when he visited Mount Palomar, Calif., and delivered the principal address in the California Institute of Technology. The occasion was to dedicate a 3-cent postage stamp issued in commemoration of the Palomar Observatory special ceremonies in the big dome that houses the 200-inch Hale telescope, the largest in the world.

All of which brings us to another facet of the mind of this brilliant administrator and one not so widely known as his Government career. Within the past few months he has made such rapid strides in the study of astronomy, that while he calls himself only an amateur, he comes close to professional skill and knowledge.

During the winter he might be seen on many clear nights at a high point in Alexandria, with binoculars, telescope, tripod, stool, and flashlight, blithely star gazing into celestial spaces. He declares that most men don't know what to do when they retire and he is getting ready with an absorbing hobby for that—at present—somewhat distant period. He is a beginner and self-taught, but he knows the jargon of the science and can reel off its language like the discoverer of planets. He has a card system and jots down data for ready reference. He had the spirit of generosity which led him to take his equipment around to schools and old folks' homes where he has given elementary lectures. I cannot think of a more attractive idea for the laity—all of us in fact who find the subject thrilling, but have neither the type of mind nor the time for the technicalities of mathematical problems involved. His laudable object is to bridge the chasm between the scientists and the people. He has made friends with many of the leading astronomers of the day and has procured the best assortment of instruments and equipment possessed by any amateur. His library, too, is growing and he has prepared an information folder for ready reference on known heavenly bodies and astronomical hieroglyphics.

Mr. Young is also a stamp collector and has rare ones from all parts of the world, among them many first-day covers.

I visited this starry-eyed, starry-minded enthusiast in his room in Garfield Hospital and found him whiling away the tedious hours of enforced confinement with pamphlets and books on the latest developments in his favorite pursuit—astronomy. He says his studies have made him realize how insignificant and unimportant are our own little troubles in the wonders of this big cosmic scheme.

Nevertheless, Mr. Young's friends consider him of much importance and are sending good wishes for his speedy recovery and return to regular activities.

Mr. Young is the son of Mrs. M. H. Young, of Jackson. His father, the late M. H. Young, was a railroad man. His grandfather, for whom he was named, represented Claiborne County in the State legislature for 20 years. He was a Baptist and was at one time chaplain of State institutions. He was a very distinguished gentleman and during two generations was credited with marrying more couples than any other minister during his period of service.

Decartelization in Germany

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, May 27 (legislative day of Monday, May 23), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "AMG Firing Saves 'Food Hitler'—Crack-Down Is on Foes of Cartels," written by Arthur Massolo and published in the Sunday, May 22, edition of the New York Post Home News.

This article describes a long-distance interview Mr. Massolo conducted with Mr. Charles H. Collison, who was fired recently as deputy chief of decartelization in Germany. Mr. Collison contends that he was fired as he was preparing to crack down on a "little fuehrer" who operates a multi-million-dollar food monopoly in Hesse.

Mr. President, I do not know why Mr. Collison was fired. Mr. Richard Bronson, United States Chief of Decartelization in Germany, has been quoted in news dispatches as asserting that Mr. Collison was placed on the surplus list because of a cut-back in staff.

Earlier, Mr. Alexander Sacks, another outspoken foe of cartels, was removed from his position allegedly because he criticized the feeble manner in which our military government was handling the decartelization program. The case of Mr. Sacks is one of a man being fired, then reinstated, and fired again.

During the past 2 years Mr. Sacks and Mr. Collison have criticized our decartelization program in Germany. Reports by reliable correspondents in Germany during that period indicated that other persons in military government were apprehensive over our failure to really crack down on the German cartels.

These reports received little attention in this country. Some people were prone to dismiss them as the work of zealots who did not fully realize what they were saying. Nevertheless, many top Government officials were concerned.

Our official policy in Germany has been to break up the cartels. Our military officials in Germany from time to time pointed to our policy directive aimed at the elimination of cartels.

Just the same there appeared to be little action in that direction. Finally the Army named a special committee, headed by Mr. Garland F. Ferguson, of the Federal Trade Commission, to investigate the decartelization program.

According to reliable information, this commission received testimony from both Mr. Sacks and Mr. Collison. Recently the commission filed its report and confirmed the suspicion that our antitrust program in Germany was feeble.

Shortly after this report was filed Mr. Sacks was fired again and Mr. Collison was placed on the surplus list.

Both of these men had complained that our decartelization policy was not being carried out in Germany. The Ferguson committee confirmed those reports.

Mr. President, I think our decartelization program thus far has been a tragic blunder. Our official aims have been excellent. But through our failure to vigorously carry out that policy we have played into the hands of antidemocratic forces in Europe.

The blame does not rest on the United States alone. England and France also must bear at least part of it. But that does not excuse us from failing to carry out a major policy—a policy aimed at eliminating one of the world's worst evils.

Mr. President, cartels breed war. They must be stamped out if anything resembling competitive trade is to exist between nations.

In conclusion I wish to emphasize that it is not too late to act. We still can break up the cartels.

I hope that our new commissioner in Germany, Hon. John J. McCloy, will recognize our failure in this field and take immediate steps fully to implement our decartelization policy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMG FIRING SAVES "FOOD HITLER"—CRACK-DOWN IS ON FOES OF CARTELS

(By Arthur Massolo)

Charles H. Collison, "fired" last Thursday as deputy chief "trust-buster" in the American zone of Germany, charged Saturday that he was dismissed as he was preparing to crack down on a "little Fuehrer" who operates a multi-million-dollar food monopoly in Hesse.

Collison identified the German as Fritz Dietz, a former Nazi whom he has had under investigation since September.

In a radiotelephone interview from Frankfurt, Collison told the Post Home News that his inquiry has disclosed that Dietz made $3,000,000 on American food shipments to Germany when the currency reforms were instituted a year ago.

"I had been working on this case since last September," Collison said. "I had it cracked and I was trying to present it when I was fired. I have 100 witnesses, but they are being intimidated by Dietz. The United

States Government is doing nothing about it."

Collison said that he had been released because of his testimony before the special Army investigative committee, headed by Garland F. Ferguson, that recently accused high military government officials of not having carried out the antitrust program in Germany.

PUT ON "SURPLUS" LIST

Collison was given 30 days notice last Thursday and put on the "surplus" list by Richardson Bronson, United States chief of decartelization. He was the first of the 44 employed by the trust-busting division fired for economy.

"Bronson told me that I was fired because of my testimony before the Ferguson committee. It's no coincidence that I have just come out with discomforting disclosures about Dietz and the food monopoly," Collison said.

Collison said Dietz has broken practically every decartelization law on the books. He has been a member of the Nazi Party for 3 or 4 months, he said.

GOT A KEY JOB

In 1945, Collison declared Dietz got a job in the German food office, and was put in charge of issuing licenses to distributors of food shipped to the zone from the United States.

"He was supposed to hand out licenses to other distributors," Collison explained. "In fact, three companies were supposed to share, but he took the work on himself."

Collison said that Dietz invested 100,000 marks, and in the first 3 weeks made 125,000. Within 2 years he made 835,000 marks, a neat profit of 696 percent.

Collison, a former New York City corporation lawyer associated with United States Steel and Electric Bond and Share, explained how Dietz made the $3,000,000.

"Before the currency reform," he said, "Dietz paid United States banks a dollar for a dollar's worth of food. After the reform he had to pay only 10 cents, but the food was still worth $1."

Collison said that Dietz "openly bragged that if I continued the case I would be fired." He said that three witnesses, working in the food office, have been declared surplus. Others are being intimidated, he said.

THEY'RE AFRAID OF HIM

"One witness told me the other day," Collison said, "that 'I am more afraid of Dietz than I am of the United States Government. He has more power here than the Americans.' "

"Who is protecting Dietz?" Collison was asked over the phone.

"That's the $64 question," he replied. "I'm a lawyer, and I cannot talk until I have sound proof."

Collison said he meets with an Army grievance committee soon but asserted, "I plan to fight this out as long as I can. I won't leave here until I receive some satisfaction."

"Do you see any evidence of a revival of nazism?" he was asked.

"I can't tell you over the phone," he said, "but I've got one case that's a beaut."

Poppy-Making Program of Veterans

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, May 27 (legislative day of Monday, May 23), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an eloquent and inspiring address delivered by Dr. Ruth Miller Steese, past State president of the American Legion Auxiliary of Pennsylvania, at Sunbury, Pa., on Tuesday, May 24, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

POPPIES

In one short week American citizens shall join to pay honor and tribute to every man and woman who gave his or her life in defense of this, our country, and to express that honor by strewing the graves of our honored dead with the beautiful flowers of May.

But as we pay our tribute to the dead we should also ask that same citizenry to wear a flower for the living, the crimson flower of battle, the little red poppy of May.

Every State in the Union has its little poppy—some of crepe paper—some of cloth—but all of them flowers made or assembled, not grown. They are the flowers assembled by our hospitalized veterans whose world is bounded by hospital walls, and whose vision is often not even that of a hospital bed.

In Pennsylvania, the American Legion and the American Legion Auxiliary sponsor the poppy-making program of veterans in our hospitals for several reasons. First of all, with the veteran being paid for every poppy he makes, he is able to make some money for the use of himself and his family; then, too, poppy making helps to fill those many, many idle hours; it also exercises those hands burned, scarred, and crippled or those new and difficult steel hooks, and it furnishes the necessary means by which the American Legion and its Auxiliary can maintain year-round service to the disabled veteran and his family through its rehabilitation and child-welfare program, which program is carried on, not only in the hospitals but throughout every community and rural area in the Commonwealth.

If the public could and would visit any of our veterans' hospitals and travel down the corridors and wards and study the records of any 10 patients, taken at random, they would readily understand how they, the public are fortunate in having had these men and women to stand between them and the horrors of war and destruction endured by our allied countries in both wars.

Would you, Mr. or Mrs. Public, be one of our thousands of patients in our neuropsychiatric hospitals? Would you exchange your bed for that of a paraplegic? Would you walk proudly down Main Street with only a white-headed cane and possibly a seeing-eye dog as your sight? As you drive your car, would you exchange places with that of an amputee?

As you, the public, buy and wear your poppy this year, stop, look, think, will you buy it as if donating to a public charity or as if in support of a local tag day? Or will you think and buy it, remembering—yes, remembering—that your purchase is your annual free will contribution toward the welfare of a group who made your security and freedom possible? Then having bought it, will you look at it. Look at it and think—yes, think—of the veteran who may have made it; think of the blind, the paralyzed, the amputee, the mental. Looking and thinking, wear it. Wear that poppy in humility and respect, in love and appreciation, for those men and women who having loved their country, loved it unto death; for those men and women who, having loved their country, loved it and surrendered their eyes, their hands, their minds; and still loving it, their country, today fashion those little red flowers, blood-red, crimson-red, those flowers with the little white stickers, silent testimony to the fact that the only poppies made in veterans' hospitals in Pennsylvania are made for the American Legion and the American Legion Auxiliary.

Yes, those little red poppies with the little white stickers tell a story all their own, a story that includes the fact that every cent of the proceeds is solemnly dedicated to the needs of the hospitalized and disabled veteran and his family, whose love and sacrifice made our freedom possible.

In this last week of May 1949 shall we, one and all, contribute our dimes and our dollars—in such proportion as we value our American freedom for 1 year—contribute to America's vast army of hospitalized veterans? Shall we, one and all, wear that poppy with the love and devotion with which we wore the carnation on Mother's Day—the red rose on Father's Day—wear it and attest to our neighbors and to the world that we individually remember in this beautiful month of May that we remember the price which was paid for our freedom; the price which is still being paid by those who love their freedom even as you and I; and that we shall ever remember them by wearing their flower—the flower of sacrifice and sorrow, but the flower which gave to us in America a tomorrow.

Buy, think, wear the memorial flower of those who died, the flower in tribute of those who served and live—the crimson flower of battle—the red flower of sacrifice—the poppy with the little white sticker.

The Tennessee Valley Authority

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, May 27 (legislative day of Monday, May 23), 1949

Mr. TAYLOR. Mr. President, recently the Lewiston (Idaho) Tribune carried a series of articles by Tom Humphrey, of the Portland (Oreg.) Journal, on the Tennessee Valley Authority. These articles were accepted on the assumption that they would be objective, factual reports. After they were printed, the editor of the Tribune agreed with me that the series was plainly biased and slanted against TVA, and in order to be entirely fair he printed a letter from me showing a few of the Humphrey misstatements.

Since these Humphrey articles were placed in the RECORD yesterday, I ask unanimous consent to have printed in the Appendix of the RECORD my letter to the Lewiston Tribune.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SENATOR TAYLOR REPLIES—TVA DISTORTED BY TRIBUNE CRITIC

(EDITOR'S NOTE.—The Tribune recently published a series of articles by Tom Humphrey, of the Oregon Journal editorial staff, on his impressions of the Tennessee Valley Authority as related to proposed creation of a Columbia Valley Administration. Senator GLEN H. TAYLOR, Idaho, has written the following communication on these articles.)

To the TRIBUNE:

My attention was called recently to the series of articles in the Tribune by Tom Humphrey. Of course, you have a perfect right to print anti-TVA propaganda if you so desire, but I was startled to find that these articles were carried as an objective, unbiased, factual survey of TVA. I was startled because Tom Humphrey has written anti-TVA editorials in support of the Oregon Journal's editorial position several

UNIVERSITY OF MICHIGAN LIBRARIES

times before he ever saw TVA. This trip to TVA evidently was caused by a series of on-the-spot analytical articles by Bauer, of the Portland Oregonian, which were really fair, objective articles.

Knowing of your fairness in presenting both sides of every issue, I have thoroughly checked Humphrey's articles with the facts and hope that you will print this brief summary of his misstatements and errors of fact. To answer all such errors would require as much space as the original articles, so I'll confine myself to a few major misconceptions.

First, I'd like to comment on Mr. Humphrey's technique. He quotes voluminously from a few people who, for one reason or another, are bitterly opposed to TVA, and leaves the impression that the vast majority who approve TVA are either bought "They've got themselves a deal" or fearful "You simply don't oppose TVA any more * * *. Not if you want to stay in business and in one piece." He reports accusations "And the men A. E. Morgan accused of undemocratic behavior were retained," without reporting that the accusations, after intensive investigation by Congress, were found baseless.

He has ignored, or not bothered to read, the TVA Act, and thus attributes to TVA powers it does not have, claims it violates provisions of the act and limitations which do not exist, and finds fault with it for carrying out provisions of the law that do exist. He misstates facts "* * * the Cumberland River * * * carried more tonnage than the Tennessee," which could easily be checked. He doesn't mind reversing himself, even within a single article, depending on the point he is trying to make "* * * they still preserve the polite fiction that TVA is primarily a flood control and navigation project." And in the same article, TVA's power facilities are limited in production "by the demands of comprehensive control of a river for flood control and navigation." He uses slurring terms "TVA's funny accounting system," without an iota of reason or basis; as a matter of fact, TVA keeps its accounts according to the FPC uniform system and its accounting has been highly praised. When these devices fail, he resorts to a reportorial crystal ball. "Your reporter instincts tell you so." "You have a hunch." "You have a feeling, too."

One misconception is his charge that TVA power operations are subsidized, a point Humphrey tries to make by comparing TVA financing with that of the Bonneville Power Administration and by claiming that the allocation of investment in TVA arbitrarily favors power.

EARN FAIR RETURN

In the first place, Humphrey mentions nowhere in his series that the TVA power operations are earning an average return on the net investment of more than 4 percent. Rate of return on investment is the common measure of financial success, and it is clear that so long as the TVA power operations are earning a return substantially above the cost of money to the Government (about 2 percent), the TVA power operations are not subsidized but instead are a good investment for the taxpayers of the country

Humphrey contends that Bonneville is financially successful and TVA is not because the former pays interest and amortizes its investment, while the latter does not. Upon examination, however, is turns out that this is rather a distinction than a difference. It must be kept in mind that both the Bonneville project and the TVA are wholly owned by the Government (if that is socialism in the Tennessee Valley, as Humphrey seems to think, it is also socialism in the Northwest). All of the revenues from both projects belong entirely to the Government. In both cases, the revenues exceed the costs of producing, transmitting, and selling the power. The nub of the matter is in the way in which these revenues are handled and accounted for.

The Bonneville revenues are all paid into the United States Treasury. The Bonneville Administration does not pay interest in the ordinary sense of the term; it simply makes a calculation based on an assumed rate of interest, and calls a part of its revenues interest rather than simply revenues. TVA pays interest on its outstanding bonds, and records the payment on its books, but makes no calculation of interest on its entire investment. The return on the investment exceeds any assumed rate of interest for such projects in any case.

According to Humphrey, Bonneville has paid back into the Federal Treasury $122,100,000, while TVA has paid only minor sums. However, Bonneville has to obtain appropriations both for meeting its operating expenses and for capital investments. TVA, on the other hand, uses its revenues to meet operating expenses, for reinvestment in the power business and for payments into the United States Treasury. In both cases, operating expenses and the needs for expansion of facilities have to be met. Through June 30, 1948, TVA's power revenues amount to $310,000,000. Of this amount $129,000,000 was paid out in operating expenses, payments in lieu of taxes and interest; $147,000,000 was reinvested in the power program under section 26 of the TVA Act, $23,000,000 was paid into the general fund of the Treasury, and $11,000,000 was used to retire outstanding bonds.

It is obvious, of course, that if the TVA revenues had been handled in the same manner as those of Bonneville, the net cash difference would have been not a single dime; if TVA paid all its revenues into the Treasury, they would have had to be offset by appropriations of $129,000,000 to meet operating expenses and $147,000,000 for investment in the program.

Humphrey, of course, does not even suggest, much less explore, the reason for the fact that TVA was authorized to use its revenues to meet current expenses, which was to assure flexibility and efficiency in operating one of the biggest power enterprises in the country.

Humphrey objects to TVA's allocations of investment, on the basis that they are not "approved by the Federal Power Commission, on the basis of long established formulas." He takes no account of the fact that "long established formulas" applicable to one of the projects might not be applicable to another, nor to the fact that the TVA allocations are based on probably one of the most thoroughgoing studies of allocation problems, by both staff members and outside consultants, ever made. As to the practical results of the allocation, the Nation, in the Tennessee Valley, is getting flood control and navigation facilities at far less cost than they could have been provided for without the power development. Under the allocation, navigation facilities have been provided for $149,000,000 as compared with $225,000,000 for equal facilities if provided in a single-purpose system; in the same way, flood control facilities cost $153,000,000 as compared with a single-purpose cost of $227,000,000. In the light of these facts, power cannot be said to be "subsidized" through the allocation of investment.

LAND SALES MISREPRESENTED

In article No. 3, Humphrey criticizes the land acquisition program of TVA, based upon expert appraisals of property and a non-price-trading policy. Most of the owners sold at appraised prices, Humphrey says, "but many went to court to defend themselves against condemnation." The fact is that only 6 percent of all the land purchased by TVA was involved in condemnation proceedings where price was involved. Perhaps the best evidence of the efficiency and fairness of the TVA land buying program is the fact that TVA, at the invitation of the Departments of Interior and Justice, was called in to help set up a new system of land-buying for the Bonneville Administration. It loaned the services of the assistant director of its land acquisition department and a chief land buyer to assist in setting up the new method and in assembling a staff. It has also given assistance to the Santee-Cooper project in South Carolina and to the United States Army Engineers, to whom TVA loaned a number of its appraisal staff for a period of 2 years in connection with the Cumberland Valley projects.

There are a number of errors in the same article. Humphrey says, "Willkie sold for * * * about 80 percent of the real value of the properties." Actually, the price, reached through negotiation, was considerably more than the original cost of the properties, less depreciation, and in some quarters Willkie has been credited with getting much the better of the bargain. Humphrey's carlessness with easily ascertainable facts is also indicated in this article.

In one paragraph, he says the power companies lost 288,000 customers through sales of property to TVA. Two paragraphs later, he refers to a million customers being involved in the purchase of electric facilities from private power companies, of a total of 950,000 served at present; practically all of the remainder are now consumers, who never before had the benefit of electric service.

In article No. 5 Humphrey omits facts and distorts testimony in order to bolster his thesis that TVA is pushing around both people and other agencies. Thus, in discussing Douglas Dam, he mentions as the sole reason for the project that TVA engineers wanted that power. He conveniently forgets the background of the times—the fact that in 1940 and 1941 the Nation was mustering its strength for national defense and power was one of the urgent needs.

The facts are simple. The Office of Production Management asked TVA where and how much a large block of power could be made available. TVA replied, on the basis of the engineering facts, that power could be produced at the Douglas site within a little more than a year, and nowhere else in the valley could this be accomplished. In fact, it developed nowhere else in the country could the same amount of power be made available in so short a time. It was on this basis that the Office of Production Management decided the dam should be built and urged the Congress to appropriate funds for it.

The manner in which quotations are lifted from the context is indicated in Humprrey's paragraph:

"Mr. Brannan also indicated that there is 'waste and duplication of effort' in the forestry program but told the committee 'we are doing, and TVA also, our very best to eliminate any possible waste as to the result of the exercises of our duplicate authorities."

The exact words of Mr. Brannan, then Assistant Secretary of the USDA, were:

QUOTES BRANNAN

"Mr. BRANNAN. Senator Cooper, there are facilities within the TVA directed toward forestry activities. There are also facilities in the department of agriculture engaged in forestry activities.

"In pure statutory language, there may be duplication of existing authorities, but as to the point of whether or not there are really conflicts and duplicative waste, or waste regardless, from the fact that these duplicate authorities exist, is the point at real issue, and we are doing, and the TVA also, our very best to eliminate any possible waste as to the result of exercise of our duplicate authority."

It takes a good deal of stretching to make this statement an indication that there is "waste and duplication of effort."

Nowhere in Humphrey's articles is it mentioned, of course, that whereas the forest service is concerned with publicly owned forest lands, the major objective of the TVA forestry program is the promotion of modern sustained-yield forest management and good forest practices on the 87 percent of forest lands in the Tennessee Valley which are privately owned.

IGNORES FACTS OF ACT

In discussing TVA's fertilizer and agricultural activities, Humphrey is apparently ignorant of the provisions of the TVA act and of facts. He indicates that TVA was supposed to operate only "pilot plants" for fertilizer, although section 5 authorizes TVA "to manufacture and sell fixed nitrogen fertilizer, and fertilizer ingredients." He says TVA produces "about one-sixth of the national production" of fertilizer. The facts: the three major plant nutrients are nitrogen, phosphate, and potash. In the fiscal year 1947, TVA produced 6.75 percent, or about one fifteenth, of the nitrate fertilizers; 4.09 percent, or one twenty-fourth, of the phosphates; and none of the potash.

The same type of inaccuracy and misrepresentation run through the rest of the article.

Throughout his articles, Humphrey goes to great lengths to create the impression that TVA is a superstate. To support this, he declares that TVA "can plow its earnings back into system improvements or fertilizer or recreation or fish or seeding trees or traveling libraries or towns or what have you—without going back to Congress for permission."

In this he goes directly counter to the provisions of section 26 of the TVA Act, which limits the uses to which it may put its proceeds to "the operation of dams and reservoirs, in conducting its business in generating, transmitting, and distributing electric energy and in manufacturing, selling, and distributing fertilizer and fertilizer ingredients."

For all other purposes—agricultural activities, forestry development, recreation development, fish and wildlife activities, research of various kinds carried on in cooperation with other agencies—TVA must depend upon appropriations. Nor does Humphrey indicate that TVA's operations, both those financed by revenues or proceeds and those financed by appropriations, are closely scrutinized by the Congress, particularly through the appropriation procedures. Humphrey simply ignores the elementary fact that Congress created the TVA and TVA is completely responsible to it.

The same irresponsibility is demonstrated in Humphrey's attempts to show that "TVA is the government in the Tennessee Valley. There is nothing, no one above it." Joint projects between TVA and other agencies become, in his articles, simply a means of obtaining a sinister hold on States, counties, and other organizations. To take a single example, he says "TVA is in the planning commission of the various States. It set up some of them, manned them, still helps some."

The facts are TVA, in constructing its projects, encouraged the formation and activity of both local and State planning agencies to meet problems of readjustment which had to be met. The point may be illustrated by the Tennessee State planning commission which Humphrey himself says "is certainly doing a good job (wish we had as good in the Pacific Northwest)."

STATE, COUNTIES JOIN

TVA could, of course, have done the required planning work itself in connection with its specific projects. It elected to do otherwise. The State planning commission was set up in the early days of TVA to undertake planning activities which TVA contracted for in connection with reservoir construction. TVA did, indeed, help support it financially through these contracts and by technical assistance. Through this means it obtains maximum participation of both State and localities in planning the readjustments resulting from construction. When the specific tasks were completed under the contracts, TVA's support ended, but the planning commission remained.

The importance of planning had been demonstrated and the State has continued to expand the commission's activities. The initial State appropriation for the commission was $15,000; the latest just approved, was $125,000. In brief, the impetus given by TVA in the early days, in connection with specific jobs, has resulted in state-wide organization—not manned, supported, or controlled by TVA—of recognized and increasing usefulness.

This letter has become longer than I intended, but I have gone to considerable trouble in this matter because our proposed CVA is subject to the same type of attacks. I urge everyone to obtain the facts on both sides of CVA, and I'll be happy to send a copy of the bill, or a section by section summary to anyone who wants to see what the measure actually provides.

GLEN H. TAYLOR.

UNITED STATES SENATE,
Washington, D. C.

Substitution of Natural Gas for Coal by Atomic Energy Commission

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Friday, May 27 (legislative day of Monday, May 23), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from the National Coal Association and a statement prepared by the Fuels Research Council, Inc., regarding the Atomic Energy Commission's proposal to kick coal out of Oak Ridge, Tenn., and spend a large sum of money to put in natural gas.

As the country well knows from painful experience, there is a limited supply of natural gas. Many consumers of natural gas in my own State suffered from the shortage of natural gas last winter and the previous winter, even though West Virginia is a gas-producing State. Yet the AEC plans to switch from the use of coal to natural gas at the Oak Ridge plant, even though the plant is located near the heart of the Tennessee coal fields. This switch will necessitate large expenditures for the construction of gas lines.

I know of no reason why this conversion should take place at this time. So far as I can determine, the AEC has not presented evidence to show that this contemplated action is necessary for security reasons. I wish to emphasize that if such evidence is produced I will support the move with all my strength, and I am confident the West Virginia coal operators and the National Coal Association will join me in such action.

But until such information is produced I feel compelled to object to this contemplated action on the part of the AEC.

There being no objection, the letter and statement were ordered to be printed in the RECORD, as follows:

NATIONAL COAL ASSOCIATION,
Washington, D. C., May 24, 1949.

Hon. HARLEY M. KILGORE,
United States Senate,
Washington, D. C.

MY DEAR SENATOR: There is no sound economic reason for the Atomic Energy Commission to kick coal out of Oak Ridge, Tenn., and spend a vast sum of money to put in natural gas.

A million tons of coal will be displaced if the Commission has its way, resulting in unemployment in coal mines, particularly in Tennessee, and among railroad employees and others working to handle the coal.

A subcommittee of the Joint Atomic Energy Committee of the House and Senate filed a report yesterday, criticizing the Atomic Energy Commission for contracting for the supply of natural gas at Oak Ridge. Oak Ridge is in the heart of the coal fields. To supply natural gas would mean that many other towns and communities would be deprived of said gas. If the Atomic Energy Commission must h ve a stand-by fuel, oil is in abundance and a fuel pipe line is within 17 miles of their power plant. We repeat—there is no sound economic reason for displacing this vast quantity of coal by natural gas at Oak Ridge. The subcommittee referred to above pointed out the danger of gas, citing a natural-gas explosion which destroyed a Tulsa, Okla., public-utilities steam plant within the past year. It had a great deal more to say in its report to the full committee. Attached is a brief summary of this situation.

It is respectfully suggested that in any appropriations for the Atomic Energy Commission it be clearly provided that no part of such appropriation should be expended for the purchase of natural gas at Oak Ridge, Tenn.

Very truly yours,

J. D. BATTLE,
Executive Vice President.

STATEMENT BY FUELS RESEARCH COUNCIL, INC., WASHINGTON, D. C.

This is the incredible story of how officials of the Atomic Energy Commission thought they might not get enough coal to continue firing the boilers at the Oak Ridge, Tenn., plant, and how they thereupon decided to convert the burners from coal, which is in plentiful supply right at Oak Ridge, to natural gas, which is in comparatively limited supply in the United States.

This is the story of how that decision may not only affect the industrial and domestic consumers in more than 338 towns and cities in 8 States, but may very well directly or indirectly affect industries and workers in other sections of the country.

The statements in this brochure are factual. They are based on the record.

These are the facts:

1. The Oak Ridge plant of the Atomic Energy Commission is located in the heart of the Tennessee coal fields.

2. The plant's boilers have always been fired by coal.

3. The Oak Ridge plant has never had less than 6 weeks' supply of coal on hand.

4. Using natural gas to fire boilers is admittedly the lowest use that can be made of this precious fuel.

5. The Oak Ridge plant has the space (200,000 acres) and supply available (from nearby coal mines) to keep an almost unlimited supply of coal on hand if officials want to do so.

6. The plant does not have facilities to store natural gas.

UNIVERSITY OF MICHIGAN LIBRARIES

7. According to the best estimates, there are less than 30 years' supply of proven natural-gas reserves in the entire United States.

8. If the Atomic Energy Commission insists on converting its boilers from coal to natural gas, it may consume 60,000,000 cubic feet of natural gas every day. Tentative plans are to increase consumption to 80,000,000 cubic feet a day.

9. Eighty million cubic feet of natural gas daily is equivalent to the average daily consumption of natural gas for cooking, heating water, and space heating 146,000 average homes each day.

10. More than 338 towns and cities in 8 States served by the Tennessee Gas Transmission Co. (the primary supplier) may be deprived of sixty to eighty million cubic feet of natural gas each day that otherwise could be available to them.

11. Domestic consumers in the Appalachian area who would like to use natural gas in their homes still cannot do so because there is an insufficient supply.

12. Natural-gas shortages develop during almost every normal winter. During these shortage periods, natural-gas supplies are cut off from industries (where the gas is used for manufacturing purposes). Thousands of workers are laid off. This means production stops not only in those cities but also is slack or stopped altogether in the cities whose industries supply materials to the factories closed down by the natural-gas shortage. Home consumers are required to use less gas for cooking, heating water, and heating the home.

13. If the Oak Ridge plant burns sixty to eighty million cubic feet of natural gas daily, then any shut-downs in these industries will be longer, because the cities will have an aggregate of sixty to eighty million cubic feet of natural gas less each day—gas that otherwise would be available to them if it were not siphoned off for Oak Ridge.

In other words, homes will be cold longer, workers will be laid off from their jobs for longer periods, and industries will lose more money during the shortages because the Atomic Energy Commission, whose Oak Ridge plant literally is built over coal, will not use coal.

14. Conversion of the Oak Ridge boilers from coal to natural gas not only will affect many workers and industries that require natural gas for manufacturing purposes but also will penalize the coal and railroad employees and owners.

It is conservatively estimated that if the Oak Ridge conversion to natural gas is permitted—

A. The loss to coal operators will exceed $3,000,000 per year.

B. The loss of employment to miners will aggregate more than 170,000 man-days a year. This represents employment for 200 days a year for 850 coal miners.

C. The loss of freight revenue to the railroads will aggregate more than $1,028,000 a year.

D. While there is no direct testimony in the record as to the effect of this reduction in freight traffic on railroad employment, it is evident that a reduction in freight traffic will cause a corresponding reduction in railroad employment.

The coal and railroad operators and employees should not be penalized to allay the unfounded fears of the Atomic Energy Commission officials. It would seem that a showing of public convenience and necessity requires more than a statement of concern. Thus far, little has been offered to justify the proposed conversion.

ATOMIC ENERGY COMMISSION CLAIMS SHORTAGE WOULD HAVE AFFECTED OAK RIDGE PRODUCTION, BUT SHORTAGE NEVER DEVELOPED

If Oak Ridge could not operate without natural gas, no one would object to the losses to American industry and workers resulting from longer lay-offs during natural-gas shortage periods. But Oak Ridge—

Lies in the heart of the Tennessee coal fields;

Can be served by union and nonunion mines in its own area;

Can receive deliveries by two railroads or by trucks;

Can stock almost unlimited quantities of coal to keep its boilers fired, and thus would not be affected by strikes. (It is interesting to note that within the last quarter century no strike in the coal industry has lasted more than 59 days.)

During the hearings held before the Federal Power Commission, these facts were brought out:

An official of the Atomic Energy Commission admitted that the only reason it wants to convert the Oak Ridge boilers from coal to natural gas is that during the winter of 1946–47 stocks of coal at Oak Ridge were being burned faster than supplies were coming in. But the coal stock pile never went below 6 weeks' supply.

Testimony introduced showed that during this very same period private utilities were building up their coal stock piles. It was suggested that the Oak Ridge personnel were overlooking some opportunities in the matter of buying coal or obtaining coal cars.

Gardiner Symonds, president of the Tennessee Gas Transmission Co. (the primary supplier of the natural gas proposed to be delivered to Oak Ridge), stated that he did not approve of using natural gas for boiler fuel. When asked his opinion concerning the Oak Ridge proposal, his comment was: "It isn't for me to argue with the Atomic Energy Commission."

During the period in 1946–47, when the Oak Ridge officials thought they were faced with a critical coal shortage, the Atomic Energy Commission asked the Office of Defense Transportation for a special order routing coal cars to Oak Ridge. The ODT officials, although having the necessary authority to deal with the situation, did not consider their intervention to be necessary. As it turned out, it wasn't necessary because the Oak Ridge plant went through the "critical period" with adequate stocks on hand at all times.

An official of the Louisville & Nashville Railroad testified that during the operation of the Oak Ridge plant, the L. & N. never has had any difficulty in supplying all the coal cars needed or wanted for shipment of coal to Oak Ridge.

Grain-Storage Program

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, May 27 (legislative day of Monday, May 23), 1949

Mr. SCHOEPPEL. Mr. President, yesterday on the floor of the Senate there was much discussion of certain phases of the Commodity Credit Corporation as it was related to the storage program and other related matters. It was quite apparent that there is some confusion and a lack of frankness on the part of certain officials of the Commodity Credit Corporation as disclosed by certain memorandums from the Department. I am sure that there is going to be much disappointment in the Kansas area because of inability to secure storage room for wheat as a basis for Government loans.

A casual survey will indicate that storage elevators in the terminal markets of Wichita, Kans., Hutchinson, Kans., St. Joseph, Mo., and Kansas City, are now filled with grain owned by the Commodity Credit Corporation. I have been reliably informed that the Commodity Credit Corporation refuses to move this grain before the new wheat crop comes on. I am afraid that as a result country elevators will not be able to accept much storage wheat for farmers because they will not be able to pass it on to the terminals. These country elevators are mostly small concerns, not designed generally to be storage elevators, and they pass this grain on to the terminal storage plants.

If the country elevators cannot move this grain to the terminals because of their congested condition, buying of the farmers' wheat will be curtailed in the local areas. In many places price differentials will result and the farmers will suffer.

I am informed that there are about 100,000,000 bushels of elevator room east of the Mississippi River which could have been utilized by the Commodity Credit Corporation, which would have materially relieved the congested terminals in the Kansas area. This delay in the shifting of this wheat to the eastern terminals by the Commodity Credit Corporation I am afraid will result in injury and damage to the farmers of my area.

In this connection Walter R. Scott, of Kansas City, Mo., delivered an address at Wichita, Kans., on May 21, 1949, before the Kansas Grain, Feed, and Seed Dealers Association, which speech I think is most worthy of consideration and sets forth pertinent facts which I feel should receive wide coverage and serious consideration.

I am offering it for the RECORD today, and request that it be printed in the Appendix thereof.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY WALTER R. SCOTT, EXECUTIVE VICE PRESIDENT OF THE BOARD OF TRADE OF KANSAS CITY, MO.

In every year the volume and direction of the movement of wheat after the harvest are of great interest to grain men, millers, and railroad officers. This is especially so when the crop is a large one.

This year a quarter-billion-bushel crop is forecast for Kansas, with huge crops indicated for Oklahoma and Texas, and conditions presented to the trade in the handling of these great crops merit consideration by all who are interested.

In recent years we have been most concerned with the supply of boxcars in which to move the wheat, but this year transportation presents no problem. Railroad freight business is running a good 10 percent under last year's traffic, with the result that cars are plentiful. Moreover, railroad officials have been successful in returning a high percentage of their cars to the owning lines, resulting in great improvement of the condition of western lines' grain-carrying cars, so that there are not only more cars but better cars available for grain loading.

The prime problem this year is not transportation, but storage. Storage facilities hold too much old-crop wheat, and the question is where will the new wheat go?

Unlike last year, a great part of the old crop left on hand is in the ownership of Commodity Credit Corporation, and what the Corporation does with its wheat has a most important bearing upon the handling of the new crop. Washington authorities have said that they do not see a great problem in the State of Kansas because the official report of stocks in all positions on April 1 showed 20,000,000 bushels less than last year. But the stocks a year ago were differently owned and in different positions:

	1948	1949
In interior mills and elevators	20,446,000	25,618,000
In merchant mills	14,650,000	12,700,000
In terminal elevators	20,476,000	30,213,000
On farms	63,074,000	30,078,000
Total	118,646,000	98,609,000

If we add the stocks in St. Joseph and Kansas City, Mo., as we should do to get the whole picture, we find that this year there were 23,000,000 bushels more than a year ago in commercial hands and 33,000,000 bushels less in farmers' hands. While this indicates a more comfortable position for the farmer this year if he wants to store his wheat on the farm, it also indicates that those farmers who wish to secure loans on their wheat in commercial warehouses are as a group facing the possibility of less room even than a year ago, and it will be remembered that there was much disappointment and complaint last year over the adequacy of storage space.

The Government loans and purchase agreements this year compare to the stocks on April 1 as follows:

	Stocks	Loans
On farms	30,078,000	9,500,000
In warehouses	87,725,000	47,080,000
Total	117,803,000	55,580,000
Purchase agreements		27,554,000
Total		84,134,000

Eliminating wheat held by mills for their own grinding it is apparent that about 70 percent of all the wheat, including farm stocks, is Government wheat. So the important question is what will the Government do with its wheat?

A better view is obtained by looking to the situation of the entire Southwest—from Nebraska to Texas. On April 1, there was reported in this area in all positions, 238,000,000 bushels of wheat, against which there were loans on 131,000,000 bushels and purchase agreements on 55 million, or over 75 percent represented by loans and purchase agreements. We do not know how much of the purchase agreement wheat remains to be purchased by CCC, but the other figures are definite and certain.

These figures caused us to examine the terminal situation. We found the last report showed stocks in the terminal markets serving Kansas as follows:

Stocks of all grains

	Bushels
Hutchinson	12,642,000
Wichita	8,428,000
Kansas City	28,763,000
St. Joseph	3,295,000
Total	53,128,000

The working capacity of the public elevators in these four markets totals 70,000,000 bushels. If the present stocks remain in these elevators, as now seems likely, these four markets can accommodate only about 17,000,000 bushels of new wheat. A year ago these markets had on hand 29,000,000 bushels, but the totals ran down to less than 20 million before the crop started to move. Contrasted to that, there is no present indication that the 53 millions now on hand will be reduced at all. The problem of these terminal stocks affects the entire grain trade.

As early as the first week in April we began to deal with this question. We observed that the public elevators east of the Mississippi River reported over 100,000,000 bushels of empty space and asked CCC officials to move as much grain as they possibly could from these four terminal markets into eastern elevators to make room for the new crop. They had followed such a course on two previous occasions. This time CCC declined to take such action.

Governor Carlson also took notice of the situation and called a State-wide meeting in Hutchinson on April 21 to take stock of the matter, and resolutions were there adopted calling on CCC to move its grain, but again CCC refused to do so. Other efforts were made, but they, too, failed.

Finally, last week we obtained a conference in Chicago with the regional managers of Commodity Credit Corporation and top officials from Washington. The situation was again gone over, and CCC was again urged to move its stocks, and this time finally and definitely refused to move any grain out of the terminals until all its other grain was moved out.

It appeared that space had actually been obtained in eastern elevators, of which 9,000,000 bushels were allotted to this area, but none of it would be utilized for grain out of terminals.

The Corporation stated its policy to be to move all the grain it acquired, first from the farms, second out of country elevators, and finally out of terminals if it got around to that point.

We were advised that since May 1 CCC had issued loading orders to country elevators for 30,000,000 bushels with another 20,000,000 in prospect, or 50,000,000 in all. As the loans in the Southwest aggregated 131,000,000 bushels and the purchase agreements 55,000,000, the chance of ever getting around to the terminals before the crop starts to move in volume is, obviously, very remote. Indeed, CCC officials estimated that the most optimistic estimate would be from June 20 to July 1.

Moreover, the question plainly arises, Where will CCC move this enormous volume of wheat to? Its loading orders are for shipment to the Gulf outside the 9,000,000 bushels to the eastern elevators. The amount of CCC wheat would fill Gulf requirements for the next 9 months. It would seem, on the face of the known facts, an utter impossibility to clear out all the farm and country elevator grain.

Should CCC adopt a buying policy in order to support the price of new crop wheat, as well it may, the huge crop of 230,000,000 bushels in prospect in Oklahoma and Texas would meet all Gulf requirements for months to come.

This, then, appears now to be the situation in next July as contrasted to a year ago: CCC owns practically all the grain stocks in the terminal elevators and refuses to move them; ample grain from other sources is available to carry out its export program. Last year the stocks were only a little over half as great, the grain was largely free grain, and a continuous movement of grain of large size went on continuously from the terminals to the Gulf.

The Kansas City market has room now for about 11,000,000 bushels—most, if not all, of which must be reserved by the elevators to fill merchandising requirements, so little, if any, room will be available to store grain for others. Space must be reserved by the terminal elevators to assure the proper handling of off-grade grain. The experience of last year demonstrates the necessity of this. Last year in the 4 months, June to September, 95,000,000 bushels were received and 45 shipped, the difference, 50,000,000, being retained by the mills and elevators, a large part being storage wheat for farmers' loans. Plainly, no such record can be made this year. A similar situation exists in the other terminal markets.

I have said this terminal condition will affect the entire grain trade. It is certainly important to the farmers of the Southwest, who have demonstrated a preference for placing their Government loans on warehouse receipts. Last year the warehouse loans in this area were five times the loans on farm-stored wheat. It will affect many, if not most, of the country elevators. Many of these because of their size or for other reasons do not offer storage to farmers but send the storage grain to terminal markets for warehouse receipts. There can be practically none of that this year. Moreover, with the terminals practically full, there cannot be a free movement out of country elevators, but there will be a slow searching process of finding buyers who have room and probably with rather wide price discounts because of the shortage of space. Many a small elevator will fill up in 1 day's run and then find it difficult to locate a place to which to ship for storage and slow business finding markets. There will be no lack of cars but slow marketing conditions will prevail.

If CCC would have eased this strain by making substantial amounts of room available in the terminal markets, the small country shipper could follow his usual practice of shipping out as fast as he takes the grain in. His commission merchant would promptly dispose of his shipments either in the terminal or by selling them at points beyond. The commission merchant will still function, of course, and will comb the country for outlets for his shippers. But in the great harvest rush a big reservoir of elevator space in the terminal markets greatly facilitates the handling of the crop.

It is important, in my opinion, and the fair thing to do, to see that farmers are fully acquainted with the facts in this matter so that they may be given every opportunity to protect themselves. They cannot this year rely upon securing commercial storage as a basis for making Government loans. There will be too little of such space available. The Government because of their refusal to call loans early in the season and their later refusal to relieve the terminals has too much space plugged up. Farmers can still protect themselves to a large extent, however, by buying steel bins or building wooden storage.

Country elevator operators, too, should take these conditions into account. Be careful about taking grain in for storage unless you know where you can place it. The mill buyers at the terminals will provide an outlet for much of your purchases, but you will need the best efforts of your favorite commission man to find other outlets. Remember that the grain you buy may move very slowly and because of lack of space may be seriously discounted in price.

Socialized Medicine

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE SENATE OF THE UNITED STATES

Friday, May 27 (legislative day of Monday, May 23), 1949

Mrs. SMITH of Maine. Mr. President, I invite a close reading of an editorial in the April 23, 1949, issue of the

UNIVERSITY OF MICHIGAN LIBRARIES

Lewiston (Maine) Daily Sun on the controversial issue of socialized medicine. It is as concise and devastating a rebuttal as has ever been my privilege to read. I ask unanimous consent that it be inserted in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WOMEN DON'T LIKE IT

With both sides girding for the coming battle on socialized medicine, now that President Truman has appealed to Congress for his bill, opponents of the administration plan are gaining valuable allies in federations of women's clubs who are voicing their hostility to the compulsory program.

Already federations in nine States have gone on official record as against the plan, and additional clubs are expected to follow suit later. As reported by the Christian Science Monitor, women of the State federations are basing their opposition on three main grounds.

One is the cost of the program, likely to rise to exorbitant heights because of the bureaucracy needed to administer it. Based on the experience of Germany, where socialized medicine got its start, a bureaucracy of 1,500,000 Government employees would be required in this country, and this huge cost would have to be met out of the increasingly high pay roll reductions taken from workers to pay for it.

Two is the prospect of a decrease in the quality of medical service. Since the number of patients and the frequency of their visits would rise, while the number of doctors and dentists would remain stable, or increase only slightly, the result would be less individual attention and poorer care.

Three is the invasion of a patient's privacy through the recording of case histories in duplicate and triplicate. There would be an end to the present confidence reposed by the patient in his or her doctor, since copies of the records made would be available to countless clerks and other officials of the administrative establishment. Of course, defenders of socialized medicine say this information would be strictly confidential, but that does not mean it actually would be, in all cases.

When these objections to socialized medicine, and many more, become more widely known, the rising tide of opposition will become even greater. There is no place for such regimentation in a country having the high standards of medical care and national health that are found here. The comparative few who are too poor to afford regular doctors' visits, or private insurance plans, can be looked after without subjecting millions of people to forcible expropriation of their wages.

Proposed Single Appropriation Bill

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, May 27 (legislative day of Monday, May 23), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Approval of the Single Appropriation Bill," and written by Mr. Arthur Krock, and published in the New York Times, Friday, May 27, 1949.

This article calls attention to the great need of the adoption by Congress of the principle of the single appropriation bill, and commends the Senator from Virginia [Mr. BYRD], and the Senator from Nebraska [Mr. BUTLER], for the untiring efforts they have put forth in winning the support of Congress for this important measure.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN THE NATION—APPROVAL OF THE SINGLE APPROPRIATION BILL

(By Arthur Krock)

WASHINGTON, May 26.—When Chairman CANNON of the House Committee on Appropriations announced today that a bipartisan agreement is near to put all spending in one bill at the next session of Congress and thereafter, the most promising means yet suggested to prevent casual Treasury deficits moved toward adoption. Casual deficits are those which are more the result of slatternly Federal housekeeping than of deliberate disregard of red ink. By that term they can be distinguished from planned spending in time of depression, which was the fiscal philosophy of the late Lord Keynes and the New Deal.

The single appropriation bill was urged by Senator BYRD of Virginia in the Seventy-ninth Congress, when his only cosponsor was Senator BUTLER, of Nebraska. This year his concurrent resolution to achieve the reform was cosponsored by seven other Senators. The general idea is to provide Congress with an official estimate of the revenues the Government can expect in the forthcoming fiscal year, against which estimate it can then measure the amount to appropriate for every purpose without incurring a deficit. By consolidating all these appropriations in one bill, and specifying how much of each appropriation may be spent in the ensuing fiscal year, it is believed that order may be brought out of the present chaos.

The principal effects which the sponsors of the resolution hope for, if their plan is adopted, were listed by Senator BYRD before a Senate rules subcommittee this week. They follow:

1. Under the present system reduction of appropriations for fiscal 1950 will not lower the amounts available for spending in that period which were appropriated in previous years. In the single bill proposed the spending for particular items in fiscal 1950 would be limited to conform to the revenue prospect for that period.

2. Since it is expenditures, not appropriations, which determine whether there is to be a deficit or a surplus, this system sets up a control that now is lacking.

OTHER ADVANTAGES

3. Funds previously appropriated would be reckoned in deciding on what both the appropriation and the spending would be for the subsequent fiscal year, thus eliminating one of the chief sources of the present confusion.

4. While this system would allow for necessary deficiency and supplemental appropriation bills after the consolidated one was passed, it would inevitably bring about a reduction in their number.

5. The limitation would not prevent the Executive from entering into contracts for projects that extend beyond one fiscal year, but would merely in that period prohibit delivery of property or services under those contracts beyond the amount assigned for such items.

6. It would not apply to payments of claims certified by the Comptroller General, moneys carried in private bills, interest payments on the public debt or revolving funds.

7. Congress would know definitely what it now does not about Federal expenditures through the requirement of reports from all its appropriation groups and conference committees. These would include tables itemizing available appropriations and estimating expenditures, with the totals in each case.

The value of the reform has been accentuated by the recent estimate of Colin F. Stam, chief of staff of the Joint Committee on Internal Revenue Taxation, that the prospective deficit for this fiscal year will be about $3,000,000,000, or much larger than the executive estimate. It is now proposed to pass a general "recession" measure, requiring the Executive to spend only a certain percentage of the appropriations already passed, or to be passed by the Senate and the House. But this would leave the allocation of the reductions wholly to the Executive. If the consolidated method of appropriating were in force, it would be in the process of legislation at this time and Congress could make the general reductions before passage and specify the items to which they would apply. While the House, in which appropriations must originate, was framing and passing the general bill, Senate committees would be at work. And when the House passed the measure the Senate would usually have May and June to legislate its own draft for passage and conference.

THE OBJECTIONS

Among the objections raised to the proposal is that a consolidated bill would require so much expenditure of time by the Appropriations Committees and the two branches of Congress that the end of the fiscal year would arrive with nothing legislated. The sponsors answer that "the customary cooperation" of the two branches could be relied on to prevent that.

Another objection is that the President would be obliged to veto a bill containing all Government appropriations if he disapproved of certain items, and leave the Government without carrying funds for an indefinite period. Conversely, it is argued, he would be under unfair pressure to refrain from using his veto powers.

This is conceded to be a point, but the sponsors maintain that the advantages to the Government and the people as a whole far outweigh whatever restriction of the veto this would impose on the President. It is suggested, however, that search be renewed for some clearly constitutional method whereby the President can veto a single item, or several items, in an appropriation bill without vetoing the entire measure.

Waste in China

EXTENSION OF REMARKS

OF

HON. ROBERT C. HENDRICKSON

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, May 27 (legislative day of Monday, May 23), 1949

Mr. HENDRICKSON. Mr. President, I desire to have printed in the Appendix of the RECORD an article from the Newark Evening News of Monday, May 23, by John O. Davies, Jr., concerning the wasteful manner in which our aid to China has been used.

While I have been, and will remain, a firm believer in aid and assistance to Nationalist China, I feel that we should make certain that our supplies reach those for whom they were intended and that they serve the purpose for which they were sent. Such diversions and waste and inefficiency can only mean that we are not doing as much as we should to help the forces of China.

I feel, Mr. President, that Mr. Davies and other reporters are doing this Nation a great service when they follow through on our acts and report on the results accomplished.

I also ask unanimous consent to have printed in the RECORD an editorial entitled "Our Wastage in China," from the Newark Evening News of May 26, 1949.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Newark (N. J.) Evening News of May 26, 1949]

OUR WASTAGE IN CHINA

Our aid to China is now an utter fiasco.

This was the undoubted fear of Secretary of State Marshall as it is the belief of his successor, Mr. Acheson. The one foresaw, the other realizes, the demoralization of the Nationalist Government. There could be little doubt of that when Chiang Kai-shek retired "temporarily" as President; there was room for none when the Communists made a mockery of the "negotiations" with the Nationalists, sent the delegation back and then proceeded to cross the Yangtze River. That was the beginning of the end.

Yet military supplies from the United States continue to pour into Formosa, and more are on the way. This is, of course, because the Eightieth Congress insisted that if the European recovery program was set up, many millions of dollars worth of supplies must go to Chiang.

A factual picture of what this aid means at the moment is presented from Formosa by John O. Davies, Jr., the News' correspondent in the Far East. At the port of Kaohsiung, largest in Formosa, he counted 150 huge crates of airplanes—new P-41's, 47's, and 51's, many of which have been exposed to the elements more than a month. And from import-export agents he was informed that six more ships loaded with planes were on the way.

These planes have been shipped and are being shipped to the Nationalist Air Force, whose record in the civil war has been deplorable and which is hated by the other armed forces. They are consigned to an outfit unable to put them to good use. Their fate may be to rust or be blown to pieces by the summer typhoons unless the Communists first capture Formosa and take them over, just as they have come into possession of so much of the war supplies we have sent through the years to the Nationalists.

Mr. Davies saw rusted armed vehicles sent by our Government in which Chinese families were making their homes. He saw hundreds of tons of new and used war surplus stuff, recently brought to Formosa from Shanghai, Okinawa, and Guam. They constitute a vast junk pile, which the Nationalists seem unable to utilize.

This is a spectacle of waste that outrages common sense. Assume that as a political gesture to get billions voted for European recovery, the supporters had to yield to congressional insistence that aid also be given to China. Is there no way now to stop continued exports of costly materials never to be used by their recipients and perhaps ultimately to be turned by the Communists against them?

[From the Newark (N. J.) Evening News of May 23, 1949]

CHIANG PLANES RUST, BUT UNITED STATES SHIPS MORE—FORMOSA DOCK LINED WITH UNCRATED AMERICAN FIGHTERS AND MORE KEEP COMING

(By John O. Davies, Jr.)

KAOHSIUNG.—Despite the poor civil war record of the Chinese Air Force, hundreds of thousands of dollars worth of new warplanes addressed to the CAF still are arriving at this southern seaport of Taiwan (Formosa) from the United States.

Huge crates of new P-41's, 47's, and 51's form an almost unbroken wall on both sides of the narrow streets which parallel Kaohsiung's 90-year-old harbor.

We counted 100 such crates on one side of the harbor and 50 on the other during an inspection of the port. According to foreign import-export agents here, at least six more shiploads of new planes for the CAF are expected from America.

Besides the airplanes, many crates of which have stood exposed to the elements for more than a month, boxes of new motors, spare parts, and other airplanes accessories also clutter the harbor.

RESEMBLE JUNK HEAP

The CAF is moving the planes to Tainan, Taiwan's oldtime capital, but at the rate of only one or two crates a day. Foreigners who have lived and worked here since the war with Japan ended warn that any new planes left on the open docks during the June-July typhoon season will be blown to smithereens.

Already many of the crates have cracked open, including several containing expensive engines.

Contributing heavily to the harbor's tremendous cargo congestion has been the recent arrival of ships from Shanghai, Okinawa, and Guam, which have dumped hundreds of tons of new and used war surplus stuff, ranging from huge airplane tires to scores of empty, 1-gallon oil cans.

Many of the wharves resemble gargantuan junk heaps which are under 24-hour guard by rifle-armed Chinese sentries. Expensive aerial cameras are mixed up with rusted nuts and bolts. Used airplane motors are piled atop row after row of oxygen tanks.

ARMORED VEHICLES RUSTING

United States-made armored vehicles, shipped here brand new months ago, apparently are being allowed to disintegrate in the Kaohsiung dock areas. Families of harbor-stationed Chinese troops are living in some of the vehicles. We discovered crates of parachutes which were stamped as having been packed for shipment from America in 1946. Some of the airplane motors were packed for shipment as far back as 1947.

The much-pampered CAF is the target of bitter hatred on the part of China's infantry, artillery, and armed forces. Taiwan-stationed officers of these units openly expressed their contempt for the ineffectiveness of China's pilots in the war with the Chinese Communists. The knowledge that the United States still is shipping great quantities of air-force material to this port has cooked anti-CAF resentment to the boiling point.

The imminent danger of Shanghai's capture by Communist armies has been reflected at Kaohsiung by a decline in ship arrivals and departures from and to mainland China's biggest seaport. Shanghai-moored ships reportedly have been requisitioned by garrison troops. The crews of some ships here which normally would sail for Shanghai have gone on strikes to prevent such embarkations.

Despite the cargo congestion on the open docks, the jam-packed condition of go-downs filled with unused and rotting war material and the continued successes of the Communists on the mainland, Kaohsiung still is one of Nationalist China's busiest seaports.

Since March 10 more than 65,000 tons of sugar have been exported and during our visit another 25,000 tons were being loaded for export. A third loading of 50,000 tons is destined for Shanghai, according to foreign shippers, but that may have to be diverted elsewhere. Kaohsiung, which has an estimated population of 150,000, borders a district rich in rice and sugar cultivation.

Between 10,000 and 15,000 tons of salt is being shipped out of here monthly, shipping agents said. Recent imports included a 10,000-ton cargo of fertilizer, of which Taiwan is in dire need. Of that cargo, shippers said, the Taiwan provincial government got 7,500 tons and the Economic Cooperation Administration 2,500.

BUFFALO DRAW CARTS

There are hardly a dozen resident foreigners in this city, which was developed into a major seaport by Japan. Only the size of its population merits its identification as a city. Few of its roads are paved and buildings over four stories can be counted on one hand.

Water buffalo, bullocks, and old horses drawing carts of farm produce, manure, and cheap native goods meander through the main streets. Pedicabs and old-fashioned high-wheeled rickshas out number automobiles 500 to 1.

Most native houses and office buildings are constructed Japanese style. First-class hotels, which also conform to Japanese architectural and service customs, are unkempt and uncomfortable.

The Columbia Valley Authority Plan

EXTENSION OF REMARKS

OF

HON. GLEN H. TAYLOR

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Friday, May 27 (legislative day of Monday, May 23), 1949

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the RECORD two articles on the Columbia Valley Authority plan, written by Peter Edson and published in the Washington Daily News of May 24 and May 25, 1949.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of May 24, 1949]

SHORT-CIRCUITING CVA

(By Peter Edson)

A Weaver-Newell plan is being put forward as a substitute for President Truman's Columbia Valley Authority plan. Just as the Pick-Sloan plan was thought up to block development of Missouri Valley Authority planning, the Weaver-Newell plan is being used to check Democratic administration planning for a CVA.

The plan is the brain child of Col. Theron D. Weaver, United States district engineer in the Northwest, and R. J. Newell, regional director for Bureau of Reclamation at Boise, Idaho.

The Weaver-Newell deal, first announced by the Secretaries of the Army and Interior, divides up responsibilities for some 60 projects in the Columbia Valley. Only two have been completed. Reclamation Bureau has 7 more under construction, 4 more authorized but not appropriated for, and 13 recommended. Army engineers have 4 under construction, 8 authorized, and 22 recommended.

UNIVERSITY OF MICHIGAN LIBRARIES

The Army's share alone is estimated to cost $1,500,000,000, plus $11,650,000 a year thereafter for maintenance.

Authority for this planning goes back to 1943, when the Senate Commerce Committee asked Army engineers to revise their plans for development of water resources in this area. Then last June and September the President asked both Army engineers and Reclamation Bureau to review and coordinate their plans, following the disastrous Columbia River floods of 1948. The President asked that the report be sent to the White House for approval.

On April 19, Army engineers and Reclamation Bureau announced their agreement to split up the work they had planned. Two days later Gen. Louis A. Pick, as Chief of Engineers, sent this proposed plan to the governors of the Western States and to other Federal agencies having an interest in this area. They were given 90 days in which to make suggestions for changes. That gave them till mid-July.

Reports from the States are all in and are all favorable to the Weaver-Newell plan, with some reservations on giving irrigation projects second consideration in Montana and Idaho. The situation with respect to Agriculture Department's Soil Conservation Service and Forest Service, Interior's Electric Power, Grazing, National Parks, Indiana, Fish and Wildlife Services, and the Federal Power Commission and Bonneville Power Authority are considerably different. All these agencies have major interests in the Northwest.

Under normal Government procedure, all these agencies are required to make reports to the White House on Engineer and Reclamation proposals. A final revised report must then be cleared by the Budget Bureau. After that General Pick would be authorized to forward the report to the Secretary of the Army, who would send it to Congress.

In the great desire to speed approval on the Weaver-Newell plan ahead of CVA, this routine has been completely short-circuited. Chairman WILLIAM M. WHITTINGTON's House Public Works Committee asked the Chief of Engineers to submit his as yet unapproved plan direct to Congress. Colonel Weaver made this presentation in 1-day hearings Friday. Mr. Newell made the presentation for Reclamation Bureau. The CVA plan wasn't even mentioned.

Army and Engineer and Reclamation Bureau spokesmen say their Weaver-Newell plan will fit right into a CVA, if and whenever one is created by Congress.

CVA backers say the Weaver-Newell plan makes provision for nothing except Engineer and Reclamation projects. They say it does not provide for efficient management of Columbia waters to provide power, irrigation, flood control, fisheries, antistream pollution, and navigation all at once. In calling it just another Pick-Sloan stop-gap compromise, they point to reports from ex-President Hoover's Commission on Government Reorganization for proof of its inefficiency, duplication, and wastefulness.

[From the Washington Daily News of May 25, 1949]

CVA SHENANIGANS (CONTINUED)

(By Peter Edson)

Fancy shenanigans are going on around here in connection with the Columbia Valley Authority plan.

President Truman first tried to get the Senate and House to hold joint hearings on his pet bill to set up a CVA. He called Senator DENNIS CHAVEZ of New Mexico and Representative WILLIAM M. WHITTINGTON of Mississippi to the White House to talk about it. They are chairmen of the Senate and House Public Works committees.

WHITTINGTON blocked joint hearings. He said his committee had so many other things to do it couldn't possibly get around to CVA before mid-June. The truth is his committee is believed to be divided 14 to 13 in favor of CVA, though WHITTINGTON is against it. On the side, WHITTINGTON is vice president of the national rivers and harbors congress. This is the semiofficial kingfish in the powerful water lobby, which is opposed to all valley authority plans.

So it was left for Senator CHAVEZ' committee to hold hearings first and alone. As near as can be figured out this Senate Public Works Committee has only two Democrats in favor of CVA—Senator CHAVEZ and Senator SPARKMAN of Alabama, a strong TVA man. The other six Democrats and all five Republicans—headed by Senator HARRY CAIN of Washington—are against CVA. So it has no more chance than any snowball in June on Capitol Hill.

Nevertheless, the committee will go through the motions of holding CVA hearings. Scheduled to begin on Friday, they will run through June 4, including sessions on Saturday and Memorial Day. Who will attend them is a question, though this timing will serve to smother adequate news coverage.

President Truman's bill will be presented first. The hearings will then recess the week of June 6. That will give anti-CVA forces a week in which to prepare to give it the business during the week of June 13.

Meantime, Representative WHITTINGTON has made a fast play of his own. On short notice, his committee held one-day hearings on what is known as the Army Corps of Engineers Bureau of Reclamation Weaver-Newell plan for Columbia River development.

The record of the day's hearings reveals a good bulldozer technique. Nobody appeared who was opposed to the Weaver-Newell plan. E. W. Rising, registered lobbyist for the national water conservation conference, seemed to be in charge. This NWCC has for its Columbia Valley affiliate an outfit known as Pacific Northwest Development Association. A recent audit of its books showed, among others, the following contributions for the years 1945–47:

From Idaho Power Co., $1,855. From Washington Water Power Co., $6,600. From Pacific Power & Light, $5,600. From Portland General Electric, $5,500. From Northwest General Electric Co., $2,560.

This reveals a private-utility-backed lobby opposing development of the Columbia Valley Authority plan. They all have a perfect right to do this. But it's just as well to understand all the gimmicks, right out in the open.

Tennessee Valley Authority

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. MITCHELL. Mr. Speaker, in the Appendix to the CONGRESSIONAL RECORD are reprinted a series of 10 articles on the Tennessee Valley Authority, comprising pages A3221 to A3233. The author of these articles is Mr. Tom Humphrey, of the editorial staff of the Oregon Journal, one of the two metropolitan dailies in the city of Portland. The two Senators from Oregon, in placing these articles in the RECORD, have explained that there is intense public interest in proposed legislation for the Columbia Valley Administration which has the strong backing of President Truman, and that these articles on the TVA are offered to help evaluate new legislation for unified river-basin development.

According to the Senators from Oregon, Mr. Humphrey's articles are comprehensive and factual and worthy of careful study. I regret to state, Mr. Speaker, that both Mr. Humphrey and the Oregon Journal which sent him on the mission to the Tennessee Valley are hostile to the proposed CVA. Careful study will show that these TVA articles are rife with prejudiced comments and written in a manner calculated to place the proposed CVA in an unfavorable light.

Before embarking on his mission, Mr. Humphrey wrote a derogatory article on CVA which was published in the Washington Post and the Oregon Journal and inserted in the CONGRESSIONAL RECORD on three separate occasions by members adamantly opposed to CVA. In a communication to the Washington Post, which will be found in the Appendix to the RECORD of March 21, I pointed out that Mr. Humphrey wrote with the heavy hand of bias against a CVA.

Far more informative and factual than Mr. Humphrey's writings on CVA is the series of articles written by Mr. Malcolm Bauer, city editor of the Portland Oregonian. The newspaper which Mr. Bauer represents has approached the CVA in an open-minded way, and has been disposed to consider the issue on its merits. Mr. Bauer's mission to the Tennessee Valley preceded that of Mr. Humphrey. In the interest of presenting a better balanced picture of TVA operations and their significance for the proposed CVA, I ask that the series of 16 articles by Mr. Malcolm Bauer, written for the Portland Oregonian, be printed in the Appendix to the RECORD. Hearings on CVA have commenced in the other body of Congress, and I am confident that these articles will be most helpful to the Members in appraising one of the most important legislative proposals before this Congress.

The articles follow:

WHAT ABOUT TVA?

Proposed legislation creating a Columbia Valley administration has been modeled in large part on the Tennessee Valley Authority, which for 16 years has directed the development of the Tennessee River and its watershed.

Malcolm Bauer, city editor of the Oregonian, has just returned from a month's visit to the Tennessee Valley. He went there to find out precisely what TVA is, how it operates, what the people of the valley think of it, what effect it has had on the economy and the institutions of the valley.

What he found out is of utmost importance to every resident of the Pacific Northwest interested in the pros and cons of the proposal for a CVA.

TVA—MODEL FOR CVA?

TENNESSEE STREAM OF ALTERNATE FLOODS AND DRY SPELLS—MUSCLE SHOALS PROJECT OUTGROWTH OF WORLD WAR I BUT FINISH DELAYED AND OUTPUT SUBJECT TO VAGARIES

(By Malcolm Bauer, city editor, the Oregonian)

(Mr. Bauer has just returned from a month's visit to the Tennessee Valley. This is the first of a series of 16 articles in which

he will report on the operation there of the Tennessee Valley Authority, the only existing regional development agency such as that proposed by the Truman administration in its Columbia Valley administration bill.)

Within the next few days the Truman administration will send to Congress its bill for the creation of a Columbia Valley administration. With the bill will go a special message from the President urging its passage as a major administration objective of this session of the Congress.

The bill will call for the creation of a three-director Government corporation to effect the unified water control and resource conservation and development on the Columbia River, its tributaries, and the surrounding lands in the interest of improved navigation, control, and prevention of floods, irrigation and reclamation of lands, strengthening of the national defense, and for other purposes. The other purposes include the power-producing operations of the Bonneville power administration.

But what is CVA? How would it operate? What could it do?

We can look but to one place for answers to those questions based on experience. That is the valley of the Tennessee River in the interior southeast where there exists the first and only such Federal agency for the coordinated development of regional resources—the Tennessee Valley Authority.

TVA PATTERN FOR NORTHWEST

As the only concrete experience from which the proposals for a CVA could be drawn, TVA provides the pattern for the administration's CVA bill. There is every reason, therefore, why a study of the 16-year experience of the TVA will help in understanding what can be expected of a CVA.

For that reason the Oregonian sent me to the Tennessee Valley, and I have just returned from a month's visit there and in Washington, D. C. What I have learned about the TVA and about the Tennessee Valley and its people may be of some service to the reader in drawing his own conclusions about a CVA. I do not propose to marshal arguments either for or against a CVA. Rather it will be my purpose to tell as objectively as possible the story of TVA, what it is, what it does, what the people of the Tennessee Valley think of it after 16 years and in what manner they have been affected by it.

But beware of transmuting without question the experiences of TVA to apply to the problems of the Columbia Basin. There are, of course, many differences in the two regions, differences that have some acknowledgement in legislation proposing CVA. That is not to say there are not significant lessons to be learned by a study of TVA. One must merely give consideration to their application in the Pacific Northwest.

For example, the Tennessee River differs from the Columbia. It does not flow into an ocean, but into the Ohio River which then flows into the Mississippi. Unlike the Columbia, which has a relatively steady and heavy flow of water the year around, the Tennessee has always been a flash stream. From the earliest days of settlement it had flooded its banks almost annually. The heaviest rainfall in the eastern United States pounds down on the southern Alleghenies and the Great Smokies where the headwaters of the Tennessee rise in eastern Tennessee, western North Carolina and the far western tip of Virginia. Rain measures more than 60 inches a year in some places (Oregon's coast knows what that means). Long-time average is 52 inches throughout the Tennessee Valley drainage area. That is 10 inches more than Portland's 42 inches.

FLOODS EXPECTED ANNUALLY

These downpours would sweep down the steep gullies into the Clinch, the Holston, the French Broad, the Watauga and Little Tennessee Rivers. Unchecked, they washed down these streams into the Tennessee River, which begins at Knoxville, and then spread out over the farm lands and the settlements of the valley. The muddy waters were always widest and deepest at Ross' Landing, which is now the city of Chattanooga. Almost annually the Tennessee would behave as did the Columbia last year. It's a smaller river, and at its top flood stage it flows less than half the record flood level of the Columbia. But the water is just as wet.

The floods came any time from December through April. Then, come August, you could drive a mule across the main channel of the river almost any place. From a flood load of 470,000 cubic feet a second at Muscle Shoals, the river often fell to a trickle of 4,200 cubic feet a second.

Steamboat operators, too, were unhappy. They found but few weeks in the year when water was neither too deep nor too shallow for river traffic.

As early as 1824 John C. Calhoun, then Secretary of War, ordered a survey of the river with specific reference to the construction of a canal around the 37-mile stretch of rapids called Muscle Shoals. A 17-lock canal was actually built by 1834 and was enlarged in 1871. But in 1916 the United States Army Engineers reported in exasperation: "It has been impracticable to establish reliable through navigation extending over any of the reaches" of the Tennessee. The pesky river kept running wild in the winter, then resting from its mischief in the summer. It was harnessed only at Hales Bar, down river from Chattanooga, where a private power company had built a dam in 1905.

Urgencies of the First World War brought authorization from Congress for the construction of a power dam at Muscle Shoals (now Wilson Dam). The dam was to produce energy for operation of two plants to derive nitrogen from the air for wartime explosives. But the Germans didn't have to worry; the dam was not completed until 1925. In the 1920's Wilson Dam at Muscle Shoals was looked upon as the whitest of white elephants.

FORD'S OFFER TURNED DOWN

Henry Ford wanted to buy it before completion, back in 1921, for $5,000,000, but Congress turned him down.

When the dam began producing power in 1925 so fickle was the flow of the Tennessee that the installed capacity of 184,000 kilowatts could operate only intermittently. Its "firm power," or year-around guaranteed production, was less than 40,000 kilowatts. That's less than half the capacity of one generator at Grand Coulee. Even that was more than was wanted by the private power company that was Wilson's only customer and used the Government-produced power only to supplement its own generation. So uncertain was the great dam's production, both because of the uneven flow and meager market, that even the lights in the powerhouse were energized from an outside source so that the engineers could work in the light even when the generators were not operating.

The combined irritations of the floods and the helpless monster at Muscle Shoals rubbed raw the patience of Tennessee Valley Congressmen. They asked in 1928 for a Federal agency to make something out of the shambles of the Tennessee. That was the birth of TVA.

BILL TO CREATE TVA VETOED BY TWO PRESIDENTS; FINAL VICTORY LARGELY DUE TO SENATOR NORRIS

The Tennessee Valley Authority is not at all, as many think, a child of Franklin D. Roosevelt's New Deal.

A Republican Congress passed the first TVA bill, but it died in Calvin Coolidge's pocket. Again in 1931 it was back. But Herbert Hoover affixed the veto that time.

Then came 1933 with a new administration and a program calling for vast public-works expenditures. The same Congress that voted millions for Grand Coulee and Bonneville Dams created, in May 1933, the Tennessee Valley Authority.

The passage was a triumph for aging Senator George W. Norris, long the chief exponent in Congress of the development of the Tennessee.

The TVA was, Congress said, "for the purpose of maintaining and operating the properties now owned by the United States in the vicinity of Muscle Shoals, Ala., in the interest of the national defense and for agricultural and industrial development, and to improve navigation in the Tennessee River and to control the destructive floodwaters in the Tennessee River and the Mississippi River Basins."

To do this job the Congress created a corporate agency that, in form and substance, is practically the same as the TVA of today.

REPORTS MADE DIRECT

TVA is an independent Government corporation. It reports to no Government bureau in Washington, but directly to the President and to the Congress. The President appoints its three directors to 9-year terms with the advice and consent of the Senate, but only once has a President exercised his right to fire a director. Franklin Roosevelt ousted the first chairman of the board, Arthur E. Morgan, in 1938 over differences of policy. Each year TVA must come to Congress for appropriations to carry on its program. It must also obtain from Congress authorization for its major projects. Otherwise, TVA is free to operate within the terms of its original act a : amended. It can sue and be sued. It can issue bonds as authorized by Congress.

So it happened that in 1933, at the depths of the Nation's greatest economic depression, TVA's first three Directors moved into Knoxville to set up an organization that would accomplish the objectives of the TVA Act. They were Dr. Arthur E. Morgan, an engineer and educator, who was designated Chairman; David E. Lilienthal, a young utilities lawyer, later to become Chairman of TVA and now Chairman of the Atomic Energies Commission; and Dr. Harcourt Morgan (no relation to Arthur E.), an agriculturist and educator.

They had a big job. Economic life was at a standstill in the Valley. In one east Tennessee county 87 percent of the population was on relief. There are those in the Tennessee Valley today who like to think things weren't so bad then as painted. They point happily to the 13 percent who were making a go of it.

The new-born agency was experimenting for the first time as a Federal authority with regional responsibilities. Its specified area of authority lay within the watershed of the Tennessee River and its tributaries, including parts of seven States. The total is about 40,000 acres in area, less than half the size of Oregon, but containing more than twice the number of people now in Oregon.

SEVERAL STATES AFFECTED

Bulk of the Valley lies in Tennessee, but the headwaters of the Powell, the Clinch, and the Holston rise in the highlands of the western tip of Virginia, and other tributaries feed in from the Great Smokies along the western edge of North Carolina and in northern Georgia. The Tennessee itself, after running south from Knoxville in eastern Tennessee, dips into Alabama and runs westward across the northern width of that State into the northeastern tip of Mississippi. Then it turns north and flows through Tennessee again to empty into the Ohio at Paducah, Ky. Tennessee and Alabama are the States principally affected by TVA; Virginia, North Carolina, Georgia, Mississippi, and Kentucky less so. I visited all but Mississippi and Kentucky.

UNIVERSITY OF MICHIGAN LIBRARIES

That is not the geographical limit of TVA's wide-flung activities. TVA distributes power over an area of 80,000 square miles, twice that of the watershed. Its farm program, as we shall find later, stretches into a majority of the States of the Union, including Oregon, Washington, and Idaho.

TVA's first job, in addition to the herculean task of organization, was the construction of Norris Dam, to control the Clinch River, just northwest of Knoxville. It was primarily a storage dam, to control floods and equalize water flow for navigation. But it also produces 100,800 kilowatts of electricity.

Norris was completed in the spring of 1936. Since that time TVA has constructed 16 major dams and a number of smaller projects, and is now building South Holston, a $33,600,000 rock and earth fill storage dam on the Holston River, in the far northeast corner of Tennessee. South Holston completes the major construction program now contemplated by TVA.

What does TVA do other than build dams? Here are some things:

TVA controls the water flow of the Tennessee and its tributaries through a system of 27 major and numerous smaller dams. (Ultimate authority in critical periods, however, lies with the United States Army Engineers, who have final word on how much water can be released into the Ohio and Mississippi Rivers when floods threaten.)

TVA has completed a 630-mile, 9-foot clearance navigation channel from the mouth of the Tennessee at Paducah, Ky., to Knoxville, a distance roughly equivalent to that from the mouth of the Columbia to 100 miles beyond Grand Coulee Dam. (The U. S. Army Engineers operate and maintain the locks and thus control navigation.)

TVA operates a power system, principally as a wholesale producer, which last year generated more than 14,000,000,000 kilowatt-hours of electricity, substantially more than the 10,885,907,000 kilowatt-hours produced in the same period by Grand Coulee and Bonneville Dams.

VARIOUS PLANTS RUN

TVA operates chemical plants at Muscle Shoals which last year produced about 350,000 tons of phosphate and nitrate fertilizers.

TVA distributes this fertilizer, without cost except for freight, to more than 15,000 test-demonstration farmers throughout the Nation. Such fertilizer as is not so distributed is marketed at cost through farm cooperatives.

TVA last year furnished more than 10,000,000 seedling trees for reforestation by 3,300 farmers and timberland owners.

TVA conducts research and experimentation in conjunction with the valley's land-grant colleges in such fields as food-freezing, wood hydrolysis, and manufacture of laminated wood, ceramics, farm machinery, and paint, all from products of the valley.

TVA manages some 500,000 acres of properties surrounding reservoirs. Much of this has been leased to public and private agencies for recreational and other development.

To do these and other things, TVA has 15,000 employees, ranging from Chairman Gordon R. Clapp to the lowliest mudslinger at South Holston Dam, now abuilding.

TVA—Model for CVA?

PEOPLE OF TENNESSEE VALLEY PROVE TO BE ACME OF HOSTILITY WHEN GOVERNMENT FIRST ARRIVES TO DEVELOP REGION

(By Malcolm Bauer, city editor, the Oregonian)

(This is the second of 16 daily articles by Mr. Bauer, who has just returned from an inspection of the Tennessee Valley Authority, only existing regional development agency such as the proposed Columbia Valley Administration.)

The Federal Government could have found no more hostile region than the Tennessee Valley for its first experiment in regional development. By tradition, politics, experience, the people of the valley suspected outside authority.

When TVA's first three directors and a staff of assistants arrived in Knoxville in 1933 to set up TVA as directed by Congress they were invading territory where representatives of Washington, D. C., had often been more hated than loved.

The moonshiners of the highlands of Virginia and east Tennessee had long been taking pot shots at the Federals.

The farmers and tradesmen of the valley still remembered the last Federal agent to pass through—Gen. William Tecumseh Sherman.

But that didn't mean they were solid-South Democrats, open and agreeable to the ministration of the first Democratic regime in a coon's age. The Tennessee Valley is all below the Mason and Dixon's line; but it would be a mistake to think of it as part of the solid South.

Western North Carolina and eastern Tennessee fought for the Union, and they are still full of Republicans. A Republican represents Knoxville and its district in Washington in this Congress.

Willson Whitman, to whom I am greatly indebted for her excellent book, God's Valley, says it very well. The Tennessee Valley, she writes, may vote Democratic, but it prays Republican to this day.

The Tennessee Valley people are independent, not the kind of people to welcome with open arms any Federal program of paternalism, whatever the material benefits. Watauga, Tenn., and Abington, Va., in the valley, were the first settlements in the Colonies to declare in formal articles against British rule.

PEOPLE FLEE DOMINATION

The valley had been settled by people seeking to escape the domination of government—English, Scotch, Irish. They lived in the valley and raised their offspring to question authority. Less than 1 percent of the valleys' population is foreign born. There are few Olsens in the telephone book, no DiMaggios. The headstones in the cemeteries are filled with Macs.

In the highlands of east Tennessee you can still hear the last traces to be found of Elizabethan English used in daily conversation. Charles Krutch, the helpful chief of TVA's graphics section, heard this one:

"I was hunkerin' down and I creeled my ankle; it's poned up so I'm 'feared it'll beal."

All good enough English if you go back far enough, but it requires an interpreter today.

Not long before Oregon herself was emerging from the wilderness. Tennessee was the land of the frontier. A tree on a branch of the Watauga in Tennessee bears the legend: "D Boon Cilled a Bar." Dave Crockett and Sam Houston were big men in Tennessee before they went on to Texas. Andy Jackson pioneered in the valley, hacked out a "Hermitage" near Nashville and from there went to the White House.

The Tennessee Valley has always been a valley of strife.

The pioneers had routed the Cherokees, the Chickamaugas, the Chickasaws. Brother had fought against brother Tennesseean at Shiloh and on Missionary Ridge and Lookout Mountain. Religion itself had entered the lists in the Scopes-Darwin trial at Dayton in the heart of the valley.

So the residents of the valley rolled up their sleeves and pitched right in on both sides of the fight when the TVA moved in and immediately locked horns with the private utility companies. In hot spots like Chattanooga where the fledgling municipal system started to build a competing line, families were split, as were church congregations, lodges. That, however, is a story for later on. The point, in case it was buried above someplace, is that the people of the valley are a vigorous people, independent and wary of authority. No more, no less, perhaps, than the people of the Pacific Northwest.

DIFFERENCES EASY PITFALL

The peoples of the two river basins are different in many ways, of course; but it would be an error to magnify too greatly these differences in contrasting TVA and CVA.

Per capita income is lower in Tennessee than in Oregon. In both areas such income has been soaring out of proportion to the general rise throughout the land. Tennessee's deficiency is due partly to the greater percentage of rural population, supporting itself on nearly 300,000 small farms, five times the number of farms in Oregon, a State twice as large. Partly, also, it is due to the greater number of Negroes in the Tennessee Valley. Their wages there don't compare to a white man's.

There are probably many other reasons, but none which seems to have any bearing upon the acceptability of a regional authority.

And as everywhere in this country the standardization of everyday life is working toward the elimination of such differences as do exist between the peoples of the several regions. The same reducing formulas and permanent wave solutions are advertised in the drug stores of Chattanooga as in Portland. Parking meters in Portland and Knoxville are identical. The same movies play there; the same radio programs. The convertibles at the University of Tennessee looked just as yellow and just as numerous as at Eugene or Seattle. I waited 3 days to hear the Portland pressmen's strike had been called, but had up-to-the-minute news on Li'l Abner, Rip Kirby, and Skeezix.

It is a common delusion, perhaps to consider oneself different—i. e. better—than the fellow in the next valley. That fancy can have little place in the consideration of the advisability of applying the experiences of TVA to the Columbia Basin.

The TVA must deal with people; but it likewise deals with a number of less animate objects. The biggest and most important of these are the dams.

NINE TENNESSEE DAMS UNDER TVA CONTROL FLOODS, PRODUCE ELECTRICITY

The nine main river dams operated by the Tennessee Valley Authority have turned the Tennessee River into a series of lakes, second in size in this country to the Great Lakes. Where the slack water from one dam reaches its upstream limit, there stands another.

Biggest and nearest the mouth of the Tennessee is Kentucky Dam, just 23 miles upstream. It was completed in 1944. It is the river's principal flood-control dam protecting the downstream areas of the Ohio and Mississippi basins. As do all TVA dams, Kentucky produces hydroelectricity.

Unlike Columbia River dams, however, none of the mainstream Tennessee dams have fish ladders. The fish of the Tennessee are not anadromous. They do not need to move upstream to spawn.

ENGINEERS IN CHARGE

All the main river dams have locks for navigation. The locks are operated by the Army engineers, not TVA.

For comparison: Kentucky's reservoir of 6,000,000 acre-feet, biggest in the valley, holds about two-thirds as much water as Grand Coulee's reservoir; Kentucky produces 160,000 kilowatts of power to Bonneville's more than 500,000. (TVA's biggest power producer, Wilson Dam, has generator installation now

under way to fill its capacity of 436,000 kilowatts.)

Two hundred miles up the river from Kentucky Dam is Pickwick Dam. It spans the river at Pickwick landing where 173 gunboats landed on the eve of Shiloh in the first large scale amphibious engagement in American arms. Pickwick is but 50 miles downstream from Wilson Dam, at Muscle Shoals, first in the Government-built chain.

A scant 18 miles above Wilson is Wheeler Dam, which had been started when TVA was created in 1933. Above that is Guntersville, like Wilson and Wheeler, in Alabama. Eighty miles farther on toward Chattanooga is Hales Bar Dam, built originally by a private power company but later altered to some extent by TVA engineers.

DAM FAVORITE SPOT

Chickamauga Dam stands astride the river at Chattanooga and is the top tourist attraction of the TVA system, possibly because it is so easily reached. Next above is Watts Bar, just halfway between Chattanooga and Knoxville. Beside it on the bank of the river stands the only steam plant built to date by TVA. The Watts Bar steam plant requires a 260-man crew and consumes 50 carloads of coal a day to produce its 240,000 kilowatts. But the hydro plant at the dam produces 150,000 kilowatts with a crew of 37 and the water of the river—a contrast in the operating costs of hydro- and steam-power generation—why water power makes for cheaper electricity.

Fort Loudoun Dam, just below Knoxville, completes the river chain. All are broad, low structures, although in engineer parlance they are classed as high dams as main-stream dams go.

In addition there are 14 major storage dams on tributaries. None of these has locks, but all generate power. The better-known ones are Norris, the first TVA-built dam, on the Clinch River, about 20 miles northwest of Knoxville; Fontana, on the Little Tennessee in North Carolina, at 470 feet the fifth highest dam in the world. (Grand Coulee is 550 feet); Douglas, built in record time in World War II on the French Broad River in the mountains of eastern Tennessee.

FERTILIZER PRODUCED

TVA also operates five dams built and owned on the Little Tennessee by the Aluminum Co. of America, whose plant at Alcoa, Tenn., biggest in the world, uses power from the five dams and from TVA as well.

At Muscle Shoals, Ala., TVA operates two big fertilizer plants, using fertilizer thus produced in demonstrations on farm lands in the Tennessee Valley and elsewhere in the Nation—including Oregon, Washington, and Idaho. The surplus is marketed through farm cooperatives.

TVA once owned an entire town—Norris, Tenn., built to house the working force for the construction of Norris Dam. It was constructed as a permanent, model settlement, and TVA operated service centers, such as the drug store, restaurant, etc. That started the charges, still found in many places, that TVA is in the drugstore business, variety store business, etc. But Norris was sold—lock, stock, and drug store—last August to Henry D. Epstein, of Philadelphia. He paid $2,107,500 for it, and is now in the process of selling and renting the 5- and 6-room houses that are scattered on the winding roads through the trees of the Norris hillside. Most are occupied by TVA employees, many of whom commute the 20 miles to Knoxville daily. Others work at Norris and at Norris Dam.

Listed above are the principal physical structures of TVA—the dams and the plants. They and the reservoir lands surrounding the man-made lakes represent the capital investment of TVA—a capital investment by the people of the United States that now stands at more than $800,000,000.

TVA—MODEL FOR CVA?

VALLEY AUTHORITY, LACKING POWERS OF GOVERNMENT, ACHIEVES ITS OBJECTIVES THROUGH RESORT TO CONTRACTS

(By Malcolm Bauer, city editor, the Oregonian)

(Mr. Bauer has just returned from a month's study of the Tennessee Valley Authority, which has formed a pattern for legislation proposing a Columbia Valley Administration. This is the third of a series of 16 articles on his findings.)

The Tennessee Valley Authority is not a government.

TVA has no police, no army, no courts of its own. It has no power to regulate. It can give orders to none but those on its pay roll. It has no legislative powers. Its one power of compulsion is the right of eminent domain, a common instrument of public agencies.

TVA, therefore, cannot really live up to its reputation in some quarters as a "super state." It is a corporation authorized to develop with Federal funds the resources of a river basin that extends over political boundaries into seven States. But, TVA can no more direct State and local officials or individual citizens of Tennessee than can the Portland headquarters North Pacific division engineer, whose authority also overlaps State boundaries, give instructions to the State and local governments or private citizens of the Northwest.

TVA gets its work done by contract. It contracts with each of about 150 power retailers for the distribution of the energy generated at TVA power plants. These contracts specify not only the cost of TVA power to the retailer, but also the retail rate. Parties with TVA to these contracts include municipal utility boards, rural cooperative organizations and private power companies.

The demonstration farm program is also operated by contract. The agreement is with the extension division in each of the land-grant colleges in the Tennessee Valley States and in 18 States outside the region. Oregon State College has entered such a contract with TVA.

OSC, TVA IN PACT

The contract with OSC specifies that the extension service, through its county agricultural agents in Oregon, will supervise the demonstration of TVA fertilizer and soil conservation methods on the 82 farms in 12 Oregon counties participating in the TVA farm program. TVA, on its part, agrees to provide fertilizer manufactured in its Muscle Shoals plant for use on the demonstration farms. TVA at one time furnished some funds for the operation of the program in Oregon. That is not now true. In any event the execution of the program in Oregon, as well as in the Tennessee Valley States, is in the hands of the extension service which is bound to TVA only by the terms of the mutually agreed contract.

The contract is the device used by TVA to secure execution of its policies through established local, State and Federal agencies, public and private. There are in existence hundreds of such formal agreements between TVA and every manner of institution in the valley, ranging from county library boards and State universities to highway and conservation commissions. TVA operates the TVA-owned plant—all of its dams, power and fertilizer plants, and tree nurseries—with its own employees.

One issue that always arises in the discussion of TVA's policies is that of its practice of building dams and other major projects by "force account"; that is, TVA hires directly all engineers, technicians and workmen, rather than letting the jobs by contract. In the 1933 emergency, when TVA wanted to get started quickly on Norris dam, the force-account method was adopted to avoid necessity of detailed plans and specifications. These were developed as the job progressed. TVA liked the system so well it has never changed.

The Associated General Contractors of America does not like the force-account practice. The contractors contend it is unfair Government competition with private industry.

DAMS JUST AS GOOD

This is one of the fields in which TVA's activity has run head-on against a private enterprise, and has resulted in charges of encroaching socialism. Major example, of course is the public-private power controversy. TVA is in the middle of that one, too.

The contractors do not contend, however, that the TVA dams are not good dams. They are just as good as, no better than, Grand Coulee or Bonneville. Nor do the Army engineers or the Bureau of Reclamation, the other big Federal dam builders, have any criticism of TVA engineering. That is simply not an issue.

TVA draws its authority for operation from the original TVA Act. It has been amended six times, but is still a relatively brief and general document. TVA must also go to the Congress annually for appropriations with which to carry on its non-revenue producing activities and to build such new projects as Congress has authorized. Policy matters within the limitation of the TVA Act and the appropriations approved by Congress are formulated by three directors, each serving a nine-year term.

Chairman of this Board of Directors is Gordon R. Clapp, a mild-mannered young (43) man, who has worked his way up through succeeding TVA executive positions. He was assistant personnel director, then personnel director in the early days of TVA. He served as general manager when David P. Lilienthal was Chairman. When Lilienthal went to the Atomic Energy Commission, Clapp was confirmed as his successor after long hearings in the Senate. Tennessee's Senator KENNETH MCKELLAR opposed Clapp's appointment strenuously, but in the past year has paid Clapp high compliments as a competent Administrator.

IDAHO MAN IN

Another Director is James P. Pope, 65, one-time Senator from Idaho. He has been with TVA for a good many years, and specializes in relations with the public.

Dr. Harcourt Morgan, one of the three original TVA Directors, came to the end of a long term of service just this year. While I was in the Tennessee Valley, Dr. Harry A. Curtis, 65, was sworn in as a Director to replace Dr. Morgan. Dr. Curtis worked as a chemist for TVA from 1933 to 1940. He returns to TVA from the post of dean of engineering at the University of Missouri.

TVA's original Directors each had administrative responsibilities in separate fields. This made for so much friction, as witness the Lilienthal-Dr. Arthur E. Morgan controversy, that all administrative tasks have been relinquished by TVA Directors. They now deal only with policy matters, execution of which is the responsibility of a general manager, who directs all of TVA's activity through its force of 15,000 employees.

Current general manager is George P. Gant. He is assisted directly by a chief engineer, whose staff designs and builds the dams and other projects; a manager of power, who directs all power operations; a chief conservation engineer, who deals with chemical, agricultural, and forestry programs; and a manager of reservoir and community relations, who administers the 500,000 acres of reservoir properties, makes regional economic studies, and supervises health and safety programs. In addition, there are administrative divisions dealing with personnel, legal advice, finance, and property and supply.

Directors and general manager live and work in Knoxville. There also are their chief assistants, with two exceptions. The TVA

UNIVERSITY OF MICHIGAN LIBRARIES

power business is run from Chattanooga; fertilizer and chemical research at Muscle Shoals. There are but seven small regional TVA offices. You seldom see a TVA man in the small towns and rural areas. The TVA business is carried on by local agencies.

POLITICAL TEST OUT

There has never been so much as a rumor that politics has played a part in the employment of TVA personnel. The original act specified that "no political test or qualification shall be permitted or given consideration," in appointments or promotion. Stiff penalties are provided for TVA officials who might violate that section.

It was recognized on Capitol Hill early in the life of TVA that a letter from a Congressman was worse than no letter at all as a recommendation for a job in TVA. That was the feature of TVA most often emphasized by those to whom I spoke in the Valley as the ingredient necessary to the successful operation of any such authority as TVA or CVA.

Political activities of TVA employees are governed by the Hatch Act, as for all other Federal employees.

The Ramspeck Act of 1940 exempted TVA alone of all Government agencies from Civil Service. TVA can therefore hire, fire, and promote on the basis of merit without reference to Washington. There is, however, a system providing for advancement, seniority, and pension. This is in line with the divorcement of TVA from all Washington, D. C., administrative agencies.

TVA employees are organized into several craft unions, all A. F. of L. They deal with TVA through a trades and labor council representing all unions. Wages and other working conditions are readjusted annually by negotiation. There have been few work stoppages, all minor. Disagreement calls for arbitration by the Secretary of Labor. During the life of TVA four appeals have gone to the Secretary.

TVA now has a 40-hour workweek with time and a half to 44 hours, double time thereafter. Highest wage is $10,000 annually, plus living quarters, for the directors. Approximately 70 top administrative officials receive an annual wage equal to that of the directors. Minimum hourly pay is 95 cents; minimum annual wage, $2,150. Wages, by specification in the TVA Act, must conform to the prevailing rates in the region.

TVA—Model for CVA Plan?

(By Malcolm Bauer, city editor, the Oregonian)

(This is the fourth in a series of articles on the Tennessee Valley Authority. The author has just returned from the Tennessee Valley after several weeks of inspection of TVA. His report will be of interest to those now considering prospects of a Columbia Valley Administration.)

Prime mission of the Tennessee Valley Authority is not, as some may think, the production of power. It is the control of floods. Second to flood control comes navigation. The preamble of the TVA act does not so much as mention power production.

Reason, perhaps, is that the Constitution gives no authorization for the Federal production of power. Benjamin Franklin apparently did not understand the true significance of his kite trick. A Government dam built for power production might easily be the target for suits by private power companies. The TVA act, therefore, was for flood-control navigation, and other purposes. Among the other purposes specified in the act was the production of power incidental to flood control and navigation.

Hence, power may be the glamour girl of TVA, but flood control is the boss. The water engineer at Knoxville directs the flow of water in all of TVA's reservoirs. Each dam is operated on a flood rule curve, which shows at all times at just what level the reservoir water should be. If this rule curve conflicts with the requirements of power production, it is the power production that suffers.

EXTRA WATER PROBLEM

In the proposed Columbia Valley Administration bill, irrigation has first call on water from the river. No one in Tennessee, however, is worried about not having water. The problem there is to get rid of it. The valley is the area of heaviest rainfall in the eastern United States. The almost annual floods were a prime factor in the birth of TVA. The people of Chattanooga, lying in the funnel of the valley, tired of wading through water in streets.

When TVA was created in 1933, there was no flood control on the Tennessee. The first TVA Dam, Norris, was a major flood-control dam, trapping a reservoir of 2,500,000 acre-feet on the Clinch River just above the beginning of the Tennessee at Knoxville. That was the start of the TVA flood-control system which now comprises 27 major dams on the Tennessee and its tributaries. Water is dispatched through this system from high in the Great Smokies to the mouth of the river at Paducah, Ky., just as a passenger train is cleared through a busy main line.

In the flood season, N. W. Bowden, the chief water engineer, and his staff, are busy around the clock in their Knoxville water-control headquarters. To them come the reports of weather observers throughout the watershed. Teletypewriters chatter with statistics from more than 200 rain and stream-flow gages. Other reports are flashed automatically by TVA-developed radio gages in remote mountain areas, where rainfall often averages more than 80 inches a year.

Bowden's office looks like a busy newspaper city room. Assistants, each assigned to a given region, analyze the rainfall reports. Their calculations are coordinated by Bowden who directs waterflow through the network of dams. His word is law in Chattanooga, where sit the power dispatchers. If Bowden says water must be spilled over the dam to make room for more in the reservoir, it is done, although the power dispatchers often, figuratively at least, weep bitter tears over such waste of the white gold.

PROBLEMS WIDESPREAD

The water boss' problems range from pigs to yachts. One night in a flood period a farmer in Alabama telephoned Knoxville to plead for a delay in release of water to permit him to remove his pigs from a low-lying island. As it happened, the rule curve called for such delay, so the farmer saved his pigs. Not so happy were members of a Chattanooga yacht club when they found their ships high and dry early one morning. The boathouse boy had neglected to heed the regularly broadcast TVA warning that the water level would be reduced overnight.

TVA's engineers think that this flood control has paid off. In the past 13 years, since March 1936, when the first reservoir (Norris) began to fill, there have been 18 times at which water in the Tennessee would have reached flood proportions if it were not for the TVA reservoirs and the tight water control maintained. The engineers have conducted surveys of potential high-water marks and cite a figure of more than $43,000,000 saved in property damage at Chattanooga alone, during the 18 flood stages. January 6 of this year, for instance, the Tennessee reached a stage of 29.5 feet at Chattanooga, a mark the engineers say would have been 36.3 feet if it had not been for flood control. They surveyed the part of Chattanooga that would have been under water at the 36.3 mark, and count a saving of $500,000.

In February of last year a potential flood crest of 44.3 feet at Chattanooga was reduced, the engineers calculate, by 10.5 feet. Estimated savings, $13,000,000.

There is, of course, no comparable flood control on the Columbia. Grand Coulee reservoir, as large as it is, would be filled in short order by the waters of the Columbia at flood stage. And, of course, it cannot be held empty waiting for floods for it is primarily an irrigation dam. Bonneville Dam is just a ripple in the stream so far as flood control is concerned.

DIKING URGED

For that matter, the flood control system of the Tennessee is not yet foolproof. The critical spot, Chattanooga, might still suffer should a flood reach the record proportions of that of 1867, when water poured into the Hotel Patten in the heart of Chattanooga. For that reason both TVA and the Army engineers have recommended that $20,000,000 worth of dike be constructed at Chattanooga. The sum is much smaller than that that would be required to add to the height of dams above Chattanooga to give the same effect. As yet, however, Chattanooga property owners have not jumped at the chance to pay the $3,000,000 or $4,000,000 necessary to purchase rights-of-way to provide a site for the dikes which would presumably be built with Federal funds.

In fact, delegations of Chattanooga businessmen have been in Washington, D. C., during the past month to ask that TVA, not the Army engineers, do the dike job. TVA, they think, might well pay for the rights-of-way as well as for the dikes. While they talk, they may get their feet wet. This is the critical flood season on the Tennessee.

Water control serves to provide a year-around channel for navigation.

From Knoxville to Paducah, Ky., the Tennessee is now a 630-mile extension of the Nation's 6,000-mile inland waterways system. TVA constructed the 9-foot clearance channel. The Army engineers operate the locks in the river's nine dams. The Coast Guard marks the channel. It is apparently up to TVA, however, to see that as much use as possible is made of the new broad water highway thus created.

Navigation is the least flourishing of TVA enterprises. The river is there. It is broad and deep. But the traffic is not heavy. Last year about 3,000,000 tons of freight moved on the river with an estimated saving of about the same number of dollars, scarcely enough to operate and maintain the locks. Most of this was sand and gravel. Even the best friends of TVA do not seriously contend this is adequate use of the $150,000,000 navigation project.

BARGING SHUNNED

TVA might increase this tonnage by itself going into business on the river, but it does not intend to do so.

"The barge-line business," I was informed by John Ferriss, under whom the TVA navigation staff works, "is a private business; we want it to remain so."

Columbia River barge-line operators will understand many of the reasons why the Tennessee is not filled to the banks with commerce. In the first place, the Interstate Commerce Commission has been diligent in giving rail lines below-cost rates in order to compete with the admittedly cheaper water transportation.

Here is an example of what Tennessee navigation is up against. Just after commercial navigation became feasible as far as Chattanooga in 1939, Southern Chemical Co. shipped 900 tons of cotton linters from Cairo, Ill., to Chattanooga by barge because the water rate was 14 cents per 100 pounds as against the 34-cent rail rate which they had been paying. The railroads asked ICC for relief and received permission to reduce the rail rate to 18 cents per 100 pounds. The remaining 4-cent advantage which the water carriers still held was not enough to overcome the disadvantages of extra loading and unloading required by barge transportation. As a result, the water movement was killed.

The rail rates to Stephenson, Ala., located inland from the river and 30 miles nearer to Cairo than is Chattanooga, remained at 31 cents, or 13 cents higher than the Chattanooga rate. Hence, it is cheaper for a dealer in Stephenson to let his rail freight go right by his door and on to Chattanooga, unload it there, and truck it back to Stephenson.

Rail rates on petroleum products have also been reduced sharply to meet waterway competition.

Of course, southern shippers are making a saving as a result of the water competition, but somebody, maybe somebody in the Northwest, is paying for that saving in a higher rail rate.

SERVICE IRREGULAR

Other handicaps to river traffic development include the reluctance of barge companies to provide facilities for less-than-bargeload shipments, or to schedule regular service. Nor will rail and truck lines cooperate by quoting joint rates for movement by water.

During the war, TVA erected five river terminals. None of these is yet paying its way. At Harriman a terminal designed specifically for loading of coal stands idle. Other general-use terminals at Decatur and Guntersville, Ala., and Chattanooga and Knoxville, Tenn., are available for public use, but there are few takers.

So far as I could determine, none of these four cities has yet created a public dock commission or other agency to promote the use of the terminal facilities. In each community leaders acknowledged the opportunity for port development. At Chattanooga the chamber of commerce had actually gone so far as to name a committee to study the problem. But there are just not many old salts as yet along the Tennessee.

The navigation picture is not altogether a dark one. The development of the Tennessee has brought many benefits, some of which are not reflected directly in the tonnage figures. Each week a million dollars' worth of new automobiles are unloaded from specially constructed three-deck barges at Guntersville, Ala., for distribution throughout the southeastern States.

BARGES CARRY GRAIN

More than 3,500,000 bushels of grain annually are barged up the river for processing at newly constructed mills.

Oil companies service eight tank terminals with more than 30,000,000 gallons of petroleum products annually.

Shipyards at Decatur, Ala., turned out Liberties and LST's during the war and still have big contracts.

Coal is moving by barge for the first time out of the eastern Tennessee coal fields to the Midwest.

Iron and iron-ore shipments are put on the river in Alabama to move north.

The permanent flooding of about 500,000 acres of land to provide the TVA storage reservoirs that make possible flood control and navigation on the Tennessee has created many problems as well as opportunities.

TVA—MODEL FOR CVA?

DISPLACEMENT OF FAMILIES BY TVA PROJECT IN DENSE REGION UNLIKELY TO PRESENT SIMILAR PROBLEMS IN COLUMBIA VALLEY

(By Malcolm Bauer, city editor, the Oregonian)

(This is the fifth of a series of 16 articles describing operations of the Tennessee Valley Authority. The author has just returned from a visit to the Tennessee Valley, undertaken to provide for readers of the Oregonian a picture of TVA, a possible legislative model for a Columbia Valley Administration.)

TVA has literally changed the face of the Tennessee Valley.

During the past 16 years TVA has completed 16 major dams backing up reservoirs that cover 473,000 acres of land, much of which once produced crops, pasture, timber. Displaced from the inundated areas have been about 14,000 families, most of them from farms. Another 226 families now are looking for new homes outside the projected reservoir bed of South Holston dam, which will be closed in November of next year.

Density of the rural population in the Tennessee Valley has made this displacement a much graver issue than it would likely become in the Columbia Basin, even under such intense development of the main stream. For instance, only a scattering of persons were displaced by gigantic Grand Coulee Reservoir. But so often has been raised the question of TVA's drowning farm land and moving the residents thereof that it is well to give some detailed consideration here to the facts.

TVA was but a few days old when confronted by its first reservoir problem. Almost 3,000 families lived in the area that was to be flooded by Norris Dam. Between May 1933 when TVA was born, and March 1936 when Norris Reservoir began to fill, arrangements had to be made to purchase the land to be covered and to assist in relocation of the more than 10,000 persons affected.

As in most of its activities, TVA chose to act through local agencies in solving problems of the mass population movement. TVA funds paid for employment of assistant county agents to visit the affected families as soon as possible after their land was purchased and to give them counsel and assistance in obtaining new homes in the vicinity or elsewhere. These agents worked directly under authority of the county agents in the counties in which was located the reservoir property. They were invariably friends and neighbors of the displaced families.

RED CROSS HELPS

Also cooperating in the removal program were the county and State welfare bureaus, departments of health, and the American Red Cross.

This is the pattern of population readjustment that has been followed by TVA in all of its projects.

Prior to the current projects of Watauga and South Holston Dams, a total of 13,462 families were moved from areas to be flooded. Of these 4,585 were landowners, 8,877 were tenants. Farm families numbered 8,202; nonfarm families 5,260. Several hundred families, including the entire town of Butler, Tenn. (population 706), have been moved from the area now filling up behind Watauga Dam, which was closed last December. As has been mentioned, another 226 families plus a lead mill employing 20 persons, will be displaced before November 1950, by South Holston Dam.

Butler has been the only town relocated. Some of its buildings became the nucleus of a new town, Carderview, Tenn. Hundreds of schools and churches have been moved. A special problem is removal of cemeteries. Graves have been transferred either to existing burial grounds or to new ones, whichever the nearest relatives of the deceased prefer. Behind Norris Dam, alone, it was necessary to move 5,000 graves.

Most of those relocated find new homes in the immediate vicinity.

Only 29 percent have moved outside the county of original residence. Less than 5 percent have left the home State.

FEW GO TO COURT

Landowners and tenants usually have grumbled when called upon to move; but only 9.7 percent of all reservoir property transactions have had to go to court for condemnation. Only 6 percent of these have been contested. The other 3.7 percent were friendly suits to establish title, the complications of which are often staggering when a large family has lived on one farm for several generations. One man told Claude Nash, supervising readjustment at South Holston, that he would rather see his land buried under 100 feet of water without any payment by TVA, than to see his brother-in-law get any share in the purchase price.

Only once was a project held up by a reservoir family. Closure of Chatuge Dam was delayed several days by the illness of a 91-year-old man too feeble to be moved.

In most instances the terms of the purchase and sale contract provide that all structures can be salvaged by the owners. Evacuation, therefore, means removal, not only of families, personal belongings, and livestock, but also of buildings, fences, and crops. Many houses have been moved intact to nearby locations above the water level. Tenants offer a special problem because they receive no money from TVA. They are, however, given assistance in resettling.

I talked to many farmers who had been relocated. I also visited the area that will be filled with water behind South Holston Dam.

All of those who had been relocated for some time were happy with their new situation.

A typical example is Scott Irwin, an 86-year-old farmer who has been displaced twice in the last 15 years. In 1934 he received from TVA $11,105 for 210 acres on which his wife's family had farmed for generations. It was to be covered by the water in Norris reservoir.

Scott, his son and wife and six children were none too happy about leaving the old homeplace. "It was a right smart shock," he told me. Now he thinks it the luckiest thing that ever happend to him. He took $7,500 of the $11,105 and bought 172 acres just south of Knoxville. When Fort Loudoun Dam was authorized his farm again lay in the reservoir area. This time he realized $15,000 out the land that had cost him $7,500, and he and his son now farm a rich 56 acres on a hillside overlooking Fort Loudoun reservoir. They harvest more grain than ever before and milk 26 cows.

"I made good money in the real-estate business," said Scott. "I'd like to know where they're gonna put the next dam."

Most of those whose readjustment is behind them feel as does Scott Irwin. An extension agent survey of families who had been relocated from the area behind Wheeler Dam found 39 percent of them in better locations than before, 54 percent in comparable circumstances, and 14 percent in situations they considered inferior.

Figures, however, mean nothing to those who have just been told they must give up a home of a lifetime. When TVA engineers drive in the big white stakes that show the projected high-water line, families living on lower ground know they must either learn to live under water or move. Such white stakes line the knob-like hills in southwestern Virginia and northeastern Tennessee behind the site of the South Holston Dam. People living there have known for almost 8 years that TVA would sometime flood out their homes. South Holston Dam was begun in 1941, then halted to give wartime priority to bigger Douglas Dam. Some South Holston families, however, moved as long ago as 1942, others are counting on staying until the last possible moment in November 1950.

ANGER BURSTS FORTH

L. F. Garrett has lived practically all of his 79 years on the farm he must sell to TVA. I found him literally splittin' mad when I talked to him a few days ago.

"Law me, I was thet mad when I heerd about it," he exclaimed, sending a stream of tobacco juice across my bow.

UNIVERSITY OF MICHIGAN LIBRARIES

Moving to a safer angle, I asked him what he thought of TVA. He said: "Guess it's all right. The fertilizer and the cheap lights are all right."

But he couldn't get his mind off having to move. He drove me right around the yard with salvo after salvo as he stated his case: A man shouldn't have to move off the land on which he's spent his whole life. The water will cover the very house to which he brought his bride a half century ago. He never expects to get another place as good, etc.

Down the road, J. W. Combes, a farmer who also runs a small roadside store, because his 40-acre plot does not keep him busy, was more philosophical. But he, too, had mixed feelings about making a change.

FEW MOVE FAR

James M. Gorsline, county agent of Washington County at Abingdon, Va., said there was no general feeling in the reservoir area against the TVA program. Most of those forced to sell, he said, would relocate within a few miles.

It was apparent, however, that even the prospect of a favorable real-estate deal could not completely dull the pains of wrenching oneself from one's own land and home. Nobody who has ever built a dam has completely solved that problem.

More often TVA is criticized for having flooded out crop and pasture land.

W. V. Howard, a geologist, of Dover, Tenn., an indefatigable critic of TVA, contends that more land has been put under permanent flood than was previously subjected to temporary winter and early spring floods. That is true, in part. Of the 473,000 acres of land lying below the normal pool levels of TVA reservoirs, about 303,000 acres represents crop and pasture land. Of this, 210,000 acres previously were subjected to destructive and periodic flooding, leaving a total of 93,000 acres as crop and pasture land inundated initially and solely by TVA. Much land, rural and urban, previously subject to floods, now is usable in all seasons.

Two agriculturists made for me independent estimates of the annual produce value of the 303,000 acres of crop and pasture lands permanently covered. Both set the figure at about $7,000,000.

This is a factor that should not be taken too lightly, but most of those to whom I talked in the Tennessee Valley felt the benefits of the reservoirs more than compensated for the retirement of the cropland.

Food production in reservoir counties actually has increased despite elimination of the bottomland. Without exception, county agents in every county in which I visited farm lands informed me that more corn, cotton, tobacco, livestock, and grasses were produced after the reservoirs were filled than before. Many farmers who previously thought river bottomland was the only place for decent farming, have learned that modern soil conservation practices will get even better yield on the uplands.

TVA—MODEL FOR CVA?

TVA PROVIDES UNUSUAL RECREATIONAL FACILITIES WITH PARKS ALONG SHORES OF MAN-MADE LAKES

(By Malcolm Bauer, city editor, the Oregonian)

(The author has just returned from a visit to the Tennessee Valley, where he made a detailed inspection of the Tennessee Valley Authority, possible model for a Columbia Valley administration. This is the sixth of 16 articles.)

The people of the Tennessee Valley and from other States as well have found that the TVA dams are good for more than flood control, navigation, and power production. A major byproduct is sport and recreation.

The Tennessee River, from Paducah, Ky., to Knoxville, Tenn., is one vast series of man-made lakes—the biggest such in the Nation. In the high mountains of eastern Tennessee and of North Carolina and Georgia storage reservoirs provide mountain lakes where no lakes at all had existed before. The 10,000 miles of shore line—more than all that of the Pacific and Atlantic coasts combined—offer wide opportunity for cabins, public and private parks and playgrounds, and for fishing, hunting, and boating.

The people and public agencies of the valley have invested nearly $15,000,000 on recreational facilities and equipment on the shores of the reservoirs alone. There are more than 10,000 pleasure craft valued at $5,500,000. As you drive down the river the banks are lined for long distances by boathouses. There are now flourishing boat and yacht clubs at Chattanooga and other cities where once few knew the difference between port and starboard.

TVA BUILDS PARKS

TVA in its early years was active in the promotion of recreational development and actually constructed some park facilities on the shores of Norris Reservoir, just to show what could be done. Now, TVA has withdrawn from such direct demonstration and States and local governments and private owners have taken over.

There are now 7 State parks on the shore land and 23 public parks developed by county and city governments. In addition, there are 53 privately operated resort sites; 19 group camps, leased to such groups as Boy Scouts and YMCA; and hundreds of private cottages, sites for which were sold by competitive bidding.

Tennessee Valley Chamber of Commerce managers believe these recreational features were the major factor in attracting to the valley, in 1948, 3,000,000 tourists, who spent more than $150,000,000.

So successful have the reservoirs been as breeding grounds for fish, that the fish and game commission of all the valley States several years ago abolished closed fishing seasons on TVA lakes. In my auto journey down the valley of the Tennessee I was seldom out of sight of the water, and everywhere fishermen, individually and in groups, lined the banks.

They fish for bass, catfish, buffalo (suckers), carp, and spoonbill. Some of the catfish top 100 pounds. But far more fish die in the lakes of old age, than are caught. For example, only 2 percent of some 3,000 fish tagged in a heavily fished portion of Wheeler Reservoir were caught over a period of 3 years. It was such experience as this that led to the elimination of closed seasons, and discontinuance of TVA fish hatcheries.

Pacific Northwest sports fishermen, used to livelier species of game fish found in Northwest streams, may be more interested in the report that the Tennessee fish and game commission last year planted 45,000 rainbow trout fingerlings in the Little Tennessee below Fontana Dam. Water is fed into the stream from the depths of Fontana Reservoir thereby providing the colder water suitable for trout and driving the walleye and smallmouth bass to warmer waters downstream.

NEW INDUSTRY BORN

The reservoirs have also created a commercial fishing industry. Most of the commercial catch is in TVA waters in Alabama, behind Wheeler, Pickwick, and Guntersville Dams. There in 1948 commercial fishermen caught 1,262,500 pounds of fish, mostly catfish, buffalo, and spoonbill. They grossed $320,500. Most of the catch with the exception of the spoonbill, which is exported to New York at a fancy price, was consumed locally. Mussel shells valued at $550,000 were taken from TVA reservoirs.

There are no anadromous fish such as the salmon in TVA waters. Therefore, none of the TVA dams has a fish ladder.

B. F. Riley at Wheeler Dam has fished the river commercially for 19 years. He told me there are more fish now than ever before, but Abraham H. Wiebe, chief of TVA's fish and game branch, assured me the Tennessee would never foster a major commercial fishing industry on the scale of that in the Columbia River.

As may well be imagined, migratory wild fowl have found the creation of the TVA lakes much to their liking. There were few such game birds in Tennessee before TVA. Last November a wild-fowl census counted some 200,000 ducks and 10,000 geese on Kentucky Reservoir alone. TVA has set aside several thousand acres of land and water as refuges for State game commissions and the United States Fish and Wildlife Service. Several thousand acres of reservoir property are planted in crops during the low-water season in the spring and summer, and a portion of the crops are left standing to provide food for waterfowl when the land is flooded in the fall and winter. These crops are planted and tended by farmers who lease the land from the TVA on the understanding that they will leave a certain portion of the crop in the field.

A major TVA reservoir program is malaria control. When TVA came into the valley malaria was widespread, especially in northern Alabama. There a 1934 survey showed that more than 25 percent of those living around Wilson Dam Reservoir and in the area of the proposed Wheeler Dam were afflicted. In some communities as many as two-thirds of the population had the disease.

CONTROL SUCCEEDS

TVA was well aware that the creation of additional large bodies of stagnant water would increase the malaria hazard. Scientists and engineers combined a control program which developed the application of DDT and other materials by airplane, controlled vegetation along reservoir margins, and constructed dewatering projects in which areas can be drained or fluctuated separately from main reservoirs during mosquito-breeding season. It has been found also that a sharp drop in waters of main reservoirs during the breeding season leads to the death of mosquito larvae.

So successful has been TVA's mosquito-control program that for 5 years incidence of malaria has been at approximately five one-hundredths of 1 percent in areas in which it was once the most prevalent.

Dr. Earl Martin, head of the Guntersville, Ala., general hospital and chairman of the city commission of Guntersville, told me that the hospital had found only two smears of malaria out of 4,000 patients in the past year, and that there was none found in examinations the year before. As high as 80 percent of the population of Guntersville had been infected with malaria before the empoundment of the TVA dams.

Down the river at Decatur, Ala., Lloyd L. Lively, manager of the Alabama hosiery mills, had a similar story. Fifteen years ago health of the workers was bad. A large majority of them suffered from malaria, reducing efficiency sharply. Lively's mill gives a physical examination to all prospective employees. In the past few years malaria incidence has been so small that they have not bothered to test for it.

In northern Alabama this is one of the most important factors in the general popularity of TVA.

Another major portion of TVA's health program has to do with stream pollution. TVA has acted principally as a fact-gatherer supplying information both to agencies responsible for controlling pollution and to those industrial organizations and others which contribute to it. TVA has no regulatory authority, but during the past year, for example, the States of North Carolina, Alabama, Virginia, and Tennessee, took steps

to enforce stream pollution control on the basis of river-water tests and other investigations by TVA.

Stream pollution is on the list of responsibilities projected for the Columbia Valley Administration. Presumably CVA's activity in this field would be comparable to that of TVA.

TVA—Model for CVA?

TVA COLOSSUS GENERATES, MARKETS POWER TO LIFT STANDARDS IN SOUTHERN AREA FOR DISTRICTS OUTSIDE TENNESSEE VALLEY

(By Malcolm Bauer, city editor, the Oregonian)

(This is the seventh of 16 articles on TVA, possible legislative model for CVA. The author has just returned from a month's trip to the Tennessee Valley. This is the first dealing with power production and distribution.)

The Tennessee Valley Authority is practically the sole source of power in an area of 80,000 square miles—twice that of the Tennessee Valley.

The TVA act specifies no geographical limitation on TVA's power activities, and, in recent years, it has been interpreted to mean that the TVA network is confined to that area in which electricity can be transmitted without uneconomic loss of energy.

TVA power lines, therefore, reach far down into the southern Mississippi, although only the very northeasternmost top of that State is within the Tennessee River watershed. They stretch northward toward Louisville in Kentucky and reach the Mississippi river at Memphis. Although the TVA has no geographical authority in the Cumberland valley of north central Tennessee and southern Kentucky, the region is blanketed by TVA-fed publicly-owned power systems. And Army engineer dams on the Cumberland feed power into the TVA network through arrangement by the Department of the Interior.

The story of low-cost Federal power is not new to the Pacific Northwest. Grand Coulee and Bonneville dams were constructed during the same years that saw the beginnings of TVA.

BONNEVILLE'S RATE LOWER

Bonneville's basic $17.50 per kilowatt year is actually lower than TVA's wholesale rate. Last year Bonneville marketed 10,272,257,111 kilowatt-hours for a gross revenue of $24,513,710, an average per kilowatt-hour of less than 2.5 mills. TVA sold 12,245,000,000 kilowatt-hours at an average rate of 3.96 mills, substantially above the Bonneville average.

The differential may be in part accounted for by the difference in the character of the TVA and Bonneville markets. Bonneville sells a huge chunk of power, just about half of its production, to the aluminum industry alone. Other industrial and military users leave but 46 percent of the Bonneville output for distribution through private and public systems. TVA, however, sells most of its power to distributors. Only 43 percent of the 1948 production went directly to big industrial users. A great part of this was also for aluminum production, but was merely returned to Aluminum Co. of America at Alcoa, Tenn., in return for authority to operate its hydroplants on the Little Tennessee River.

In the Tennessee Valley, as in the Northwest, the past 15-year period has been one of rapidly expanding power generation and equally rapidly expanding power consumption. Electric stoves, refrigerators, water heaters, and milking machines have been sold by the thousands. Electric heating systems have been installed in homes. Chemical and metallurgical plants have sprung up to prosper on the big low-cost power loads.

The two areas have differed in one respect. The Tennessee Valley and surrounding regions started from much farther down the power scale than was the Northwest. At the end of 1934 only 3.6 percent of Tennessee farms had electricity; but in Oregon the figure was 27.5 percent, and in Washington 47.5 percent. Use of electricity in urban areas of the two regions was correspondingly in contrast.

ELECTRIFICATION MORE ABRUPT

The change, therefore, from the kerosene lantern to the light blub has come much more abruptly in the TVA region and is etched more sharply on the minds of the people. The Tennessee Valley and its bordering regions also have swung much farther than has the Northwest toward public ownership of all means of power generation, transmission, and distribution.

In August 1939, ending a 6-year period of private versus public power warfare in the Tennessee Valley, TVA and a group of municipal power firms representing major cities in the valley paid $78,425,055 for all the power facilities of Tennessee Electric Power Co., a subsidiary of Commonwealth & Southern Corp. The check-passing ceremony in New York, which starred TVA Chairman David E. Lilienthal and Commonwealth & Southern President Wendell Willkie was the biggest transfer of utilities from private to public ownership in the history of the United States.

Tennessee Electric Power Co. stockholders never have complained about the price paid. It was generous. As Willkie said, they had a good lawyer.

As a result of the transaction TVA became the one big source of power in all of the Tennessee Valley region. There are generating facilities there outside the TVA network, but they are insignificant. In the Northwest, publicly owned generating facilities, including Bonneville and Grand Coulee produce only about 52 percent of the total energy available to the Northwest power pool.

Another difference should be made clear at this point. TVA generates and markets its own power; but Bonneville power administration merely markets the energy generated at Bonneville Dam by the Corps of Engineers and at Grand Coulee by the Bureau of Reclamation.

TVA's present chairman, Gordon R. Clapp, assured me TVA has no plans to extend its marketing area. In fact, TVA is hard put to it to meet the mounting demand from its present customers. As does the Northwest power pool, TVA expects the current critical power shortage to get worse before it gets better. And, unlike the Columbia, there is little more room for hydroelectric expansion on the Tennessee and its tributaries.

TVA has about 2,300,000 kilowatts installed generating capacity at 21 major TVA dams, 5 small hydro plants, 11 steam plants, and 1 internal-combustion unit. Added to this is production of more than 300,000 kilowatts at five dams owned by the Aluminum Co. of America but operated by TVA. Authorized for installation in TVA hydro plants are generators rated at 350,000 kilowatts. In addition, three Corps of Engineers dams abuilding on the Cumberland River will add 441,000 kilowatts to the TVA pool by 1952.

TVA is seeking congressional approval of a 275,000 kilowatts steam plant at Johnsonville, Tenn. If approved, that will bring the total TVA generation to about 3,766,000 kilowatts 3 years from now.

COLUMBIA POTENTIAL GREATER

Combined installed capacity at Grand Coulee and Bonneville is now about 1,600,000 kilowatts. But Federal agencies in the Northwest are seeking approval of a program that will add 4,300,000 kilowatts to that figure by 1957, and an additional 5,800,000 kilowatts not later than 1970. The Columbia 1970 potential of nearly 12,000,000 kilowatts thus dwarfs that of the Tennessee, whose hydroplants have but 400,000 kilowatts capacity beyond that now authorized, and which has precious little room left for more dams.

Proposal of the Johnsonville plant precipitated floor and committee battles in both Houses of Congress reminiscent of the early days of TVA. The private power industry contends approval of the Johnsonville plant will be direct endorsement of public power competition with private enterprise. They would confine governmental power development to hydro projects.

TVA, which already has built one steam plant—at Watts bar in the emergency period of 1940—says it needs the steam generation to provide power when hydrogenerators lag in dry months, and thus to firm up the TVA generation to a higher minimum-assured year-around output. TVA further contends it is the only power production agency left in the Tennessee Valley with facilities to build and operate such a massive plant. The latter contention can scarcely be contested and points up the degree to which the Tennessee Valley and adjacent areas have come to depend on TVA for generation and transmission of power.

The House of Representatives has passed the Johnsonville steam plant bill, and it is now in Senate committee.

Distribution systems are not the only major customers of TVA. At Oak Ridge, just a few miles northwest of Knoxville, the Atomic Energy Commission's big plant calls upon TVA for an untold amount of power to supplement that produced in its own steam plant.

TVA operates the five dams of the Aluminum Co. of America on the Little Tennessee River, but feeds power back to the firm's Alcoa, Tenn., plant, the biggest in the world. Other big industrial users who buy direct from TVA include: Electro Metallurgical Co., Sheffield, Ala.; Monsanto Chemical Co., Columbia, Tenn.; Reynolds Metal and Reynolds Alloy Cos., Sheffield; Tennessee Copper Co. Copperhill, Tenn.; and Victor Chemical Works, Mount Pleasant, Tenn.

POWER SUPPLY STABILIZED

Nearly 800,000,000 kilowatt-hours also went last year to private utility companies in surrounding States with tie-in arrangements with TVA. The vast power network thus created is operated from dispatch rooms at Wilson Dam and Chattanooga, and the power exchanges effected have helped stabilize the power supply in all the South, from Texas east. Critical state of the power supply in all that area was emphasized last January 7 when the overload knocked out large sections of the power pool system, leaving about 6,000,000 people without service for 14 minutes. That is the crisis that was feared in the Northwest during the past winter's brown-out period, but it did not happen here.

G. O. Wessenauer, manager of power for TVA, a job once held by J. A. "Cap" Krug, now Secretary of the Interior, believes TVA could gain about 200,000 kilowatts more in firm power from its current system if it operated its dams for power rather than flood control. That is a situation, however, that will not be altered. Flood control comes first.

TVA—Model for CVA Plan?

TVA'S CHEAPER PRODUCTION, PROFITLESS RATE SCHEDULES DOOM PRIVATE UTILITIES, BUT RESIDENTS IN WIDE REGION APPROVE RESULTANT SAVINGS, POWER EXTENSION

(By Malcolm Bauer, city editor, the Oregonian)

(This is the eighth of a series of 16 articles on the Tennessee Valley Authority, possible pattern for a Columbia Valley Administration. The author has just returned from a month-long inspection of TVA and the Tennessee Valley.)

The public-private power issue has been settled in the Tennessee Valley. Public power has won.

UNIVERSITY OF MICHIGAN LIBRARIES

The experience seems to prove conclusively that there can be no private utilities industry of any consequence within the region of an authority such as TVA. The very provisions of the TVA Act insure that in this way:

1. All important energy production facilities are in the hands of TVA.

2. Preference in the wholesale purchase of TVA power for resale is specifically given to public utilities; contracts with private companies can be canceled on 5 years' notice.

PROFITS ELIMINATED

3. TVA contracts with all power retailers, including private companies, specify the resale rate. By law that rate is kept at a level that excludes profit. Any net revenue must go to the improvement of service or the reduction of rates.

4. Private power companies which have their own source of power cannot compete with TVA's cheaper production and with the profitless rate schedules of adjoining publicly operated distributors.

True, there are private utility firms operating in the Tennessee Valley. But they are the exceptions that prove the rule. A CVA on the pattern of TVA almost certainly would mean the doom of such large private distributors as Washington Water Power, Puget Sound Power & Light, Portland General Electric, and Pacific Power & Light. Their stockholders probably would suffer no loss; prices paid for private utility acquisition by public utilities in the TVA region always have been generous. Their technical and clerical employees could, and probably would, get jobs with the public utilities. But there should be no sidestepping of the fundamental fact that TVA has meant the end of private power in the Tennessee Valley.

It should be of some interest to consider for a moment the experience of such private utility companies as do still exist in TVA land.

I made a point of visiting Franklin, Tenn., which is served by one of the three small privately owned distributors of TVA power. The Franklin Power & Light Co. actually reduced its rates during the past year. They are in line with those of municipally operated utilities in towns of similar size throughout the valley.

EXPENSES FEW

It is not difficult, however, to see how the Franklin company operates under such circumstances and still shows a reasonable profit. Franklin is a compact community with two large industrial power users. It is surrounded on all sides by rural power cooperatives which must assume the expenses of building new lines into sparsely settled areas. Franklin Power & Light need worry only about maintenance and repair of a small, tightly-knit system. Overhead is at a minimum; a superintendent to mind the switch which regulates the flow of TVA power into the community, and a repair man or two. The company's offices are in the rear of the bus station waiting room. There work the treasurer of the company and a clerk. President of the firm, Laurence B. Howard, can give most of his time to his Nashville law practice.

Howard told me in Nashville that the experience of his company is proof that an efficient private power company can operate profitably as a retailer of TVA power. But few can hope for the combination of circumstances that has made that possible: no responsibilities for expansion, compact and steady market, minimum overhead.

Kingsport Utilities, Inc., is the only private company I found operating in the shadow of TVA but without TVA power. It generates its own energy and gives efficient service to the heavily industralized town of Kingsport, Tenn. (population about 20,000). So good have been its service and its community relations that Kingsport has never sought to purchase its system for municipal operation. How long it can survive in competition with lower TVA rates on all sides is a question. For example, a typical Kingsport residential user pays $8.85 for 500 kwh; in nearby Bristol, a city of the same size served by a municipal system retailing TVA power, the same amount of electricity costs $6.90.

(For a comparison of retail electric rates in the TVA region and the Northwest, see the table accompanying this article.)

PEOPLE APPROVE

In all other communities of the Valley and in most of those within the 80,000 square miles of TVA's distribution area the people have made their choice at the polls. And they have voted for public power.

End of the bitter utilities struggle came in 1939, when, as has been recounted, Tennessee Electric Power Co. finally sold its facilities to TVA and a group of major municipal distributors. In both Knoxville and Chattanooga municipal power companies had begun to build duplicating systems to compete with the private utilities. Families and partnerships were split by the bitter conflict. Power poles were torn down by the competing factions. The warfare gripped communities throughout the valley. The private power companies fought the constitutionality of the TVA Act, carrying their case to the United States Supreme Court. That tribunal's historic 1938 decision upholding TVA's right to market power as set forth in the act led to the surrender of private power and the record-breaking sale of properties.

There is scarcely any of the old animosity left, however. Thomas R. Preston, chairman of the board of the Hamilton National Bank in Chattanooga, one-time president of the American Bankers' Association, and one of the directors of the Tennessee Electric Power Co. during the long period of tension, told me a few days ago:

"TVA is just what this country needed. Private industry could not have done the job TVA has done."

A decade ago he was a leader in the anti-TVA faction.

In the past 10 years other private systems have been taken over. Now there are more than 140 separate municipal utility boards and rural cooperative distributors of TVA power.

Major municipal distributor is the Chattanooga Electric Power Board, with whose manager, States R. Finley, I spent an entire afternoon going over the books and discussing the business of the company. So suspicious of Federal authority were Finley's parents that they christened him "States Rights."

States Rights Finley is now a leading exponent of federally developed public power and boss of the biggest marketer of TVA power in the Tennessee Valley.

PAYMENTS MADE

Last year the Chattanooga Electric Power Board sold 819,165,000 kilowatt-hours of energy, and realized a net revenue of $1,387,623. It paid out $441,400 in taxes and payments in lieu of taxes, more than the Tennessee Electric Power Co. had ever paid in that city 10 years ago. It set aside $263,972 for interest and debt expenses. It has all the expenses of a private utility with the exception of Federal taxation and dividend payments (profits).

All Tennessee Valley municipal power companies and rural cooperatives make payments in lieu of taxes to State, county, and local governments. The payments are many times those formerly paid in taxes by private utilities, the increase corresponding to the phenomenal increase in utility properties under TVA.

The publicly-owned retailers of TVA power are each directed by a board of directors. I talked to many members of these boards and found them invariably responsible citizens of the community who were far removed from local politics.

For example, chairman of the Knoxville utilities board is Jo H. Anderson, president of the Park National Bank of Knoxville. He and his board members are appointed by the city administration for 10-year terms. He assured me that city politics had never had anything to do with the board's decisions. The same is true, in Chattanooga, in Decatur, Ala., and other places where I had opportunity to confer with members of the utility boards. Nor did I discover any feeling among TVA critics that politics play a part in the operations of the public utilities.

A decision by the United States Supreme Court helped cement the policy of putting the utility boards above local politics. Lenoir City, Tenn. (population 5,000), sought to use its power revenues to apply to other civic expenditures. TVA lawyers fought the case to the United States Supreme Court, which ruled that such surplus revenues as should be realized from power sales could only be used to expand the utility plant or to reduce rates to utility users. No city, therefore, can use its profits from TVA power to pave its streets, to pay its policemen, or to meet any other general municipal expenses.

Rural electrification in the Tennessee Valley is still far below the scale attained in the Pacific Northwest. TVA critics point to this fact as an evidence of failure of TVA. Tennessee started from a much lower point in the matter of rural electrification than did Oregon or Washington. In 1935 only 3.6 percent of its 273,783 farms were electrified, as were 27.5 percent of Oregon's 64,826 farms and 47.5 percent of Washington's 84,381. In 1948, the Tennessee percentage was 50.9; Oregon, 95.2; Washington, 93.5.

WAR SLOWS JOB

During the war years electrification of farms was slowed in the Tennessee Valley to a much greater degree than in any other part of the country because of the great blocks of power that went without public explanation into making the first atom bombs at Oak Ridge. The Northwest at the same time poured much of its energy into Hanford.

Since the war, according to Allan Walters of the Rural Electrification Administration in Washington, D. C., the Tennessee Valley's electrification program has made "remarkable progress." There are now approximately 60 percent of the valley's farms electrified and this figure is increasing by about 1 percent per month.

These figures of the number of farms electrified in Tennessee, Oregon, and Washington in 1935, 1945, and 1948, amply illustrate that the rural utility co-ops in the Tennessee Valley have not been loafing:

Number of farms electrified in:

State	1935	1945	1948	Total farms 1945
Tennessee	9,727	69,546	119,323	234,431
Oregon	17,839	46,652	60,094	63,135
Washington	40,060	66,449	74,715	79,887

Fourteen years ago these were little better than half the number of electrified farms in Tennessee as in Oregon. Now there are almost twice as many there as here, although the percentage of farms electrified in Oregon is substantially greater and in fact nearing 100 percent.

The general manager of the Knoxville utilities board, Max Bartlett, told me shortages of materials and skilled labor were the only limiting factors in reaching 100 percent electrification of rural areas within the five-county area served by KUB. The company requires assured revenue of $200 per mile

of line per year before it extends service, but this can be met without exception, Bartlett says. All rural lines are now grossing much more than that.

HOW POWER RATES COMPARE

Consumers of electricity in the Northwest pay less in most cases than they do in the Tennessee Valley. Power company rates have long been at a low level in the Northwest. In addition, Bonneville's wholesale rates average about one-third lower than those of TVA.

The two areas, served by the Federal Government's largest power networks, are both strikingly below other regions in power rates.

The following table was prepared from figures supplied by the Federal Power Commission, Washington, D. C., and compares typical electric bills in cities of 50,000 population and more in the Pacific Northwest and the TVA region.

City	Residential			Commercial		Industrial	
	25 kilowatt-hours	250 kilowatt-hours	500 kilowatt-hours	6 kilowatts, 750 kilowatt-hours light	30 kilowatts, 6,000 kilowatt-hours power	150 kilowatts, 30,000 kilowatt-hours	1,000 kilowatts, 200,000 kilowatt-hours
TVA:							
Chattanooga	$0.75	$5.00	$6.90	$17.50	$90.00	$370	$1,810
Knoxville	.75	5.00	6.90	14.00	78.00	360	1,810
Memphis	.75	5.00	6.90	20.13	89.70	414	2,082
Nashville	.75	5.00	6.90	14.00	78.00	360	1,810
Northwest:							
Portland	.85	5.12	5.70	14.70	80.37 *62.00	364	1,656
Seattle	.80	5.10	5.70	13.16	103.36 *63.25	347	1,890
Spokane	.89	4.38	6.08	15.49	91.70	406	1,998
Tacoma	.95	3.20	5.30	10.00	*†61.50	253	1,180
National average	1.25	6.78	9.98	27.65	160.68	582	2,997

Symbols next to figures in commercial rate column indicate types of service, as follows: †Motive power; *heat. Where there are no symbols, the rate includes motive power, heat, and light. In cases where two rates were listed in EPC tables, the lower rate appears here.

All of the TVA region cities are served by publicly owned municipal companies, each marketing TVA power under contract. Tacoma's plant is publicly owned and its rates, in general, lowest in the Nation. Seattle is served at the same rates by two companies, one private, one public. Portland and Spokane service is by private utilities.

TVA—PATTERN FOR CVA?

TVA FACILITIES PROVIDE COMPETITION PRIVATE POWER COMPANIES CANNOT MEET BUT BENEFITS TO NAVIGATION, FLOOD CONTROL, AND CONSERVATION DEFINITELY ACKNOWLEDGED

(By Malcolm Bauer, city editor, the Oregonian)

(This is the ninth of 16 articles and the third of those dealing with the power production of the Tennessee Valley Authority.)

Most oft-repeated criticism of the Tennessee Valley Authority is that it is a financial phony; that it can afford to market power at rates cheaper than those of private competition because it does not include on its books the legitimate costs of power production; that it has brought washing machines to the hillbillies at the expense of the American taxpayers.

Specifically, the principal charges are:

That TVA inflates bookkeeping allocations to navigation and flood control, both nonreimbursable government functions, to minimize the total power investment;

That TVA pays no taxes;

That TVA pays no interest on funds appropriated by the Government to carry on its program.

Let's consider these separately to see, in each case, what the facts are.

Are TVA's allocations of cost accurate?

BONNEVILLE EXAMPLE

It has long been considered a proper use of the Federal taxpayers' money to develop the navigable rivers of the Nation, on the theory that provision of a navigation channel benefits the Nation as a whole. Flood control, too, has traditionally been a matter for Federal expenditure without reimbursement. Power and reclamation projects, on the other hand, are directly revenue-producing and, when developed by Federal funds, it has been customary to include provisions for the repayment to the Government of the costs allocated thereto.

For example, at Bonneville dam, cost of the plant and equipment determined to be jointly useful for power generation and other purposes, such as the dam itself, fishways, reservoir, is allocated 50 percent to power and 50 percent to the other purposes: Navigation, fish conservation, and so forth. Investment in specific power facilities (power house, generators) raised the allocation to power to about 69 percent of the cost of the Bonnneville project. That portion of the cost of Bonneville will be repaid to the Federal Government out of power revenues.

At Grand Coulee, the joint-use allocation was 56 percent to power, 44 percent to irrigation and navigation. Specific power costs lifted the power allocation to 59 percent of the total cost of the project.

However, the construction of transmission and distribution facilities, all charged to power, had, by the end of the last fiscal year, raised the power allocation to 71 percent of the cost of the entire Columbia River power system.

After engineering calculations such as those which led to the Bonneville and Grand Coulee joint-use allocations, TVA determined to assign 40 percent of the multipurpose dams, reservoirs, etc., to power and 30 percent each to flood control and navigation. Cost of plant and equipment solely for power development, including transmission lines and distribution facilities, had by fiscal year's end, raised to 61 percent of the total that part of the TVA water-control development allocated to power, leaving 19 percent to navigation and 20 percent to flood control.

IRRIGATION FACTOR

Percentage of cost assigned to power by TVA is thus substantially lower than allocation in the Columbia River power development.

The calculations concerning the Pacific Northwest development are complicated by the irrigation features of the Grand Coulee project. Costs assigned to irrigation must be repaid to the Federal Government, much of them out of Bonneville power revenue. TVA has only the power allocation to repay out of revenues.

For instance, it has been noted above that current allocation to power is 50 percent of the cost of Grand Coulee. However, on an ultimate basis (based upon current cost estimates for an 18-unit development) only 29.6 percent of the costs will be allocated to power. Reason is that a great part of the total ultimate expenditures on the project will be for direct irrigation facilities. However, all of the irrigation costs must be repaid, and much of them must be paid out of power revenues. Actually, 83 percent of the ultimate costs at Grand Coulee are to be repaid by power.

It should be noted in this connection that nonreimbursable allocations make up a much larger portion of the TVA investment. The distinction is that a big part of the Northwest development is in irrigation, funds for which must be repaid to the Federal Government. In fact, as of June 30, 1948, the nonreimbursable investment in the Northwest system was only $27,300,000 out of a total of $447,900,000, or only 6.1 percent. This compares with the 39 percent of the total TVA investment that need not be repaid.

Critics of TVA contend that its arbitrary joint-use allocation of 40 percent to power is much too low. Perhaps so. It is based upon such imponderable factors as the prospective savings to accrue to farmers in the Ohio and Mississippi basins as the result of flood control on the Tennessee and the savings to shippers through use of the navigation channel, the latter of which scarcely have been realized.

However, no one yet has been able to convince Congress that the TVA allocations are in error. And there is no controverting TVA's logical contention that flood control, navigation, and power can all be obtained more cheaply when lumped into one-package, multipurpose program that would be the case of each should be developed by separate projects, cost of which could be neatly separated on the books.

COMPETITION STIFF

The result is that, in the Tennessee Valley and to a considerably lesser degree in the Pacific Northwest, there have been developed two enormous power-producing agencies, each of which has been able to charge off a part of its plant cost to other purposes. No private power company, of course, can do that. It is as though the Portland General Electric Co. had prevailed upon the Columbia Packers Association and the Columbia barge lines to share the cost of a dam. Of course, the private firms need not provide all the nonreimbursable services.

It is competition the private companies cannot meet. Perhaps it is "fair" competition. Perhaps not. But whoever will judge must bear in mind the acknowledged benefits of such resource development, the need for navigation, flood control and conservation, and the consequences of any such policy that would preclude such undertakings by the Government.

TVA has repaid into the Treasury about $31,000,000 of the approximately $400,000,000 allocated to power. Under present law it must repay all power appropriations in 40 years, paying not less than $87,059,810 before June 30, 1958, and not less than $5,500,000, including a minimum of $2,500,000 for retirement of outstanding bonds now held by the Treasury, by June 30, 1949.

Unlike Bonneville, which must pay all of its revenues, with the exception of an emergency revolving fund, into the United States Treasury and then seek appropriation for expenses, TVA is permitted to retain power revenues in excess of the minimums cited above and expend them in any way it sees fit in operations of the system. TVA administrators consider this an important factor in maintaining flexibility in power operations.

Does TVA pay taxes?

UNIVERSITY OF MICHIGAN LIBRARIES

The original TVA Act provided for payment of 5 percent of the gross power revenues to the States of Tennessee and Alabama in lieu of taxes.

ACT AMENDED

This provision proved most inadequate, however, after TVA had taken over the properties of private utilities in a wide area. Other States in the region and individual counties suddenly found themselves bereft of income from major tax sources. Complaints blossomed and they are still bearing fruit in statements that characterize TVA payments in lieu of taxes as "token" payments.

As a result, in 1940 the TVA Act was amended to provide that TVA make payments to all States and counties in which it holds power properties or conducts operations. The first year the payment was set at 10 percent of the gross power revenues to help make up for the period in which many of the counties went without any revenue from the properties. The percentage was scaled down by ½ percent each year, until this year it is back at the 5 percent level, which will be maintained.

In 1948 these payments were slightly in excess of $2,000,000, just twice the amount in property taxes that would have been paid if reservoir and power properties purchased by TVA had remained in private hands.

It can be argued, of course, that TVA properties now total much more than those purchased; for instance, the dams built with congressional appropriations. The joker there is, of course, that no one contends seriously that the dams could or would have been built by any private tax-paying organization. It may be remarked also that the development that came with TVA has brought new responsibilities and new burdens to local governments, thus giving reason for greater tax revenues.

TVA pays no Federal taxes. TVA makes no profit, therefore sees little reason for providing for an income or profits tax.

The Bonneville Power Administration makes no payments in lieu of taxes; but, over the 75-year-payout period for the Coulee project, its power revenues will pay the so-called subsidy to irrigation, an average $3,000,000 a year in irrigation costs, based on the 1940 cost estimate of the irrigation works. The present plan is that the increase in irrigation costs over the 1940 estimates will be met by extending the payout period, but if such increase were to be absorbed in the 75-year period, the average annual irrigation payment, over and above repayment for power investment, would be about $5,500,000.

Does TVA pay interest?

TVA pays interest only on the outstanding amount ($54,000,000) of a $65,072,000 bond issue now held by the United States Treasury. By agreement, TVA pays but 1-percent interest on this indebtedness, a rate that would be attractive to any utility company. The bonds were originally issued to provide funds to purchase the private utility properties.

OTHER INTEREST PAID

TVA pays no other interest on the appropriations for power production.

Bonneville Power Administration calculates 2½-percent interest on the Government investment allocated to power.

Before 1939, when it bought the properties of Tennessee Electric Power Co., TVA actually went into the red in its power operation. Since 1940, however, a margin of net revenue has been maintained. Last year this amounted to $17,176,448. Chairman Gordon R. Clapp contends that, so long as there is such a margin, there need be no worry about whether TVA does or does not pay Federal taxes or interest.

The $17,176,448 is more than 4 percent on the depreciated power investment, and corresponds to the sum which a private corporation, utility, or otherwise, has to divide among those who have invested in the business and to pay Federal income taxes.

All of this $17,176,448 is, Clapp says, the property of the Federal Government. Whether it is broken down and some of it called interest on the original investment, or whether it is called income tax or profit, the Federal Government will get it all and it represents a surplus over and above the cost of producing and transmitting the power at current rates.

YARDSTICK REFUTED

A surplus of little more than $10,000,000 annually would be enough to meet Congress' requirements for amortization of the power investment.

Therefore, if one can accept Clapp's reasoning, and if one can grant TVA's liberal allocations, to the nonreimbursable activities, it would appear that TVA power production is, at present, paying its way. It is my conviction that it is. That was not true, however, until after the 1939 purchase of the Tennessee Electric Power company's system. And it must be acknowledged by the friends of public power, as it is so well understood by its foes, that the Government in the power business enjoys many privileges, financial and otherwise, against which private industry cannot successfully compete and yet maintain a margin of profit.

It follows that it is an error to consider the TVA power rate a yardstick rate for the Nation's utility industry as often claimed. William C. Fitts, Jr., onetime general counsel for TVA, recognizes this. He writes in Public Utilities Fortnightly:

"No such representation [the yardstick] ever has been made [by TVA]. On the contrary, it has been repeatedly pointed out that differences [in costs] do exist, and that allowances for these differences should be made in any attempt at rate comparison."

Here is one question, however, that no one in the Tennessee Valley could answer: When the TVA power plant has been paid for by the power users of the region, to whom does it belong? The same question might be asked about Bonneville and about Grand Coulee. We'll just have to wait until 1990 or thereabouts for the answer to that one.

TVA—MODEL FOR CVA?

SUCCESS OF DEMONSTRATION FARMS DECLARED ONE OF GREAT FEATS OF TENNESSEE PROJECT

(By Malcolm Bauer, city editor, the Oregonian)

(This is the tenth of 16 articles on the Tennessee Valley Authority, possible legislative model for a Columbia Valley Administration. The author has just returned from a long visit in the Tennessee Valley.)

The Tennessee Valley Authority's most far-reaching program is its system of test-demonstration farms.

Last year 82 Oregon farmers participated in the TVA farm program under supervision of Oregon State College and demonstrated their results to hundreds of their neighbors. Yet Oregonians, for the most part, think of the Tennessee Valley Authority as a big power business and little else.

Actually, the popularity of TVA in the Tennessee Valley—among bankers and industrialists as well as farmers—is based more solidly in the influence it has had in altering farming habits than in the cheap electricity about which so much has been written.

SOIL RUNS DOWN

When TVA was born in 1933, the agricultural economy of the valley was skidding fast—a condition that may be a bit difficult of comprehension for the owners of the rich wheat lands of the inland empire of the Northwest. It is better understood by the diversified farm operators west of the Cascades, where decades of cultivation have drawn from the soil much of its natural stock of minerals.

There are approximately 300,000 farms within the watershed of the Tennessee, 5 times the number in Oregon, which is more than twice the area of the Tennessee Valley. In 1933 owners and tenants were eking out a year-to-year existence planting and harvesting row crops: Corn, cotton, tobacco. Such cash crops, as any farmer knows, suck the rich minerals from the soil. Repeated annually, without variation, they lead to soil exhaustion.

Cotton that once stood waist high in eastern Tennessee and northern Alabama had shrunk to shoe-top level. The yield fell accordingly. Desperate farmers plowed up hillsides to increase their cash crops, then they watched the soil wash away before the heaviest rains in the Eastern States.

In central Tennessee there had existed for centuries a natural test-demonstration area, a central basin, extending from south of Nashville northward through Kentucky. Southerners call it "The Dimple of the Universe." To the rest of the world it is the "blue grass country." Game abounded. Grass grew naturally and abundantly, insuring against the erosion that stripped the topsoil in other regions.

The Indian tribes of the East had fought over the grasslands for years until finally they reached an unwritten agreement that they were to belong to no tribe. The "Dimple" became the common hunting ground. When the white man came, his bloodiest contact with the red man was in the blue-grass country. There Andrew Jackson and others established the first civilization in the valley.

Secret of the blue-grass country is the rich phosphate content of its soil.

Surrounding the "Dimple" and making up most of the Tennessee Valley is the "highland rim." There the soil has had little phosphate, and plants were without an adequate supply of one of the three basic plant nutrients: Nitrogen, potassium, phosphorus.

PHOSPHATE ADDED

A combination of circumstances in TVA's beginnings made it possible for TVA to take steps to remedy this situation. At Muscle Shoals were the idle nitrate plants intended for production of munitions in World War I. In the "Dimple" south of Nashville were beds of phosphatic rock that held the minerals so necessary to the rehabilitation of the depleted soils of the "rim."

One of TVA's first acts was to convert the nitrogen plants to the manufacture of phosphatic fertilizers, authority for which was given in the original TVA Act. Phosphate was obtained from the beds in the grasslands.

The TVA job then was to get the 300,000 farmers of the Tennessee Valley to apply the phosphate fertilizer to the farm lands whose prime need was phosphate. The specific needs of the soil of the valley had been known for a long time, but not one farm in all of the valley had applied this knowledge on a farm-wide scale until the beginning of TVA's farm program in 1935.

TVA therefore evolved a program of test-demonstration farms—a program operated not by TVA but by the agricultural specialists of the valley's seven land-grant colleges. TVA contracted with these colleges (and later with others, including Oregon State College) to demonstrate on selected farms the advantages of phosphate fertilizer application. The colleges agreed to supervise the demonstrations through the Extension Service of the Department of Agriculture, field representatives of which are the county agents. TVA agreed on its part to provide the fertilizer for the demonstrations, free of charge except for freight costs, and to obtain the funds necessary for additional personnel to supervise the tests.

In no case does TVA have any authority to tell the county agents what to do. They

operate, as elsewhere in the country, under the Extension Division of the Department of Agriculture and through the land-grant colleges.

Dean E. C. McReynolds, of the University of Tennessee School of Agriculture, who supervises most of the county agents administering the TVA program, told me:

"We have never been in a position in which we felt we had to apply any suggestion of TVA if we had any question about it. We are the bosses."

This is how the test-demonstration program works:

In each community a farmer is chosen (by his neighbors, not by TVA nor the county agent) from those who volunteer to operate their farm as test-demonstration farms. There are usually several such farms in a county—about 1 in every 30 farms, each possessing particular characteristics desirable for demonstration of the program.

The demonstration farmer and county agent drew up a 5-year plan adapting the farmer's own program to soil-conservation practices. The farmer is advised in matters of contour plowing, proper cropping for different fields, rotation of crops, including legumes, grasses. The farmer must be prepared to follow the modernized agricultural practices suggested by the county agent. This may lead to the purchase of lime and potash, equipment and livestock, and the building of fences and buildings. In making effective use of TVA fertilizers, test-demonstration farmers have spent three times as much as the cost of the fertilizer to TVA.

RESULTS PLEASE

The only contribution of TVA is the fertilizer. It would retail for about $40 a ton. The farmer pays as much as $10 a ton freight in the first years of the demonstration program. Later in the program he pays the full price.

The test farmer, too, must agree to show his results at intervals to his neighbors, either individually or on conducted tours arranged by the county agent.

Last year there were 15,305 such test-demonstration farms; 11,676 covering 1,443,929 acres in the Tennessee watershed; 1,526, totaling 366,095 acres elsewhere in the seven valley States, and 2,103 or 433,056 acres in 18 nonvalley States, including Oregon, Washington, and Idaho. Here is the picture in the Northwest:

State	Number of counties	Number of farms	Number of acres
Oregon	12	82	16,562
Washington	19	39	7,051
Idaho	11	20	3,849

The neighbors of the test-demonstration farmers have come, they have seen and they have been convinced. They have purchased fertilizers and put into practice the principles the results of which they have seen on the demonstration farm.

The program has had the effect of putting into grass crops a large portion of the lands previously devoted to corn, cotton, and tobacco. This has resulted in a booming livestock industry and a reduction in farm-labor requirements. We shall see at a later point in these articles the part this has played in the general economic rehabilitation of this part of the South.

The shift to cover crops is also an integral part of the water-control program on the Tennessee. For the phosphate-poor land of the "rim" offered no support for the grass crops that might anchor it against the driving rains and floods. Increase in grasslands, which remain green and moisture-absorbing throughout the winter before being turned under as green fertilizer in the spring, is an important factor in flood control.

How well the moral of the TVA lesson has been learned is illustrated by this line that runs across the top of the daily farm page of the Huntsville (Ala.) Times:

"The South will come into its own when its fields are green in winter."

More substantial proof of the change that has been wrought in the past 15 years are the green fields and the grazing cattle that one sees in driving through the valley.

In Decatur, Ala., there was scarcely an egg or a glass of milk to be had in 1934. Now Decatur has surplus milk to go into a big cheese factory and to the Carnation Co. for canning. It exports hundreds of dressed chickens daily to the big city markets of the South and East.

CORN INCREASES

On the 378 test-demonstration farms of 14 TVA counties in North Carolina, corn acreage has decreased 26 percent, but corn production is up 50 percent; livestock has increased 80 percent. In Georgia, the Georgia extension service found row crop acreage one third less since the TVA program began; acreage of soil-building crops had doubled.

F. L. Ballard, associate director of the cooperative extension work at Oregon State College, wrote me this about the TVA program in Oregon:

"I should say that the project has worked out fairly well. The TVA contribution to salary while it was in effect was not large ($2,274 annually until the end of 1947; nothing since that time), and we experienced rapid change in personnel as outside salaries increased because of the general wartime inflation.

"If the allotment of fertilizer material had been adequate and if the funds granted for cooperative personnel would have enabled us to employ two or three well-qualified men, the project would have been much more successful. The theory underlying the project applies soundly to our conditions, particularly those existing west of the Cascade Mountains."

To be more specific, here are the reports of two farmers to whom I talked:

Gurley V. Mitchell, Albertsville, Ala.—"I had 2 cows when I finally became convinced I ought to be a demonstration farmer. Now I've got 26. My wife and I and a boy can run the place now (80 acres). I used to have to have a crew to harvest the crops. I get $250 a month for the milk alone."

Boyd Vinyard, Marshall County, Ala.—"Used to think 25 bushels of corn to the acre was good; now I get 92. I'm going more and more to poultry."

Alex Locker, who also farms in Marshall County, got only $1,200 for his total cotton, corn, and hay crops in 1936; last year he grossed $19,000 on livestock, hay, small grain, and legume seed sales.

FIGURES GOOD

These experiences, of course, differ only in degree from those of other farmers in the Southeast and in the Nation as a whole. TVA is teaching nothing new through its demonstration program, but there can be no doubt that the show-me methods of TVA have intensified the modernization of agricultural methods in the Tennessey Valley. A farmer who can see the green grass and prosperity across the fence is more easily convinced to follow his neighbor's lead than he would be through the reading of any number of pamphlets.

That the Tennessee Valley is ahead of the rest of the South in rehabilitation of its agriculture seems clear from such statistics as these:

In the 63 TVA counties of Tennessee, cotton acreages have been reduced under TVA 69,000 acres, or 27 percent, as against only 7-percent reduction in the 32 nonvalley counties of the State.

Corn acreage in the valley counties is 351,000 acres less, or 22 percent, as against 13-percent reduction in nonvalley counties.

The number of cows milked increased in valley counties by 21,000, or 6 percent; outside the valley they have actually decreased 7 percent.

Milk production has jumped 33 percent in the valley counties, only 10 percent in other Tennessee counties.

Figures from other valley States follow the same pattern.

A sour note in the TVA farm program is the relationship between TVA and the Department of Agriculture's soil-conservation service. That is a subject for a later article.

TVA—Model for CVA Plan?

Industry enthusiastic supporter of TVA's new processes in fertilizer manufacture but it would like to market the surplus from agency's test demonstration farms

(By Malcolm Bauer, city editor, the Oregonian)

(This is the eleventh of 16 articles on the Tennessee Valley Authority, a possible legislative model for the proposed Columbia Valley Administration. The author has just returned from a tour of inspection in the Tennessee Valley.)

A major TVA activity is the operation at Muscle Shoals, Ala., of an immense national chemical laboratory for the development and production of fertilizers and munitions.

In its beginning TVA fell heir to two nitrate plants that had been designed for manufacture of explosives for World War I. The original TVA act also specified that one of the purposes of the Valley Authority should be "to improve and cheapen production of fertilizer" for the Nation's farmers.

Thus, this is another field in which TVA has not been confined to the valley of the Tennessee.

PLANTS LITTLE USE

The nitrate plants have been of little use. Plant No. 1, designed to produce nitrogen directly from the atmosphere, was obsolete long before TVA came into being. After years of idleness, it was leased in 1946 by the Reynolds Metal Co. for an annual rental of $18,000 and option to purchase. A portion of plant No. 2 has been used in fertilizer production, but it is considered to contribute no value to such production because of the high cost of its operation.

TVA chemists at Muscle Shoals early turned their attention primarily to the development of phosphate fertilizers and to the perfecting of processes for manufacturing phosphate containing the highest possible percentage of the active ingredient, phosphorous pentoxide (P_2O_5). That is the part of any phosphate fertilizer that constitutes the plant nutrient.

"NEW" CLAIM DENIED

Most "superphosphate" fertilizers then on the market contained approximately 16 to 20 percent P_2O_5). The rest of the mixture was inert matter that added nothing to the soil but did add considerably to freight charges and to the pains in the back of the farmer who had to buck his own fertilizer sacks.

TVA is often embarrassed by the claims of its friends that it had developed at Muscle Shoals revolutionary new fertilizers. This is not strictly true. The basic plant nutrient in all phosphate fertilizers, TVA's included, is the same P_2O_5. TVA's contributions have been to develop processes for the manufacture of fertilizers that will provide a product with as high as possible concentration of P_2O_5, and to demonstrate to farmers of the Nation the advantages of the use of such fertilizers.

UNIVERSITY OF MICHIGAN LIBRARIES

ACID METHOD NEW

Triple superphosphate (45–48 percent P_2O_5) had been manufactured by private industry for 42 years before TVA was created in 1933. But it had never exceeded 5½ percent of the total production of phosphatic fertilizers. In 8 years before the war and after TVA began manufacture and demonstration of triple superphosphate, the fertilizer industry increased its production of triple superphosphate to 13 percent of the total.

A significant accomplishment at Muscle Shoals has been the development of an electric-furnace method for the manufacture of phosphoric acid from phosphate ore. The phosphoric acid is then used to break down the ore in the production of triple superphosphate fertilizer. Practically all commercial fertilizer manufacturers have used sulfuric acid for this process, but in regions of cheap electricity, such as the Tennessee Valley and the Pacific Northwest, it is acknowledged that the phosphoric-acid treatment is the most efficient.

CO-OPS HANDLE SALES

A TVA furnace of new design has produced calcium metaphosphate, containing about 60 percent P_2O_5, at a cost per unit lower than that for manufacture of superphosphates.

Other pilot plants in the Muscle Shoals chemical center have produced rich phosphates in other forms. There is also substantial experiment in and production of fertilizers providing the other two basic plant foods—nitrogen and potassium.

Fertilizers that have been proven by use, such as triple superphosphate, are distributed to test-demonstration farms and sold to other growers through farmer cooperatives in all parts of the country.

INDUSTRY BENEFITS

Fertilizers in various stages of experiment, however, are not for sale. After having been tested by land grant college staffs in greenhouses and in small plots, they are distributed to test-demonstration farms where results are watched closely over a period of years.

The results of TVA research and experiment in fertilizers are available to private industry. The Westvaco Chemical Co., of New York City, used TVA designs to build an electric furnace plant to smelt phosphate ore from Idaho properties leased from the Simplot Fertilizer Co., which will use part of the phosphorous so obtained in making concentrated phosphate fertilizer. Permanente Metals Corp., of Permanente, Calif., is currently making a TVA-developed product by a TVA-developed process. The Manganese Product Co., of Seattle, also constructed a plant to use this process, and the Interstate Chemical Co., of Longview, Wash., used it in experimental production.

NORTHWEST AFFECTED

Phosphate research and production is a phase of the TVA operation that should hold much interest for the Northwest. For in Idaho and western Montana are concentrated the bulk of known phosphate deposits, about 75 percent of the United States supply. Central Tennessee, which has been the chief source of phosphate ore, not only for TVA but for the commercial fertilizer industry as well, has only about 1 percent of the nation's deposits. The remainder, about 24 percent, is in Florida, which now furnishes much of the raw product for TVA's furnaces.

TVA would be very happy to witness the development in the Northwest of a phosphate industry that would take the burden of the nation-wide supply off the dwindling stocks of Tennessee and Florida.

SALES CAUSE TROUBLE

TVA is an experimental and not a commercial fertilizer producer. It does, however, market fertilizers produced over and above the demands of the test-demonstration farms. Of 160,000 tons of concentrated superphosphates manufactured last year, more than 150,000 tons were sold.

This gets TVA into trouble with commercial fertilizer manufacturers and distributors and is another source for the charges that TVA competes with private enterprise. For TVA markets its product through farmer cooperatives which compete with the commercial fertilizer distributors.

Sales of TVA are an important source of revenue for the farmer cooperatives of the valley. I visited a cooperative in Decatur, Tenn., and its warehouse held little else but TVA fertilizers. The manager told me the cooperative made 10 percent on retail sales of the fertilizer. TVA wholesales the product at cost.

However, the example of the TVA test-demonstration farms has so increased the demand for and the sale of commercial fertilizers that the complaints of the dealers are scarcely audible above the jingle of new coins in their pockets.

SALES RISE RAPIDLY

Between 1935 and 1948 sale of commercial fertilizers in the 107 counties within the Tennessee Valley increased 232.3 percent. In the 258 counties outside the watershed, but in the States of Tennessee, Alabama, Georgia, and North Carolina, the increase was but 63.5 percent. The fertilizer industry knows well enough that the difference lies in the concentration of test-demonstration farms in the valley. Both test-demonstration farmers and their neighbors go to private dealers as well as to cooperatives to buy the phosphate fertilizers that have proven so successful in tests for which TVA provided the original supply of fertilizer.

The last thing the fertilizer industry wants is an end of TVA or of TVA test-demonstration farms. But it would like to market the TVA surplus. That is the one point of irrigation.

During the last war TVA's fertilizer plants were turned quickly to the production of munitions. Elemental phosphorous, which is produced in the normal stages of triple superphosphate manufacture, went into smoke grenades, incendiary bombs, and spotter shells. A big portion of the Nation's nitrate explosives came from Muscle Shoals. Texas City was scattered into the heavens by an explosion of ammonium nitrate, still manufactured in quantity at Muscle Shoals.

TVA—Model for CVA?

FOREST PROGRAM AIMED AT SAVING, INCREASING TIMBER STANDS; MOST LAND OWNED PRIVATELY

(By Malcolm Bauer, city editor, the Oregonian)

(This is the twelfth of 16 articles on the Tennessee Valley Authority, possible model for the Columbia Valley Administration. The author has just returned from a tour of inspection in the Tennessee Valley.)

TVA's forestry program is much smaller in scale than its counterpart in the Pacific Northwest; but the objective is the same—to conserve and increase the stand of timber and to develop wider and more efficient use of forest products.

The pattern of land ownership in the Tennessee Valley makes for much of the difference. In the Pacific Northwest a large proportion of timberland is publicly owned, most of it by the Federal Government. It is therefore regulated and managed directly by Federal agencies. In the Tennessee Valley, however, only 17 percent of such land is publicly owned. The rest is in the hands of private owners, about evenly divided between large industrial holdings and the small woodlots of thousands of valley farmers.

TVA concerns itself not so much with the federally owned timberland as with that in private hands. The United States Forest Service administers the Federal holdings.

WOOD BIG INDUSTRY

TVA initiated its forestry program, not as a duplication of Forest Service operations, but as a part of its general program for development and conservation of the valley's resources. Forests, largely of oak, pine, and poplar, cover 54 percent of the valley's area. Wood products industries employ one in every 12 persons on valley pay rolls. In the postwar peak production year of 1946, the 4,000 valley mills (most of them small portable outfits) cut 935,000,000 board-feet of lumber valued at $50,000,000.

That is less than one-tenth of the 10,000,000,000-plus annual cut in the Pacific Northwest States. Even so the forests support a basic heavy industry of the Tennessee Valley.

TVA goes about forest conservation in much the same manner as it does soil conservation. It fosters demonstrations of recommended forestry practices. Its program has four major divisions: Forest fire control, reforestation, sustained yield and wood products utilization. In most cases these activities are administered not by TVA but by established local, State and Federal agencies. Here are some examples:

Fire control: 1,684,000 acres of privately-owned land in 15 North Carolina counties were brought under fire control in a 5-year program completed last year. The North Carolina division of forestry and parks administers the program. TVA supplies technical guidance and 18 percent of the total budget.

SEEDLINGS GIVEN

Reforestation: TVA furnishes seedlings from its two forestry nurseries as the incentive to planting by private land owners. During 1948, 3,325 landowners planted 10,686,000 TVA seedlings in projects supervised by county agricultural extension agents (for farm woodlands) and State forestry departments (for large industrial timber holders).

Forest management: TVA has established 600 demonstrations of what modern forest management can achieve. These demonstrations are conducted on farms and on industrial and institutional forest land holdings, all under private ownership. Only those who volunteer to conduct the demonstrations are included. The Koppers Co., owning tracts of some 35,000 acres in Tennessee, has accomplished complete surveys of its holdings in cooperation with TVA and Tennessee State foresters. As a result, it has adopted a program of management of the entire tract on a sustained yield basis. The Hassel & Hughes Lumber Co., operating on 74,000 acres in Wayne County, Tenn., where lumber constitutes the country's biggest industry, has shifted to a program of selective cutting and sustained yield as the result of TVA studies. Results of demonstrations, both large and small, are available to other timberland owners.

TREATMENTS TESTED

Forest products research: TVA has cooperated with the land-grant colleges in developing new wood preservatives and testing simplified methods of applying them. The United States Forest Service and TVA joined in developing a small experimental lumber dry kiln, which can be heated by steam or electricity.

Of special interest to the Pacific Northwest is the start TVA has made on construction at Muscle Shoals of a small pilot plant for wood hydrolysis to manufacture cattle feed and alcohol from waste forest products. A big hydrolysis plant now stands idle at Springfield, Oreg., because current processes have not proven economical. It is the intent of the Muscle Shoals chemists to find the bugs in the Springfield operation, and, if possible, develop a process that can be used to put the Springfield plant back into profitable operation.

Dr. Nathan Gilbert, who is in charge of the Muscle Shoals hydrolysis project, told me his plant would be drawn on the same pat-

tern as that at Springfield, but on a greatly reduced scale. It will have 10 times the capacity of the forest products laboratory at Madison, Wis., where the process was first developed; but will be little more than one-tenth the size of the Springfield plant's five units.

What Dr. Gilbert finds out at Muscle Shoals may mean many millions of dollars to the Willamette Valley and to the Northwest.

TVA carries on a wide range of research and experimentation in other fields.

FREEZING STARTED

A food-freezing industry, which did not exist in the Tennessee Valley in 1933, now does an annual business in excess of $5,000,000 using processes developed by TVA in cooperation with the land-grant colleges. There are nearly 30 neighborhood and community locker plants in the region, all designed from a TVA demonstration model. In 1948 they handled farm products worth $8,800,000, with an estimated retail value after processing of $25,000,000.

TVA has initiated research to adapt farm machinery to special requirements of the valley's small diversified farms.

One such product is a small threshing machine that can be attached to the rear of a truck or automobile. TVA blueprints and designs were made available to the Turner Manufacturing Co., of Statesville, N. C., which volunteered to produce the machine commercially. More than 200 are now in use on valley farms, and many have been sold outside the valley. TVA's expenditure in that development amounted to about $45,000 over several years.

Similarly, TVA-financed research has resulted in private manufacture of a low-cost barn hay-drier.

Current experimental products include a tractor-drawn seed and fertilizer drill and portable sprinkling equipment.

OTHER TESTS MADE

Varying amounts of TVA appropriations are going into other experiments conducted at land grant colleges on a contract basis. Georgia Tech is experimenting with commercial uses for the many clays which abound in the valley. The University of Tennessee is conducting tests with new kitchen appliances and electrical devices. Tuskegee Institute is studying the problems of manufacture of cheap paint from vegetables.

TVA has confined its minerals research to those deposits which have not been large enough to attract research development. It leaves copper, for instance, to such private concerns as the Tennessee Copper Co., which has excavated a mountain near Ducktown, Tenn.; aluminum to the Aluminum Co. of America, whose biggest plant is at Alcoa, Tenn.

In cooperation with the United States Bureau of Mines, the United States Geological Survey, and various State agencies, TVA has encouraged research in less well-developed minerals.

This research led to the establishment in 1948 of a plant at Spruce Pine, N. C., for production of feldspar, grinding mica, and quartz sand from alaskite.

TWO MINES RUN

Another firm opened two mines in halloysite deposits identified by TVA. Halloysite is a hard white clay which increases the whiteness of fired ceramics.

Surveys have indicated easily mined mica deposits in the Southeast States.

Pilot plant tests have begun to determine feasibility of using sillimanite to replace kyanite, now imported from India for manufacture of ceramic products that must stand heavy wear.

Research has been undertaken to recover barite from low-grade ores.

All results of research conducted by TVA or in cooperation with Federal, State or local agencies are made available to private industry. A program undertaken primarily to promote wider and more efficient use of the Tennessee Valley's resources has, therefore, in some instances reflected to the benefit of other regions.

TVA—Model for CVA?

Two regions comparable in resurgence

(By Malcolm Bauer, city editor, the Oregonian.)

(This is the thirteenth of 16 articles on the Tennessee Valley Authority, possible model for legislation creating a Columbia Valley Administration. The author has just returned from a tour of inspection in the Tennessee Valley.)

The Tennessee Valley can be compared to the Pacific Northwest in the magnitude of its economic resurgence since the depths of the depression in 1933—the year the Tennessee Valley Authority was created.

In those far, dark days the per capita income in the valley was only 40 percent of the national average. Since then it has risen so much more swiftly than in the Nation as a whole that per capita income in the valley now is 60 percent of the national figure.

Industrial employment in the valley increased 161 percent from 1933 to 1945 as compared with a gain of 131 in the Nation. A total of 1,448 new industries was established in the valley region in the 8 years from 1940–48. (Some of the biggest of these are listed in an accompanying table.)

Retail sales have more than quadrupled. In 1933 residents of the valley States paid 3.4 percent of the total income taxes paid into the Federal Treasury. By 1947 they were paying 6.3 percent of the total, almost doubling their share of the expenses of government.

Readers of the Oregonian know something about what these figures mean, because they have been living in the midst of a burgeoning industrial and agricultural prosperity that has been ever more marked than that of the Tennessee Valley. Per capita income in Oregon, Washington, and Idaho has risen from about 95 percent of the national average in 1933 to about 110 percent of the national figure. The three States paid only 0.65 percent of the total Federal income taxes collected in 1933. By 1946 the percentage was increased almost five-fold, to 2.98 percent. Retail sales multiplied four and one-half times in the same period.

The Northwest has forged ahead even more speedily than has TVA-land in the contest for new industries, more dollars, and the better life. But, in comparing the progress in the Tennessee Valley with that of the rest of the country east of the Rockies, the valley stands out like a magnolia tree in a tobacco patch.

WORKER QUITS FARM

Precisely how much of the valley's prosperity is the direct result of the program of TVA is, of course, impossible to determine. There is no mistaking, however, that the people of the valley are convinced that TVA had a lot to do with it.

I talked with them—the farmer who is grazing his livestock on pasture green with TVA fertilizer and making 10 times the amount he did in the old cotton-and-corn days; the ex-farm hand who is no longer needed on the mechanized farms and has found a job in industry that pays him five times the wages for half the time; the industrialist whose new factory is powered by energy that costs about one-fourth the 1933 rate. All these can see their blessings in concrete form, and each one stems directly from TVA.

Statistics serve as a cold and unexpressive medium. Let us go down into the towns of the valley and see the transformation at first hand.

THE GUNTERSVILLE STORY

Wherever I went during the first few days of my visit in the upper Tennessee Valley I heard about the miracle of Guntersville, Ala.

Guntersville in 1933 was a little land-locked town of 3,900. The Tennessee River flowed a few hundred yards from the edge of the residential area, but nobody used it for much but fishing or cussing. The cussing came when, almost every spring, the muddy Tennessee rolled out of its banks and over the flat farmland between Guntersville and the river.

Guntersville cracker-box orators left off the river and cussed TVA when they heard, in 1935, about the dam that would be built across the river just north of town. TVA engineers warned them that the lake that would rise behind Guntersville Dam would flood out all the farmlands that surrounded the town and would push water right up into the unpaved business streets. Even the floods didn't reach that high.

Most of Guntersville was dismayed. Paul Stockton, the grocer, sold his store and prepared to move to some place with a future. Other merchants followed suit. Lumbermen complained the reservoir would bury a major source of timber. Farmers swore the county couldn't feed itself without the produce from the bottomlands that would be flooded.

EX-GROCER REGRETS

But that was all 14 years ago.

I went to Guntersville to see what had happened. I found there a prospering river port of 5,700 persons, half again as many as lived there in 1935.

Ex-grocer Paul Stockton is still there and wishes he had his store back, because the new pay rolls the river and cheap power have brought to the town have hiked retail sales to four or five times their previous levels.

The town clings to a peninsula that juts out into Guntersville Lake. Its streets are paved. It has 2,000 feet of developed deep-water waterfront with plenty of room for more. On the waterfront are two large grain elevators (receiving wheat up the river from the Midwest), two oil terminals (Gulf and Texaco), a TVA-built public dock over which each week about $1,000,000 worth of automobiles are unloaded from specially constructed three-deck steel barges.

In addition, Guntersville residents work in a cotton mill (the only big pay roll before the high water), a chenille plant, a concrete-block plant.

The city is developing a large municipal park on the shores of the lake adjoining the residential district.

W. L. Martin, the county agent, told me the county now produces more corn, more cotton, and more hay than before construction of the dam and the drowning of the farmlands. Livestock production, as everywhere in the valley, has grown out of all proportion.

Joe Starnes, lawyer and ex-Congressman, now president of the Guntersville Chamber of Commerce, opined: "The lake just drowned out the mortgages."

I found no one in Guntersville who wanted to return to pre-TVA days.

THE DECATUR STORY

Down the river about 60 miles from Guntersville is Decatur, Ala., a city of about 20,000. It lies on the shores of Wheeler Reservoir, first of the main river dams completed by TVA.

There, Barrett Shelton, editor of the Decatur Daily, let his paper roll along without him while he spent 5 hours showing me the new Decatur.

As early as 1923 Decatur's principal pay roll, the shops of the Louisville & Nashville Railway, began to close down. By the time the rest of the country crashed through the

UNIVERSITY OF MICHIGAN LIBRARIES

economic floor at the end of the decade, Decatur knew what it was to live in the cellar. It had one small hosiery mill, its only pay roll. Farm lands were played out.

FORMULA ELUDES

Businessmen organized committees to find a solution to the town's problem. They visited Washington, Birmingham, and other cities; but there was no progress. Then, in 1933, came TVA. I'll let Shelton tell it:

"TVA gave us the tools with which to work, and we worked our way out. We pitched into the test-demonstration farm program and increased our livestock and pasture land. We sent a delegation to the Carnation Milk Co. to make a contract for delivery of milk. They just laughed at us at first. Now they're buying millions of pounds of Decatur milk. We raised $15,000 by subscription to start a cheese factory. Last year that factory paid farmers $490,000 for 11,500,000 pounds of milk.

"The change in agricultural practices released thousands of men and women from chores on the farms. We went after new industry to give them jobs. Private industry is now on the firmest basis in the history of Decatur."

I visited some of Decatur's industries with Shelton: The Ingalls shipbuilding plant, which started in 1934, built Liberties and LST's during the war, and still has big contracts; the Alabama flour mills, producing 1,200 barrels of flour a day from wheat barged up the river and selling it all within 150 miles of Decatur; a shining new copper wire plant that will give jobs to several hundred persons; the Alabama hosiery mills, where some of the workmen on the spinning machines make more than $100 per week.

MALARIA DIES OUT

Lloyd L. Lively, manager of the hosiery plant, told me 95 percent of his 400 employees came originally from the farms of Alabama and Tennessee. Lively is a Yankee. The southern workman, he thinks, given good food and good health, is as good and as alert as his counterpart in the North.

A majority of Lively's work force once suffered from malaria. They were listless, poor producers. TVA's malaria control program has been so effective the plant does not now even include a malaria test in its regular physical examination of all employees.

Decatur's power rates are second lowest in the country for cities under 50,000. Eugene, Oreg., has the lowest rates. Quincy Eddins, manager of the Decatur company, has his heart set on beating out Eugene for the honor.

Decatur shows its prosperity. A new athletic field for the high school has just been finished, grandstand and all. Excavation is starting for a new $1,500,000 high school. Shelton is pushing a public subscription to build a new baseball park (construction already started) so the city can obtain a franchise in organized baseball. The residential streets are lined with new homes, and out toward the newly remodeled country club stands an array of big new brick homes, built in the "old plantation" manner with gleaming columns and broad, green lawns.

"We've been pretty flat," said Shelton on leaving me. "But we won't be knocked down again."

TVA POWER DRAWS INDUSTRY

In 1933 there were 1,348 manufacturing plants, mostly small ones, in the Tennessee Valley region, including the valley itself and the adjacent area later to be supplied by TVA power. In the past 8 years alone more than that number of new plants have been established in the region—1,448 by count of TVA's economics staff.

Here is a tabulation of a few of the biggest ones:

City	Name	Product	Employment
Listerhill, Ala	Reynolds Alloys	Aluminum	2,500-5,000
Sheffield, Ala	Renalite Corp	Aluminum, plywood	500-1,000
Gadsden, Ala	Goodyear	Rubber soles, heels	2,500-5,000
Do	Allis-Chalmers	Farm equipment	2,500
Boaz, Ala	Skyline Manufacturing Co	Rugs, mats, robes	500-1,000
Dalton, Ga	Gouch Chenille Co	Bedspreads	900
Bowling Green, Ky	General Electric	Radio tubes	900
Paducah, Ky	Magnavox	Radio equipment	1,000-1,800
Philadelphia, Miss	Wells, Lemont Co	Cotton gloves	300
Water Valley, Miss	Rice-Stix Co	Garments	400
East Flat Rock, N. C	Chipman LaCross Co	Hosiery	300- 500
Nashville, Tenn	Consolidated Vultee	Farm machinery, busses	1,200
Dyer, Tenn	Brown Shoe Co	Sole-fitting unit	500
Lowland, Tenn	American Enka	Rayon tire yarn	1,500-2,000
Chattanooga, Tenn	Norge	Refrigerators	800-1,000
Do	DuPont	Nylon yarn	1,000
Hohenwald, Tenn	General Shoe Corp	Shoes	600
Frayser, Tenn	International Harvester	Farm machines	3,000
Clarksville, Tenn	B. F. Goodrich	Rubber soles, heels	1,360
Bristol, Va	Universal Products	Radio cabinets	1,000
Damascus, Va	Damascus Furniture	Furniture	1,000

TVA—MODEL FOR CVA PLAN?

ALL BUT HANDFUL OF TVA EMPLOYEES FULL-TIME RESIDENTS OF REGION—RELATIONS WITH LOCAL, STATE GOVERNMENTS GENERALLY SMOOTH

(By Malcolm Bauer, city editor, the Oregonian)

(This is the fourteenth of 16 article on the Tennessee Valley Authority, possible legislative model for the proposed Columbia Valley Administration. The author has just returned from a tour of inspection in the Tennessee Valley.)

Essential to an appraisal of the Tennessee Valley Authority is an understanding of its regional character .

The directors of TVA and all but a few of its 15,000 employees are full-time residents of the Tennessee Valley. Only TVA office in Washington, D. C., is a small one, staffed by subordinate employees whose duty it is to provide liaison between TVA headquarters in the valley and other parts of the Government.

Chairman Gordon R. Clapp, of TVA, explains it this way:

"The mainspring of the working machinery of the TVA as an agency of the Federal Government is this: TVA's responsibilities run to a single region; its officials and employees live and work and make their decisions in the very climate of the regional community, not as agents of a distant central office, but as employees of a localized, regional agency."

When States R. Finley, manager of the Chattanooga Electric Power Board, wants a change in his contract with TVA, he merely climbs two flights of stairs to the office of G. O. Wessenauer, TVA power manager. Wessenauer can give a decision that in any other Federal agency would have to come from Washington, D. C.

OWN DECISIONS MADE

David E. Lilienthal, long-time Chairman of TVA and probably the one man who can speak with most authority on its objectives, writes in TVA—Democracy on the March:

"The entire TVA experiment, as I interpret it, makes it clear that no proposal for regional resource development may be described as a kind of TVA unless it embodies these fundamentals:

"* * * A Federal autonomous agency, with authority to make its decisions in the regions.

"* * * Responsibility to deal with resources, as a unified whole, clearly fixed in the regional agency, not divided among several federalized central agencies.

"* * * A policy, fixed by law, that the Federal regional agency work cooperatively with and through local and State agencies."

TVA has made a fetish of working "with and through" local agencies and thus has held at a minimum any friction between the Authority and residents of the valley. Its farm program is administered by county agents, themselves usually long-time residents of the locality. TVA power is retailed by municipal boards and rural cooperatives directed by local people.

LOCAL LEADERS PICKED

There are even many evidences that the TVA people themselves have, in the past 16 years, pushed their roots deep into the region. Chairman Clapp has lived and worked there for more than 15 years, and thinks of himself now as a Tennessean, although he was born and educated in Wisconsin and came to Knoxville in 1933 as an "interloper" from the North.

Most of the other top men in the Authority have been long at their jobs. Administrators in the seven regional offices in the valley are, for the most part, long-time residents of the towns in which they represent TVA. They belong to the local luncheon clubs and take part in lodge, church, and civic affairs in the community.

TVA's unique position in government has forced it to pioneer in relationships with local and State governments and with other Federal agencies.

REVENUE FACTOR

An important consideration to local, county, and State governments is the revenue received from TVA in the form of payments in lieu of taxes. As has been mentioned previously, TVA makes such payments to counties and States in which it has power properties or in which it markets power, and they total substantially more than taxes paid on the same property when in private hands.

Some counties, however, suffer from revenue lost from reservoir land and not entirely replaced by payments in lieu of taxes which are based on only that part of the reservoir property allocated to power. No payments are made on property allocated to flood control or navigation. Thereby some counties on upriver tributaries suffer loss in revenue for benefits that are realized only by counties in the lower reaches of the river system.

Thus far no completely acceptable scheme has been devised for transmitting these benefits to the unpland counties in the form of tax dollars, although Tennessee Valley States have undertaken to distribute the payments in such a way as to alleviate the most severe cases of tax loss.

In the Northwest, the Bonneville power administration makes no payments in lieu of taxes.

County and local governments are understandably wary of Federal development which may take properties off the tax rolls without some offsetting revenue. Their fears are intensified by discussion of the theory, cur-

rently popular in Federal Government circles, that the benefits brought by Federal development—such as increased incomes, new industries, etc.—more than offset any loss in tax revenue, and that payments in lieu of taxes should not, therefore, be required. Those who pay the bills of local government know how difficult sometimes it is to give these benefits tangible form—something as tangible, for instance, as a few dollars in the county treasury.

Another example of TVA's deviation from the norm in its relationship with the locality is its pattern of condemnation.

Army engineers in Portland file suits for jury trial in Federal court when property owners are adamant in refusing terms offered for property needed in construction of dams, reservoirs, etc.

FAIR PRICE SPECIFIED

The TVA Act, however, specifies that the Federal court shall designate three commissioners to determine the fair price. These commissioners must be from outside the locality in which the land is to be purchased. Some critics feel that this provision cannot be reconciled with TVA's expressed desire to function as a part of the local community.

Despite such irritations, I found no local, county, or State official with a complaint about TVA. On the contrary, governors of Tennessee Valley States were lavish in their praise of TVA.

I spent a half hour with Gov. Gordon Browning in Nashville, Tenn. He told me there has been no instance in which TVA had interfered with the sovereignty of Tennessee. In fact, he recalled that TVA had been instrumental in establishing and building up the State's first department of conservation, now a strong arm of the State government in forestry and agriculture. He added:

"Our feeling is that the TVA has not tried to revolutionize the social order but has taken the institutions and customs found here to build on."

EXTENSION SOUGHT

Gov. James E. Folsom, of Alabama, wrote to me that he was "looking forward to the time when an authority similar to TVA, if not TVA," can bring to all of Alabama the benefits now enjoyed by that part of the State lying within the Tennessee Valley.

Gov. W. Kerr Scott, of North Carolina, wrote that TVA "has aided greatly in the development of agriculture and industry" in his State. He said he had experienced no problems in dealing with TVA.

Paradoxically, the Tennessee House of Representatives in 1947 memorialized Congress to reject a proposal to place the Cumberland River watershed of northern Tennessee under the jurisdiction of TVA. Given as a reason was the fear that high dams on the Cumberland would flood farm lands as had TVA's dams on the Tennessee.

TVA is more popular with the State and local governments of the valley than with its sister Federal Government agencies.

The Army's Corps of Engineers, which controls navigation on the Tennessee and also has the last word on flood control, has little love for TVA. I talked to a ranking member of the staff of the Nashville district engineer. He had no quarrel with TVA's engineering; but he bitterly attacked the principle of TVA which he interpreted as Government competition with private enterprise.

There is no noticeable friction, however, in operations of the two agencies on the river; and TVA actually does considerable mapping work for the Army.

SOIL CLASH ARISES

Biggest interurban scrap is that between TVA and the Soil Conservation Service of the Department of Agriculture.

The TVA farm program was operative throughout the valley before the Soil Conservation Service came into existence, and now is playing dog in the manger on the theory that its practice of dealing through local agencies might be disrupted should soil-conservation specialists set up offices in the counties of the valley. On its part, the SCS has grumbled that it should have its agents in the valley just as elsewhere in the country despite any duplications that may exist in the two programs.

Senator ESTES KEFAUVER, a good friend of TVA, told me in Washington, D. C., that both parties were pretty stubborn about reaching an understanding.

Only in Alabama has the SCS made any substantial invasion of the valley. The 10 northern Alabama counties in the watershed are organized into two soil-conservation districts, and the SCS agents and extension agents work together without difficulty (often in adjoining offices).

Both extension agents and the SCS agents come from the same agricultural schools, teach substantially the same practices. Only discernible difference in the gospels they preach is that the TVA program of the extension agent emphasizes the use of fertilizer, while the SCS agents concentrate on mechanical devices such as contour plowing.

AID DUPLICATED

By working arrangements in the Alabama counties, the SCS men leave the TVA demonstration farmers alone, and the extension agent does not bother with farms seeking SCS assistance. In some rare instances, however, one farm operates under both programs—a doubling up of Federal assistance. In such cases, the farmers do not complain.

In fact, the county agent of Washington County in Virginia was delighted to hear from me of the Alabama arrangement. He is going right after Soil Conservation Service help to supplement the TVA farm program in his county.

TVA's forestry theories also differ from those of the Forest Service. TVA prefers the demonstration method in obtaining voluntary action by timber owners and abhors the regulatory program of the Forest Service. Federal forest-land ownership, however, is on such a small scale in the Tennessee Valley that there has been little conflict.

TVA's task has been to reconcile two contending factors: a duty to represent the taxpayers of the Nation in administering congressional appropriations in one region so as to bring the greatest possible benefits to the country as a whole, and a responsibility to the residents of the region. The fact that TVA relationships with local and State governments are more congenial than those with Federal agencies is testimony to the success of TVA's accomplishment, at least from the viewpoint of the residents of the valley.

TVA—MODEL FOR CVA PLAN?

TENNESSEE VALLEY RESIDENTS FOUND NEARLY UNANIMOUS IN EXPRESSING APPROVAL OF TVA'S ACCOMPLISHMENTS IN RESTORING ECONOMY OF AREA DURING AND AFTER DEPRESSION

(By Malcolm Bauer, city editor, the Oregonian)

(This is the fifteenth of 16 articles on the Tennessee Valley Authority, possible legislative model for the proposed Columbia Valley Administration. The author has just returned from an inspection of the Tennessee Valley.)

There is no mistaking the popularity of TVA among the people of the Tennessee Valley. Even Dr. Gallup couldn't miss it.

I talked to one-hundred-and-eighty-odd people in the valley, excluding those in TVA, and I found only five who were opposed to TVA on any grounds. Some others proved noncommittal. But most—including chambers of commerce presidents, bankers, and farmers—had only praise for the Authority.

The dissenters included two newspaper editors, one Georgia housewife, a railroad lawyer and an Army engineer. All opposed TVA on principle.

Typical are these comments by Guy Smith, editor of the Knoxville Journal: "TVA personnel are missionaries of socialism. They have done a smart job of selling TVA to the valley."

EDITOR SHARES VIEWS

Roy McDonald, editor and publisher of the Chattanooga Free Press, shared Smith's view. He contended further that TVA is autocratic and uses "guesstimates" in its water-control operations. He illustrated his point with a story of how his boat was left high and dry at its mooring one morning after TVA engineers had ordered a drop in the reservoir level.

Charles H. Smith, division counsel of the Southern Railway Co., told me: "I am not an admirer of TVA. There are too many people there to do the job. They ride roughshod over opposition, using the power of Government. TVA competes unfairly with railroads."

"But," he added, "TVA had done wonderful things for the region, coming as it did in the depression. It made Knoxville prosperous."

The critics quoted conceded the general popularity of TVA in the valley. This, they said, was the natural result of heavy Federal expenditures ("nobody hates Santa Claus"). Administrators of TVA, they thought, had tread softly for fear of alienating people in the Nation's first experiment in regional development.

"But watch out when they get ready to use the power they have," was the warning of one.

Some did not want to take sides.

POWER MAN SPEAKS

Jo Conn Guild, Jr., ex-president of the Tennessee Electric Power Co., which lost its long struggle with TVA, and now president of the Southern Coach Lines, Inc., in Chattanooga, had this to say:

"The Tennessee Electric Power Co. sold its properties to the TVA * * * almost 10 years ago. Previous to that time, for some 5 or 6 years, the officials, employees, stockholders, and other individuals who did not believe in Government ownership or operation of industry by the Government, did everything possible to defeat the TVA and discourage its growth and the extension of its influence. After the sale of the Tennessee Electric Power Co. properties I have made it an inviolable rule never to discuss this project either publicly or privately."

But the great majority of those to whom I talked responded to my questions as though they were paid boosters for TVA. There were no factional lines drawn, as in the Pacific Northwest on the issue of TVA. Industrialists and chamber of commerce representatives spoke just as enthusiastically as did farmers and labor leaders.

Here are some of their comments:

W. F. Moehlman, president of the Knoxville Chamber of Commerce and president of the Tennessee Metal Culvert Co.: "TVA has been beneficial to the people and institutions of Knoxville in a number of ways. It has made available greatly increased quantities of electric power at cheaper rates. I do not know of any great objections to the underlying principles of the Tennessee Valley Authority so far as this area is concerned."

Thomas R. Preston, board chairman of the Hamilton National Bank, Chattanooga, ex-president of American Bankers Association, and one-time director of Tennessee Electric Power Co.: "TVA is just what this country needed. Private industry could not have done the job TVA has done. I am against Government in business when business can do the job. I know of no private industry adversely affected other than private power."

UNIVERSITY OF MICHIGAN LIBRARIES

Thomas R. Cuthbert, printer and editor of the Labor World newspaper, A. F. of L., Chattanooga: "If somebody tries to take this TVA away from us, we'll just grab our shotguns and hold 'em off. There are many thousands of jobs here that would not have been but for TVA."

W. H. Wilhite, roadside grower near Trenton, Ga.: "We're just crazy about TVA, but we haven't got it. We've got Georgia Power Co. power, and it's a shame."

O. L. Mitchell, farmer, Marshall County, Ala.: "TVA is the finest thing that ever happened to Marshall County."

W. R. (Bill) Jones, farmer, Meigs County, Tenn.; "Hell, the fishin's worth all TVA has cost, TVA sure pulled this country out of a hole."

Mrs. W. A. Shadow, farmer's wife, Decatur, Tenn.: "TVA has developed the human resources, too. If it weren't for the bookmobiles in TVA's early days we wouldn't have a book in this county. Those bookmobiles were the origin of Tennessee's State-wide library system of today."

J. D. Huddleston, Aluminum Co. of America, Alcoa, Tenn.: "Alcoa couldn't have done what it did during the war or after without TVA."

Lloyd L. Lively, manager, Alabama Hosiery Mills, Decatur, Ala.: "I'm strong for TVA. The important thing, though, is its farm program; not the power."

E. W. McLeod, president Morgan County National Bank, Decatur, Ala.: "The rest of the country is not subsidizing the South. TVA provided the capital with which we are working and creating a big return, measured not only by revenues from power but by a much greater amount returned to the country in doubled income taxes and in general prosperity, benefits of which are reflected throughout the Nation."

James M. Gorsline, county agent, Washington County, Va.: "TVA has started yeast to work in the community. Ideas ferment. The county is now seeking a county recreation area. The feeling has always been: 'If granddaddy didn't do it, we won't do it.' TVA has shown us that things can be done."

Loye Miller, editor of the Knoxville News-Sentinel: "There were some smart alecks and 'pinkovitches' in the early days of TVA. They are gone now. The News-Sentinel supported Willkie once and Dewey twice, but we have always supported TVA."

Dawson B. Harris, president, Hamilton National Bank, Chattanooga: "I am against the principle of Government in business. But the job on the Tennessee was one for Government."

P. A. Wood, president of the Chattanooga Chamber of Commerce and president of a bridge and steel company: "What we like about TVA is that they not only plan, they do. The same organization should have the planning of a project as the doing. TVA is not essentially in conflict with private enterprise. Power is more in the nature of a public resource."

W. Corey Smith, prosecuting attorney, Hamilton County, Tenn.: "The people are sold on TVA. Of course, all of them aren't sold on it; but then some people aren't sold on Jesus Christ."

Fred Hixon, political editor, Chattanooga Times: "Politically, there is overwhelming opinion in favor of TVA. All candidates must be for it, because the people like it."

T. L. Howard, manager of the Knoxville Chamber of Commerce: "Few will deny that it has been a good thing for the valley. I wouldn't be without electric heat."

Harold V. Miller, director of the Tennessee State Planning Commission, Nashville: "There is no substitute for the unified approach for the entire development of an area. The unified approach offers the one exception in which the whole can be greater than the sum of its parts. TVA did not tell the people of Tennessee what to do. If it had it would have been accused of meddling."

Jo H. Anderson, president of the Park National Bank, Knoxville, and chairman of the Knoxville Utilities Board: "The people as a whole appreciate the great things that TVA has done for them."

Robert Culver, president of the Tennessee Valley Bank, Knoxville: "TVA was not only a great benefit, but coming as it did in the trough of the depression, it saved the region from great distress. We (business interests) may have opposed it at first, but we've certainly come around. I am sure TVA pushed rural electrification in this area much more than the private utilities would have done."

Walter Johnson, Southern Newspaper Publishers' Association, Chattanooga: "TVA development of forests will be a big thing for southern newspaper publishers in leading toward ample supplies of newsprint from southern pine mills."

Carter Patten, president, Tennessee Timber Growers' Association, Chattanooga: "I would say that our relations with the forestry relations division of the TVA are entirely satisfactory."

C. E. Twiggs, librarian, Knoxville: "TVA has made the Tennessee Valley a good place to retire. The fishing can't be beat."

Dr. Earl Martin, chairman of city commission, Guntersville, Ala.: "TVA saved this community."

Some of the above comments were obtained in Chattanooga's Mountain City Club, counterpart of Portland's Arlington club. I went there as a guest of States R. Finley, manager of the Chattanooga electric power board. He had this version of the change in the sympathies of the predominantly conservative membership:

"Most of the members of this club opposed TVA at first," Finley said. "Now they love it. It's like castor oil to them. When they first heard of it they didn't like the taste and they didn't like the smell, but they've been getting regular doses for a good many years now, and they find that it's been mighty good for what ailed them. Now they just close their eyes and reach for another spoonful."

TVA—Model for CVA?

GUIDEPOSTS OFFERED FOR NORTHWEST STUDY

(By Malcolm Bauer, city editor, the Oregonian)

(This is the sixteenth and last of a series of articles on the Tennessee Valley Authority, possible legislative model for the proposed Columbia Valley Administration. The author has just returned from an inspection of the Tennessee Valley.)

The problems of resource development in the Tennessee Valley differ in marked degree from those of the Pacific Northwest.

For this reason, opponents of the administration's CVA legislation contend accomplishments of the Tennessee Valley Authority have no application in the Columbia Basin.

On the other hand, CVA proponents argue that a program that worked well in depression years in the poor lands of the Tennessee Valley should prove even more successful on a larger scale in the Northwest and in the more prosperous days of 1949.

It is fitting, therefore, as a conclusion to this study of TVA experience that we examine in some detail the differences and similarities in the two regions and in their problems.

The Columbia Basin is much larger in area than the Tennessee Valley—about six times the latter's 40,000-plus square miles. Populations of the two regions are, however, comparable—slightly more than 4,000,000 by latest census estimates in the Columbia Basin, about 3,000,000 in the Tennessee watershed.

The Columbia Basin extends into Canada. TVA has never been confronted by the complications of international coordination. An existing United States-Canadian Commission has already dealt, with apparent success, with the Skagit project in the Northwest.

Economies of the two regions are also at variance. When TVA was created in 1933, the country was in the depths of its worst depression. The Tennessee Valley was especially hard hit. It had had no part in the prosperity of the 1920's. Its rural and urban standards of living had been slipping since the Civil War.

NORTHWEST BOOMING

The Tennessee region is even now far below the level, economically speaking, than the Northwest, which in the past few years has been at the top of the postwar prosperity spiral as judged by retail sales, production figures, bank clearing house totals, and building permits.

The Pacific Northwest, too, has reached a stage of resource development far ahead of that which existed in the Tennessee Valley at TVA's beginning 16 years ago. However, the Tennessee River, under the accelerated program of TVA, is now at a point where, in proportion to its total potentialities, it is much more under harness than is the Columbia.

For example, flood control on the Tennessee is almost complete. Just the addition of levees at Chattanooga will make the Tennessee shorelands safe against floods even half again as great as the greatest flood of record on the river.

Farmers and home owners who lived along the Columbia in May and June of last year and along the Willamette almost any winter know how remote is such control in the Northwest. Water-storage facilities proposed in the Corps of Engineers' comprehensive 308 Report, when approved and constructed, will reduce from 30.2 feet to 24.5 feet the Vancouver, Wash., crest of a flood of the proportions of that of 1948.

Dams to be completed in the next few years, however, are multipurpose projects for power production, irrigation, navigation, as well as flood control, and have relatively insignificant storage capacities. Thus, under present plans, the Northwest will have to wait for a long time for flood control of the effectiveness now available on the Tennessee.

A flood on the Tennessee, of course, is a relatively small matter compared to the Columbia torrents. The Tennessee's high stage at Muscle Shoals is 470,000 cubic feet per second, not much more than a third of the peak discharge of 1,240,000 cubic feet per second at The Dalles in the record 1894 flood.

WATER TRAFFIC VARIES

Construction of the Tennessee's navigation channel is complete from the mouth of the river to Knoxville, 630 miles upstream. Upon completion of the engineers' 308 Report program, years hence, the Columbia channel will extend only 495 miles inland from the ocean. However, there are now a total of 740 navigable miles on the Columbia and its tributaries, and water traffic on the system is heavier than on the Tennessee.

The Columbia, Willamette, and their tributaries carried 1,403,652,155 tcn-miles of cargo in 1946, more than three time the 434,103,757 ton-miles recorded on the Tennessee in 1948. There are many more miles of undeveloped waterway in the Northwest than in the Tennessee Valley.

TVA has attained almost complete development of the power resources of the Tennessee. TVA now controls generating facilities rated at about 2,600,000 kilowatts. Authorized for installation in dams already built is a capacity of 350,000 kilowatts.

TVA will also get an additional 441,000 kilowatts from the Corps of Engineers' Cumberland River dams now building and 375,000 kilowatts from the projected Johnsonville steam plant. There is room for generators of a capacity of 400,000 kilowatts in TVA dams, bringing the TVA power-production total to 4,166,000 kilowatts.

TVA engineers think there are no more than 1,000,000 kilowatts available in potential hydro development sites on both the Tennessee and the Cumberland.

The Columbia is now far behind the TVA stage of power development, but its potentialities are infinitely greater. Bonneville and Grand Coulee have a rated capacity of 1,600,000 kilowatts. McNary Dam, now in the second year of construction by the Corps of Engineers, will have an ultimate installed capacity of 980,000 kilowatts. Chief Joseph Dam will be even larger in power potential: 1,536,000 kilowatts.

The four dams projected on the lower Snake River will have a capacity of 1,255,000 kilowatts; Detroit and Big Cliff Dams, 116,000 kilowatts. This makes a total of nearly 4,000,000 kilowatts in engineer projects alone within the foreseeable future.

1970 GOAL HIGH

In addition, the engineers, the Bureau of Reclamation, and Bonneville Power Administration are seeking approval of a vast program that will bring Pacific Northwest federally financed power production to about 12,000,000 kilowatts by 1970. That potential is more than twice the best the Tennessee Valley region can hope for, but it's a long way in the future.

The job of transmission of power to consumers in rural ragions is only about 60 percent finished in the Tennessee Valley. There is little left to be done in this regard in the Pacific Northwest, where about 95 percent of the farms ere electrified.

The principles of TVA's farm program are applicable in the Northwest, according to F. L. Ballard, associate director of cooperative extension work at Oregon State College. He wrote me:

"The theory underlying the project (the TVA farm program) applies soundly to our conditions, particularly those existing west of the Cascade Mountains."

The conditions of which he writes include lack of phosphates in the soil. Production, investigation, and distribution of phosphate fertilizers is a major adjunct of the TVA farm program. The Pacific Northwest has great opportunities in this field, having at hand 75 percent of the United States supplies of phosphate ores.

The Northwest, like Tennessee, therefore, is important as a source of munitions. In the last war TVA produced more than half the Nation's elemental phosphorus for use in munitions from ore representing about 1 percent of the Nation's phosphate supply.

The two regions are similar in a kindred matter. Each has an immense atomic-energy plant which calls upon the Government-built power projects for untold amounts of energy.

IRRIGATION CONSIDERED

There are broad fields of activity, however, in which TVA experience can be of little direct guidance to development in the Northwest. A major factor in the Columbia Basin, for example, is irrigation. There is no such need in the Tennessee Valley. Drafted CVA legislation, therefore, contains special provisions designed to safeguard water rights as they exist under State laws.

Priority of water use is also altered by requirements in the Northwest. Under TVA, flood control and navigation get first call in the water-control program. In the latest draft of the administration's CVA bill preference for water use reads: Domestic, irrigation, mining, industrial, and atomic energy, in that order. Flood control, navigation, and power production come after.

TVA Director James P. Pope, one-time Senator from Idaho, which State has a number of irrigation and reclamation projects, told me in Knoxville:

"There is not the slightest doubt in the world that a valley authority can handle irrigation just as well as it handles all functions of TVA."

Stream-pollution control has made great strides in the Tennessee Valley. There is no comparable coordination of stream purification in the Northwest.

Fish and wildlife have increased in the development of the Tennessee. The fish there, however, differ from those of the Northwest. They do not have to swim upstream to spawn, and their flesh is much softer than the fighting game fish of the Northwest.

Both commercial and sports fishermen, who are seeking to safeguard the Pacific Northwest's fish life in development of the region's resources, look with scorn on the bass, crappie, and buffalo fish that so delight fishermen along the 10,000 miles of shoreland on TVA's slack-water lakes.

OTHER PROBLEMS ARISE

Nor does TVA have the problems of grazing lands and Indian lands. Its forestry program is on a small scale and consists of voluntary arrangements with private timber owners rather than actual administration of publicly owned timberlands. Its development of mining resources has also been on a scale much smaller than is possible in the Northwest, where lies a sizable portion of the Nation's undeveloped mineral wealth.

Scope of the proposed CVA legislation in such fields as those mentioned in the preceding paragraph is not yet known. It is considered probable, however, by some of those familiar with the drafting of the CVA bill that CVA will not have direct administrative responsibilities in land management, forestry, mining, and other activities not directly related to the river.

CVA may, however, have authority for budgetary coordination of activities that will be administered, as now, by agencies of the Departments of Interior and Agriculture.

It should be apparent to all who have followed me this far that the experiences of TVA, although in many cases not directly applicable to the Columbia Basin, do have pertinence to a study of proposals for a CVA. Just how much these experiences should govern the choice for or against a CVA I must leave to the reader.

It is entirely possible for one with a high opinion of TVA to have quite contrary views of CVA. Representative LOWELL STOCKMAN, for example, visited the Tennessee Valley a few years ago, and he told me in Washington last month that he thought TVA "the greatest thing ever done for the South." He will, however, probably oppose legislation for a CVA.

STOCKMAN'S friend, Senator ESTES KEFAUVER, of Tennessee, acknowledges the differences in the Columbia and the Tennessee; but he expressed to me the view that what was good for the Tennessee Valley at its lowest ebb should be even more beneficial in the rich lands of the Northwest. He will be a sponsor of CVA legislation in the Senate.

I shall leave it to TVA Chairman Gordon R. Clapp to close these articles. Said he:

"I do not hesitate to say that I believe an intelligent adaptation of the TVA idea—an autonomous agency with a clear assignment fixed upon it, an agency decentralized into the region and committed to real cooperation with State and local agencies—would work successfully in any great river valley of this country.

"But, if the TVA way is the road to heaven, it is not the only road."

Juvenile Delinquent

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. HELLER. Mr. Speaker, under permission granted me, I desire to call the attention of the House to an excellent article entitled "Juvenile Delinquent," written by a dear friend of mine, Hyman Barshay, Esq., who is the acknowledged leader of the criminal bar in the city of New York, a former assistant district attorney in Kings County who served with great distinction from 1929 to 1940.

Mr. Barshay taught law at the Police Academy of the city of New York from 1932 to 1934 and was an instructor in criminal law at the Brooklyn Law School in the city of New York.

I believe that the problem which Mr. Barshay discusses will be of interest to my colleagues, to law-enforcement agencies, and the great institutions which are compelled to cope with the situation he so ably treats.

Mr. Barshay's article reads as follows:

JUVENILE DELINQUENT

(By Hyman Barshay)

The voice is mine, but the tongue is that of the accused, unfortunately named, "Juvenile delinquent." I shall let the accused speak for himself:

"I am the composite juvenile delinquent: the boy and the girl, the child and the adolescent, the black and the white, the Christian and the Hebrew. I am a product of a cross section of America; I am the son of the poor and the daughter of the rich, and I am the offspring of the middle class. I am the sneak thief, the thrill-seeking girl, the stay-out. I am the bigot and the desecrator of churches and temples. I am the purse snatcher and the automobile thief, the disobedient pupil, and the 'hookey' player.

"My middle name is 'anti.' I am antisocial, antilaw, and antireligion. I seem to be anti-everything. My hero is the gangster, and my heroine the wise-cracking gunmoll.

"I live in slums. I see no trees. My room was intended for one, but it is occupied by four. It matters not if I come home late or not at all. My big brother is out with the boys, and my big sister with the girls. My parents are too busy to observe me, too indifferent to correct me, and too disinterested to guide me. I get little sympathy and less understanding. I run out of the house as fast as I can.

"I cannot distinguish right from wrong. There are none to set an example. Doing the wrong thing is often a temptation and always an adventure. I account to no one for time spent, things done, or left undone.

"School is a burden, and books merely take up space. I show little respect for my teacher, and less for my classmates. My classroom is overcrowded, and my classmates underfed. My teacher is too overworked to be concerned with my individual problems.

"The schoolyard is dark at night. The street corner, the poolroom, and the cellar club, became my hang-out. The community furnished nothing better, if anything at all.

"The church or temple is just another building in the neighborhood. The spirit within it missed me completely. It has been years since I have seen the inside of it.

UNIVERSITY OF MICHIGAN LIBRARIES

"I am confused and bewildered; I need help desperately.

"I am guilty of all these charges, but the guilt is not mine alone. I don't want to pass the buck, but you must share my guilt. You, neglectful parent, overworked teacher, selfish big brother, indifferent big sister, apathetic community—all of you—are more to blame than I.

"Reform school or jail is not the answer. Sending me there will rid you of me for only a while. I may even emerge worse than when I entered. Neither you nor I will gain by it.

"When the enemy from without struck at Pearl Harbor you united with lightning speed. The manpower of the Nation was harnessed. A nation at peace was transformed overnight to a nation at war. You spent billions for arms, ships, planes, ammunition, and material. That enemy was liquidated.

"I, juvenile delinquent, am your enemy from within. It is I who weakens the foundation of the community upon which your city, State, and Nation are built. It is of no use to conquer the enemies from without, and be conquered by the enemies within. Spare me the future of a gangster. A delinquent child is the forerunner of a racketeer. It has been wisely said, 'a journey of a thousand miles is begun by a single step.' Prevent me from taking that first step.

"You have talked a lot about juvenile delinquency. You have done very little. It is too late for theorizing. Let's get to work.

"Eliminate the slums in every section of your community. Make my house a home. Let me know the beauty of a tree, the fragrance of a flower.

"Priest, rabbi, and minister, teach me tolerance of my neighbor, and respect for his religion. Show me the beauty of all religion. Free my mind of prejudice, be it racial or color.

"Teacher, make my problem your concern. Share my thoughts; correct my views.

"Community, give me an interest in life, and make me a useful citizen.

"Give me a youth center, where I can relax and play; where I can rest and read. Where I can swim and box. Where I can wrestle and dance, or just look on.

"Bring there, men and women, authors and painters, doctors, lawyers, and others, who will serve me as an inspiration, and whose work I can try to emulate.

"When I'm wrong, don't mollycoddle me. Don't spare the rod. Discipline is good for me. I'll thank you for it in later life. It is easier to build a man than to reform a boy.

"Parents—it is better for you to begin while I am in the high chair, than for me to end up in the electric chair."

Victor and Walter Reuther

REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. BIEMILLER. Mr. Speaker, I join with the gentleman from Michigan [Mr. RABAUT] in voicing my indignation and horror at the attempted assassination of Victor Reuther 2 nights ago. Victor, and his brother Walter Reuther, both of whom have now been the subjects of such attempts, are two of the finest labor leaders in the United States, and I am proud to count them as close personal friends. They know how to fight totalitarians of all descriptions, whether Fascists of Communists.

These dastardly attempts to kill two of the finest citizens of our great country must be thoroughly investigated. If such assassination attempts remain unsolved the foes of good Americanism will be encouraged to make other attempts.

International implications may likely be found in the attempts to kill the Reuther brothers.

Like the gentleman from Michigan, I hope that the FBI will take an active role in this case and that the Attorney General will soon make such an announcement. It is high time the abilities of our most able agents are put on these cases.

Hon. Oswald Ryan, Member of the Civil Aeronautics Board

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. HINSHAW. Mr. Speaker, on May 5 Mr. Oswald Ryan was sworn in for a third term as a member of the Civil Aeronautics Board. Of the original five members of the Board appointed pursuant to the Civil Aeronautics Act of 1938, Mr. Ryan is now the only one still remaining on the Board, having participated in its formation and in the formulation of its policies through the past 11 years. His words are words of experience and wisdom achieved through service to Civil Aeronautics and to his Government. Mr. Speaker, I have the honor to present the remarks of Mr. Ryan made on the occasion of his being sworn in for his third term as a member of the Civil Aeronautics Board at Washington, D. C., May 5, 1949. Mr. Ryan said:

I would be without any sensibilities indeed this morning if I did not feel a deep sense of appreciation toward you who have evidenced your friendship and good will by coming here. All of you honor me by your presence and I am grateful.

The 11 years of this Board's life have been full and interesting years. While that experience has at times fallen short of being serenely pleasant and at times I may have wondered whether the principal compensations of public service were not criticism and even misrepresentation, there have nevertheless been some enduring satisfactions. The friendship and good will which are revealed here today must be numbered among them.

My years of service on this Board have been full and interesting years. In the first place, the subject with which we have dealt has had a creative aspect. Years ago Chief Justice Stephens and I sat in a Harvard law class where Prof. Bruce Wyman undertook to teach us the law of public utilities. You will recall, Mr. Justice, that he opened his course by describing public utility law as the glory of the imperfect. This was Bruce Wyman's way of saying that public utility law was in an early stage of development and that in dealing with this branch of the law one was dealing with a creative function.

Now, I think that Professor Wyman's description can be appropriately applied to the regulatory task on which the Civil Aeronautics Board has been engaged in the past 11 years. At the time this Board took over the control of American civil aviation there had been practically no substantive development of regulatory law and policy in this field, and the Board was confronted with the task of developing a body of regulatory law and policy to meet the needs of civil aviation. And since the techniques and concepts of public relations in other fields of public-utility enterprise were frequently found to be inadequate to the needs of a dynamic aviation development, the task before us provided the opportunity for some creative effort.

The work of the Board has had other interesting aspects. Unlike the Interstate Commerce Commission, the Federal Power Commission, and similar regulatory bodies, the Civil Aeronautics Board sits with the map of the world before it: It regulates American air-line operations not only in every American State and Territory but in the major countries of every continent of the world, save only Russia and the satellite states. Now since the world long ago accepted the doctrine of the national sovereignty of the air as a basic principle of international air law, the extension of American air lines into foreign countries raised important problems of both law and policy in the international field. The solution of those problems did not lie within the power of the United States or of any one nation; the problems called for cooperative international action. They made necessary the negotiation of treaties and agreements between this Nation and many other nations of the world. So the Secretary of State adopted the practice of placing one or more members of the Civil Aeronautics Board upon the United States delegations that were charged with the diplomatic task of negotiating the necessary international air treaties and agreements. Thus the members of this Board found themselves engaged in diplomatic as well as regulatory and developmental functions and through the years the members have played a major part in the development of the only body of international regulatory law which now exists for the control of international air transportation.

Now these are some of the tasks that have made membership on this Board an interesting and satisfying experience. But I think, my friends, that the most enduring satisfaction of all has been the consciousness, ever present in our minds, of the deep significance of our subject to the welfare of mankind. The airplane has become the greatest medium of man's dominion on this earth, and it is having a profound effect upon the lives of all peoples everywhere.

I am not thinking of the airplane as an instrument of war for dealing death and destruction among men. I am thinking of it as a beneficent messenger of commerce and good will; aiding in the development of the natural resources of distant lands; fostering the exchange among free peoples of the products of their toil; and, more important than all else, promoting world travel and the exchange of ideas among peoples, thus paving the way to a better understanding among the nations of the world. That is the ultimate destiny of the airplane, and I submit to you that no contribution it will be able to make to human welfare will be half so important as that which seeks to safeguard mankind against the tragedy of a future war.

Let's Speed Government Reorganization

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. KEATING. Mr. Speaker, one of the most important recommendations made by the devoted and hardworking men who comprised the unusually able membership of the Hoover Commission, had to do with the reorganizaiton of the Military Establishment. It has been estimated that the adoption of this proposal alone would result in an annual budgetary saving of more than a billion dollars. The other body yesterday passed legislation intended to make possible many of the reforms suggested by the Commission.

As pointed out in the accompanying editorial from the Washington Post, it is essential that early opportunity be afforded the House for debate and consideration of a similar bill, with complete freedom for both proponents and opponents to be heard.

Many of the Hoover Commission recommendations, perhaps 20 percent, can be effected through administrative action without any legislation whatever. There should be no delay in bringing this about. It would be appropriate for the President to divert from Members of Congress to the heads of executive departments some of the whip-cracking in which he has recently engaged to accomplish this objective.

As to those recommendations which require legislation, it is sincerely to be hoped that more than mere lip service will be paid to the devoted work and excellent recommendations of this Commission. Their great contribution to the cause of good government can be largely nullified and their devoted purposes frustrated if the only recommendations submitted to us for legislative action are those calling for increases in salary and personnel and involving added expenditures, and we are denied the privilege of passing on the large number of excellent proposals for consolidating departments, eliminating unnecessary Federal employees, and decreasing the cost of our sprawling bureaucracy.

Besides the Military Establishment, there is a most urgent need for long overdue reforms in the Post Office Department and in the matter of procurement of Federal supplies. In these categories alone, immense savings to the taxpayers can be brought about, always, of course, assuming that the enactment of appropriate legislation will be accompanied by competent and efficient administration of those laws, without which any reforms can be set at naught, and all efforts for economies rendered fruitless.

The country is aroused, and justifiably so, over the need for action. Every day's delay is costly. We should act, and act now.

HALFWAY POWERS

Unlike the Senate, which has been energetically debating the broadening of the powers of the Secretary of Defense, the House so far has scheduled no hearings on the bill. The House Armed Services Committee cannot be accused of dawdling, for it has been busy with many other items of military legislation. Nevertheless, if there is to be House action this session, the committee will have to move promptly because of the legislative jam that inevitably bottles up Congress prior to adjournment.

We believe that the bill, which embodies many of the recommendations of the Hoover Commission respecting the definition of defense authority, is a necessary measure that ought to pass. Indeed, we should like to see even more extensive changes, such as the substitution of Assistant Secretaries of Defense for the present service secretaries and the creation of a single Chief of Staff instead of merely a chairman of the Joint Chiefs, as Mr. Forrestal himself advocated shortly before his resignation. Nevertheless the strengthened and decisive authority which the present measure would give the Secretary of Defense is an important step forward.

There are, of course, many sincere reservations on such a centralization of authority, and the holders of these views deserve to be heard. What is essential is that the bill emerge from the committee in time to permit full debate on the floor and at the same time provide the definite decision on which defense planning depends.

Federal Spending Facts—Proposed 1950 Outlays for National Defense

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement that was issued by the Council of State Chambers of Commerce. This is a very revealing statement, and it supports my contention that the military authorization that was recently passed by Congress can be reduced substantially. During the debate on the ECA appropriation I pointed out the necessity for cutting our tax bill by the substantial amount of seven to eight billion dollars. I further pointed out that these savings can be made on the appropriations for the foreign-aid program and on appropriations for the military.

FEDERAL SPENDING FACTS

PROPOSED 1950 OUTLAYS FOR NATIONAL DEFENSE

To maintain the National Military Establishment of the United States next year—the fifth year of peace after World War II—the House of Representatives has approved cash appropriations and contract authorizations amounting to $15,909,000,000. H. R. 4146, the House-approved National Military Establishment appropriation bill, now awaits Senate action.

The following break-down shows what each of the armed services would receive under H. R. 4146 for the fiscal year 1950, as compared with the amounts granted by Congress last year for the current fiscal year 1949:

National Military Establishment

[In millions of dollars]

	Appropriation for 1949	President's request for 1950	Approved by House for 1950	Increase (+) or decrease (−) by House over 1949
CASH APPROPRIATIONS				
Army [1]	5,714.0	4,604.9	4,481.8	−1,232.8
Navy	3,662.0	4,408.0	4,375.3	+713.3
Air Force [1]	896.8	4,000.9	4,222.9	+3,326.1
Other	181.0	206.1	192.7	+11.7
Total cash	10,454.4	13,219.9	13,272.7	+2,818.3
CONTRACT AUTHORIZATIONS				
Army	220.0			−220.0
Navy	558.6	643.5	643.5	+84.9
Air Force		1,415.0	1,992.8	+1,992.8
Total military appropriations	11,233.0	15,278.4	15,909.0	+4,676.0

[1] Army appropriations for 1949 include 1,734.4 million dollars for support of the Air Force. In reality, therefore, cash appropriations for the Army were increased 501.6 million dollars instead of decreased 1,232.8 million dollars, and Air Force appropriations were increased 1,591.7 million dollars instead of 3,326.1 million dollars.

Large sums wanted for procurement and construction

Of the proposed $4,676,000,000 net increase in cash appropriations and contract authorizations combined, $4,110,500,000 represent net increases in procurement and construction for the three services. The major items are as follows:

Cash appropriations for Army ordnance have been increased from $610,000,000 in 1949 to $730,000,000 for 1950. Navy ship construction has been upped from $56,800,000 to $168,000,000. For Navy aircraft procurement the House has allowed $523,100,000 in cash appropriations and $576,500,000 in contract authority, as against nothing for 1949. Aircraft outlays for the Air Force for 1950 include $1,100,000,000 in cash appropriations and $1,992,800,000 in contract authorizations.

How much is $15,900,000,000?

In World War I, the two big spending years were 1918 and 1919. In those 2 years combined the United States expended a total of $17,160,000,000 on its armed forces—only a billion and a quarter dollars more than the $15,909,000,000 wanted to maintain our armed forces in 1950, the fifth peacetime year after VJ-day.

This figure of $15,909,000,000 exceeds the total estimated amount of taxes collected this year for the support of all our State governments, all our county governments, all our municipalities, and all our public-school systems combined.

The $15,900,000,000 is more than the aggregate expenditures of our Federal Government for all purposes in the first 110 years of its existence, from 1789 through 1898—including the financing of three major wars.

Fifteen billion nine hundred million dollars not the whole story

National defense today includes, for the United States at least, much more than the maintenance of the National Military Establishment. It includes our participation in the Atlantic Pact, which involves cash appropriations of $1,130,000,000 and contributions of surplus war materials toward the arming of friendly North Atlantic nations—all subject to congressional approval. What the Atlantic Pact will cost us in subsequent years has not yet been disclosed.

UNIVERSITY OF MICHIGAN LIBRARIES

Then there are the foreign-aid programs—Economic Cooperation Administration ($4,198,000,000),[1] Government and relief in occupied areas $1,000,000,000), and other foreign aid totaling $320,000,000—a grand total of $5,518,000,000 of appropriations for 1950. The primary purpose of all these programs, according to their sponsoring agencies, is national defense, although humanitarian and economic objectives also have a place in the picture here.

Taking all these outlays together, we find that it is proposed to appropriate an overall total of $22,557,000,000 for the broad purposes of national security for the fiscal year 1950. This is more than 10 percent of the national income.

Dr. Nourse suggests a blueprint

Government expenditures of this size naturally have serious implications for the national economy as a whole. These were admirably reviewed recently by Dr. Edwin G. Nourse, Chairman of the Council of Economic Advisors to the President.

Pointing out that some people contend that a military budget of $15,000,000,000 provides a welcome prop against sagging commodity and labor markets, Dr. Nourse warned that this idea has some validity but requires important qualifications. Observing that large wartime and postwar outlays for national defense have compelled the curtailment or deferment of many public works and other domestic programs, he said, "All these domestic civilian needs are still there, ready to employ any manpower or block of materials made available by reduction of preparedness effort."

He added: "A defense program that is guided exclusively by the most perfect military considerations may impair economic and financial preparedness, or give fuel to the development of a fifth column in our midst and thereby undermine its own effectiveness."

Dr. Nourse urged an integration of military, Atlantic Pact, and ECA activities so as to buy better security at the same cost or even at lower cost. This meant, he said, that we must rework the whole operational and financial plan so as to gain maximum security with minimum strain on our economy. The problem needs to be handled with unsentimental business efficiency.

Fantastic waste in armed services

Waste of funds, materials, and manpower in the armed forces is nothing short of fantastic. Every survey, hearing, and investigation on the subject of national defense activities has disclosed new evidences of mismanagement, duplication, wasteful interservice competition, and an almost universal lack of comprehension by the military "brass" of the value of tax dollars.

The findings of the Commission on Organization of the Executive Branch offer the most recent contributions in this regard. Testifying before the Senate Armed Services Committee a short while ago, Herbert Hoover, Chairman of the Commission, indicated that savings of at least $1,500,000,000 could be made in the National Military Establishment through adoption of the budgetary reforms proposed by the Commission. How many more billions could be saved through unification of the three armed services can only be guessed at.

Instances cited by the Hoover Commission's task force showing how national defense funds have been and are being wasted would fill far too many pages of a single Spending Facts bulletin. So, we present only a few which can be simply stated:

Of the 86,000 tanks produced in the United States during the war, 25,045 were on hand at the end of the war according to Army statistics, but the Army could only account for 17,875.

Under the requested 1950 National Guard appropriation, an error of $30,000,000 was caused by a clerical mistake of inserting a "3" before the item of $9,000,000 for 155-millimeter howitzers.

Bethesda Naval Hospital gets funds from 12 separate appropriations, with no summary anywhere to show what the hospital's overall costs are.

The Government sought funds to build 910 family houses in Alaska for Air Force personnel at a cost of $58,350 each, 828 houses in Guam at a cost of $48,000 apiece, and 7,880 houses in the United States at $18,600 apiece.

One manufacturer furnished a replacement part to the Navy at $63 each, but the same item, under a different Navy identification number, could have been procured from the prime manufacturer at $9.06 each.

National defense budget a "sacred cow"

Congressional efforts to cut excessive spending in the armed forces' budgets are made difficult by the fact that appropriations for National Defense are viewed by large segments of the public as a "sacred cow," especially during these days of cold war.

The admirals and generals certainly do not try to discourage this public attitude. On the contrary, they repeatedly utilize their huge propaganda and lobbying machines—financed by the taxpayers largely—to break down Congressional resistance to their excessive requests. One recent instance was the campaign of the Air Force to obtain from Congress larger appropriations than the President was willing to recommend.

Real headway against unduly large national defense expenditures can be made as soon as Congress feels that a more critical approach on its part to such expenditures will have public support.

ALVIN A. BURGER,
Research Director.

[1] This does not include funds for the last quarter of fiscal 1949 which are yet to be appropriated and are estimated by the President at $1,047,000,000.

Earl Godwin's Comment

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. GOSSETT. Mr. Speaker, most of us are acquainted with Mr. Earl Godwin, who has long been one of the outstanding newspapermen and radio commentators of Washington. Mr. Godwin's honest, factual, and humanitarian approach to the news has won him the respect and confidence of Congressmen for many years.

Among those who have commented upon the tragic events which led to the untimely death of the Honorable James Forrestal, none have been more realistic and honest in their appraisals than Mr. Earl Godwin. In his broadcast of last Monday, he had this to say:

One reason why James Forrestal ended his life was the pounding of vast cruelty inflicted on him by editors and commentators who had an ax to grind or an exclusive scandal to sell or spout; also, a flood of abusive letters reached him because of his stand on Middle East oil.

At least one organization of women, not far from Washington—in Silver Spring, to be exact—is determined to raise its combined voice against the "hounding to death" (they use that expression) of a public servant. Women can snowball an idea into an avalanche.

Mr. Speaker, all of us should hope that the time will soon come in America when public opinion will not tolerate slanderous or libelous abuse of sincere public officials who courageously endeavor to do their duty and to serve their country.

Jim Forrestal

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. HÉBERT. Mr. Speaker, no finer tribute could have been paid James Forrestal than the one paid him by the eminent George Sokolsky in his broadcast last night over the American Broadcasting System.

I have obtained the script of that broadcast from Mr. Sokolsky, and, with the permission of the House, I submit here for all of you to read:

Good evening. This is George Sokolsky speaking on the forces and events of these days.

Wars take their toll in the minds and lives of men long after the fighting is over. The broken and maimed, the crippled, the psychopathic, the disillusioned and hopeless remain to face the rest of their days. And their families have to face them, too.

And not all the heroes of any war are the soldiers and sailors and air men. Many a man and woman, during the last war, sat at a desk, working long and trying hours in Government or private offices, or in factories, making the things that soldiers need. And many a mother won her first gray hairs worrying about her son. Heroism, sacrifice, service is limited to no one group.

For nine long years James Forrestal so labored with no holidays, no rest, no peace of mind. He served his country as Assistant Secretary of the Navy, as Secretary of the Navy, as Secretary of Defense. A tireless, energetic, nervous worker, he pushed himself as he pushed others, himself even more than others. He came into office to serve a country unprepared for war. He labored to get his country ready. He had to face Pearl Harbor with the frightful errors that brought upon us that calamity. He directed the Navy throughout the war.

And when it was over, he took on the task of organizing and directing the unification of the armed services—a task which involved constant quarrels, back-biting and political chicanery, all of which became his daily fare, and all of which he somehow had to fight off. Every act led to personal attack and abuse and to that frightful dissection of motives and the gossip of columnists and commentators which have become so great a trial not only to public officials but to sensitive persons in every walk of life.

James Forrestal was a patriotic American. He gave up a profitable banking business to serve his country. His reward was an abuse that struck at his sensitivity and dignity. He became very tired. "Occupational fatigue," they diagnosed his illness. Perhaps it would have been better to say that he suffered from sadness and disillusionment.

I last saw Forrestal on March 17 at the dinner at the Hotel Astor in New York, when he addressed the friendly sons of St. Pat-

rick. We talked for a very few moments. He was all skin and bones. On that occasion he made a fervent plea that everyone should support his successor as Secretary of Defense, Louis Johnson. It was as though he were saying: "This job broke me. Don't let it break my successor."

There can be no question but that on that occasion, St. Patrick's Day, Jim Forrestal was a well but frightfully tired man. He was out of office and about to take a rest.

Forrestal did not wish to leave the office of Secretary of Defense at that moment. He was serving on the Hoover Commission on the organization of the executive branch of Government and he wanted to see its report on the armed services through Congress. His very close friend, Ferdinand Eberstadt, had prepared that report and it proved the need for new legislation for tightening our defenses. Forrestal expected to be permitted to see the Eberstadt report through Congress in the form of legislative enactment.

I know that on the Sunday previous to the acceptance of his resignation, he had not expected to leave office. For on that Sunday night, he spoke of things to do about the Hoover Commission's work as though he were going ahead. It must have been a frightful shock to Forrestal to discover that after all his labors, he was unwanted. Tired as he was, it knocked him down.

During the past month I had kept close to this situation. I knew he was improving. I even looked forward to visiting him. Then I heard that he was being psychoanalyzed, for it was suspected that a great hurt was bothering him. Suicide had been in his mind.

James Forrestal was a sensitive, intellectual person, deeply read in philosophy and literature. His fine memory held lines of poetry. Last night he read Sophocles and he must have seen those lines in Ajax, which speak so bitterly of human friendship:

"I for my own part, having learnt of late
Those hateful to us we are not to hate
As though they might not soon be friends again,
Intend to measure, now the services
I render to my friend, as if not so
To abide forever; for of mortals most
Find friendship an unstable anchorage."

And there, too, he must have read this:

"Men of perverse opinion do not know
The excellence of what is in their hands,
Till some one dash it from them."

And also, he read Alcestis by Euripides which to offset the pessimism of the night contains these lines:

"Old men's prayers for death are lying prayers, in which they abuse old age and long extent of life. But when death draws near, not one is willing to die, and age no longer is a burden to them."

Yet life had for him lost its meaning and its fascination. To live without prospect of service was not to live. He could not devote himself to futility, to watching the sun rise and set each day and to wondering what depth of gloom the morrow would bring. He ended his life.

We, as a people, are merciless with our public officials. We wear them out. We demand of them Herculean tasks and afford them little compensation in money, in honors, in those dignities of person which are often more valued than wages. We ignore their virtues and speak only of their errors of judgment or acts. Selecting our own governments, we choose only too often the least capable and then expect of them such wonders as they cannot perform. When so able a man as Forrestal agrees to serve us, we tear him apart, rejecting his competent counsel and forcing upon him the indignity of defending his motives. We throw him to the wolves of partisan politics and subject him to the caprices of politicians who enjoy office more than honor, and the game, as they call it, more than the truth. We batter our best men and praise only those who possess charm and who can smile like a movie actor on demonstration. Our gratitude is not for the constructive minds and personalities; our praise is for him who is most sensational and who outpromises his competitors for public applause.

There is no national dynamics in that, no national strength, no enduring greatness. For what we say to the competent is that the incompetent are just as worthy, and more so if they can amuse. Our officials waste the little strength and the few precious years that God has given any of us in appeasing their opponents and in winning public favor, when they should be permitted to work at their tasks with unabated fervor.

Forrestal, in my memory, will never be one who committed suicide. He was killed in service. He died a hero and a martyr.

And as the years move on, we shall more and more wonder what for. During the days of the war, few raised their voices to criticize Tehran and Yalta and all the crimes committed in the name of democracy and peace. I know that Forrestal did not agree with the crimes committed against such countries as Poland and China. But he went along doing the job he felt he had to do. It must have riled his deeply patriotic sense to see his country subordinated in policy to Russia. A competent student of Marxism, he knew how evil that system can be and as one reared a Christian, he realized, as he told me last summer, that our civilization must be fought for every day, if it is to be preserved. He knew that we were not fighting for our civilization.

He loved the Navy and believed in its great traditions and values. He realized that with every dramatic and startling development in aviation, more and more people would be influenced to believe that the air arm would save us in the next war. And while he accepted fully the value of air fighting, he still believed the Navy essential. It was the struggle, between air and Navy that wore him down. It was that fight that, in the end, killed him.

I spoke to you of as competent an official as this country has ever had.

James Forrestal was born in a small town, Beacon, N. Y. His was an Horatio Alger rise in the big city where he became a leading banker and eventually a high-ranking public official. His was a quiet disposition, somewhat aloof.

Some believe that they die. But nothing in God's universe dies. Nothing disappears. Nothing is lost. Life is eternal and everlasting.

And Forrestal's memory will be crowned by his work for his country in the trying days of the past 10 years. It was a life not wasted.

Thank you. This is George Sokolsky. Good night.

Rural Roads

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1949

Mr. TEAGUE. Mr. Speaker, I have been interested in the possibilities of providing additional Federal grants to the States in an effort to accelerate our rural road-building program which was interrupted during the recent war.

On January 5, I introduced legislation which would supplement the present Federal Aid Road Act and if enacted into law would provide additional assistance to States for their rural-road programs.

On April 27 the Senate Public Works Committee held its hearings on similar legislation and I took advantage of the opportunity afforded me by appearing in support of these bills. It is my hope that we will be successful in providing an adequate rural-roads program during this session of Congress.

Under leave to extend my remarks in the RECORD, I wish to include a House concurrent resolution adopted by the Texas Legislature which is clear indication that such a rural-roads program will meet with its full approval:

House Concurrent Resolution 76

Whereas it has come to the attention of the Texas Legislature that the National Congress has under consideration possible legislation that would make available to the States additional Federal grants for the construction of farm-to-market roads; and

Whereas the Texas Legislature has just enacted into law senate bill No. 287 making available from State sources additional funds for the construction of farm-to-market roads which funds would be available for the matching of such possible additional Federal grant; and

Whereas the Texas Legislature considers it of primary importance that additional mileage of farm-to-market roads be constructed as early as possible in order to better serve our rural areas and to develop all-weather school-bus routes and mail routes: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That we urge careful consideration of legislation making available additional Federal grants for the construction of farm-to-market roads, and that a copy of this resolution be sent to all Representatives of the State of Texas in the National Congress and members of the subcommitte on roads of the Public Works Committee of the United States Senate, with the statement that Texas is ready and willing to match such possible additional Federal grants when they are made.

Many "Foreign" Places Within State's Borders

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1949

Mr. SADLAK. Mr. Speaker, the Hartford (Conn.) Times for Monday, May 23, 1949, contained a very interesting article for which Dean Arthur H. Hughes, of Trinity College, Hartford, is responsible.

It is commended to my colleagues as an example of the unusual that may be found in the Great Constitution State.

MANY "FOREIGN" PLACES WITHIN STATE'S BORDERS

Nutmeggers, without going outside the State, can in a single day make a tour through Canada, Egypt, Hungary, Palestine, Poland, Scotland, and Siam. Furthermore, they can take side trips to Algiers, Berlin, Brunswick, Damascus, Dublin, Hamburg, Hanover, Jerusalem, Lisbon, Quebec, and Riga.

So says Dean Arthur H. Hughes, of Trinity College, who has taken the map of Connecticut apart and cataloged some 10,000 place

UNIVERSITY OF MICHIGAN LIBRARIES

names ranging from Abbey Brook to Zogg Brook. And, contrary to popular opinion, only 4 percent of the names are of Indian origin and only 6 percent were imported from Great Britain.

Chestnut Hill, say Dean Hughes, is tied with Prospect Hill as the place name occurring most often in the State. There are 18 of each.

The Bay State influence crops up in 11 Bostons in Connecticut, including New Boston and Little Boston, 3 Bunker Hills, 5 Beacon Hills.

"What with Devil's Hopyards, Satan's Kingdom, and the like," Dean Hughes says, "I find 12 places in Connecticut that are literally the property of the Prince of Darkness, but I am sorry to report that I can find no corresponding and compensating appellations that belong to the side of the angels, with the exception of Promised Land in Seymour."

Dean Hughes really gets down to the oddities when he tells of Hardscrabble in Warren and Pinchgut in Danbury "reminiscent of the hard times encountered by the early settlers." Then there's Bangall in Stamford, named for the noise made by a tin shop once located there, and Dog's Misery, a swamp in Meriden "where many a member of the canine family has come to grief."

The toughie that would break up any spelling bee is Naromiyocknowhusunkatankshunk Brook in Sherman. "It is spelled with 29 letters," comments the Trinity researcher, "and I understand that the State highway commissioner has a problem in maintaining signs at culverts where it is crossed by roads."

Of course, Podunk in South Windsor is mentioned along with the comment that it's too bad there is no post office there to add to the curious and unusual postal addresses in the Nation.

And anyone going fishing who says he's headed for Roaring Brook may be at any one of 11 places in the State. As for Mill Brooks, there are 14 of them.

A Modern Tragedy

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. HÉBERT. Mr. Speaker, from time to time I have taken the privilege of directing the attention of this House to editorials from the New Orleans Item.

Today I have asked the privilege of directing your attention to another editorial from this great newspaper which demonstrates that Jim Forrestal belonged to no particular section of this Nation but belonged to the whole country.

A very good friend of mine, Bill Korns, wrote this particular editorial. As a friend of Jim Forrestal's I deeply appreciate the deep insight and understanding of this man's character by Bill Korns. It is a human, living editorial and one of the most profound pieces of writing that has ever come to my attention.

It could well be an editorial about many other individuals possessed of the same sensitive, deep nature of Jim Forrestal. It could well be an evaluation and appreciation of who might even be our neighbors.

It is an editorial as deep and understanding as Jim Forrestal was in life, as unforgettable as Jim Forrestal will remain in death.

The editorial:

A MODERN TRAGEDY

The universal shock caused by the death of James Forrestal is in keeping with the stark tragedy of his last act. Sophocles, to whom he turned in his darkest hour, never penned a more heart-rending or revealing portrait of the mind in torment than was acted out in life and in death by this American patriot.

It is difficult, if not impossible, for men and women to achieve real understanding of human actions unless they have experienced them. It is both a physiological and psychological fact that every person has his breaking point. But very few of us are ever brought face to face with the crucial test, and we become slightly smug, inclined to overrate our personal woes and underestimate our fellow men. The genius of the Greek tragedies lies in their power to awaken a degree of insight into the human spirit, with all its capacity for strength and for weakness. The experience of James Forrestal should provide a similar stimulus.

Here was a man who, until his arrival on the national scene almost 9 years ago, had trod the well-worn American path to personal success. Born of immigrant parents, he had worked up to a leading position in the American financial world while still a comparatively young man. When he enlisted in Government service in 1940, at the urging of President Roosevelt, there was nothing to indicate that he might not soon be back at his desk in Wall Street.

But circumstances dictated otherwise. His executive ability combined with marching events determined his choice as Under Secretary of the Navy. War broke out and thrust upon his shoulders the immense burden of building a Navy to meet and defeat the enemy. Even here, however, he could indulge to some degree his passion for anonymity.

Then in 1944 Secretary Frank Knox died, and James Forrestal became his logical successor. His responsibilities increased at once and continued through victory and demobilization. But the time when he and countless others might lay down their heavy tasks and return to the more leasurely pursuits of civilian life, never arrived. Events again conspired to return this Nation to a state of watchful preparedness. When Congress decreed unification of the armed services, President Truman called on him to be our first Secretary of Defense.

How well he performed that unparalleled and thankless task can best be left to historians of the future. For the heat of the criticism heaped upon him during the past 2 years has yet to cool. The fact is that few persons outside the Defense Establishment can have any notion of the degree to which interservice rivalries and moss-encrusted traditions have blocked the road to early unification. But James Forrestal patiently laid the foundations of an organization which we have reason to believe will eventually bring order out of chaos.

In the process, he endured silently the slings and arrows of the backbiters and armchair critics. Perhaps had he been capable of retorting in kind, the mounting pressure would have been eased. Conscientious to the nth degree, selfless in his devoted application to the job before him, his mind could find no rest from the worries of the job and the nagging insistence of his detractors. They proved too much and he collapsed. He had reached his breaking point.

But it is in the denouement that true tragedy emerges. There was to be no happy ending, with mind and body restored to health and usefulness through long convalescence free of the responsibilities of office. Although he had handed on to another his back-breaking assignment, and was receiving the best of medical care, he could find no release from the accumulated tensions of 9 years in the service of his country. In his extremity, death at his own hand offered the only avenue.

The American people owe an unredeemable debt of gratitude to James Forrestal. All will agree with President Truman's statement that he was "as truly a casualty of the war as if he had died on the firing line." But we also owe to him the understanding born of humility and charity. There will be many persons whose heads are bowed with the thought, "There, but for the grace of God, go I."

Reorganization of the Executive Branch

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. TEAGUE. Mr. Speaker, the Congress is called upon to make many important decisions and to see that these decisions are carried out and placed into operation. The Congress took a step in the right direction when it authorized a commission to study our greatly expanded executive branch to determine where services could be improved, duplications eliminated, and savings for the taxpayers effected.

The Hoover Commission has completed its work and has submitted its reports on the reorganization of the executive branch to the Congress. I believe that this Commission has accomplished a great service to this country and I trust that we will soon see placed into operation many of the changes suggested.

Congressman GEORGE SMATHERS, of Florida, has made a careful study of the Hoover Commission reports and in a recent radio address to the people of Florida he has clearly stated the necessity of reorganizing our executive branch. I invite you to read the speech of COL.GRESSMAN SMATHERS which I am having placed in the RECORD under leave to extend my remarks:

HOOVER COMMISSION REPORTS

Several weeks ago I visited the former naval air station at Banana River, Fla. That's in Brevard County between Cocoa and Melbourne. The former navy base is now to be used by the Air Force, in conjunction with the Navy and Army, as an experimental testing station for guided missiles. While touring around the base, I was shown through a large warehouse which contained thousands and thousands of articles of every description: Nuts, bolts, beds, iceboxes, tires, airplane engines, umbrellas, and so on.

There were several dozen men working in the warehouse, and it was obvious that they were taking an inventory. I asked the Air Force officer who was showing us around, "Didn't the Navy leave a list of what was in here when this base was turned over to the Air Force?" He answered, Yes, the Navy had given the Air Force a list of the articles in

the warehouse but that the Navy and Air Force have different designations for the same articles so that the Navy list meant nothing to the Air Force. The Air Force men could examine the Navy's list of inventory, but because the Air Force called things by different names and numbers than did the Navy, the Navy list was meaningless; it might as well have been written in Chinese and it was, therefore, necessary to inventory everything again and redesignate it at a cost of some $50,000.

This little incident is shocking. It points out a most wasteful and senseless practice which daily goes on but it could be multiplied hundreds of times and the sum total of the waste is breathtaking to even imagine. Large-scale inefficiency, wide-spread carelessness, unnecessary red tape, unbelievable duplication, and inexcusable extravagance are today rampant in our Government agencies. As a result, you and I, as taxpayers, are paying several billions of dollars in taxes each year which could be saved. This is not a wild charge; it's a conclusion based on the Hoover Commission reports and on statements of the Comptroller General of the United States, who, as chief Government accountant, knows more than any other person about how your tax dollar is spent.

Our Federal Government is the world's largest business and each American holds a single share of stock in that business. We have a right to expect—but we should not assume—that our Government will be run as economically as possible.

The Constitution divides the Government into three branches—the judiciary, the legislative and the executive. The Congress creates agencies, boards, departments and commissions and upon their creation they form a part of the executive branch of government. So to study the operation of our Government—from an efficiency standpoint—we must analyze the executive branch, which is headed by the President.

During 160 years our population and production have increased tremendously, but so has the size of government and particularly the executive branch. Today the executive branch employs 2,092,180 people; now hold onto your hats; there people are distributed into 9 departments, 104 bureaus, 12 sections, 108 services, 51 branches, 460 offices, 631 divisions, 19 administrations, 6 agencies, 16 areas, 40 boards, 6 commands, 20 commissions, 19 corporations, 5 groups, 10 headquarters, 20 units, 3 authorities, and 263 miscellaneous and functionally designated parts. No doubt George Washington and Thomas Jefferson have rolled over in their graves many times when contemplating this maze and galaxy of governmental agencies.

President Franklin D. Roosevelt recognized this problem. In 1937 he said, "The executive structure of the Government is sadly out of date. * * * Neither the President nor the Congress can exercise effective supervision and direction over such a chaos of establishments, nor can overlapping, duplication and contradictory policies be avoided."

When President Roosevelt made that very sage observation the Government was only spending $8,000,000,000 a year, whereas in the present fiscal year our governmental activities will amount to $40,000,000,000, so that the problem as stated by Roosevelt has multiplied five times.

Two years ago the Congress created a Commission to study the executive department and to submit plans for bringing order from chaos, economy from waste. The Commission was to consist of six Democrats and six Republicans. President Truman selected as Chairman of that Commission ex-President Herbert Hoover, which has resulted in its being popularly known as the Hoover Commission. From January to May of this year the Commission submitted its reports to Congress in 18 installments. The findings and recommendations are of paramount concern to every citizen of the United States.

The thorough studies made by the Commission revealed in detail what had been generally realized—that our Government is full of duplication and contradiction, carelessness and inefficiency—all resulting in gross waste.

For example, two different Government agencies, the Army engineers and the Bureau of Reclamation, each drew up plans for the building of a reclamation project at Hell's Canyon, Idaho. Each set of plans cost the taxpayers a quarter of a million dollars. Strangely enough, the plans differed in many essential particulars and by over $75,000,000 as to the cost of construction. On one recent occasion the Congress appropriated money for a project in the Middle West on the assumption it would cost $44,000,000—it finally cost $131,800,000. The Hungry Horse project in Montana grew from an estimated $6,300,000 to an actual cost of $93,500,000—more than 15 times the original estimate.

In a single county in Georgia it was discovered that there were 47 employees of 7 separate Federal field services advising 1,500 cotton farmers.

Construction costs of Government hospitals run as high as $51,000 per bed as compared with an estimated $16,000 per bed for voluntary or private hospitals.

In a private insurance company each employee handles an average work-load of 1,762 policies, yet in the Veterans' Administration each employee handles only an average of 450 policies. In other words, it takes over four times as many employees for the Veterans' Administration to handle the same number of policies as it does in a private insurance company. Although privately owned insurance companies pay the vast majority of their death claims within 15 days after notice of death, the average time for the Veterans' Administration to pay a death claim is 80 days.

The Hoover Commission found that personnel difficulties are the roots of much of the waste in our Government. Frustrating red tape, cumbersome recruiting machinery, low pay scales, and little opportunity for advancement prevent the Government from securing and keeping able workers. On the other hand, it is too difficult to get rid of incompetent or superfluous workers. In one bureau checked, 24 subordinates receive as much salary as their chief. Inexperienced help start at salaries not so many thousand dollars below the maximum that can be possibly earned after years of experience. It takes an average of 7 months to fire an incompetent worker. Some have been known to appeal and hold on to their jobs as long as 17 months.

Carelessness of personnel accounts for considerable loss to the Government each year. For example, one agency paid a bill twice in the amount of $20,250. One Government inspector accepted what was supposed to be a 25-ton crane but was later found to be an 11-ton crane, with a resultant loss of $6,534. The Department of Justice is now trying to recover about $2,000,000,000 overpaid to transportation companies during the last war.

Poor accounting systems are also responsible for millions of dollars wasted each year. The maze of figures—with no rhyme or reason—which attempt to explain Government expenses are wholly inadequate and fail to give Congress and the country a clear picture of what is happening to the tax dollar.

Careful examinations of the budget show that bureaus often cost much more to operate than would at first appear. For example, one particular service receives an appropriation of $26,000,000 a year for its operation, but it also draws on funds from other appropriations to the extent that it actually costs $43,000,000. Each year the President recommends in his budget and the Congress appropriates money to the Bureau of Mines for operating rescue cars and aid stations and for the investigation of accidents. The amount appropriated this year was $1,175,000, yet the Bureau of Mines discontinued this service over 2 years ago and the funds so appropriated are being divided among five other activities without notice being given to the Congress. The result is that, by merely examining the appropriations, no one could tell where the money is really going.

Many Government corporations invest their surpluses in Government bonds and collect the interest on which they operate. The Congress, of course, appropriates money to pay interest on bonds and, therefore, is actually appropriating money twice to operate the same Government corporation, and without knowing it. For example, the Panama Railroad, a Government corporation, piled up a surplus of $10,000,000 which it invested in bonds instead of returning it to the Federal Treasury. The results of such fancy and deceptive bookkeeping is nothing short of confusion compounded, and makes it next to impossible to either get an accurate picture of, or properly control, Federal spending.

In its 18 reports to Congress the Hoover Commission has made specific recommendations for correcting this maze of incompetency and inefficiency which is now corroding our Government. Since the President must work as the head of the executive branch, the actual reorganization should be left up to him. However, he must have congressional authority to make the needed changes so we in the House passed a bill some time ago authorizing the President to reorganize the executive branch. The Senate last week, after a long delay, passed a similar bill.

The House and Senate bills differ in that the House bill would permit the President to make any reorganization he thought desirable, subject to a veto of both the House and Senate within 60 days. However, the Senate bill would permit either the House or Senate to veto the President's action. I don't think the Senate action advisable, and it reflects the effective propaganda barrage that some of these agencies can put out. They are afraid they will be eliminated and want to check the President's authority to reorganize as much as possible.

Reorganization is—like the weather—something everybody talks about but does nothing about it. Every bureaucrat will readily admit that reorganization is necessary but he will always add "leave my department alone." With Government reaching unprecedented size—with necessary Government expenditures requiring more and more money—we can no longer afford wasteful losses through inefficiency. When Government was a small enterprise, waste was comparably a mere trickle. But today that trickle has become a raging swollen Mississippi River amounting to waste too tremendous to be borne by already overburdened taxpayers. We must stop up the leaks—and do it now.

The Hoover Commission has accomplished a notable service for our country and we should lose no time in taking advantage of its findings and recommendations. It will ultimately mean money in your pocket and mine, for if we restore order and competency to our Government—to borrow from Shakespeare, as day follows night, so will economy follow efficiency. You must keep on this project by insisting that your Congressmen and Senators support the Hoover Commission findings without reservations or qualifications.

UNIVERSITY OF MICHIGAN LIBRARIES

Mr. Bowles' Formula for Unemployment

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks, I desire to include an editorial from the New Haven (Conn.) Evening Register of May 20, 1949, entitled "Mr. Bowles' Formula for Unemployment."

My colleagues will recall the many occasions, since the beginning of the Eighty-first Congress, wherein from the well of the House I invited their attention to the increasing number of claims for unemployment benefits reported, in accordance with law, each week by the responsible authority of the State of Connecticut, namely, the commissioner of labor.

Realizing that growing unemployment meant longer lines of claimants, who had to spend much time in line in order to have their claims processed due to a lack of personnel in field offices, I sought additional funds to be sent back to the States in order that they might provide adequate personnel to cope with the situation.

Of course, I have reference to my amendment of $14,000,000 in H. R. 2632, the first deficiency appropriation of 1949. This amendment failed of passage in the House on February 16; perhaps because of the contention, as I have heard it expressed, that I was an alarmist and that a serious unemployment situation was not developing, and that unemployment was temporary and seasonal.

The other body restored my amendment when the measure passed the Senate on April 13, and the House unanimously agreed to the restoration of the full amount of my amendment on May 16—the President approved the amendment in the appropriation bill on May 24, when the bill became Public Law 71.

It was also contended by Democrats in my district, the State of Connecticut, that the ever-increasing number of layoffs, lessened number of hours for those who were working, plus week-on and week-off employment, was merely a seasonal condition and nothing about which to be alarmed. It is for this reason, among the others that I have mentioned, that I invite the attention of the Members of the House to the editorial concerning the program of Chester Bowles, the Governor of the great State of Connecticut. Many Members, I feel sure, are acquainted with the Governor who formerly held the positions of OPA Administrator and economic stabilizer.

The editorial follows:

MR. BOWLES' FORMULA FOR UNEMPLOYMENT

Governor Bowles suddenly has awakened to the fact that the Connecticut unemployment situation is serious. However, instead of taking the proper steps to emeliorate this situation through governmental economies and legislation that would encourage the business community, the Governor seizes upon it as a political weapon to use upon behalf of his reckless spending program. Like his Washington counterparts, Mr. Bowles now has the effrontery to propose that Connecticut resort to that discredited New Deal practice of attempting to spend its way to prosperity.

The fact that Connecticut now has more than 76,000 unemployment compensation recipients plus 15,000 or more who have already exhausted these benefits, is serious. Of that there can be no doubt. Every right-minded person is concerned, and deeply concerned. They realize that steps are necessary to relieve this situation, after taking the essential steps that will prevent it from going further.

Those steps must consist of economy in government, National, State, and local. They must consist in logical and equitable reduction in taxation so that the funds for investment and expansion and plant building capital may be released to open new avenues for gainful and genuinely productive employment. Even those who once hummed the New Deal tune in Washington are becoming aware of this fact and are now setting themselves up as disciples of economy and moderation in taxation. While their conversion is belated, it is nonetheless welcome.

Not so Mr. Bowles. He visions as a cure for this suddenly discovered serious situation more of the same doses that brought it on. He now uses it as a promotional device upon behalf of his ridiculous $75,000,000 bonding program.

No wonder the situation is serious. No one has done more to make it so than Mr. Bowles himself. No one at the present time is doing more than Mr. Bowles to make it yet more serious.

Instead of realizing that it was his reckless spending proposals that alarmed business in Connecticut and added greatly to the numbers laid off because of an anticipated down-turn in the volume of wartime business, Mr. Bowles now advances propositions that would increase this alarm and create additional unemployment.

If he thinks that he is thus presenting a good argument on behalf of his $75,000,000 bonding fantasy, he is much mistaken.

Does the fact that he now attempts to sell this bonding program as a cure for near-depression conditions, mean that he has retreated from his original position? At the outset Mr. Bowles declared this bond issue was a necessity in its own right. Why does he now sing a far different tune?

All this has a very familiar ring. This same type of double talk has come to us from Washington for the past 20 years. There the cure for inflation, recession depression, or any economic condition one can envision, has ever been the same. The inevitable remedy for all of these ills has been more spending and more controls. Grim amusement must be drawn from the fact that at this eleventh hour, Mr. Bowles and other junior administrators in State and local fields, adopt it as their very own.

Design for Peace

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

DESIGN FOR PEACE

There is a touch of paradox in the fact that the United States program for the expenditure of $1,450,000,000 for arms aid abroad should be set forth in a State Department "peace paper." Yet, this program is designed directly for keeping the peace by making the strength of free nations a deterrent to aggression. The strength that is counted upon is not merely the present economic and military strength of the United States but rather the developed strength of other countries with which we are associated. The program is designed not merely to supply arms at this moment but rather to assist the recovering nations to become and to remain strong.

The program is not only a peace program; it is also a defensive program. Its object is to enable our allies and ourselves to keep our freedom. But it is defensive in another sense. It has been forced upon us against our will. No one supposed at the end of the war that the United States would be obliged to embark upon such an undertaking within a few short years. We had most earnestly hoped that the security of all the nations would be a common enterprise and we gave our enthusiastic support to the machinery of the United Nations designed toward that end. Unhappily that common program, together with international control of atomic weapons and disarmament, has been blocked by one nation. Because of that stoppage we have been obliged to take the second best and only remaining course. Our aim is peace and security, and if one means of finding it is denied to us we are obliged to seek another. This is done in the hope that later we can return to the better course.

Maritime Day

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Joseph K. Carson, Jr., Commissioner United States Maritime Commission, Friday, May 20, 1949, customs house, port of New York:

Mr. Chairman, National Maritime Day is a proper occasion for us to retake our bearings, plot our future course and resolutely determine that we shall avoid the mistakes and omissions of past years and that there shall be under the United States flag at all times the most efficient and effective merchant marine in the world.

I am honored by your invitation which brings me here today. I have, Mr. Chairman, rather wistfully cherished the hope that some day I might keynote the cause of the American merchant marine in New York, the greatest seaport in all the world. I believe in the merchant marine and am proud to be a member of the United States Maritime Commission which is by law committed to "foster the development and encourage the maintenance" of a strong maritime industry. Now, a strong and independent Maritime Commission can do much to prevent the mistakes and omissions of the past but it cannot do the job alone. There must be teamwork by Government, labor and management, if we are to chart a future course which will insure us a position of primacy in world ship-

ping. Lack of teamwork will but lead again to a condition of decadence in our merchant marine and a complete disintegration of our foreign commerce. It is our job—the team's job—to prevent such an eventuality.

All good Americans are proud that there is today upon the high seas, flying the American flag, the best fleet of cargo and tank vessels we have ever had. We have the finest ships, the best crews, and the wisest management. We are now in first place in the maritime league. Our job—the team's job—is to keep our merchant marine in first place—not just in the first division.

Despite our unhappy realization at the beginning of World War I that we had almost no ships of our own to carry our foreign commerce, nevertheless we sank again into a position of near obscurity in overseas shipping during the late twenties and early thirties.

It will serve no purpose here to catalog all our mistakes in the past. Nor will it further the cause of our merchant marine to expend our energies in futile attempts to fix the blame for our shortcomings. We are not here to assess past failures. Our job is to find solutions to the problems which lie ahead—find them quickly and apply them promptly.

In national defense we have never lost our naval supremacy, but we allowed our merchant fleet, indispensable in the logistics of war, practically to disappear. Proof of the indispensability of merchant vessels in war is the fact that we had to build over 50,000,000 deadweight tons of merchant craft between the inception of the emergency and the end of hostilities. When we build a naval vessel we hope it will not be necessary to use it for any purpose other than insurance against war. Many naval vessels have been built only to become obsolete between wars and then scrapped. We build more and charge it up to national defense, and think nothing of it. Neither Navy, Army, nor Air Force can function effectively without a tremendous fleet of merchantmen to support them. Dry-cargo ships, reefers, tankers, and troop carriers are all needed in great numbers. We cannot do without them. Yet, they are about the only weapons of war for which there is a peacetime use. Think of it. Here are instruments indispensable in war which pay most of their own keep and yet on which we have been most niggardly in providing financial assistance. Think of it. Here is an industry, the maritime industry, indispensable to success in war and prosperity in time of peace, which was permitted to languish and made a whipping boy by those bent on its ruin.

At this very time other nations, which we have aided in many respects, are engaging in discrimination against our merchantmen which bids fair to prevent ships of our flag from competing in their foreign trades. Currency restrictions are only one phase of these discriminations. Steps must be taken by our Government to halt such practices.

While we are extremely fortunate that we now have the newest, fastest, most modern ships as the components of our cargo and tank fleets which are providing a regular and dependable service in our foreign trades, we must remember that ships do not stay new. Neither do they remain modern with respect to speed, design, economy and efficiency.

We cannot keep our fleet modern or be assured of regular and dependable service in the foreign trades unless we have a replacement program which will keep our merchant fleet up to date. It should be remembered that our fine cargo and tank vessels have already been in use about one-third of their normal life. In 10 years many vessels we now consider modern will not be able to keep up with the new tonnage that will then be in competition. Ten years is a long time when we think of the future, but as we look backward it seems only a day since Germany invaded Poland and set off World War II. Our passenger fleet was practically wiped out during the war. At the close of hostilities we had less than one-fourth of our prewar passenger carrying capacity.

Therefore, the team—government, labor and management—must solve the problem of keeping our fleet modern and do it promptly.

For the most part, shipyards throughout the country are in need of work. Thousands of skilled workers who learned it the hard way during the war seek employment in shipbuilding. There must be activated an orderly program for the replacement of all of our current merchant fleet. There is no time to lose. In a few years it will be too late for such a program. We may again find ourselves faced with the necessity of building a large number of vessels simultaneously and at great expense, only to have them in turn grow old all at once.

The Commission now has under way the largest passenger-ship construction program in our peacetime history. We are constructing three passenger vessels for the trans-Pacific trade, two for the Mediterranean, and the superliner for the New York-northwest Europe range. The Commission has also authorized calling for bids for the construction of a prototype cargo vessel. The Commission, labor, and the industry collaborated in developing its design. The Commission will soon have plans developed for the construction of a prototype naval auxiliary. So you see, progress is being made.

You know the Commission has let a contract for the building of a superliner. Efforts have been made to prevent the building of this vessel. The Commission, however, was determined to proceed. The Merchant Marine Act of 1936 directs that the Commission devise means for building superliners comparable with those of other nations. Not only that, Congress appropriated funds for that very purpose. There is also another consideration. The United States rates the finest passenger vessel afloat. We are to have just that in this superliner. Passenger ships not only transport people. They are a great aid to business in many ways. The great hotels in New York would soon find cause for concern if passenger liners no longer served the port of New York.

The full restoration of domestic shipping is a must. What was once the most flourishing component of American shipping is now its weakest, never having recovered from the knock-out blow suffered by the war. Competition from various sources, some unfair, together with the higher cost of steamship operation, presents a problem for which no solution has yet been found, but one can and must be.

Among the Commission's statutory duties is that of promoting the welfare and prosperity of the merchant marine. Postwar commitments have made it impossible thus far to put into execution plans for a full-scale maritime promotion program. Last March I submitted the outline of a plan which is now in process of expansion and development. It is most essential that no time be lost in consolidating public opinion on the necessity of the maintenance of a strong merchant marine. The American people must know the necessity of fostering the use of American ships by American shippers. If we depend upon foreign bottoms to carry our export and import commerce, that commerce will dwindle to the vanishing point as it did immediately prior to our entry into World War I.

I am for the American merchant marine without any ifs, ands, or buts, else I would not be here today. I am glad to have a part in fostering a better merchant marine. I intend to fight all who are endeavoring to disrupt the maritime industry by trying to make a governmental scapegoat of the Maritime Commission. All things considered, the Commission has handled well a multitude of knotty postwar problems.

Now, as we emerge from the deluge of war and postwar problems, what are to be the policies of the future? Personally I shall exert every effort to achieve the following aims:

Retention of the 1936 act and the principles embodied in it;

Keep the merchant marine out of the hands and beyond the reach of any influences, governmental or otherwise, which would scuttle it or bargain away its effectiveness;

Get the Government out of the shipping business in peacetime and keep it out;

Halt the discriminatory practices of other nations against our shipping;

Fully rehabilitate our domestic shipping.

Expand and complete a program of the construction of an adequate number of passenger vessels;

Replace our cargo and tank fleets with new and modern vessels;

Carry out a real promotional campaign for the merchant marine.

We have retaken our bearings today and we know where the American merchant marine now stands. We know what must be done in the future if we are to keep the position of primacy we now hold in the shipping world. The job which lies ahead can be done through teamwork—the Government, labor, and management team. Each member has a vital stake in our maritime affairs. Each member of the team will profit by a job well done—each will suffer through complete or partial failure.

Bound together in a community of interest we must go forward, each member of the team doing its full share to the end that we have at all times under the American flag the world's best merchant marine; a merchant marine adequate for trade, travel, and defense; a gallant merchant marine worthy of the pride of every American and commensurate with the might, the dignity, the prestige, and the sovereignty of the United States.

National Housing Problem

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1949

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony of Arthur J. Aronson, chairman of the Jewish War Veterans of the United States National Housing Committee, before the Banking and Currency Committee of the House of Representatives this 25th day of April 1949:

Mr. Chairman and members of the Banking and Currency Committee, please permit me to thank you for the privilege of presenting, for your additional consideration, the viewpoint of the Jewish War Veterans of the United States on our national housing problem in general and on H. R. 4009, which you now have before you for consideration, as a solution to America's most critical domestic problem, housing.

To facilitate the deliberation of this committee on a difficult problem, I shall endeavor to avoid reiteration of what witnesses before me have said on the subject. I have

UNIVERSITY OF MICHIGAN LIBRARIES

read the statements submitted to you by Mr. Raymond M. Foley, Housing and Home Finance Administrator and Mr. John Taylor Egan, Public Housing Commissioner. The statements, of these two noted men in housing, were the result of meticulous and conscientious study, and we of the Jewish War Veterans enthusiastically endorse them for your full consideration. For my own part, I should rather present, briefly, some few observations and recommendations for the strengthening of the present bill and, if permitted, to answer some of the arguments which have been raised against public housing.

We believe that H. R. 4009 is a fine bill. With one major exception, it contains recommendations that meet the hopes of our organization as expressed in its national housing policy adopted at the 53rd National Encampment of the Jewish War Veterans with the approval of our national executive committee. H. R. 4009, of course, omits provision for medium-income housing, which we feel is so essential to an intelligent, well-rounded housing policy and program for our country. We feel this omission is a grievous one and we ask you, in your deliberations to so amend the bill as to meet the needs of those uncounted thousands with medium incomes who will otherwise be forgotten, and whose position without a place to live, is just as desperate as that of the people whom the bill was designed to aid.

We believe that H. R. 4009 contains certain inherent self-destructive weaknesses which may bear amendment by your committee. One of the most glaring deficiencies is its provision for the 20-percent rental differential between the upper-rental cealings of low-rent public housing and those lowest rentals at which private enterprise is allegedly providing adequate housing. If the bill is to be enacted with such a restriction, we believe it would leave us with a vast multitude of displaced veterans and citizens who would find themselves, and now do find themselves, ineligible to obtain the benefits of public housing while also unable to obtain private housing as well.

Secondly, the proposed program is predicated on a strict dollar-cost limitation in a field where everyone is too keenly aware that costs are in a continual state of competitive flux. This very type of provision, experience has shown, was basically responsible, years ago, for the failure of construction of housing projects which had already been approved. It could well again be the basis for further failures of construction. It could strongly serve to defeat the very purposes of the national housing policy, so well defined in the bill, by uterly nullifying any implementation of that policy through arbitrary limitations of cost. We believe that the present bill, without this arbitrary limitation, affords sound protection to the people against excessive costs of construction. The bill specifically provides that elaborate or costly designs or materials shall not be used but that cheaper construction shall be made available. Another protection in the bill to possible excessive costs is the provision that average costs, excluding land, demolition, and nondwelling facilities shall not be greater than the average construction costs of dwelling facilities currently produced by private enterprise in a given locality. We believe that these are sufficient safeguards. If we go beyond them we may well, again, be faced with a situation where building costs may extend just beyond the limitations permitted, and all further construction must necessarily end. This is an eventuality we all seek to avoid but, I repeat, it is opposed to the very policy which we seek to establish; the construction of housing for those who need it most.

In addition, we of the Jewish War Veterans are against the 5-year limitation for veterans' preference. We believe that the veteran, just now, perhaps, at the very threshold of his re-integration into the peacetime economy, may need many more years of opportunity to fully and completely readjust himself. We therefore submit that the five-year restriction as to preference is unfair and we urge that it be stricken from the bill. This preference, unquestionably, should be without any period of limitation.

This is the fifth successive year in which the Congress has had the basic principles of H. R. 4009, in one form or another, before it for consideration. Each year they have failed of passage because the people who need housing most have had neither the means nor the influence to dramatize their needs before the public and the Congress. As each of these years have passed, our housing situation has deteriorated to the point where, today, it is the most critical of our domestic problems and is causing indescribable hardships to the people in general and the veteran in particular. It now affects the very phyical security of hundreds of thousands of veterans, the futures of their marriages and the futures of their children, the Americans of tomorrow.

In the face of a condition so threatening to the Nation's moral and physical fibre, millions of dollars that might better have been expended on new construction were used instead to manufacture the myth that legislative proposals such as H. R. 4009 are inspired by Socialists in the Congress of the United States.

In a recent issue of "Headlines," the organ of the Realtors' Washintgon committee, we find such shocking statements as this:

"Three times when the threat of socialized housing, which is again at our door, seemed certain of success, RWC was the spearhead of opposition to it before the committees of Congress. And three times this threatened entry of Government into our business was defeated."

When private enterprise can boast of frustrating the will of vast numbers of the American people, it is playing fast and loose with the representative form of government it professes to cherish. The quotation I have read from the publication of the Realtors' Washington committee is far more encouraging to enemies of our political system than to millions of Americans born and educated to the devout belief that government is the servant of the people.

It cannot be expected that the selfish and short-sighted opponents of Federal aid to public housing will tender any warmer welcome to H. R. 4009 than they offered to previous proposals of this nature. Now, what are the arguments they will advance against this measure? Their offensive against this bill will strike out in three directions.

First, they will reiterate the familiar thesis that the program envisioned by H. R. 4009 will sound the death knell of private enterprise by diverting building materials and killing incentive for building. Simultaneously, they will launch a campaign of psychological warfare to convince the Congress and the people that those who support a public-housing program are dedicated to the belief that the Government owes them housing at half price. And on a third front, they will repeat that public housing is a socialistic concept, a cunning plot by a coalition of radicals devoted to the doctrine of planned economy, who have twisted the facts surrounding the actual housing situation.

I respectfully ask the members of this committee to examine briefly this coming three-pronged attack on the public interest.

The loudest prophecies of the imminent death of incentives have emanated from builders of homes and rental units designed for the pocketbooks of people who wouldn't be in the market for the kinds of dwellings contemplated by public-housing legislation. These early mourners, thrown into a shudder whenever a potential purchaser flinches from exorbitant or unreasonable prices, have thus far found it profitable to avoid investment in public educational material that would apprise their readers that one of the fundamental concerns of the authors of H. R. 4009 was to establish a program that would carefully avoid impairment of private building interests. Nothing in this bill, as it now stands, can divert fair profits from builders and realtors who are now building, selling and renting homes and apartments to those who can afford to pay the prices asked. The real-estate pages of the Nation's press prove beyond any doubt that ample incentives have existed since the end of World War II, and that they continue to exist now. If private builders are to be shorn of incentives for new construction, H. R. 4009 is not the instrument that will do the shearing. Rather, the shears will be wielded by a wilful, destructive few who confuse private enterprise with special privilege.

Examining "Operation Smear" of this grand offensive, the distortion that H. R. 4009 is designed to satisfy the mythical element of the population that is alleged to want housing at half-price, examination of the voluminous library published by the National Association of Real Estate Board and all its associates fails to reveal so much as one reference to the fact that this bill does not propose a Federal construction program. On the contrary, the realtors' literature contains a myriad of assertions that under this bill, the Government will make reckless and wholesale gifts, in the form of subsidies, directly to the people. In the hands of these gentlemen, facts are certainly not stubborn things.

But it is the third, and major, argument of the bitterest opponents of this bill, that is of particular concern to an American veteran. Gentlemen, we of the Jewish War Veterans have expressed our ardent support of such national policies as the European recovery program and the proposed North Atlantic Pact. We were prompt to voice that support because as veterans we are perhaps more sensitive to the needs of our Nation's security than the average nonveteran. It requires an unusual degree of astigmatism not to recognize that we are engaged today in a conflict of ideas and principles on a scale at least as huge as the war we finished fighting less than 4 years ago.

Because our Government and all our people provided us with the means, we were able to make our proper contribution to the security and welfare of our country. We veterans know today that we have no less an obligation to maintain our country's liberty and stability in peace than we had in war. The Jewish War Veterans of the United States of America, and every other American veterans' organization, is conscious that the hot war of 4 years ago has been supplanted by a cold war, and that this cold war must be fought with ideas and principles. In this conflict, we of the Jewish War Veterans are convinced that progressive social legislation of the type of H. R. 4009 can be as important to our country's security as the North Atlantic Pact and the European recovery program. For if we cannot show in a time of social crisis that our Government is responsive to the basic human needs of its citizens, then we shall have suffered a major defeat on the field of ideological combat. We shall have permitted to go unrefuted the angry lies of those who slander us in the arena of world opinion and we shall have encouraged the sinister handful within our gates who can only thrive on the frustration and despair that comes with the denial of so basic a human necessity as adequate shelter.

Gentlemen, it is a rare veteran indeed who can recall that any such device as socialistic planning was employed in war to induce him to give his maximum effort for the safety of our country and the preservation of its liberties. It is therefore something less than heartening for a veteran to be told today that he is giving in to radical political doctrine when he welcomes the introduction of a bill such as H. R. 4009 as a measure calculated to reaffirm the devotion of this free Government to the welfare of its free citizens. I do not have available the precise figures of how many veterans—and for that matter, nonveterans as well—who are living in substandard dwellings or in rooms or apartments inadequate to hold the number of persons that now inhabit them. But if all these Americans, who now wait with anxiety for enactment of H. R. 4009 have taken on the political coloration ascribed to them by the literary efforts of the real-estate lobby then the funds applied to blocking passage of housing legislation have been misspent. They might better have been expended on bolstering the country's internal security machinery.

Establishment of National Medical Care Investigation Commission

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. MILLER of Nebraska. Mr. Speaker, yesterday I introduced a bill which calls for the establishment of a Medical Care Investigation Commission. It would be a bipartisan Commission with two Members from the Senate, two from the House and three appointed by the President. It will be the duty of the Commission to study and investigate all phases of medical care in the United States, including all existing and proposed governmental and non-governmental programs and plans for such care, for the purpose of determining, first, in what respects existing medical care in the United States is inadequate; and, second, what are the best methods of remedying such inadequacies. The Commission may, where it deems it appropriate to the making of such determinations, examine any phase of medical care in any foreign country. As used in this subsection, the term "medical care" includes surgical care, hospital care, preventative medicine, and all other kinds of medical care, and includes insurance with respect to any such care.

Mr. Speaker, for many years I have studied the question of medical care. I made two trips to Europe for this purpose. The question of compulsory health insurance will soon be before this Congress. It is my considered judgment that the Members of Congress ought to have complete factual knowledge and information upon all types of health programs now in existence. This subject is charged and surcharged with emotion. It is not easy to separate the wheat from the chaff.

It would be my hope that such a Commission, with a small staff, could make a thorough, impartial study and report their findings to the Congress and the country. If this is done, and all the facts are laid bare, then I have great confidence that the Congress and the American people will make the right decision upon this controversial subject. I trust that this resolution may have a prompt hearing and that such a Commission can be appointed and proceed promptly with their studies.

The Duck Stamp Bill

EXTENSION OF REMARKS
OF
HON. PAUL CUNNINGHAM
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. CUNNINGHAM. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement of Carl D. Shoemaker, representing the National Wildlife Federation:

THE DUCK STAMP BILL

(Statement of Carl D. Shoemaker)

This bill amends the original Duck Stamp Act of 1934 only in three particulars, as follows:

1. Increases the price of the duck stamp from $1 to $2. There is no dispute or opposition to this proposed amendment among the people who buy these stamps and enjoy the privileges which come from their purchase.

2. Increases the amount which may be devoted to protection of waterfowl from 10 percent, as fixed in the original act, to 25 percent in this bill. There has been an insistent demand that more protection be afforded to the waterfowl wherever they may be found in this country—on refuges, rivers, lakes, and other feeding and resting areas. Should this bill pass, 50 cents out of each $2 duck stamp purchased would go for protection instead of 10 cents out of each $1 duck stamp purchased under the existing law. There is no dispute over this proposed amendment.

3. The remainder of the revenues raised through the sale of these stamps (75 percent of the total sales) will go to the maintenance and development of refuges heretofore acquired and put in operation, and for the acquisition of wildlife management and inviolate migratory-bird sanctuaries. This means that at the discretion of the Fish and Wildlife Service, public hunting areas may be set up on newly acquired lands out of the additional revenues provided by the proposed amendment.

In the sense used in this bill, a wildlife management area simply means that in the discretion of the Fish and Wildlife Service new areas purchased with money arising from this proposed act may be managed and operated as public hunting grounds provided that the supply or population of waterfowl justifies this program. An inviolate sanctuary does not include any public hunting or management. All refuges heretofore purchased from the duck stamp revenues are now and will continue to be inviolate sanctuaries even though this bill becomes law. Several such areas not acquired from duck stamp revenues are now being operated in cooperation with the States, among them the famous Mattamuskeet refuge in North Carolina and the Bear River marshes in Utah. They are both popular and wisely managed.

This third amendment is the only one over which there has developed any dispute or opposition.

The wholehearted support for this bill comes from organizations or groups interested in the broad program of reaping the annual harvest or surplus crop of ducks and geese. The great vast majority of the people who are directly concerned and who are paying the bill through the purchase of these duck stamps not only favor the increase but also the better management program provided for in this third amendment. The following organizations have endorsed this bill in toto and completely: National Wildlife Federation; Wildlife Management Institute; Izaak Walton League; International Association of Game, Fish, and Conservation Commissioners, representing in its membership the 48 State fish and game administrations; Western Association of State Game and Fish Commissioners; Alabama Wildlife Federation; North Carolina Wildlife Resources Commission; and many other State commissions, federations, chapters, and groups; and the Massachusetts Audubon Society.

These organizations and groups, through their membership and affiliations, represent several million good sportsmen in the United States who feel that the management of our waterfowl resources can be wisely entrusted to the Fish and Wildlife Service and the splendid cooperation received from the State authorities.

We sincerely hope that the bill will receive a favorable report from the committee.

In the First Degree

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Daily Mirror of May 13, 1949:

IN THE FIRST DEGREE

Assassination must not return to New York City as an arbiter in labor-industrial disputes. We had hoped that era was over; that it had died with "Lepke" Buchalter in the Sing Sing electric chair.

Hired murderers will destroy anyone for anyone who pays them. They do not attack in passion. Such commercial killings are more than an obvious danger; they are a disgrace. This city cannot tolerate them. The police, the district attorney must not sleep until the cold-blooded butcher who stabbed William Lurye is apprehended and executed.

Moreover, and even more important if possible, is similar treatment for the man or men who revived the trade of Murder, Inc., by buying murder. This is no issue of union versus union or employer versus employee. This is an issue of murder in the first degree, compounded by conspiracy with an accessory before and after the fact.

If this fatal outrage is not avenged, there may be another bloody wave of such slaughter as this city knew for years in industrial rackets. New York City is indignant. It will not stand for a comeback of assassins. It demands quick, sure justice to forestall any such calamity.

UNIVERSITY OF MICHIGAN LIBRARIES

Teamwork in the Armed Forces

EXTENSION OF REMARKS
OF

HON. ROBERT L. F. SIKES
OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1949

Mr. SIKES. Mr. Speaker, as one who has consistently supported balanced defense forces, I deplore the sometimes senseless competition between the services. I consider it plain that we still need all of our present forces. I also consider it plain that we need unification—more unification than we now have—but that it should be unification which permits the kind of wholesome rivalry between the services that keeps them on their toes.

For instance, I have supported the Air Forces in its desire for a larger long-range strategic striking force. At the moment that means, in substance, more B–36's. Now, only the B–36 can take off from an American base, strike an overseas enemy target, and return to its base in this country. It has been greatly improved since its introduction and it constitutes a formidable weapon.

It has been proposed that mock-warfare tests be conducted between the B–36 and Navy jet fighter interceptors. I heartily approve. This is the kind of wholesome rivalry which keeps the services striving for the best possible weapons, and provides the technological superiority which is our best guaranty of security. Weaknesses revealed by these tests would have to be faced frankly, and weaknesses faced can be overcome.

I am not certain that the services always have been frank in their dealings with each other, and since we all are on the same team, this lack of frankness is inexcusable. For instance, I have for some time known of an Air Force report, known as the Scanlan report, which describes in some detail the operations on Leyte and is highly commendatory of the cooperation between the services. This report suddenly was withdrawn and reclassified as top secret. I am somewhat puzzled by this maneuver, and since the report also is denied to me, I have to draw my own conclusions.

Others, likewise, have been puzzled, and I call attention here to a very recent article by a distinguished Washington columnist, Frank Kennedy, who writes the Washington Treadmill:

TREADMILL

(By Frank Kennedy)

SIKES HUNTS SECRET REPORT ON NAVY AIR

WASHINGTON.—Congressman SIKES is on the trail of a top secret report, prepared by General MacArthur's staff and known as the Scanlan report. It is entitled "Report Number Three, Army, Air Forces Evaluation Board, Pacific Ocean Area, the Occupation of Leyte, November 15, 1944."

The Scanlan report is said to contain descriptions of the Navy's bomber-support operations in support of the Ground Forces which invaded the island of Leyte in that year. It is said to praise the Navy's bomber operations in support of the invasion in the most superlative terms. In the matter of seconds, it is said, a Jap strong point, in a bario or bamboo thicket, was pinpointed by the Navy fighter-bombers, and the advance of the invading ground trooops at all times was covered with an umbrella of Navy bombers and strafers. The Scanlan report, it further is said, analyzed the comparative effectiveness of the Army Air Corps and the naval air arm in these same Leyte operations, the comparisons all resounding to the credit of the Navy.

SIKES has reached the definite conclusion that Congress cannot decide wisely the proper role of the Navy's air arm in the scheme of national defense until it knows the salient features of the Scanlan report. His interest was aroused in the secret document when he learned reliably that copies of it were being hastily recalled from study groups and from quasi-secret files of the Army, Navy, and Air Force, to be locked and requestered in a single place of safe keeping. He suspects that the sudden recall of the document from divers quasi-secret resting places has much more to do with the bitter controversy between the Navy and the Air Force, than it has to do with real national security. He intends to find out for sure.

A few secrets, perhaps: The Crestview Congressman, who knows little about the details and minutiae of the Scanlan report, is willing to concede that some portions of it actually may be top secret and that the publication of a few details possibly might give aid and comfort to a potential enemy. He is quite willing that any truly military secrets should be screened out of any published version of the Scanlon report. He is equally convinced, however, that the broad statements and conclusions of the report, dealing with the Navy's superlative air-support operations of the Leyte beachhead, should be made available to Congress in order that its Members can evaluate the role of the Navy's air arm in the whole scheme of national defense. If it is true that the Scanlon report is being sequestered for reasons other than true national security, then the Congressman wants to know the whole story and who it was who ordered the recall of the report from files previously considered adequate to protect its contents.

Supercarrier a side issue: The scuttling of plans to build the U. S. S. *United States*, the Navy's 65,000-ton super-aircraft carrier, was only a dramatic incident of the bitter struggle between the newly coequal Air Force and the Navy. Congressman SIKES and Congressman BENNETT, of Jacksonville, are pursuing the matter of the big flat top independently of the larger question of the Air Force's relationship to the Navy's air arm. On this subject, some formidable authorities are coming to light.

Richardson's minority report: Admiral James O. Richardson, one-time commander of the Pacific Fleet before Pearl Harbor, as one of his last official duties, served as the chairman of a special committee to report on the reorganization of the national defense departments. The Richardson findings were the first official report on unification of the armed forces. The admiral, in a report filed with the Seventy-ninth Congress more than 3 years ago, opposed the general plan of unification, but concurred in the plan proposed if ever unification were adopted. Concerning the creation of an Air Force coequal with the Army and the Navy, Admiral Richardson, in a special minority report, stated, in paragraph 4 (k), as follows:

"I am not convinced an Air Force should be set up on a basis coordinate with the Army and Navy. Proponents of this idea assert that this is necessary for full development of air power. Naval air power has developed within the Navy. I fear that the creation of an Air Force on a basis coordinate with the Army and Navy would inevitably draw the naval aeronautical organization out of the fabric of the Navy into which it is now intimately woven. Such disintegration of the Navy would be prejudicial to the effectiveness of the armed forces as a whole."

Who is Richardson? The opinion comes not from "just another admiral." He figured brightly in the testimony of several Pearl Harbor investigations which, according to most Congressmen, have proved just one affirmative fact—that Admiral Richardson was the only officer of general rank in the Army, the Navy, or the Air Force who was on his toes before Pearl Harbor and alert to the danger—and he got fired before the Japs attacked. The Richardson incident is too long to detail here. In short, he was relieved of the command of the Pacific Fleet by President Roosevelt in February 1941 because he opposed the basing of the fleet at Pearl Harbor and because he protested the transfer to the Atlantic patrol of so many of his screening forces—light cruisers and destroyers.

Congressman SIKES is convinced that the Richardson opinion on naval air power, therefore, is timely. He was right before Pearl Harbor—he still may be right. He now is on the retired list and unavailable for current comment. It should be easy to imagine what Admiral Richardson thinks about scuttling the superflattop.

Scanlon report needed: Congressman SIKES further is convinced that the revelations of pertinent sections of the Scanlon report would be most opportune. The report dealt with the initial drive to recapture the Philippines from the first major Asiatic enemy of the United States—the Japanese Empire. When it was written in 1944 there was no active Chinese Communist movement because the Japs were in possession of Manchuria. The Nationalist Chinese Government then was gaining strength to oust the Jap invaders, who were the only Asiatic enemy of the United States then in sight. Today the Chinese Government is falling apart before the advance of the northern Chinese Reds; another formidable Asiatic enemy to the United States perhaps is appearing. The Pacific Ocean is just as broad today as it was when the Leyte invasion was launched, observed the Crestview Congressman. Who can say that combined operations identical with the Leyte plan of attack some day may be needed? The United States fought a two-front war against Germany and Japan last time. It would be foolhardy to suppose that a war against communism would be anything less than a two-front war—in Europe and in Asia, with major operations in both theaters.

Mr. Speaker, in addition I invite attention to an editorial appearing in the Pensacola Journal on Sunday, May 22, 1949, dealing with the same subject:

SIKES TRAILS REPORT

Representative BOB SIKES, according to Frank Kennedy's Washington Treadmill printed on this page today, is on the trail of what is called a top-secret document showing the value of the naval air arm in the invasion of Leyte.

The Florida Congressman is not trying to bare any military secrets, but he is rightly hot over rumors that the report has been hastily recalled from study groups and is being placed out of reach of those trying to evaluate the functions of the Air Force and the Navy in the unification of the services.

If these rumors be true and if the Scanlon report sought by SIKES is strongly for naval power, that efforts are being made to suppress it indicate that foes of the Navy fear its effects.

For this very reason it should and must be brought into the open. The people of this country must not be fooled and deluded into any step which decreases the demonstrated value of an arm of defense or attack in this seething world. They are entitled to the full picture, no matter what branch of service it affects. The future safety and welfare of the Nation are at stake. Nothing else matters.

Americans cannot afford to allow an internal fight among self-seeking service groups to weaken one iota the military strength of the country and endanger the defense of this great Nation. For the protection of our lives, property, and democratic way of life, America must remain strong. If naval air strength is an integral part of that strength we must have it, plenty of it. If Air Force big bombers are a part of it, we must have them, too, and if ground strength is required, that, too, must be part of armed services.

To deliberately hide a report which casts a light upon the part which the Navy or the Air Force or the Army can play in this tremendously important role of protecting this Nation is unthinkable and any persons who have done it should be brought to the bar of public opinion for judgment by their fellow citizens.

All of this brings us back to the importance of teamwork that we may develop our strength to a maximum and hold our weaknesses to a minimum.

Panama Canal

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. THOMPSON. Mr. Speaker, during this session of Congress I have included in my extensions of remarks a number of informative articles on the Panama Canal. In the January 1949 issue of the Proceedings of the American Society of Civil Engineers there was published an instructive paper by the late Maj. Ralph Z. Kirkpatrick, former Chief of Surveys and Chief Hydrographer of the Panama Canal, whose technical studies and published works on its problems are extensive and have been used by many of our membership who have had to consider legislation for the Canal. His death, which occurred a short time ago, was a national loss.

It is, indeed, significant that Major Kirkpatrick's last important service for the Panama Canal was a technical discussion of the proposed sea-level project, wherein he uttered a warning against the dangers and difficulties which he felt assured would, sooner or later, develop in any such undertaking.

It would seem, therefore, to be especially fitting that Major Kirkpatrick's last contribution dealing with the Panama Canal should now be made available to the Congress and our people, for the time has arrived when studies must be completed and decisions made. Under leave accorded, I am extending my remarks in the RECORD by including therewith the indicated statement, which appears to have anticipated a similar warning by Prof. A. Casagrande as regards the instability of the Cucaracha slide formation. The discussion by Professor Casagrande was included in the extension of remarks, page A2229 of the Appendix of the CONGRESSIONAL RECORD by the gentleman from Virginia [Mr. BLAND]:

THE PANAMA CANAL—SEA LEVEL PROJECT—SYMPOSIUM DISCUSSION BY MAJ. RALPH Z. KIRKPATRICK

RALPH Z. KIRKPATRICK.[1] An effective answer to the basic thesis of this symposium is a paper published in 1947.[2] To the writer, that paper is an infrared light through the "confusion of ideas" begot by the various plans for the best method of modernizing and enlarging this tropical waterway. The term "confusion of ideas" was used by the late John F. Stevens, honorable master and past president, ASCE, the chief engineer of the Panama Canal during the earlier part of the construction period. Although he used it as early as 1906, oddly his subject was almost identical to the current one.

Perhaps the sufficiency of the water supply in the driest dry season may be questioned, in what is termed either the "Balanced Lake plan or the Terminal Lake plan, because it is a fact that the balance which the Madden Lake Dam made possible in flood handling, power making, and water supply for navigation has been slightly upset by the subsequent additional power units operating at the Madden and Gatun hydroelectric plants. Also, the proposed wider locks will use more water.

Fortunately this problem is easily solved: During the reconstruction period (without interference to navigation) simply dredge the bottom of Gaillard Cut from elevation +40 to elevation +37½, the ruling bottom elevation of Gatun Locks (that is, the tops of the emergency dam sills); and, since the Terminal Lake cancels the Gaillard Cut lockage surges, there is no further need for the allotment of an extra 1½ feet of dry-season prism-storage water. Thus, a realistically useful storage water prism of 2.67 +1.5, or 4.2 feet atop Gatun Lake becomes available for dry season use. In terms of water, this is about 18,600,000 cubic feet, or an increase of nearly 75 percent.

Incidentally, during the fiscal years 1940–45, the annual power generation in the Canal Zone increased from about 100,000,000 kilowatt-hours to 266,800,000 kilowatt-hours; and, subsequently, the decrease has been only slight. The four turbines at the Gatun plant are now (1948) augmented by two new and larger ones. Under the sea-level plan, that plant must close, and a virtually new electrical system for the Canal Zone must be designed and built, with but minor salvage. All that useful power-making water from Gatun Lake will pass to the sea through the proposed East and West Diversion systems. Compared to the present system or proposed Terminal Lake system the contrast in efficiency and dollar savings will be marked.

The capacity of Gatun Lake to absorb safely, and to make profitable use of the 60 to 150 inches of annual rainfall (8 months) in the Chagres River Valley has been tested for one-third of a century without a failure. It is one of the triumphs of the pioneers of the Panama Canal that their potential worst enemy has actually been made a best asset. Why gamble? Sooner or later "bugs" are nearly certain to bedevil the operations of a sea-level canal through faults in the proposed extensive and complicated West and East Diversion systems. What of those miles of levees, dams, and spillways proposed on foundation conditions still virtually unknown?

The slides in the 8 miles of Gaillard Cut have a soul-searing history; but those troubles were caused by geological, and maybe other, conditions above the present canal bottom-elevation of +40. On the face of it, going down 100 feet further to elevation −60 (see figs. 98 and 99) is daringly unprecedented even to the point of recklessness. Furthermore what is known of the probable bank and bottom stabilities of that other 20 miles of proposed canal now safely hidden under Gatun Lake? Nothing is known, except geological conjectures.

What foundation tests have ever determined that sufficient bearing values exist for those proposed dams across the Peña Blanca and Caño Quebrado swamps? Those deep quagmires of Atlantic mucks have been forgotten under Gatun Lake for 37 years. Nevertheless, there those important dams are to be found, on the maps of the proposed sea-level canal. For a long time, those swamps were the dreads and troubles of the pioneer French and American engineers—now sanguine hopes make them dam foundations.

Apparently through well-meaning but oversanguine proposals, the future safe and smooth transit of world commerce is being endangered. It must not be.

[1] The Marine Operating Problems, Panama Canal, and the Solution, by Miles P. DuVal, Proceedings, ASCE, February, 1947, p. 161.

[2] Rochester, N. Y.; formerly Chief of Surveys, Chief Hydrographer, Panama Canal, Canal Zone.

Post Office Workers, Long Imposed On, Should Be Heard

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

POST OFFICE WORKERS, LONG IMPOSED ON, SHOULD BE HEARD

For a long time now the postal employees have patiently hoped that the Government for which they work would make it possible for them to enjoy a higher standard of living, a standard becoming to those in their country's employ. Their hopes have not been realized and once more it seems as if their very natural and justified aspirations are to be completely ignored.

House and Senate bills, with bipartisan sponsorship, would give them aid, but nothing whatever is being done about these bills. Apparently it is the intention of those who do not want the living conditions of postal workers and their families improved, to do nothing, for no hearings on the bills have been scheduled.

These conscientious workers have enjoyed few improvements in their living standards in recent years. The pay of others has jumped, but theirs shows no such agility. And what they ask is really very little, coming from employees who have had so little before this. In addition to an increase in pay, they want veteran employees to be given credit toward promotion for the time they spent in the armed forces. That is, they do not want veterans to suffer for having fought. They ask for 26 days of vacation and 15 days sick leave, which is what all other Federal civil-service workers have been given. A few other small, reasonable and logical improvements in compensation are included in their legislative program.

And nothing at all is being done about the bills that would bring them relief This is an old and manifest injustice. There should be hearings at once. The public as a whole should know under what handicaps the postal employees live and work. They are deserving workers. They must be heard.

UNIVERSITY OF MICHIGAN LIBRARIES

Flood Control

EXTENSION OF REMARKS
OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1949

Mr. DAVIS of Tennessee. Mr. Speaker, Lt. Col. Herbert C. Gee, with the Corps of Engineers, wrote an article on flood control as public works investment number one, which appeared in the Military Engineer in its April edition.

It is the duty of Colonel Gee to present to the House Committee on Public Works the projects to be considered by the committee for authorization. He is one of the most able engineers who has ever appeared before the committee. He has an intimate knowledge of each and every important project of this character in the country. Resourceful, capable, well-trained, and with unquestioned integrity, he is heard with interest whenever occasion requires his appearance. His article is so factual and so well written that I have asked leave to extend my remarks in the RECORD to include it.

The article follows:

FLOOD CONTROL—PUBLIC WORKS INVESTMENT
No. 1

(By Herbert C. Gee, lieutenant colonel, Corps of Engineers)

Since the cessation of hostilities of World War II, it has been increasingly fashionable, at home and abroad, to find fault with the Government of the United States. All phases of our Government's activity are subjected to severe criticism by other nations. And our own citizens have sometimes followed this unfortunate lead with criticism which has not always been constructive. The program of public works of the United States Government has come in for its share of criticism from all quarters of our country. Flood control, one phase of this national program, has been so successful in terms of return on the Federal investment, that it is felt that more people should be acquainted with the essential facts concerning its development to date.

Twelve years ago Congress passed a law which is now known as the Flood Control Act of 1936. This act provides among other things that the Federal Government acknowledges that the problems of flood control are too complex and too costly of solution for satisfactory handling by the States. The act goes on to state that the Federal Government assumes responsibility for flood control but sets up certain requirements for local contributions to the program. The Secretary of the Army is made responsible directly to Congress for the execution of this program, utilizing the Corps of Engineers as the engineering, constructing, and operating agency under the supervision of the Chief of Engineers. This act set the stage for what has turned out to be the best investment of public works funds in our Nation's history.

The investigation of flood problems in many of our more populous areas began at once after the passage of the Flood Control Act of 1936. Soon a few projects were submitted to Congress for authorization. Every project investigated has been examined carefully by capable engineers to determine whether or not the benefits which will be produced annually by the proposed work exceed the annual cost of the work. When investigation shows that the ratio of benefits to cost is greater than unity the project is economically justified. Projects with high benefit-cost ratios produce great return on the investment and are given priority over those which will produce smaller earnings. Throughout the entire flood-control program the Corps of Engineers has attached great importance to the economic justification of projects to insure that the benefits will exceed costs for all projects recommended for authorization by Congress. Enough time has elapsed and enough projects have been put into operation for flood control to permit examination of the performance record and to draw some conclusions concerning the adequacy of earlier economic studies.

Today there are 228 completed flood-control projects in the United States. These finished works consisting of local protection projects, small detention dams, debris dams, large multiple-purpose reservoirs, channel improvement works, major drainage projects and levees, have been in operation from 1 to 10 years. The total cost of all projects to the American taxpayer is $483,000,000. The amount of flood damages prevented by these completed works during their very brief periods of service is $500,000,000. In other words, these projects have more than paid back to the people of the United States the entire cost of their construction. All benefits which they may produce in the future represent a further profit to the United States. The service records of a few typical projects will emphasize still more the soundness of the Nation's flood-control investment.

PROJECT SERVICE RECORDS

The Cincinnati local protection project completed and put into service just before the 1948 flood season on the Ohio River functioned during the spring floods. This project costing $9,973,000 prevented damages estimated at $4,700,000 during the first 4 months of its operation. In addition to this dollar value of its operation the finished work afforded a peace of mind during flood season for many thousand residents of Cincinnati heretofore unknown in that city.

Two small reservoirs on the headwaters of the Willamette River in Oregon, Fern Ridge, and Cottage Grove, have been in operation since 1942. To date these two projects have reduced flood damages in the Willamette River Valley by $5,917,000. In last year's flood alone damages of $1,000,000 were prevented by the operation of these reservoirs for flood control. To date 89 percent of the cost of these projects has been returned to the Nation after only 6 years of operation.

On the Illinois side of the Mississippi River a few miles below St. Louis, the Columbia drainage district is located. Approximately 13,800 acres of rich farmland are included in the protected area of this authorized levee project. Prior to October 1947 the Federal Government had expended $2,060,000 for levee improvement in the district. All or part of this acreage of bottom land has been provided flood control for 6.1 years. The amount of flood damages prevented by this levee system during that period is $2,395,000 or $335,000 more than the total Federal cost of the project. A neighboring project in Illinois, the Prairie Du Pont drainage district has been afforded flood control by a system of levees constructed or enlarged at Federal expense for a period of 1 year. During this first year of operation flood damages amounting to approximately one-fifth of the total Federal cost were prevented by this levee system.

All of these completed projects are doing more than saving dollars. They are preventing destruction of material resources of our Nation. The destruction of just one housing unit or one motor truck today is more than a loss of comparable dollar value. Such destruction immediately results in a drain on our resources to produce all the materials needed for a replacement item. The replacement involves man-hours of labor which might otherwise have been devoted to the building of additional items now so much in demand. The prevention of a significant percentage of the Nation's annual flood damage is a great contribution to the strength and economic well-being of our country.

MULTIPLE PURPOSES

Many authorized projects in the flood-control program are multiple-purpose projects producing a combination of benefits in two or more of the following categories: Flood control, navigation, hydroelectric power, water supply, pollution abatement, and irrigation. These categories of benefits are referred to as the primary purposes of any project. The engineering investigation of a project involving utilization of the water resources of our Nation must be all-inclusive and must provide for full utilization of the resources. The Corps of Engineers considers carefully the possible benefits which can be derived from a project in all these categories. Benefits from the projects are being realized in all categories but only the flood-control benefits have been evaluated.

Flood fighting or prevention of flood damage is a most spectacular operation for engineers and laymen alike. For the person whose home is endangered the flood fight is a crisis which has been faced all too frequently in many areas of the United States. As the flood-control program has developed and as completed projects have been placed in operation, the frequency of occurrence and the magnitude of damaging floods on our major river system have been materially reduced. The residents of these areas have followed the progress of the construction work with keen interest. The completed works have attracted visitors from nearby communities seeking information and new recreational outlets. The increasing demand by the people for adequate public-use facilities at completed flood-control projects was heard by Congress. This public demand was recognized in the Flood Control Act of 1944, which directs the Secretary of the Army and the Chief of Engineers to make provision for full public use of flood-control projects and the federally owned lands acquired for their construction. Public-use facilities are being planned at all major projects and the construction of roads, trails, parking areas, picnic areas, etc., are actually under construction at a number of large reservoirs.

The people of the United States today enjoy a high standard of living, as the average workweek is 40 hours. Our national demand for recreational outlets is, therefore, very great. This demand is being met in many areas of the United States by the Corps of Engineers' public-use programs at completed flood-control reservoirs. These plans are coordinated with public-use programs of State and local governmental units. Advice of the various State fish and game authorities is sought to provide the maximum development of fish and wildlife resources. The United States Fish and Wildlife Service cooperates fully by assisting in the preparation of data pertaining to fish and wildlife resources of affected areas. Where possible, the Corps of Engineers arranges for State park commissions to administer major portions of the public-use program.

This phase of the flood control program is also paying big dividends. Many of the large, completed reservoirs, located in areas having no natural lakes, are proving to be very popular vacation areas. One of these is Lake Texoma on the Texas-Oklahoma border created by the building of Denison Dam for flood control on the Red River. Last year over two million persons came to the man-made lake to enjoy the boating, swimming, and fishing. Dale Hollow Reservoir on the Kentucky-Tennessee border has become a very popular resort for the residents of those two States. Water pageants, powerboat races, fishing derbies, swimming meets, and similar events are being staged in ever increasing numbers on the completed flood control reservoirs. This Nation-wide

public use program, a byproduct of the flood control program itself, has already assumed national importance.

It is estimated that 10,000,000 people visited the completed projects operated by the Corps of Engineers during the past 12 months. These people enjoyed the recreational advantages of the various projects now in operation. More projects of similar type are nearing completion. A material increase is confidently expected in public use of these federally owned and controlled facilities. No satisfactory method has been devised to compute the dollar value of these recreational benefits now being realized by the American people. It is evident that the public use program is an important national asset. This great public benefit is directly attributable to the flood control program. It is an additional dividend on the taxpayer's flood control investment which has already returned to the people more than the entire cost of the program. Truly the American people have made a sound investment in flood control.

Youth Must Choose Between Individualism and the Welfare State

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. BOGGS of Delaware. Mr. Speaker, my friend, Ralph E. Becker, chairman of the Young Republican National Federation, delivered a most interesting address before the Eastern College Young Republican Policy Conference held at Yale University in New Haven, Conn.

The address is as follows:

YOUTH MUST CHOOSE BETWEEN INDIVIDUALISM AND THE WELFARE STATE

It is indeed a very great pleasure to be in New Haven today and address the opening session of the Eastern College Young Republican Policy Conference. I am going to talk to you today about something which is of primary importance to college students—that is, individual opportunity for youth, and the two political parties.

You young men of college age are at the very threshold of life. Tomorrow, of course, you will face a very hard and practical world. You are going to have to make your own way in life. But, if I am right about it, you are not afraid of the future—you feel that there will always be opportunity open for you, and that within a few years you will be moving along fast on your chosen career, through hard work and grasping responsibility.

However, the events of today are calling upon you to make a decision which is of tremendous importance not only to each of you individually, but to the Nation as a whole. The decision is this: You will have to choose between two philosophies, the Republican philosophy of free enterprise based on individual opportunity and responsibility; or the New Deal-Fair Deal philosophy of the welfare state and subordination of the individual.

Both Republicans and Democrats are generally in agreement on the fine objective of a better life for all. But we are in violent disagreement as to method. We Republicans believe the better future rests upon increased individual opportunity, responsibility, and self-development. The Democrats, like the Communists, think a better future can be reached through the compulsion, dictation, and regimentation of the individual by the welfare state.

In our great country we have the most wonderful standard of living in the world. We acquired it, not through any welfare state, but through a free-enterprise system based on individual opportunity and responsibility which is the basic principle of the Republican Party.

We Young Republicans are all aware of the imperfections of our society and those which accompany the free-enterprise and every other system, and the need for social reform. But social reform is not incompatible with our way of life and the free-enterprise system. Indeed, through free enterprise, we have tremendously increased our standard of living over the years. Our low-income groups have constantly become more productive and enjoyed more and more of the good things of life. And only more individual productivity, not less, can provide a still better standard of living.

But with the promulgation in 1848 of the Communist Manifesto by Karl Marx and Frederick Engels, a new ideology arose, the concept of the welfare state, promising minimum security at the cost of diminishing individual opportunity, responsibility and productivity and imposed on the people by the politicians through the force of law.

Now, let us look at the welfare state and its record. We have several clear examples. In the Union of Soviet Socialist Republics we see the workings of the welfare state at its highest degree of perfection. There, all decisions affecting everyone's welfare rests with the Government. The Government determines what you shall earn, how much you shall spend for food, what the conditions of your employment shall be, and so on, extending into every phase of living. There the system of central planning is complete and through the concept of the welfare state the U. S. S. R. has been provided with every opportunity to show its results.

And what are those results? First, the U. S. S. R. is an iron-bound totalitarian dictatorship. The welfare of all is subjected to that of the politician and those who dwell within the Kremlin. And the standard of living of the Russian people is so inferior to ours that we can only shrink with horror when we look at their lot.

Coming more closely to our cultural and geographical position in the world, we have the United Kingdom. Since 1945 the British Labor Party has had a full and complete opportunity to provide its people with a fairer and fuller life for all. Experience under this system now furnishes convincing and eloquent proof of the utter failure of the welfare state, and the coming collapse of socialism in England. The people of Great Britain have witnessed the nationalization of the Bank of England, railroad and motor transportation, the electric-power industry, the coal industry, and the medical profession.

Let me give just one example of the terrific price which has been paid in Englnad in return for diminishing individual responsibility and opportunity. I quote from Alfred Edwards, a member of the British Parliament, who expresses concern over the nationalization of coal and other industries. In a recent article which appeared in the Reader's Digest, he said that "From June to October 1948, in spite of the increased mechanism, and in spite of the fact that it is now the people's coal—not that of greedy capitalists—the mines produced 158,000 tons per week less than in 1938." As an example of the thinking of the British people, a recent English cartoon pictured a coal miner talking to the Minister of Mines, and saying, "You told us under socialism we would get more money for less work. Well, we have given you less work. How about more money?"

As part of this central planning by the Labor Party politicians, we find increasing Government regulations in the United Kingdom with controls gradually spreading its tentacles like an enormous octopus over the life of every Englishman.

When we come to the question as to how the welfare state exacts pay for its free services, the results are extraordinary. The United Kingdom has been financed by the United States to the extent of some four or five billions of dollars since the end of World War II. If the United States had failed to provide this assistance, there would undoubtedly have been bankruptcy not only for the "Old Lady of Threadneedle Street," but also the end of socialism in England.

Now, there you have the contrast between these two philosophies. And you college students are faced with the necessity of making a choice between them. You must choose between our Republican free-enterprise system, based on individual opportunity, responsibility, and productivity; and the New Deal-Fair Deal theory of the welfare state, where the individual is regarded as more or less incompetent so that he must be subordinated to the state and its politicians, given less opportunity and responsibility, made less productive, controlled by law, and taxed to the limit.

The Truman administration, which is the dubious inheritor of the Roosevelt New Deal, has been seeking to impose a welfare state on the American people. We may, indeed, go back as far as 1931, when Rexford Guy Tugwell, later Under Secretary of the Interior of the administration wrote that our system was "not so satisfactory to the rational faculty as revolution and rebeginning on the Russian model." Think of it. Henry Wallace, former Vice President of the United States in the administration, stated frankly that, "Capitalism must collapse unless something is done to bring the individual under control." And when running as the Democrat candidate for Governor of California, Upton Sinclair actually went so far as to say that, "Capitalism has served its time and is passing from the earth. A new system must be found to take its place. Our opponents have told you that all this is socialism and communism. We are not the least worried."

Today we are finding the Democrat administration stumbling along in the wake of the New Dealers. We have seen the NRA which imposed complete controls on business for hours of work and prices of commodities. When we compare this system, which is so similar to that employed in the U. S. S. R., we cannot help but be shocked with tremendous force.

The pressure on the part of the Truman administration for a peacetime OPA and price control which forced on us conditions of scarcity in 1946 and calls to mind the empty shelves of the shopkeeper, the black market, and widespread misrepresentations, not to mention the general scarcity of food, should concern us all. Yet the administration calls for a return, now, to a peacetime OPA, as a remedy for the spiraling cost of living. Also, seeking to regulate all business and to fix the prices on all commodities, there is pending in the House of Representatives, that epitome of restrictive legislation, the administration-sponsored Spence bill imposing virtually complete control over American business and the people generally. There you have the trappings of the welfare state wrapped in legislative habiliments.

Now, our Republican free-enterprise system and its faith in the worth of the individual, is a philosophy which is essentially youthful in character. It is the very essence of the point of view of you young people here in college who feel that you have the world by the tail and can go out and accomplish great things. It is inherently the belief of Young Republicans everywhere. Many of the older people are confused and

UNIVERSITY OF MICHIGAN LIBRARIES

disillusioned. They wonder if there may not be something in this "welfare state" and "free give-away" business. But, I have traveled 150,000 miles and more in the last 3 years, and the young people to whom I have talked all over the country just will not stand for the welfare-state idea and its subordination of the individual. We Young Republicans want opportunity and responsibility. We are not afraid of hard work and making our own way in life. We know that without opportunity and responsibility we Young Republicans can never accomplish anything and never fully enjoy life.

Hence, it is up to us Young Republicans to go out and ring the doorbells of America, to make the people aware that our only real hopes of the future lie, not with any welfare state nonsense, but with our Republican free-enterprise system based on faith in the individual, and his ability to produce and contribute to society and stand on his own feet.

Yes, we Young Republicans must fight for our beliefs, and here are two ways by which we can do it:

1. Every Young Republican should run for every political office which his personal situation permits from dog-catcher up, or support to his fullest some worthy Republican candidate, and thereby become a leader in our fight for individual opportunity.

2. Every Young Republican organization, including those Collegiate Young Republican Clubs represented here today, must organize as an effective instrument to sell our country on the tremendous importance of our free-enterprise system and individual opportunity, in articulate terms. And in fighting, in this way, in the political arena, you will be fighting for your own homes, your careers, and your future.

Atomic Energy Commission Investigation

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1949

Mr. HOLIFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials and an article by Marquis Childs from the Washington Post:

LIGHT ON THE ATOM

David E. Lilienthal's letter to Senator MCMAHON is not that of a man who is ashamed of his record or who has something to hide. Mr. Lilienthal has called for a full investigation of the Atomic Energy Commission, noting that Senator HICKENLOOPER's charges of "incredible mismanagement" involve "nothing less than the security of the Nation and the peace of the world." We welcome the inquiry which the Joint Committee on Atomic Energy has agreed to. A comprehensive investigation, going into the nonsecret as well as the secret aspects of atomic energy development, can focus a spotlight on practices and conditions which will benefit by intelligent criticism. Such an inquiry, likewise, may have the effect of restoring a badly needed sense of proportion on Capitol Hill.

For what is evident from the frenzy of the scaremongers as well as the confusion of legislators trying to do the right thing is a preoccupation with what Hanson Baldwin aptly calls the mistaken belief that secrecy is security. In point of fact, what secrecy there is regarding atomic processes is at best an evanescent thing, the value of which will disappear when Russia perfects a bomb of her own. The real atomic security of this country is in its scientific brains—and the ability to turn the atom into something more than a destructive force.

In this respect it is disturbing to note the position of Admiral Lewis Strauss, a member of the Atomic Energy Commission, regarding the shipment of radioisotopes to foreign countries. There is a certain consistency to Admiral Strauss' reasoning that these isotopes, used largely for medical and biological research, might aid the Russians if they fell into Soviet hands. But the chance is one that must be taken. As Mr. Lilienthal pointed out, isotopes have less potential military value than many other common exports such as steel and electrical apparatus.

The country simply cannot afford to become so fearful of anything that might help Russia as to ignore the handicap caused by creeping secrecy at home. There is some encouragement in the statements that top military men do not want military control of atomic energy. But, with or without military influence, continued misunderstanding of the real meaning of atomic energy and continued stress on more and more secrecy can only mean that the atom will remain just a military weapon.

SECRETS OR SENSATIONS

To the extent that the congressional inquiry into atomic security serves to put the Atomic Energy Commission on its toes, the current rash of finger pointing may have a useful result. Chairman Lilienthal now has admitted that the Commission was derelict in not reporting to the FBI at once the loss of a minute quantity of uranium. Certainly this indicates lax security checks. But Mr. Lilienthal hardly can be charged personally with a violation of security regulations about which he was not even informed until late. In this respect his willingness to assume guilt merely furnishes ammuntion to the vindictive sensationalists who are out to crucify him—and civilian control of atomic energy.

The point to remember—and it cannot be emphasized enough—is that the security value of the missing uranium is almost precisely nil. No atom secrets can be learned from it. Most of the lost U-235 has been recovered and positively identified through analysis of laboratory wastes. It is probable that there is a perfectly natural explanation for the disappearance of the bottle originally containing the smidgeon of U-235. The bottle was similar to thousands of other bottles at the Argonne laboratory. It could easily have been broken or accidentally discarded. Laboratory personnel were negligent in trying to clear up the mystery themselves instead of immediately notifying the FBI. But this was carelessness, not conspiracy.

It is disingenuous to attempt to magnify these circumstances into a full-blown security scare. Likewise, it is pure maliciousness to imply, from an off-the-cuff remark by AEC General Manager Carroll Wilson, that atom secrets have been stolen. Mr. Wilson was asked a hypothetical question, whether any AEC plans have been stolen. He replied that out of millions of documents probably some have been taken. Certainly such a statement involving vast numbers of nonsecret papers cannot fairly be regarded as an admission that atomic secrets have been stolen.

Altogether, the attacks on Mr. Lilienthal and the irresponsible and undocumented charges that the AEC is shot through with Communist sympathizers are indicative of a fear obsession with a new force that the inquisitors know very little about. There is a great need for more intelligent criticism of the Atomic Energy Commission—and in this respect the Joint Commission on Atomic Energy has been a suppliant rather than the watchdog intended by the Atomic Energy Act. But more intelligent criticism—and understanding—depend on limiting, rather than enlarging, the areas of secrecy. The danger, from the sort of hysterical nonsense now being spread, is that atomic energy may be walled off permanently from the people in a military preserve from which it cannot be extricated.

WASHINGTON CALLING

(By Marquis Childs)

FORRESTAL AND LILIENTHAL

If human beings are capable of learning from experience, then there is an important lesson to be learned from the tragedy of James Forrestal. It gets down to the real meaning of that tragedy which has scarcely been touched on in the comment on the last act of despair.

Forrestal had come to believe that he was being persecuted. This took such an exaggerated form as to be a major symptom of his mental illness.

But to perfectly rational observers it was evident that, in the last months he served as Secretary of National Defense, Forrestal was under an attack that amounted to persecution. Certain press and radio commentators had set out to "get Forrestal." While their motives may have been clothed in sublime self-righteousness, the facts nevertheless speak for themselves.

How much these attacks had to do with driving Forrestal out of office no one can say. He had undertaken, as he himself came to understand, an impossible assignment as the first Secretary of Defense, responsible for carrying out unification. When he left he was a broken and defeated man.

Today the same kind of a press and radio attack is being directed at David Lilienthal, Chairman of the Atomic Energy Commission. It comes from quite different elements of press and radio. It has not yet reached the degree of personal innuendo and vilification that characterized the wind-up of the Forrestal campaign.

But the motivation seems to be the same—to get Lilienthal. If he cannot be driven out of office, then an atmosphere will be created in which it will be impossible for him to serve further when his term expires a year from this June 30.

The parallels seem to me to be too important to be ignored. In a sense Lilienthal's assignment as the first chairman of the first civilian commission to take over the enormously difficult and complicated and frighteningly secret atomic project is as impossible as Forrestal's task.

Forrestal was attacked as a symbol of big business and high finance with constant innuendo about deals in oil. Lilienthal is attacked as a symbol of the New Deal and the radicalism of the Roosevelt administration, with repeated hints that because of his political convictions he cannot be trusted with secrets involving the Nation's security.

The outline of the campaign is fairly clear. The loss of a minute quantity of uranium-235 was exaggerated and blown up out of all proportion even after official denial had rejected the invented thesis of espionage and theft with which the story was first heralded. Similarly, the Freistadt scholarship was given the most exaggerated prominence by those who deliberately seek to discredit Lilienthal and thereby civilian administration of the life-giving or death-dealing force that science has unleashed.

I heard one of the instigators of this campaign boast some time ago about the material being assembled that would be used to "get Lilienthal." As a kind of climax to this stage of the attack, Senator BOURKE B. HICKENLOOPER, of Iowa, has called on Lilienthal to resign. One must credit HICKEN-

LOOPER with the most conscientious motives, yet the timing of his statement admirably served the campaign.

Press and radio in this country have great power. They dig out the news with a vigor and initiative seen in no other country. But the abuse of that power—when it descends to personal bigotry and personal feud—is a clear and present danger.

The end result may be to drive out of public office capable and conscientious men to the extent that we shall have left only timid hacks or military automatons. This is not to argue that Forrestal was the perfect Secretary of Defense or that Lilienthal is the perfect chairman of the AEC.

It has seemed to many that the Commission should tell the public far more than it has about the project as a whole and the atomic bomb. But consider what happens to Lilienthal when he tries to do that, as was done in the Commission's last annual report. Ignorant and prejudiced men in the Senate raised a violent outcry that secrets were being given away.

So the Commission is caught betwixt and between. Lilienthal is a convenient and conspicuous target. The attack warms up, spiced with malice as yet hardly discernible but more of that can be ladled in later on. Here is an abuse of the democratic process that can jeopardize democracy itself. No wonder the Soviet propaganda radio gets so much useful fodder for the Russian effort to prove to the world that we are a panic-stricken people obsessed with fear.

Save $3,000,000,000

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, though it was long suspected, the Hoover Commission reports have brought home to the average man the tremendous waste and inefficiency in his Government as administered from Washington.

Throughout the country the people are demanding that their Representatives do something about saving some of the tax dollars, forcing Federal employees to be more efficient. The people do not propose to take no for an answer.

But the fault does not all lie in Washington. Congressmen are sensitive to the will of their constituents and rightly so because they are the people's servants and, in some degree at least, are bound to carry out the wishes of those who elect them.

The difficulty grows out of the fact that, while the people are now insistent upon economy, they have not yet reached a point where they are willing to soften their demands for their own particular pet projects.

Typical of the editorials which show that weekly papers throughout the country are cognizant of the situation is an editorial from the Allegan Gazette, published at Allegan, Mich., written by Leo W. Hoffman, entitled "Pet Projects." If the home folks will just be sincere in their demands and insist upon economy in their own projects, they will get it.

A second editorial from the same publication shows the utter impossibility of retaining individual freedom and prosperity if we continue to adopt socialistic schemes.

The editorials follow:

PET PROJECTS

The Detroit Free Press, published by John Knight, has been doing its bit toward fighting national socialism, waste, and extravagance as planned by Harry Truman, but we noted the other day that it slipped editorially.

This metropolitan daily has been against Federal aid as it is being practiced today, but recently it made an exception and advocated Federal aid for housing. In brief, the Free Press would like an end to the Truman program and any extension of the Federal Government into private enterprise, except the building industry, because the Free Press would like a Federal slum-clearance project in Detroit.

This illustrates the political strength of Truman's attempt to socialize the United States. It is clear and convincing proof of just why and how Truman won the election.

Even the people who are against the New Deal, Fair Deal, socialism, Federal aid, and all the crackpot ideas germinated in Washington always have one pet project that they want to see put through. They are against something in principle but they want to make an exception for their own project. They are against Federal aid except that they want Federal aid for their pet project.

The Detroit Free Press is against Federal aid, but it wants Federal aid for housing, and no doubt will use its influence to help pass a bill for that purpose with the result that the cost of slum clearance in Detroit, Chicago, New York, and in all the other large cities will be borne by the taxpayers no matter where they live.

Senator TAFT is an enemy of national socialism, and the present administration, but he is for the housing bill.

All the school organizations, as a general rule, do not favor Federal aid except for education.

Senator VANDENBERG doesn't believe in Federal aid except for education.

The farm organizations are composed of rugged individuals and as a rule are opposed to the Truman program but they usually favor Federal aid in one form or another for agriculture.

The farm co-ops are quite independent but they want favors in the way of tax exemptions.

Actors organizations are in favor of Federal support for the theater, and so on down the line.

What the Detroit Free Press and these other people don't seem to realize is that this time there can be no exceptions. If one group or one project is entitled to Federal aid then the rest are. The battle against national socialism is lost if each opponent is going to hedge, make an exception, and weaken his position by demanding Federal aid for his pet project.

If the Federal Government would reduce its expenditures and abandon its attempt to socialize this country, fire more than half of its employees, reduce taxes, then Detroit might be able to take care of its own local problem, Allegan could build its own school, the actors could subsidize their own projects, the farmers could get along without price supports.

Each advocate of Federal aid or Federal favor is like a hog fighting for his portion with his fellows at a common trough and you can't let one through and keep the rest back. The more you let them have, the fatter and bigger they grow and the more they eat. They eat on private industry and on the taxpayer and pretty soon there are so many hogs that there is no longer any private industry nor taxpayers. At that stage of the game the hogs will turn on each other and you will have what some people seem to want in this country, national socialism, communism or some other ism. You won't have democracy.—L. W. H.

SHOW-DOWN

There is a war going on in the United States, so far a bloodless war. It is a war between Truman, socialism, the dole system, the IWW's, the recipients of Federal aid, the Federal employees, waste and extravagances on the one side and those who believe in a constitutional democracy, the workers, the ambitious, the rugged individuals, the thrifty, the savers, and the taxpayers on the other.

It is a war to determine whether we are to have national socialism, or a United States of America as it has existed in the past.

The most recent battle between these two forces is between Truman, who is insisting that Congress raise an additional $4,000,000,000 in tax money to prevent a deficit in Federal spending, and some Members of Congress who insist that he must reduce his spending and abandon his socialistic program.

This country cannot survive half socialistic and half democratic.

This country cannot survive under a system that requires half of the people to work and pay exorbitant taxes to support Federal aid for everything from soup to nuts.

Up to date, it has been private industry that has supported many of the socialistic schemes of Roosevelt and Truman, but it cannot continue to do so.

Either there will have to be a stop to any increase in Federal spending and expansion of Federal sponsored social schemes or there will be an end to private industry and individual liberty.

Some of the people now on the public teat will have to get off or the cow will be drained dry and there won't be anything for anybody.

As we have said before, Truman and his crowd are more of a menace to this country than Stalin and all the Communists in the world.

Vocational Rehabilitation

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. BOGGS of Delaware. Mr. Speaker, the Journal-Every Evening newspaper of Wilmington, Del., always carries an interesting column known as Man About Town. On May 6, 1949, the writer of Man About Town, in his very able and delightful way, was on the subject of vocational education and rehabilitation. The story was so appealing and thought provoking, it occurred to me that it would be of interest to the Members of this House, and, therefore, I include it in the CONGRESSIONAL RECORD:

MAN ABOUT TOWN

An interesting exchange of correspondence—involving a fifth-grade student at the Marshallton school, a misunderstanding, the giant Federal Security Agency in Washington, and the State vocational rehabilitation division in Wilmington, has just come to light.

In the process of which some Delaware children learned that crime does not always

UNIVERSITY OF MICHIGAN LIBRARIES

involve gunfire and cops but sometimes "crime means neglecting people."

Also, at a time when so-called "bureaucratic double talk" gets a daily lambasting, it is refreshing to find basic English used to describe more than adequately the complex fundamental concept of vocational rehabilitation.

The beginning of the tale apparently lies in the "misunderstanding."

The Washington Office of Vocational Rehabilitation, part of the Federal Security Agency, put on the air some 15-minute radio dramas to tell the story of rehabilitation.

The dramas—a very few of them and apparently the only ones heard by young Charlie Weymouth of the Marshallton school fifth grade—told how a handicapped man was close to the edge of crime because of his inability to compete with normal persons as a wage earner, until vocational rehabilitation put him on his feet and into a new job and a new life.

Therefore, Master Weymouth wrote a brief letter to one of Washington's largest bureaus, the FSA, to say:

"Our fifth grade would like very much 13 of your 13½-minute dramatized transcriptions to show that crime does not pay.

"Thank you very, very much," signed Charlie Weymouth and the fifth grade.

Over in Washington someone checked to make sure the letter was meant for the FSA and not the FBI, and then filed it for disposition.

Michael J. Shortley, director of the Washington office, took time out to write a long letter to the Marshallton School fifth grade, addressing his reply to "Dear Charlie."

"It was nice to hear from you and the fifth grade. We are sending you the transcriptions and we hope you will like them," Mr. Shortley wrote.

"If the fifth grade knows of people who cannot work and support themselves because they are disabled, you can tell them where to go so that they will get help. In Delaware, this is to Mr. John G. King, Rehabilitation Division, 11 Concord Avenue in Wilmington.

"These radio dramas do not deal with any crime, except the crime of neglecting people who could be made happy and useful through rehabilitation. That sort of crime does not pay either, but rehabilitation does pay because it costs very little to put disabled men or women back to work. Then they can take care of themselves and their families and do not have to depend on charity.

"The best of luck to all of you, and please let us know whether you like the radio shows."

In short order, the transcriptions were brought to the Marshallton fifth grade by Leo Waters, one of the counselors of the Delaware rehabilitation center in Wilmington.

He ran off the records to the fifth grade—and then, by request, to all other grades in the school.

The members of the fifth grade wrote some more letters, these of appreciation and to the Wilmington center. Such as the one from Janet Abe saying, "I hope you enjoyed it as much as we did," and another from Mary Jane Cain stating, "I wish you could come another time, too, but I guess you can't because you have too much work to do."

All of which opens a new field of endeavor to the vocational rehabilitation officials.

They have been working long and hard in their attempts to explain the story of rehabilitation to adults; now, they have learned the "inoculation" of ideas can be made at a much earlier age.

It could quite well turn out that children—observant, kind-hearted, thoughtful, and entirely uninhibited—would do a better job of finding handicapped persons and directing them to the rehabilitation center.

Presentment of New York Grand Jury

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. NIXON. Mr. Speaker, in view of the current intnerest and concern over Communist espionage activities in the United States, I am inserting in the RECORD the text of a presentment issued by the special Federal grand jury in the Southern District of New York, which was issued on April 26, 1949. I particularly call to the attention of the Members of the House the recommendations for tightening existing laws which are made in the presentment.

PRESENTMENT OF GRAND JURY WARNING ON ESPIONAGE

Whereas the undersigned constitute all the members of the December 16, 1948, Special Federal Grand Jury of the District Court of the United States for the Southern District of New York, impaneled to inquire into espionage and subversive activities; and

Whereas there has been present for the past 4 months, and is being presented, before this special Federal grand jury a volume of testimony concerning activities of both foreigners, and American citizens which are directed from within and without against the security of the Nation; and

Whereas this testimony and evidence have led this special Federal grand jury to certain conclusions it deems proper and imperative to be brought to the attention of the executive, legislative, and judicial departments of the United States Government for such action as may be necessary or appropriate, the undersigned members of this grand jury respectfully show and allege as follows:

1. The grand jury is of the unanimous opinion that the safety of this country and its institutions is being jeopardized because

(a) Increasing efforts, since the United States of America has been forced by events to take a dominant position in world leadership, have unlawfully been and are being made by those inimical to the Nation to obtain information relating to the national defense and security—information which could be used to the Nation's injury and to the advantage of foreign nations; and because

(b) Existing laws, applicable to activities aimed at unlawfully obtaining such information, are inadequate and unrealistic in view both of the Nation's position in world affairs and internal menaces from those zealously activating a philosophy hostile to our constitutional form of government.

2. This conviction was arrived at by the grand jury after hearing, over a period of 4 months, the testimony of a large number of witnesses who, irrespective of their widely differing relations to the problems under consideration, have been able to aid its investigations. Many of these witnesses have been summoned by the Department of Justice and some by the grand jury itself acting independently under its own authority as the anciently established representative of the people. They have been examined in that secrecy which is designed not only to determine those who may have violated Federal laws but to protect the rights and the reputations of the innocent.

Among these witnesses have been men charged with ferreting out violations of Federal laws and others who could be classed as Government witnesses.

Others, men and women whose integrity and innocence have not been questioned but who have had valuable information to give, have proven entirely cooperative in the grand jury inquiries.

Still others—and the number has proven surprisingly large—themselves believed to be guiltless of direct violation of the law as it now exists, have invoked their constitutional rights to refuse to give information they indubitably possess concerning knowledge of violations by others. It has been a matter of grave concern to the grand jury that there are in this category of witnesses certain lawyers who, despite the fact that they are by virtue of their profession officers of the court, have refused to answer questions put to them by the Federal attorneys and the grand jurors on the grounds that the answers will tend to degrade or incriminate themselves. This, such witnesses have unquestionably done because they have been alerted through the publicity given by other investigating bodies to the circumstances which the grand jury must examine in secrecy.

Lastly, there have been a certain number of witnesses who, the grand jury is convinced, either by their own confessions or by the incontrovertible evidence of others, have violated Federal laws, but who are protected by the operation of the statute of limitations. The grand jury is powerless to indict such an individual so that he can be given a fair trial before a judge and jury with all the safeguards of such legal procedures.

3. The grand jury has been provided with many object lessons of the looseness with which laws governing espionage, the practical application of which it must determine, are at present drawn. In the light of the situations it has had to face, it believes that the safety and welfare of this country require either the enactment of new legislation or the amendment of existing legislation.

4. The grand jury, without making detailed recommendations, is nevertheless convinced that the espionage statutes themselves should be amended and tightened without meanwhile infringing on those civil rights constitutionally guaranteed our citizens. It recommends, therefore, that laws defining espionage be designed to cover all unauthorized transmission of information relating to the national defense which could be used to the injury of the United States or to the advantage of any foreign nation. It further recommends provision be made that those engaged in such transmission can be prosecuted if they know the information may be used for such purposes.

The grand jury holds the crime of acting against one's own country is of such gravity and of such abhorrence to the American people that those so guilty should not be protected in any manner not provided by their constitutional rights. Accordingly it strongly recommends that provision be made to indict at any time any individual guilty of transgressing espionage statutes, now existing or to be enacted, without regard to any statute of limitation as in the case of treason.

Convinced that, despite the vigilance and the efficiency of the Federal Bureau of Investigation, increasing efforts will be made to acquire and transmit information injurious to the Nation, the grand jury holds that persons trained in espionage or sabotage by any foreign country should be required to register under the Foreign Agents Registration Act; and that failure to register under the act shall be considered a continuing offense for which the statute of limitations will not be operative. It recommends legislation to this end.

The grand jury is aware of the legislation on these and related subjects which has been

proposed on the recommendations of Attorney General Clark. These recommendations were prepared in close consultation with the Interdepartmental Intelligence Committee, composed of representatives of the intelligence divisions of the Army, Navy, and Air Departments and the Federal Bureau of Investigation. It urges the careful study of this proposed legislation by our legislative authorities with the view that laws be passed to achieve these objectives in the proper constitutional framework.

Having seen at first-hand the difficulties in arriving at the truth concerning espionage violations when witnesses have been alerted by publicized charges and countercharges, the grand jury recommends that all investigating bodies conduct their inquiries into espionage in secret.

The grand jury further recommends that an investigation be made by the proper authorities, by bar associations, and other similar bodies, to determine those measures that may be taken to disbar from practice in the courts any lawyer who, appearing before any grand jury, refuses to answer questions on the grounds of self-incrimination. It is obvious that if such grounds exist the lawyer is not of that integrity which the American people should demand of all officers of the court.

Now, therefore, the grand jury respectfully petitions the court to accept this presentment and order it filed, authorizing the foreman and the secretary of this grand jury to send copies of it to the Members of Congress and to the proper officers of the executive department of the Government, and to permit such other use as may properly be made of this document.

Dated New York, N. Y., April 26, 1949.

Signed by the following members of the special Federal grand jury: John Gilland Brunini, foreman; John G. Kilbreth, assistant foreman; Hugh V. Doran, secretary; Robert L. Barrows, Joseph P. Christianson, Mrs. Evelyn Zorn Dingwall, James Sumner Draper, Raymond G. Fowler, Robert Frese, G. Leonard Gold, Henry E. Grant, Harold C. Hahn, Richard Brown Jones, Murray Kanner, Francis Keally, Samuel B. Leight, Sidney Leshen, Herman E. Nathan, Bernhard K. Schaefer, Harry Scherman, John Schreiber, Siegfried Stern, Wheeler Williams.

FEPC, the Wrong Way To Get Fair Employment

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1949

Mr. HAYS of Arkansas. Mr. Speaker, under leave to extend my remarks, I include the following statement which I submitted to the subcommittee of the Committee on Education and Labor now considering FEPC proposals:

Mr. Chairman and members of the committee, I appear today in opposition to proposals to establish a Fair Employment Practices Commission. It is not my purpose to treat in detail the technical phases of the problem of discrimination. The subcommittee is thoroughly conversant with these matters. I do wish to emphasize the fact, however, that I am opposed to discrimination and I recognize that minority groups are adversely affected in certain respects by discriminatory practices. I am entirely sympathetic with the movement to secure for racial and religous minorities full rights under the Constitution. The differences relate to method.

While opposing the pending bills, I have in mind certain alternative proposals which I trust will receive consideration of the committee. It is my opinion that this committee has an opportunity to render a great public service by rejecting coercive measures which will result in aggravating the problem and to recommend, on the other hand, a constructive approach carefully defining the limited Federal aspects of this general problem.

The Congress cannot give adequate consideration to the proposed remedies without taking into account the relationship of specific proposals to: (1) regional variations in social and economic problems; (2) the controversy growing out of the President's message on civil rights; and (3) current economic trends relating to employment.

I should like the privilege of making a brief statement of my keen personal interest in the problem of securing for minority groups their full rights in our political and economic system. I have some pride in my efforts in past years to secure for all groups, particularly the southern Negro farm population, the highest opportunities for advancement. My record in the United States Department of Agriculture evidences this interest. I know that it is difficult for members of the majority group to understand fully how the denial of a right affects the thoughts and feelings of one who has reason to think such denial is attributable to race or religion. Viewing this difficulty some of the spokesmen of the minority have gone so far as to suggest that it is impossible for any member of a majority racial group to rid himself of the last vestige of prejudice against the minority member. I do not agree but I understand how the impression originates. I make only the claim for myself, and those who have expressed approval of these views, that we have tried sincerely and diligently to rise above prejudices.

I believe, Mr. Chairman, that it is more important at this stage that we create an atmosphere in which right solutions to legislative problems may be sought than that we come up with the perfectly correct answers to specific problems. In terms of this legislation, I mean by that that we would damage the minorities substantially if we set in force, as result of passage of questionable laws, reactions on the part of the employers and fellow workers that would cancel out any theoretical gains from a Federal law.

I am limiting my remarks largely to the southern situation where almost 10,000,000 Negroes, or 70 percent of America's total, make their residence. What the white people of the Southern States think about Federal authority being extended to this field is of tremendous importance. To disregard their thinking and the pattern of life to which the races are conditioned, would be a tragic mistake. No one familiar with the situation in the South will question the statement that legal penalties against southern employers and labor organizations for failure to conform to regulations prescribed in Washington will retard the wholesome trend toward nondiscrimination and improve race relations.

The opposition to this legislation is often identified with the resistance generally evidenced in our section to the President's so-called civil-rights program. It is impossible to disassociate the plan from the issues revolving around the President's recommendations.

I will not undertake to distinguish between the criticisms of the message which I regard as meritorious and those which are questionable. I do concede that there is merit in some of the President's recommendations. I insist, just as vigorously, that the passage of this particular proposal would be disastrous. It is a step toward statelsm which our people have every right to ask us to oppose. Neither can this view of the problem be regarded as sectional. The strongest indictment I have seen of FEPC came from Mr. Donald Richberg, of Illinois, who said of the penalty aspects of FEPC "Unless Government is to destroy the economic system of competitive freedom and a social system of free association, it cannot undertake to interfere with the voluntary selection of one's associates in work or play."

Finally, Mr. Chairman, the answer to the employment problem of the national minorities is in advanced educational methods in the public-school sytem, in industry, and government, and most important of all, in maintaining a flexible and stable economic system.

There is no power in government that will create adequate opportunities for employment in industry and agriculture unless the economy itself is thriving. Consider the practical angles. Put a law of this kind upon the books with the threat of Federal court action against the violator and 9 out of 10 employers will find legal ways not to employ Negroes for the reason that they will thereby be relieved of having to explain the discharge of Negroes in slack times. Employers will conclude that if they do not hire them they will not have to account for firing them. It will defeat its own purpose.

My opposition is directed primarily toward the coercive and penalty features of this proposal. I do not oppose the use of Federal service in counseling for nondiscrimination and in pursuing educational methods in the Department of Labor or some other Federal agencies that might be invoked for the economic aid of Negroes and other groups.

The success or failure of FEPC laws in the 10 States that are experimenting with them does not help us much in this problem. Those States have authority to deal with such problems. The authority of the Federal Government is constitutionally limited and, in my judgment, should not be extended beyond a coordinating and educational service as an auxiliary function of established agencies.

Alaska's Case for Statehood

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1949

Mr. BARTLETT. Mr. Speaker, under permission to extend my remarks I desire to include an excellent editorial written by Mr. William L. Baker, editor and publisher of the Ketchikan (Alaska) Chronicle, which sets forth many of the reasons why Alaskans believe they must have statehood if that great region is to progress as it ought to, not only for the benefit of Alaska but of the entire Nation.

The editorial follows:

AN OPEN LETTER FROM ALASKA TO DEAR OLD UNCLE SAM

We Alaskans thought you'd like to know that we are sending out an order for a dozen able Communists. We are not, at the moment, getting enough attention from you, but these babies, we're sure, can fix that.

Your House Appropriations Committee just turned down our request, made through President Truman and the Budget Bureau, for $9,000,000 for pulp-mill access roads in

UNIVERSITY OF MICHIGAN LIBRARIES

Alaska. The first $33,000,000 rayon pulp mill in the Territory will be started this summer in Ketchikan. Its officials did not ask you to build them power facilities or subsidize their transportation (as you did for much of the West) to offset high Alaska freight and construction costs. Your Forest Service has talked for 30 years of the great timber stands in Alask, ample to fill a fifth of United States newsprint needs in perpetuity. Your Interior Department has boasted for as many years that Alaska (population about 100,000 today) could support as many people as Scandinavia at a higher standard of living. We thought you were rather proud of us stepchildren up here and that you'd give us a few nickels to use in opening up our roads when we finally, through the efforts chiefly of our own leaders, got our first heavy industry lined up. Your House committee turned us down because the first road projected—largely through solid rock—was too expensive and would serve too small a population. This afternoon our Delegate to Congress (who has no vote) and our Governor went up to the Senate to ask for restoration of the pulp-mill road fund by the Senate Appropriations Committee. It will not all be spent unless three big mills come into three towns in Alaska.

We are not hopeful. You almost included us in the Federal Highway Aid Act years ago but thought better of it and then, when World War II came along and you needed hundreds of miles of road in Alaska, you paid several times as much for them as you would have if the long-time program had been in effect. You are, in fact, paying for Alaskan statehood but not enjoying its advantages. As a State, we'd have had about $12,000,000 yearly in United States highway grants. We, too, are paying for statehood and not enjoying it, for those roads would have attracted tourists who would have left money in Alaska. You do tax our gas 2 cents a gallon, you know, but spend that money building roads elsewhere, don't you, Uncle? We pay in many other ways, too. Our air lines—some of them the same companies that operate in the States—charge us 10 cents a mile to fly up here and charge only 5 in the States because the States have Senators who can protest.

The nine million we lost for pulp-mill access roads—part of it to serve 400 homesteads and homesites near our mill—may not be important to you. But if it had been little Luxemburg needing that much money to battle communism or even to build housing to prevent the creation of conditions in which communism flourishes, you would have granted the money, wouldn't you, Uncle? That's why we are going to import some Communists. Little people just can't get anywhere nowadays without them.

We voted for statehood nearly 3 years ago. At that time you were more interested in the Greek elections and the Turks. That summer the writer went with Congressman Jed Johnson (Democrat, Oklahoma, now on the customs bench in Washington, D. C.) to beautiful rugged Glacier Bay, where Alaskans thought you might build a lodge. It is a national monument, containing the most glamorous glaciers in America, the Fairweather Range, and wildlife galore. We hoped that a lodge like your Timberline on Oregon's Mount Hood would be the beginning of that multimillion-dollar annual tourist industry you keep telling us we should have. We finally got a million-dollar appropriation past the Budget Bureau to start such a lodge and another one at Wonder Lake in Mount McKinley National Park. But the two times these funds got past the House Appropriations Committee some Congressman took the money for a pet project in his home district. Yet you own, Uncle, 99 percent of the land in Alaska and your Forest Service, until last year, would not give a resort developer any but a 1-year revocable lease to resort sites in an area much larger than the State of Maryland. Take any square mile of that forest reserve and put it down in the Prairie States and you'd have millions of people visiting it each year. We lost out to Greece that year, as we lost to Luxemburg and the other North Atlantic states this year. That is our reward for sending over 6,000 Alaskans to fight for the "four freedoms" (which the Greeks, Filipinos, and Netherlands Indies are enjoying while we still seek them through statehood), and for paying more United States income taxes per capita during the war than did 32 States, and for leading a big share of the war-bond drives over the top. Aren't you some kind of a Dutch uncle, Uncle, or do you really think we can build a new country in a vacuum?

Do you think it right to protect the western Germans in their drafting of a constitution when you won't let us go on with the drafting of ours after 82 years as a colony—and we have no former Nazis in our midst. Isn't it strange for you to clamor against the cartels and trusts in the Ruhr when your own Fish and Wildlife Service built up a great salmon-packing trust in Alaska, with half a dozen companies controlling about 80 percent of the fish traps? Do you know that this same combine exercised thought control in Alaska until last fall when we broke its hold, elected a progressive legislature, and have just seen it pass the basic tax program that now makes statehood easy to support?

Oh, yes, you're paying for statehood in many ways and not benefiting from it. You wasted billions up here in the Canol project and other blunders like it during the war, and you let the Japs grab Aleutian Islands bases when our Delegate had warned you to prepare. If we'd been a State and he'd been two Senators, he'd have been heard and you wouldn't have had to tie down 300,000 troops in the Northwest for two long years until Attu and Kiska were cleared when you needed them badly elsewhere. Our Senators would have won the battle of the Aleutians in advance. There may be more such battles. This writer sees similar blunders in defense every time he travels over Alaska, which is often.

Your Indian Service schools up here have been allowed to run down. Then you closed 12 of them last year and let the kiddies go uneducated. Yet the native territorial guard was your best defense organization in the war, sharp-eyed, on the job 24 hours a day, bringing in downed pilots, spotting Japanese balloons, spying on the Japanese on Kiska (they told your Alaska command the Japs had left Kiska but he wouldn't believe them) and maintaining drills up until this spring when you and our legislature reorganized them. They are a pretty good radar system, and they didn't go running back to the States when Dutch Harbor was attacked. They gave up fishing, hunting, and trapping to build your air bases, and then, when you forgot to slip them the food you had promised them for the winter, they went hungry and lived off what birds and reindeer they could kill. They didn't protest to Washington. They lived up to their end of the Pacific Charter and the pact of the Pacific.

Uncle, you long ago plowed under the oil, coal, forest, and some of the mineral resources of Alaska under the doctrine known as Pinchotism. You promised to let us in on the public domain highway fund, then cut us out. You did the same with agricultural aid in the Adams, Smith-Lever, and other Federal acts. Now you are worried that the Arctic can't support the troops and civilians you think it needs to make it strong. You have discriminated against us at every turn, refusing for some months to give overseas credits (toward discharge) to Alaskans serving in western Alaska though the credits were allowed boys from the States. (Obviously our boys, only 1,000 miles from home, enjoyed the Aleutians and Bering Sea while your stateside boys didn't.)

Next year, we imagine, you'll be too busy with China and Japan to consider us—unless we import some able Communist agitators. Yet all we ask is a simple statehood enabling act now frozen in the House Rules Committee. Not money, alms, or arms. Just a chance to be full citizens at our own expense as you've been promising for 82 years. The weaknesses of our economy are your doing and are chronic with territories. The few people unemployed up here now are nearly all your people from the States who drove north over your Alaska Highway and can't get back. We'd have jobs for them if you'd fulfilled your promises. But you haven't. So we are willing to try to carry them out for you. We are bigger and more populous than 14 territories when admitted and we are probably more important strategically than any other bit of land in the world today. But we can't walk with the hobbles on and we can't fight tomorrow's kind of war for you with down easterners sitting on the defense committees and letting us have no money for roads to heavy industries, or for development of power plants, mineral deposits, agriculture, new fisheries products (this town had a 400,000-pound tuna catch for the first time in history last fall) and some of the unknown factors of the north, which may become mighty important in the near future.

Flood Control

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. STEED. Mr. Speaker, under leave to extend my remarks, I desire to call the attention of the Congress to an article on flood control written by Elmer T. Peterson and published in the Daily Oklahoman on Saturday, May 21, 1949, which deals with recent floods in Oklahoma and the effect of certain flood-control projects on those floods.

Oklohama, during the last 2 weeks, has been swept by almost unprecedentedly heavy rains. These rains have resulted in floods that have caused extensive damage. In only one spot, the Cloud Creek soil-conservation and flood-control experimental project, were the efforts of man able to deal with this onslaught of the elements.

I call attention of the Congress to the fact that of all the millions of dollars already spent on major flood-control projects in Oklahoma, under supervision of the United States Army engineers, not one single flood in my State in the last 2 weeks was prevented. If every project now under construction, authorized or contemplated by the Army engineers had already been completed, they would not have stopped any of these floods. There never has been better proof that this approach to solve our flood-control problem is wrong. The Soil Conservation Service has provided the answer in its Cloud Creek project. How long, Mr. Speaker, must we con-

tinue to follow this one-way flood-control policy of folly? Mr. Peterson's story follows:

FLOOD OF WASHITA PROVIDES A TEST

The extremely bad floods in the Washita Valley, in southwest and west Oklahoma, furnish the first severe tests of the Washita Valley flood-control project of the United States Soil Conservation Service, which is not to be confused with the big dam program. Fort Cobb, Anadarko, Mountain View, Carnegie, Gracemont, and other localities have suffered severely, with precipitation in a single storm amounting to as much as 8.6 inches in some places.

This is a drastic test for any kind of flood control, but what is sauce for the goose is sauce for the gander. If it tests one, it tests the others, so let's analyze any facts and statistics that are available at this writing.

First, remember that the Denison Dam didn't control these floods. This, of course, is absurdly simple, since no dam can control floods that occur above it, on the watershed. USDA statistics show that 80 percent of all agricultural flood damage occurs before the floodwater ever reaches the reservoir.

Let's go farther upstream. (Information is incomplete at this writing, as most State and Federal officials who could furnish information are not in their offices.)

Naturally you will want to know what happened on the Cloud Creek watershed, a Washita tributary about 12 miles up the river from the worst flood area. You remember that a big dedication ceremony was held there last July, 10,000 people being present.

The soil-conservation work on this subwatershed was practically completed. This is only a small beginning, however. Less than half a dozen subwatersheds out a total of about 1,000 in the Washita Valley are thus treated.

During the downpour in question 4½ inches of rain fell in 3 hours—a cloudburst. Yet there was no water coming down Cloud Creek below the small detention reservoir which acts as a safety valve in case the conservation treatment doesn't do a 100-percent flood-prevention job. The main detention reservoir lacked 4 feet of being full enough to discharge its load.

The flood-control engineer on the job said that this same Cloud Creek watershed, previous to this soil-conservation treatment, couldn't have taken 1 inch of rainfall without causing the creek to pour its surplus water into the main Washita River channel, to aggravate flood conditions.

Now suppose the big 11,000-acre Mountain View Dam, now proposed, had been built. How would it have performed?

The three main sources of floodwater were Rainy Mountain, Sugar and Cobb Creek. Without their torrents there would have been no disaster. They have had very little conservation treatment. They empty into the river below Mountain View Dam site. That's a starter.

Statistics as to total capacity of the proposed reservoir and the portion reserved for a flood-control allocation of capacity are not available, but, judging by comparable reservoirs, such as Lugert, Canton, and Salt Plains (for which statistics are at hand), the full capacity of the proposed Mountain View Reservoir would not be more than 300,000 acre-feet of which probably no more than 100,000 acre-feet would be allocated for the flood-control pool (capacity). Only 21,450 acre-feet of the Lugert Reservoir are allocated to flood control. After that is filled, the water starts coming over the dam.

About one-third of the total Washita watershed would feed this reservoir. An 8-inch rain would theoretically produce at least a million acre-feet of water, assuming all the water would run off and no conservation policies were used anywhere. That would be at least 3 times the total reservoir capacity and probably 10 times the flood-control pool. A 6-inch rain would theoretically produce at least 8 times the flood-control pool and a 4-inch rain about 5 times the pool capacity.

These figures, though theoretical and tentative, subject to correction up or down, are enough to show that the big dam doesn't necessarily control big floods. Vanport, Oreg., and Grand Lake, Okla., furnish concrete examples.

I Supported the ECA Program

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. O'SULLIVAN. Mr. Speaker, under general leave unanimously granted yesterday, Thursday, May 26, 1949, by the House of Representatives for all Members to have 5 days' time in which to extend their remarks in the Appendix of the CONGRESSIONAL RECORD, respecting H. R. 4830, I wish to make the following observations relative to same, and give some of my reasons for my supporting the passage of this bill as same was amended.

I studied carefully the evidence presented, in the recent hearings before the subcommittee of the Committee on Appropriations, House of Representatives, Eighty-first Congress, first session, on the foreign aid appropriations bill for 1950, and I also studied carefully the report of the majority and the minority view, and the bill itself, H. R. 4830, and I listened carefully to the debate on the rule, House Resolution 228, and the general debate on the bill itself, and could come to no other conclusion but to support wholeheartedly this bill in its entirety as it was amended.

In doing so I was forced to deny a serious demand from some of my constituents to cut this program 10 percent across the board.

If those who petitioned me to make this 10-percent cut had had the opportunity to become conversant with the foregoing information, which I was privileged to have, I am sure that not one of these protests would ever have been sent to me.

It has been said truly that "a little knowledge is a dangerous thing," and it had great application as far as evaluating properly this bill was concerned.

To cut this appropriation 10 percent would have amounted to a serious crippling of this great piece of legislation. This legislation is not a humanitarian one alone, but actually is strong and virile national-defense legislation. In the debate it has been so recognized by the best minds of both the Democratic and the Republican Parties in the House of Representatives. The cry to make a 10-percent cut across the board was actually an unnecessary demand, because when the amount of $3,568,470,000 recommended for 1950 is compared with the current appropriation allocated on a fiscal-year basis, there is reflected a decrease of over 26 percent. The recommended appropriation for the fiscal year 1950 is 15 percent below the budget estimate for that period report accompanying H. R. 4830. The minority views also agrees with this statement of the majority.

To have made another 10-percent cut across the board would have served nothing worth while, but unwittingly would have resulted in aiding Communists to accomplish their most heinous purposes.

ECA has stopped communism, and its full support, in my opinion, was a must for Congress.

I for one will never do anything knowingly to aid this criminal conspiracy of communism, and I am sure that none of my constituents, who have the welfare of America in mind and at heart, will disagree with my views and actions in this regard.

I shall support my country and its interests and shall work and support this bill to strengthen our national defense, which in turn in a secondary way will also help suffering humanity across the sea. The cry should not be "economy now," but "stop communism now" and put it back on its well-worn heels in the war-torn countries and "bat it flat" at home. Neither you nor I, as patriotic Americans, owe anything to this foul, soul-debasing creed.

Analysis of Lodge-Gossett Plan

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. NIXON. Mr. Speaker, I have previously expressed general agreement with the principles and objectives contained in the Lodge-Gossett plan for eliminating the electoral college and prorating the electoral vote of the States. However, I recognize that the merits of any proposal of this type should be thoroughly debated before its adoption and under leave to extend my remarks, I am including an articulate statement in opposition to the plan by Dr. Paul S. Smith, professor of American history and government, Whittier College, Whittier, Calif.

Dr. Smith's statement follows:

The proposed Lodge-Gossett amendment for electoral reform is one of questionable wisdom in several particulars. This is so despite the measurable approval it has received in various sections of the country. This is not strange since the subtlety of our electoral system is so generally unrecognized that the Lodge-Gossett plan appears on its face to incorporate changes that are altogether desirable. But this is not the case, and the purpose of these remarks is to point out some of the real drawbacks to the Lodge-Gossett plan.

A major criticism of our electoral system is that the general State ticket, or winner-take-all procedure, gives the full electoral vote of a State to the Presidential candidate winning

UNIVERSITY OF MICHIGAN LIBRARIES

the plurality vote of the State. Sometimes this has resulted in the election of minority Presidents. But exactly the same thing can happen under the proposed Lodge-Gossett plan despite the general understanding that exists almost everywhere that this new proposal insures the electoral vote of the Nation being at all times an accurate reflection of the popular vote of the Nation. It is but a simple blackboard demonstration to show that proportional or prorate casting of the electoral vote under the proposed Lodge-Gossett plan can deny the popular will quite as completely as our present electoral procedure. It would be a cruel illusion indeed to alter our present system in the direction proposed under the erroneous belief that the most important advantage claimed for it is an uncertain one. The Lodge-Gossett plan for prorating the electoral vote may reflect the Nation-wide popular vote with no more accuracy, or even with less accuracy, than our present general State ticket system which permits of no prorating.

Adoption of the Lodge-Gossett plan would freeze into the Constitution the proportional vote system, thus depriving the States of their present freedom to adopt a method for distributing the electorial vote in the way best meeting their needs. It is not inappropriate to point out that the advocates of electoral reform sometimes make the mistake of getting too much in the Constitution in disregard of the sound principle of flexibility so well illustrated by the British constitutional system.

Supporters of the Lodge-Gossett plan for proportional voting claim that this device will take away from minority parties and groups the inordinate power that it is claimed they now exercise in close States where their numbers, though small, may be decisive in determining the outcome of a Presidential election. It is said that this gives minor groups a bargaining power with the two major parties that is altogether out of proportion to their real importance and that in the case of a dangerous minor party, one that is not salutary in any respect. But it may be said with equal realism that the prorate system would encourage the establishment and growth of independent parties to such an extent as possibly to threaten our historic two-party system and bring into existence so many minority factions and blocs as to jeopardize government by majority rule. It is true that many minor parties fail to qualify for entrance to State ballots, but the plan for prorating inherently carries with it the idea that the way shall be made easier for independent parties to secure a place on them.

The feature of proportional representation introduces a dangerous possibility into American government. Adoption of proportional representation in our electoral agency of government might very well lead to its introduction in our legislative agencies as well. If it is logical to prorate seats in the electoral college, or whatever its fictional counterpart, so as to give minority groups representation, then it is equally logical and perhaps equally likely that sometime we shall adopt the same practice in the Congress of the United States and give direct congressional representation to minorities in congressional districts. Adoption of proportional representation in one area of our Government could very well open the way to its appearance in another.

Proportional representation in Congress could be a bad thing. At present a Congressman represents a geographical area and, following his election, his constituency becomes all the people living in his district—Democrats, Republicans, and others; he is the common representative of them all. If instead he were a strict representative of some one party or group, as proportional representation would make him, matters would be very considerably altered indeed. A Member of Congress whose constituency is geographic and is compounded of all the people living in a given area, is the representative of the interests of all. This tends to make him a moderate and to develop in him the capacity for compromise. If his constituency is a single group of folks (perhaps only a fraction of the people living in his district)—as would be the case under proportional representation—he tends to become radically one-sided and uncompromising. The former instance supplies a solid basis for democratic legislation, the latter denies it. It would be short-sighted electoral reform indeed that did not take into consideration, not only possible shortcomings in its immediate operation but its wider implications as well.

The Lodge-Gossett proposal for electoral reform is presented in the form of a constitutional amendment, as we know. By terms of this proposed amendment, were it initiated, it would be sent to the State legislatures for ratification. It would be far better to submit such an amendment directly to the people for final decision. This would mean submission of the Lodge-Gossett plan to State ratifying conventions composed of bound delegates chosen by the people, so that the people might truly speak. It is an altogether specious argument to say, as it has been said of the Lodge-Gossett proposal, that it ought to be sent to the American people for decision and then, in the same breath, arrange for its submission to State legislatures for ratification. If a mistake is made in the attempt to reform the American electoral system, let the people make it and let the people bear the responsibility for having done so. If a remedial change be effected in the electoral system, let the people make it, for then there is some hope that they may understand what they have done.

Robert Lewis Coffey, Jr.

MEMORIAL ADDRESS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1949

On the life, character, and public service of Hon. ROBERT LEWIS COFFEY, JR., late a Representative from the State of Pennsylvania

Mr. ELLIOTT. Mr. Speaker, I stood as an honorary pallbearer amid the sorrowful surroundings of Arlington Cemetery and watched a nation pay its last respects to our late friend and colleague, ROBERT L. COFFEY, JR.

My heart went out to his family, his parents, and friends.

Across the horizon of my mind there played the facts that I knew about BOB COFFEY. His mother, the former Curry Brindley, was reared at Cullman, Ala., in the district I have the honor to represent here. I often talked with BOB about Cullman and he told me that he would go with me to Cullman this summer. He was born in Chattanooga, Tenn., 30 years ago. Early in life he moved on to Pennsylvania, where he worked in the coal mines, was educated, entered the Army Air Force, and wrote for himself an almost unequaled record of bravery, daring, and accomplishment across the blue skies of time.

He left the Air Force in 1948 to seek election to this body, and the people of his district on November 2, 1948, conferred on him the greatest honor any man can receive—they elected him as their Representative, their spokesman in the greatest legislative body in the world.

BOB COFFEY was a big man. Though young in age, he was experienced such as few men are. His outlook was broad and big. He had participated in those things that have made this country great.

I last saw him about 24 hours before his death. We talked a moment and he departed to return no more. He gave his life in perfecting the science of jet flying.

At Arlington I realized more than ever before that BOB COFFEY's life symbolized the greatness of America, "the land where the humblest son of the humblest citizen may lift his eye in confidence to the star of hope."

And because of BOB COFFEY's life, America will go on being great, good, and strong. It will continue to be a lighthouse of hope.

And his passing is, as when a lordly cedar
green with boughs,
Goes down with a great shout against
the hills
And leaves a lonesome place against
the sky.

Connecticut River Valley Development

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by my colleague, CHASE GOING WOODHOUSE, of Connecticut, before the National Emergency Conference on Resources on May 13, 1949:

The Connecticut River Valley development cannot be approached as just another valley authority. The geographical, economic, and psychological situation is quite different from that of the Tennessee Valley or the Columbia River Valley.

The Connecticut River Valley is relatively small. The river flows 312 miles from upper New Hampshire and the Canadian border to Saybrook Point in Connecticut on the Long Island Sound. It drains 11,320 square miles, which is approximately one-third of all New England exclusive of Maine. A million and a half people live in the valley which includes 355 towns and cities, 20 of them with a population over 10,000 and some of them large metropolitan cities. The upper stretches of the valley are predominantly agricultural. The middle and lower valley is industrial with many old and long-established industries. The farm land has a relatively high economic value and a distinctly high sentimental value to its owners. Each town guards its grand list with jealousy and is far from keen on having any farms inundated and taken off the tax list by the building of river-development projects.

So in the Connecticut Valley there are not just the great open spaces of poor farm lands to deal wtih, but a well-populated valley with old farms, old industries, traditions, and among the people a deep desire to protect their beautiful countryside.

This situation and this attitude can be a detriment or can be an asset according to the way this question of valley development is presented. There is need for the spread of information among all the people and all the towns. New England is highly literate and highly thrifty. If the facts are there to prove that the Connecticut Valley development can be achieved without undue flooding of good farm land and at a cost which will bring an over-all profit to the people not only in money but in better living, it will be accepted. But not as a project instituted, developed, and operately solely by the Federal Government. It will be necessary to find constitutional means of giving the New England States, through their governors, a real share in the development and operation of any Connecticut Valley Authority. In the bill which I have introduced as a point of departure on which to build, an effort has been made to provide for such working together of the Federal Government and the New England States.

This idea of working together has been growing for some years. Like many other rivers, the Connecticut can be a source of great advancement or of great detriment to the people in its valley. In the old days, textile and paper plants were established in the valley because of cheap mechanical water power and an abundant supply of water. Look at an air map of New England and you will see that as in the history of many civilizations, it is the river that has been the life line of community development.

On the other hand, destructive floods have caused great loss. In Connecticut alone the total in dollars is $33,751,000 due to floods in the last 22 years. To this must be added damage caused by lesser floods not accounted for. The last two big floods cost $9,602,800 to Connecticut towns which are not and cannot be protected by dikes.

Since 1936 there have been attempts to agree on a flood-control compact between the New England States (Vermont, New Hampshire, Massachusetts, and Connecticut) and there is now a Connecticut River flood-control compact before the various State legislatures. This compact integrates the expressed wishes of the Congress, the ideas of the States concerned and the recommendations of the United States Corps of Engineers. There is nothing in the proposed compact which would interfere with the installation of power facilities at any dam where the Federal Power Commission and the United States Corps of Engineers determine that such installation is desirable. But there is no provision for an over-all survey or for coordination and all the emphasis is on flood control. The compact offers no incentive to comprehensive river basin development.

Unfortunately, advocacy of flood control has been used as a means of preventing the development of hydroelectric power. In fact, some people seem to imply that there is something inherently dishonest about multi-purpose dams, that they are mere devices of public power enthusiasts to make flood control the cover for paying subsidies to provide power.

The Hoover Commission report on the Interior Department is an answer to such assertions. It states "* * * the function of river development is a multiple purpose one, cutting across many of the unifunctional agencies. * * * A plan for the development of a river basin cannot be derived by adding together the special studies and the separate recommendations of unifunctional agencies, concerned with navigation, flood control, irrigation, land drainage, pollution abatement, power development, domestic and industrial water supply, fishing and recreation. The varied and sometimes conflicting purposes must be put together and integrated in a single plan of development."

The proposal for a 10-year New England development authority signed by six New England governors in March of this year carries out this idea.

In presenting this compact to the Connecticut State Legislature Gov. Chester Bowles put the situation most succinctly. He said: "It is essential that we New Englanders meet the challenge of other sections of America; that we have at our command all the facts which will aid us in comparing our progress with that of others; that we remain in a position of leaders rather than followers * * *. The New England Development Authority will help point the way toward the kind of industrial development best suited to New England traditions and resources.

"There are always those who say that we should leave such problems to the Federal Government, that only the Federal Government can insure that our people remain fully employed, that our resources will be fully utilized and that we will achieve a standard of life in which the maximum benefits of the democratic system are shared by all of our people. In my opinion it would be foolhardy indeed if we drifted into the habit of looking to the Federal Government for the solution of all the problems * * * The proposed development authority will enable us to study our future development in a comprehensive way in cooperation with the people of our sister New England States. We will not be limited by the artificial boundaries of a single State, nor will we run the risk of losing ourselves in the generalities so frequently found in the national treatment of the problem."

The compact would provide a complete survey of the New England situation by a six-man commission, one appointed by each of the Governors. The expenses would be paid by the States in proportion to population. I quote two sections which give a good idea of the sound basis upon which this compact is developed:

"ART. VII. The authority shall survey the natural and economic resources of New England together with the resources of adjacent areas which now or may hereafter affect the economy of New England and its development, including the utilization and control of the water resources of the region, especially in regard to achieving low-cost electric power, lessening flood damage, removing sources of water pollution, and obtaining from whatever source uniform or competitively fair power and light rates throughout New England, without prejudice to the agricultural or industrial economy of the area.

"ART. VIII. The survey of the natural and economic resources called for in the preceding article shall include, but shall not be limited to, an investigation, study, and a comprehensive report upon the importation of natural gas into the area by pipe line; the establishment of a steel industry in New England; the promotion and development of the textile, the electrical, the brass, and the shoe industries; and the conservation and expansion of marine fisheries, agriculture and timber and mineral production."

Unfortunately, there was no time to explain the terms and meaning of the compact to the people of the New England States before it was presented to the various State legislatures. Rhode Island ratified. Maine and Vermont have rejected it. It will be 2 years before it can again be voted on. In the meantime there will be many opportunities for discussion and for the people in each town to go over the compact from all angles.

Those interested in New England development must continue to work through Congress, the State governors and especially with information at the local level.

In Congress our first need is for authorization for a United States Army engineers comprehensive survey of the Merrimack and Connecticut Rivers and other rivers in the New England States where improvements are feasible.

Such a survey would give us facts as to potential power and the economic feasibility of its development. The marketing survey which I understand will be available shortly will answer the question of the need for power.

While it is very generally acknowledged that the entire country is suffering from a power shortage and while the war proved the value of the TVA, Grand Coulee and Bonneville, private utilities in New England, insist there is no shortage in that area, that the December 1948 peak was met and therefore there is no shortage. This group gives no explanation of why there is a lower per capita use of electricity in New England than there is in other parts of the country. With the exception of the west-south-central area of New England, the region has the lowest average use of residential electricity of any in the country. When the question of higher New England rates is brought up, the answer is always in terms of New England rates, lower today than in past years it is true. But that still does not clear away the fact that in 1932 the average rate per 100 kilowatt-hours in New England was 22 percent higher than the average charged by private companies in the TVA area, while today it is 60 percent higher. We cannot compare New England today with New England in the past. It is our current position relative to the current position of other regions in the United States which is at point.

It is not very realistic to offer a prize of $100 to anyone who can prove that any given mill has left New England because of power rates or power shortage. We cannot be content if we merely hold what we have. We must attract industry, improve the employment situation.

To point out that power is a very small percentage of total manufacturing cost is not enough. Sometimes a very small straw breaks the camel's back.

Public power is here to stay. The vote on the appropriations for the Department of the Interior for transmission lines in the Northwest and Southwest was 146 to 56, with not a single Democrat voting against these publicly owned transmission lines. In September 1948 there were some 150 Federal hydroelectric projects in operation, under construction or authorized but not 1 in New England.

But first we must have the comprehensive survey of the New England rivers. The FPC staff estimates that river development in New England could produce 749,000 kilowatts. The New England council survey found only 111,000 kilowatts undeveloped.

Why this difference? The New England Council survey estimates are apparently a summation of potential power development on individual projects, constructed independently while modern river basin planning, as noted in the Hoover Commission, looks upon the entire river as the unit of development. And the New England Council projects are for the single purpose of power and include only projects economically feasible on the basis of an annual charge of 8 to 15 percent or about twice the charge required by Federal financing (and financing means the project paying its own way). Now a sound plan involves the balanced use of all the water resources. It is just as outmoded to call for projects for power only as to call for projects for flood control only. The plan of development must be one resulting in maximum power available, flood control, navigation, pollution clearance and land preservation. The whole is a question of joint cost. The concept is just as honest and realistic in river development as in the meat-packing business.

There are a growing number of groups in New England interested in Connecticut River Valley Development. Labor is taking an active interest. Many of the young faculty members at our colleges and universities are making studies, are working with the State

UNIVERSITY OF MICHIGAN LIBRARIES

and Federal agencies. The governors have indicated their interest in very clear terms.

We need a comprehensive survey to satisfy all of us as to facts. Preliminary surveys indicate that we can look toward a unified river-basin development that will provide flood control, hydroelectric power, water pollution abatement, land conservation and wildlife conservation and that this can be done at an economically feasible cost, without undue loss of farm land and without injury to our established private utilities. In fact, the utilities should profit, for with increased prosperity there will be more demand for their services.

Aid to China

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. NIXON. Mr. Speaker, along with other Members of the House, I have been greatly impressed by the weekly radio broadcasts on communism by Commentator Jack Beall. Through these broadcasts Mr. Beall has rendered a real service to the country by alerting our people as to the methods and operation of the world Communist conspiracy.

Under leave to extend my remarks, I am including the eighty-seventh in this series of broadcasts in which Mr. Beall presents a thought-provoking analysis of the current situation in Germany and China.

The text of the broadcast follows:

We have had an undoubted victory in the "Battle of Berlin" but if any one in high place thinks that the cold war has been won thereby, he will experience a very sad disillusionment when the meetings of the foreign ministers take place, beginning May 23. As a matter of fact our difficulties over Germany, as a whole, are now in a comparatively early stage.

One major factor in our success over Berlin was because the Communists feared our setting up a separate western German state, with a democratic constitution. The Communist high command is intent on stopping this western German state. It becomes their number one requirement for "peace" in Germany, that these plans for a German constitution, now going forward at Bonn, be scrapped. The Russians claim they want to unify Germany but they want to unify it on their own model—that is of a so-called people's democracy. And they want to forestall the formation of a really democratic state in Western Germany to serve as a model. Happily, I see no lessened intention on the part of the west or of the German leaders of the western area, to scrap the Bonn Constitution. Only this morning we see where they are hurrying it to completion.

On the basis of pushing such a constitution for all of Germany, we would not be placed in the position of opposing the overwhelming desires of the German people for unification. But we would certainly oppose the unification of the German people on the Soviet model of a people's democracy. So, you can see from this one thing what a struggle is to be expected over Germany in the next few weeks and why the coming Council of Foreign Ministers may get into a hopeless deadlock.

The long-range strategy of the Soviet Union is to bring Germany—a united Germany—into a close rapprochement with the Soviet Union—even if they have to make the most extreme political bids to their late military and political enemies. They want an eventual military alliance with Germany. And if they get it they will have won the battle for Europe.

They are prepared to dangle some terrifyingly attractive offers in the face of the German people. They can offer to return the German lands—now occupied by Poland. That will be at no Russian expense—only at the expense of Poland. If we are not smart we will find ourselves being caught off base on that one. We should insist that these self-same lands, which belonged to Germany until Stalin violated his signature at Yalta—should be returned to Germany and something else beside: That Russia get out of the eastern third of Poland which she took without any trace of legality. Section 6 of the Yalta protocol said: "The final delimitation of the western frontier of Poland, should await the Peace Conference." Furthermore, there was an agreement between the great powers, immediately after the war, that the legal basis for the borders of Germany and Poland should be the borders that existed as of December 31, 1937; that is, before the Second World War. Instead of abiding by this agreement, instead of abiding by Yalta, Stalin calmly helped himself to the eastern section of Poland, then—to appease the Poles—he handed them over the eastern section of Germany—up to the Niesse River He borrowed from Peter to pay Poland.

Now, in order to bait the trap of a military alliance with Germany—and thus control all Europe—Stalin can dangle before the German people the much-desired return of Eastern Germany to them. I don't think we should be caught in the position of opposing this—as such. We should be smart enough to accept this publicly—but only on the basis that Russia return the eastern provinces of Poland, to Poland. If Stalin refuses, then the onus for the break-down of the whole arrangement will not fall on the United States, but upon Stalin. We will be in the clear with the German people, as well as with the Polish people. Stalin will not be in the clear with either of them. It will help to spike his drive for a military alliance.

We do have some cards in our hands, on this particular deal. But there is another deal of the cards that leaves us out pretty much in the cold. That is about Asia. Stalin has some things he can offer the German people, along the economic recovery line, which we cannot match, if all Asia goes Communist. It is extremely important to realize the world-wide ramifications of the Communist strategy and not to think of everything in watertight compartments. A communized Asia is going to help Stalin in winning Germany if we don't watch out.

The reason that the communization of China is going to help the Soviets in winning over Germany is for a very simple reason. They can dangle before the German people the vision of quick economic recovery—by turning over to them the markets of the Far East, for manufactured goods. From those markets, it is the intention of the rulers of the Kremlin to exclude the western nations—notably the United States and England. That would leave a clear field for Germany and I don't think we should minimize the effect that this will have on German minds—particularly of those Germans who want their country to make a quick comeback as a world power.

Now I will read you something to show the other side of the shield—the plan for a communized China to lead to the final overthrow of Europe. Last fall, the East Asian Affairs Council of the Communist International held a conference at Harbin, Manchuria. Russia's commander in northern Korea—General Lokotikov, was one of the chairmen. Representing the Chinese Communists was Li Li-San. General Lokotikov spoke as follows:

"I wish to say that the essential point of the present world revolution is still being focused on east Asia. We have already built a firm foundation in Europe and we are in the full grasp of the power to make peace or war at our own will." Incidentally, this is the best evidence you could ask for to show that the propaganda about the Soviet Union being in deadly fear of the war mongering, imperialist west is a lot of baloney and that their own leaders don't believe themselves Let me repeat that last sentence of General Lokotikov: "We have already built a firm foundation in Europe and we are in full grasp of the power to make peace or war at our own will."

He went on to say: "We are employing, temporarily, political offensives to distract the attention of those capitalist countries like Great Britain and the United States. While in east Asia, if all our comrades would put to proper utilization the 1,000,000,000 people and the resources of the continent of east Asia, we could gradually capture the Pacific Ocean and expand westward to the Mediterranean Sea. When that time comes, it will be the most suitable occasion for us to launch military operations in Europe."

Those remarks should mean several things to us. First, that from the Soviet standpoint, the key to the world struggle is Asia. The conquest of Europe, militarily, depends on the taking over of Asia, first. The Communists are not worried about Europe now. They are content to consolidate their gains there, digest what they already have, make phony gestures of peace, where it suits them, build up their potential for a military alliance with Germany—all of this while they are marching to victory in the Far East.

And the terrible thing—the insufferable thing—is that our own State Department and our own President seem content to sit by while all this is happening. As Mr. Acheson says, we are "waiting for the dust to settle." In the meantime, he does everything he can to discourage the sending of any aid, military or otherwise, which would tend to salvage even a little bit of the continent of Asia. The same people who are so acutely aware of the need of helping Europe don't realize what the Communists realize, and have said many times that Asia is the key to the whole thing. We spend billions on Europe to prevent the spread of communism there, but refuse to spend anything on anti-Communist effort in Asia. The official attitude is that it is too late. Yes; it is too late to do anything about Manchuria, into which we let the Communists by a shameful sell-out; it is too late to recover north China, which we helped the Chinese Nationalist Government to lose by refusal to ship them arms for more than a year, while the Red army was turning over a tremendous arsenal of captured Japanese weapons to the Chinese Communists. We have sat by now until it is too late to do anything about the great cities of central China. But there is still a lot of China left. Are we going to sit by and chant this litany of too late and offer too little, while the last chance of any salvage in Asia goes by, irrevocably?

I think Gen. Claire Chennault knows as much about the military possibilities in China as anybody in the State Department—certainly as much as the pinko Far Eastern Division knows. And I want to read parts of a letter which the General wrote last February. He gave testimony only this week before a Senate committee, along the same lines. Listen to these words of Gen. Claire Chennault—a man who did more to save China from the Japanese than any other one man:

"I have heard a lot of statements recently to the effect that it is now too late to give effective aid to China. In my opinion this statement is being circulated largely by the

same group of people who opposed aid to China all along. As a matter of fact, I am in close contact with the leaders of the south, southwestern, western, and northwestern provinces and I am convinced that they will not surrender unconditionally to the Communists. I am also convinced that the mountainous west will fight to retain their freedom until the bitter end. Even if the Communists are able to penetrate along the Hankow-Canton railway to the southern coast they will still have a very determined opposition in the west. In fact, the Japanese occupied a great deal more of China, in 1941, than the Communists do today. (Parenthetically, I don't recall that the State Department said then that it was too late to do anything about the conquest of China.)

General Chennault goes on: "All of the leaders I have referred to above have personally requested me to form a vounteer air unit to support their ground troops and it is sometimes very difficult for me to explain why I cannot do this at once. It is equally difficult to explain to Americans how a small air unit of this type (composed of old P-47's and B-25's) could materially influence the course of the war (in China). Having served in China, you will appreciate how much damage an airplane can do to lines of communications which are already deficient in number and usually in bad condition. On the field of battle, the Communists invariably have superior artillery and machine-gun fire. When a Nationalist city is besieged the Communists plant their artillery on ridges and hilltops overlooking the city and calmly pound away until the place is taken. Even a half-dozen airplanes could prevent this kind of artillery employment. Under those conditions a small air unit would do a great deal to restore the morale of the Nationalist leaders and troops."

That was General Chennault speaking and he has told the Senate Armed Forces Committee that the cost of his program per day would be about the same as we have been spending per day on the Berlin airlift—$1,000,000. We didn't hesitate, in this case to spend the money. We even regarded it as a bagatelle, for the chance of stopping the Communist grab for Berlin. Why we hang back and take an entirely defeatist attitude on the key struggle for both Asia and Europe, I cannot say.

The struggle with communism in which we are now engaged is a world struggle and there is no east and there is no west—separately and distinct from each other. It is for world stakes and when you give away at least half the game, by default, you stand to lose the whole game.

It took Mr. Acheson many years to get over his attitude of appeasement of the Soviet Union, as regards Europe. He eventually did see the light on that, but at considerable expense to this country, in the process. I don't know that we can afford for him to take as long a time to learn that appeasement in the Far East can be just as disastrous.

Why Washington Will Be the Next All-Public-Power State

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1949

Mr. JACKSON of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. L. J. Richardson, president, Washington Public Utility Commissioners Association, delivered May 10, 1949, at the American Public Power Association convention, Los Angeles, Calif.:

WHY WASHINGTON STATE WILL BE THE NEXT ALL-PUBLIC-POWER STATE

(An address by Mr. L. J. Richardson, president of the Washington Public Utility Commissioners Association, at the American Public Power Association convention in Los Angeles, May 10, 1949. Mr. Richardson is an orchardist in the famed Wenatchee Valley of Washington State. He has served as master of both the Beacon Hill and Chelan County Pomona Granges. He was elected a Chelan County public utility district commissioner in 1944, and was subsequently chosen by his fellow commissioners to head their association this year.)

With so many representatives of municipal or city light systems here at the American Public Power convention—I feel like a "country cousin." As a matter of fact, the utility districts which I have the honor of representing are, like REA's, country cousins of the municipals. We are all part of the big family of publicly owned utilities. We share the same public trust. We play the same role of service to the community, its residents, its business, its farmers, and its industries.

A public utility district, as most of you know, is actually a municipal utility extended throughout an entire county or section of a county. It provides a water and electric service that could not otherwise have been had in our less populated communities and farming areas. Since Washington is primarily an agricultural State, it is not surprising that we have already formed utility districts, through majority vote in public elections, in 30 out of 39 counties. Twenty-four of the districts are already in business. The rest are negotiating a purchase which is rated by the New York Times as the greatest private-to-public utility sale in history.

While we serve no extremely large cities, our districts do provide water, power, and light for many towns—some of them over 45,000 in population. In rural electrification our districts, from their beginning, have undertaken the task which only REA's would tackle in other sections of the country. We are now engaged in serving an increasing number of industries coming out into rural areas. You may wonder why we are getting these industries. Part of the answer lies in lower costs away from big cities, in the availability of raw materials and in better living conditions. (That bomb that was dropped at Hiroshima may have had something to do with it too.)

Whatever the reason, we think this new blend of industry with farming in our counties is a wholesome thing. In fact the farmers who first set about to form utility districts had this very end in mind. They knew that industrial pay rolls close by would create a stable home market for the abundance of quality food products that we produce in Washington State. They knew that a sound economy, which includes the prosperity of all enterprises in the cities, springs from a low-cost release of raw materials at the mouth of the economic assembly line—at the farms, the mines, the forests, and the fisheries. This theory has proven correct. Our State's economy has been greatly stabilized. New opportunities have arisen in a region that was once a remote, undeveloped colony—altogether dependent on outsiders. All we had to do was to make the long-range investment in our future—an investment that eastern private monopoly could not or would not make.

You will hear some people say that Washington State has the lowest electric rates in the Nation because of its hydro sites. Though this be true to an extent, it is also somewhat misleading. While no other State has a river to compare with our "miracle river," the great Columbia, there are many other streams with power plants almost as efficient—yet rates do not compare. You will hear people say that our rates are low because the Great White Father and Congress gave us big dams. This is more misleading. Washington State leads the Nation in economical generation and distribution of electrical energy largely because of its own, self-help efforts. Naturally, we made the most of what Providence and the Federal Government provided. But we had to work for and we have to pay back everything we got. It took local vision, initiative, vigorous action and courage to achieve what we have today.

Our first successful efforts to achieve power at cost started before World War I—before the Teapot Dome exposé of private monopoly, before the New Deal, before TVA, and before atomic energy or our great west coast aluminum plants were even heard of. It was started by men of humble circumstance living in the sage-brush country on my side of the mountains; and by a man named J. D. Ross and his supporters on the west side. Those near my home, Rufus Woods, Billy Clapp, the late Jim O'Sullivan, and others, were working for large volume of cheap power through the construction of dams on the Columbia which would also help finance irrigation. While outsiders may bask in the glory of what those men achieved—none of the outsiders were present when the hardest work was being done in the beginning. It was the dollars and dimes and two-bit pieces from storekeepers and farmers and ranch hands of the Coulee country that kept the Columbia River crusade alive. It was the determination of a country editor, a small-town lawyer and a local engineer that stood the test of adversity.

Mr. Ross, who gave Seattle the key to its industrial future for many centuries to come, was also a plain, ordinary citizen working in his own community. The struggles and obstacles placed before him and his goal of Skagit River hydroelectric development, coupled to the struggles of developing the Columbia, would fill a library. Without sound and creative leadership from the grass roots—the deceits, the wrong turns, the trickery, and the opposition that arose might have postponed these developments for hundreds of years, if not forever. We would not have our distinguished position as the lowest cost power State in the Nation today if it weren't for these outstanding community citizens.

Though our public-utility districts came later, they were a part of the original pattern envisioned by another of our early leaders, State Grange Master Albert S. Goss, now master of the National Grange. The districts were to be the means of providing ownership and control whereby facilities could be set up in the rural counties where the need for electricity was greatest. The districts, it was felt, would bring the advantages that Seattle and Tacoma were already enjoying to remote communities and farming areas where no large cities existed. It was the conviction of public power supporters that their job would never be completed until the last farm over the hill could set aside its kerosene lanterns. That conviction still exists today. And that is why we will be the next all-public-power State.

Our districts were made possible only after a tremendous effort to pass the necessary enabling law. This was accomplished in the 1930 State legislature under the leadership of "Dad" Chamberlain of the Grange, Senator Homer Bone, George Yantis, John McCutcheon, and others. The law gave districts the power to issue revenue bonds, to purchase or condemn utility property for use by residents of a district. These rights put a

UNIVERSITY OF MICHIGAN LIBRARIES

number of districts into business. Power, in sufficient amounts, was obtained at low wholesale rates from the Bonneville Power Administration under the public-preference clause in the Bonneville Act. The rest of the story is a part of our current public utility district history.

While I do not want to bother you with unimportant details, the main problem we are up against in completing our task brings up a matter which is worthy of your consideration. It has to do with our purchase of Puget Sound Power & Light Co., which still remains in the hands of a Boston corporation. That company has already sold its fringe properties through condemnation and voluntary sale to some of our districts. The owners want to sell the remaining integrated system of generation and distribution as a whole, at one time. We agree with this for several reasons: (1) Condemnation in each county, with accompanying high severance charges, would no doubt be more costly to the rate payer than an integrated sale; (2) we must have that portion of the company's present generation which is used in the districts where the properties will be purchased; and (3) we must have this generation because there is no chance today of getting the same amount of power from the Federal Government or any other source, under present dam construction schedules, for many years to come.

Under the 1930 law we were unable to band together to purchase an integrated system, but in this year's legislature, our State lawmakers made it possible. Under the new law a willing seller and a group of districts willing to buy may negotiate for the sellers' properties. After June 10 the purchase can be legally made, unless new and unforeseen delays arise.

In addition to the constant danger of rear guard action by the electric light association people, we have lately had some hints that there might possibly be postponements because of disagreement on basic policies among the publicly owned utilities. We do not say this is serious, but statements by some officials in publicly owned utilities have caused us concern.

Let me assure you, on behalf of the commissioners, that we want to do the best we can in the interest of the public and the broad policies deemed proper by this far-sighted organization gathered here today. We have been careful to keep our purchase discussions with other public agencies on an intelligent, cooperative basis. We feel it is not fitting that we should engage in any methods of disagreement which would reflect against the interest of our community or against the idea of publicly owned utilities and power at cost. We have assured municipal utilities within our purchase areas that they will receive a guarantee of their fair percentage of private generation obtained by us in any over-all purchase plan of an integrated system.

In spite of all this, we have found ourselves caught in a crossfire of criticism which would have us: (1) Give up to the big cities our chance of acquiring generation; (2) give up the same chance to the newly formed State Power Commission (while other utilities would keep their own generation); and (3) give up our chance of acquiring generation to the Federal Government.

What I want to say to this body today is simply this: In our opinion, it is a fundamentally unsound theory for anyone to relegate rural counties to the position of the low man on the totem pole. This problem has cropped up in other States in other ways. We think it is important enough that this body affirm a policy that the rights of citizens in small communities and farming areas are no less important than anyone else's; and that such citizens have ably demonstrated their ability to manage their utility affairs as well as other private and public agencies.

We do not believe anybody should have a monopoly on generation. We do believe the form that ownership of utility property takes depends upon the local circumstances. But if you were to give any preference (and we don't ask any) but if you were to give preference, there is actually more wisdom and sound judgment on the side of the rural utility. Thomas Jefferson's writing are full of statements that the safest and best government is that which is divided up among the many, instead of being centralized or concentrated among a few. The late Franklin D. Roosevelt, in a letter to that great Nebraskan, Senator Norris, said, "the lesson we have all learned from the public-utility districts in Nebraska may well point the way for other communities and States." David Lilienthal, former TVA Administrator, in his book about TVA stressed over and over the need for placing control and ownership out in the communities served, where policies can be best and most efficiently formed. The atomic project which Mr. Lilienthal now manages is evidence in itself that modern civilization should begin to spread out rather than concentrate. That trend, as I have already indicated, is now under way. At present we are getting industries we never dreamed of in our rural counties. The largest city in my State reports that building permits outside its limits now exceed permits for building within the city limits by 3 to 1.

This matter is a question of major policy, or I would not have brought it up before you today. It is our fervent hope that we can all go back home clear on this point. Nothing will serve to weaken the cause of public power more than disagreement amongst ourselves over basic policies. On the other hand, nothing can stop our success if we cooperate and work together in an intelligent manner. If all of us—the districts, the REA's, the municipals, and the Federal power agencies—keep in mind that the welfare of the community, its individual citizens, its businesses, its farms, and its industries is of first concern, if we do that, we will prove that publicly-owned utilities are a bulwark of prosperous, free enterprise and of a healthy democracy.

Democracy's Challenge—Addresses at Dedication of Memorial Stadium, Harrisonburg, Va.

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 31 (legislative day of Monday, May 23), 1949

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my introduction of Hon. Gordon Gray, Acting Secretary of the Army, at the dedication of the Memorial Stadium in Harrisonburg, Va., on Sunday, May 29, 1949, and the remarks he made on that occasion.

There being no objection, the introduction and remarks were ordered to be printed in the RECORD, as follows:

ADDRESS OF HON. A. WILLIS ROBERTSON

Mr. Chairman, veterans of all wars, ladies, and gentlemen, it gives me great pleasure to unite with you today in dedicating a stadium which is through the years to come to serve as a tangible memorial of the appreciation of the people of Harrisonburg and Rockingham County of sacrifices made by the veterans of World War II for the preservation of our personal freedom and the American way of life. Although I had made other plans for this weekend I changed them when I was informed that I was the first choice of my comrades of World War I to be with them on this memorial Sunday and introduce the distinguished speaker who has been good enough to honor us with his presence. For the past 16 years it has been my high honor and coveted privilege to represent the good people of Harrisonburg and Rockingham in the Halls of the National Congress and throughout that entire period their unfailing kindness, their gracious hospitality, and their unwavering support, have bound me to them with hoops of steel.

While I fully endorse the erection of monuments of stone and of bronze to the memory of those who died on the field of honor, I have always felt that the most enduring monument that we could erect to their memory would be the preservation in perpetuity of democratic principles based upon a system of private enterprise and the three freedoms for which Thomas Jefferson asked to be remembered, namely, freedom of the body as expressed in his Declaration of Independence, freedom of the mind as expressed in his University of Virginia, and freedom of religion as expressed in his Virginia statute for religious liberty.

We gather here today in a valley which I have often said was as fertile as the Valley of the Nile but more centrally located. On every hand we see evidences of physical progress and material prosperity. And these material blessings are not limited to Rockingham and the Valley of Virginia. As a nation we possess more material wealth and have a higher standard of living than any nation in the world and yet we are not happy, and are plagued by uncertainties. One of the chief causes of our discontent and unhappiness in the midst of prosperity has been our faltering and unsuccessful effort to breathe life into a blueprint for international cooperation and international peace. Many who had relied upon our possession of the atomic bomb as a safeguard against a future war now live in constant dread that Russia will discover the secret of the atomic bomb and use it against us.

We shall soon be debating in the Senate a European counterpart of our Monroe Doctrine, known as the Atlantic Pact, and likewise a tremendous appropriation of public funds for the rehabilitation of those nations which have agreed to enter a defensive alliance with us. If we will be frank we will admit that we are expecting a material benefit from that program for ourselves. Our hope is to check the aggression of Russia and ultimately to build up allies of sufficient material strength to convince Russia that if she starts a war against us she will lose. But there is no one in the Congress and no one in the United States who is going into this program with any real enthusiasm because of the fear that lurks in our hearts that it may not work.

In the Holy Writ we read "If God be for us, who can be against us?" With the hope that this Nation, which in its infancy inscribed upon its coins "In God we trust," will not place its sole dependence for future peace and security upon the power of its own right arm, I have agreed to unite with Senator ALEXANDER SMITH of New Jersey, and other like-minded colleagues in the Senate in the introduction when we take up the Atlantic Pact of the following resolution:

"Whereas the history of these United States clearly records the faith of our forefathers in Almighty God from the days of the earliest

colonization and during all the crises of their early struggles; and

"Whereas these United States and the other nations parties to the North Atlantic Treaty are believers in the guidance of the Creator in the affairs of man: Therefore be it

"*Resolved*, That the Senate of the United States interprets the sentence of the preamble to the North Atlantic Treaty, reading as follows: 'They are determined to safeguard the freedom, common heritage, and civilization of their peoples,' to include this Nation's most precious heritage—our continuing faith in our dependence upon Almighty God and His guidance in the affairs of men and nations."

Peace begins in a man's heart when he demonstrates his faith. The conflict that is shaping up in the world is between those who profess faith in God and those who deny that faith. Those who profess faith in God far outnumber those who deny it, but they lack the zeal and willingness to sacrifice of the smaller group.

I shall support the Atlantic Pact and the appropriations which are necessary to implement the Marshall plan. But while we should continue to work through international cooperation for the economic welfare of the masses and a system of law throughout the world based upon equality and justice, it will pay us to recognize the fundamental fact that progress is first mental and spiritual.

We should perceive that no material measure—no political change, no economic reform, no international organization—will of itself establish peace. Peace has escaped the chancelleries of the world mainly because it has found no home in the hearts of men.

If at home we find peace by overcoming hate, greed, and fear, and even partially follow the rule to do unto others as we would have others do unto us, there is a power stronger than the atomic bomb to rend the iron curtain behind which 180,000,000 misinformed people regard us as enemies bent upon their destruction.

I am happy to have the privilege of presenting to you a distinguished fellow citizen from a great adjoining State, whom I am satisfied shares these sentiments. He is not only a leader but he is a Christian leader, having devoted much of his time and splendid ability through his newspapers and radio station to the promotion of the social sciences.

This is his birthday and after you have heard him speak I know the refrain in your heart will be happy birthday to you, Hon. Gordon Gray.

On May 30, 40 years ago he was born in the city of Baltimore. He attended our splendid preparatory school, Woodberry Forest, in the nearby county of Orange, and then entered the University of North Carolina, where he graduated in 1930 as the No. 1 man in his class and as president of Phi Beta Kappa. From there he went to the Yale Law School, where again he was the top man in his class and an editor of the famous Yale Law Journal.

After a brief practice of law in New York City and later in his home town of Winston-Salem, he left the practice of law to become president of the Piedmont Publishing Co., the publisher of the Winston-Salem Journal and Twin City Sentinel and operator of radio station WSJS.

He was elected to the State senate in North Carolina in 1939 and again in 1941, giving up his senate seat in May 1942 to volunteer for Army service. He entered the Army as a private and was honorably discharged at the end of the war as a captain. His overseas service was with the headquarters of the Twelfth Army Group.

The President of the United States recognizing his outstanding ability appointed him Assistant Secretary of the Army in September 1947 where he was responsible for the industrial mobilization and procurement activities of the Department of the Army. Upon the resignation of Secretary of the Army Royall he became Acting Secretary and last week he was sworn in as Under Secretary of the Army.

It gives me great pleasure to present to you a distinguished veteran and a great American, the Honorable Gordon Gray, Under Secretary of the Army.

ADDRESS OF THE HONORABLE GORDON GRAY, ACTING SECRETARY OF THE ARMY

Many words have been spoken in tribute to the dead whom we honor each Memorial Day. I can add nothing to what has already been said. I wish to talk, instead, of what these Americans might say to us, if it were in their power to do so, on such an occasion as this.

I feel that if they could talk to us, they would base their message on some quality which they held in common. Their message would have to be one upon which they would hold complete agreement, and such a message could not be based upon their varying characters, their varying beliefs, or their varying circumstances. Today we give our full respect to all of them, regardless of the conflict in which they fell. All of them had one quality in common, and it is a quality which all of us would do well to recognize, to nurture, and, in greater or lesser degree, to develop in ourselves.

Every one of them found the courage to die for the sake of the things he believed.

This is the great thing they have to say to us today. It is a message which comes to us clearly across the bridge of time, unchanged by the years which separate our lives from theirs. Their statement to us can be expressed in five simple words: "We died for our beliefs."

Let us consider that message. These five words bear within them a complete philosophy.

First of all, none of them had to die in this manner if they had chosen otherwise. They could have refused the type of service they rendered—refused to have taken the first step, or any subsequent step, in the process which led to the eventual sacrifice they made. Not one of them adhered to this chosen course without fear, and this is the same thing as saying that each one of them followed that course with courage. For unless we have fear we can never know courage.

One definition of fear is that it is a quality which comes from a man's inclination to believe that there is nothing more important than himself. It is the quality which leads him, therefore, to take extreme measures for his self-protection. We should note, however, that it is a quality which contains an element of truth—especially when it is viewed in the light of the great teaching which has formed our political thought. We, in this Nation, affirm that a man is a very important thing. The dignity of the individual is, to us, much more than just a phrase. Of all the nations of the world, it has been ours which, more than any other, has given each individual opportunity for self-expression—a full diet of the precious freedom which, used by millions of individuals has made our land great. We hold the individual so highly that it would not be surprising if millions of our citizens believed that nothing was more important than their welfare and their continued physical existence. Indeed, it cannot be denied that many of us do hold just this to be the truth.

But the names of those whom we honor today give the lie to this way of thinking. These names stand in silent testimony to the fact that they believed in something which was more important to them than their own lives.

Their courage—the quality which they used to overcome their natural fear—was rooted in that belief in something more important. And thus, I submit to you that before a man can possess courage he must have two other qualities; first, a fear which must be overcome, and second, the belief which is necessary to overcome it.

If the fear of death which a man possesses is great, then the belief which gives him the courage to meet that death must be even greater. And I think that this fact illustrates something further about the quality of the men who are giving us their simple message of courage today.

Americans have always feared and hated war. It was the influence of war which played a great part in the desire of most early Americans to leave their native lands and come to live in a new nation which promised peace and freedom. We, who have descended from them, know what an evil and destructive thing war is, and always has been. In this hatred of war and this knowledge of its horrors, our Nation has traditionally followed a course of avoiding war whenever possible.

In addition, Americans are taught, perhaps as no other people are taught, this great principle of individual dignity which, in spite of its truth, gives the American more cause to fear military discipline and the individual sacrifices inherent in military life than is the case with citizens of nations which teach the opposite. A soldier who has been raised to think of himself as a tool of the state, a mere machine of muscle and skill which must move at the command of his dictator may have fear. But his fear is not of the same quality as the fear which can be felt by a free man who knows that he has created the state and that the state exists for the individual.

The American who goes into battle has more to lose than the enemy he fights. It is probable that his fear is greater as a result.

Nevertheless, he overcomes that fear and makes the greatest sacrifice he can make. The names of our dead are here today to remind us of that.

It follows that the beliefs he holds are great beliefs. They have to be, in order to give him the great courage which he must possess.

I doubt very much that many Americans who have died in battle have been conscious of these details. I doubt very much that many of the men we honor died with the thought that they were being heroes. I doubt that they would want their sacrifices described in any words other than those which state that they died for their beliefs.

It is the fact that they did so that is important.

It is the belief which they shared which is important—not the words which we see fit to speak about their deeds.

Quite possibly every one of them had a slightly different concept of what it was that he was fighting for. And who can truthfully say that there is any one concept of this Nation that is the truly correct one? The political genius of this country lies in the act that every citizen is given the opportunity to help make the country just what he thinks it should be. None of us ever see our ideas carried out 100 percent, as a result, yet each of us finds happiness in the thought that he has as much right to contribute to the final result as anyone else in the Nation.

There seems to be only one way in which we can sum up what it was that they believed, and that is to say that they believed in preserving just this system—the system which allows for all varieties of belief—which allows each citizen his chance to contribute his influence on the course of events.

This is what they believed. This is what they died for.

UNIVERSITY OF MICHIGAN LIBRARIES

Do we believe it? Are we willing to die for it?

Our dead have never asked these questions of us. They simply tell us, in the silence which we observe in their memories today and which gives us an opportunity to hear their message, that they have believed in the American idea and that they have died for it.

What we believe or do not believe—and whether we are willing to die for any ideal—is up to us, not to them.

They cannot tell us what to believe. No one can tell us what to believe. Each one of us, in his own way, must find out for himself what it is that he believes in. Each one of us does just this. Each one of us, from there on, is free to act upon his beliefs or not to act upon them, just as he sees fit.

However, if Memorial Day has any meaning whatsoever, if it is anything more than an empty sham, it means that we give honor and respect to those who act upon their beliefs. And it means the converse as well—that those who do not act upon their beliefs are not deserving of either honor or respect.

This beautiful stadium which Rockingham County has raised to the memory of our dead is a physical expression of this honor and respect. It proves, in its planning and its reality, that those who shared in the work of bringing it into existence also share in the philosophy of action—the idea of working at the things they believe in.

And we can never do too much of this type of work.

There is an apathy which has spread like a disease throughout the world we know. It is the apathy of despair, and its roots are in the soil of unbelief. It is a philosophy which has a great appeal to the selfish the lazy, the egocentric, and to those who suffer from a deluded pride. Its prime moving force is fear—the kind of fear which whispers to a man that if he is to believe in something he might be expected to act upon it, and that if he were to act upon it he might get hurt. If he does not believe in anything, he cannot act and, therefore, he cannot be hurt. It is the easy way out—the way of the coward.

It leads down the very road which those who hate America most want us to choose: The road which ends in the prison of dictatorship.

For he who does not believe in something and who does not act upon it is refusing to take his share of responsibility for his life. And he should not complain, or be surprised, when some one else takes over that responsibility. There is always some one else who is willing and ready to take this kind of responsibility and too often it is just the type of person who should not have it, let alone the power of life or death over millions of human beings. In Germany, just a short time ago, it was a neurotic misfit who wound up in control of millions of lives for this very reason, and who opened the flood gates of blood and suffering to plague the world. In France, almost 150 years ago, it was the power-hungry Napoleon who managed to seize the responsibility which millions of his fellow citizens had disavowed and who created world dislocations which still have their effects on our lives.

Who will it be tomorrow?

It need not be anyone. But if that proves to be the case—if it does not happen—it will be only because the individuals of the world have taken their share of responsibility for the world—not because history will fail to produce some tyrant who is eager to seize loose responsibility and turn it to his maniacal ends. A villain is always waiting in the wings as history unfolds upon the stage of the world. If the rest of us are unwise enough to give him his cue to enter and take over, simply because we are failing to play our own parts, or denying that we have a part to play, we should not be surprised when he does so.

I have no fear that you to whom I talk today will ever fail to play the part which you feel called upon to play. These thoughts are not needed by you, for this very occasion is a demonstration of the fact that you are the kind of people who do something about the things they believe in. And as long as this Nation is made up of people of this type, the American idea cannot die.

It may suffer. In defending it, many more Americans may die, as did those whom we are thinking about today. And it may be deserted by those cowards who don't want to believe in it because their belief may bring them face to face with hard realities.

But they will never become great in number in this Nation. The idea of freedom in its democratic expression in America is too strong for that. It compels belief—the type of belief which can override great fears and which permits those who hold it to make the greatest sacrifice for it that they can make, the sacrifice of their lives, when they are called upon to give them, the supreme sacrifice of belief to which, on this day, we attempt to pay the honor which is its due.

The splendid stadium which we dedicate here today represents the real American spirit; the spirit which expresses action, which proves that the people who built it are people who live up to their beliefs. It is an edifice which will help build Americanism throughout the future. It will be used to develop healthy bodies and the clear minds that can result from good health. It will be used, on some occasions, for prayer, the prayer which Americans practice in their many ways.

Above all, it will stand as a testimonial to the spirit of those in whose honor we stand here today, the unconquerable spirit of the Americans who loved their Nation and who proved it by the sacrifice of their lives.

Address by Hon. Arthur H. Vandenberg, of Michigan, Before Inter-American Bar Association

---

EXTENSION OF REMARKS

OF

HON. ARTHUR H. VANDENBERG

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, May 31 (legislative day of Monday, May 23), 1949

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered to the Inter-American Bar Association at the University of Michigan, in Ann Arbor, on the evening of Saturday, May 28.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, I am happy to present my compliments to the Inter-American Bar Association and its distinguished envoys from all the Americas. I am particularly happy to do so on my old college campus of 47 years ago. There could be no more appropriate meeting place because the University of Michigan has long been justly famous as one of the greatest cosmopolitan schools in the world. Its graduates cover the earth.

Every enterprise like this Inter-American Association which weds our Western World into closer understandings and aspirations is another step toward that peaceful and progressive unity which is our greatest western benediction, and which must ever be defended by all our hearts and hands.

Though the foreign policy of the United States may seem to be temporarily preoccupied with affairs in Europe, this is only the current chapter in a far wider theme. Nothing can ever overshadow the basic importance of our historic, traditional, and vital inter-American relationships with our good neighbors to the north and south. They are paramount. I hope none of you will ever have cause to think otherwise. We shall continue to prove this across the years.

By name and nature your Inter-American Bar Association is dedicated to the great juridical principle of liberty under law and to the widest international expansion of this humane and noble doctrine, particularly in our Western World. When liberty under law becomes a universal concept—when it totally substitutes for the ugly mandates of jungle force—there will be, at long last, dependable peace for freemen in a free world. When peace responds to international justice instead of international politics, durable peace will bless the earth.

That is our common, overriding aim in the United Nations which, despite all obstacles, is still the world's best final hope for peace, justice, and security. It is only through the evolution of these global goals that we shall finally stabilize a live-and-let-live world in which the unspeakably insane instruments of war shall be dependably outlawed for keeps. But since the whole is the sum total of the parts, we encourage and hasten these ultimate benedictions when we strive to make the principles and purposes of the United Nations regionally invincible as we have done within our own united western hemisphere.

In this meeting of the Inter-American Bar Association, you have come to us from north of the border where—as has been said so many countless times—our cherished Canadian neighbors l've across an imaginary line along which there has not been a single, hostile fort or gun or battlecraft for a century and a quarter of congenial peace. It is probably the greatest demonstration in history to prove that peoples of good will can live in cordial amity along 3,000 miles of friendly, international frontiers. It is beyond rational imagination that anything could happen to destroy the peaceful and congenial friendship of Canada and the United States.

In this meeting of the Inter-American Bar Association, you have also come to us from south of the border where Pan American Union, first formally established in 1890, has drawn our 21 Republics into ever-closer liaison for the common good. This Union has been the world's greatest clinic in the constant evolution of the instrumentalities of comity and peace. These Pan American Republics to the south of us have produced some of the world's greatest leaders in international law. Our common fraternity is the oldest, surest, and most spectacularly successful peace alliance in human history. It is the lengthened shadow of the immortal Monroe Doctrine which is now the proud inheritance and joint responsibility of this Pan American partnership. I venture the assertion that this common fidelity has been built for the ages.

It is significant to note, in passing, that the Monroe Doctrine was proclaimed in 1823; and that the original call by heroic Simon Bolivar for the first Congress of American states was issued in 1826. Thus these two superlatively important adventures, destined for so large a role in western history, were launched just 3 years apart in those dim yesterdays. Together they traveled down the decades. It was the logic of destiny that they finally should merge; first, in the declarations of reciprocal assistance and American solidarity in the Act of Chapultepec in 1945; second, in that chapter of the United Nations Charter dealing with regional ar-

rangements and with collective self-defense written at San Francisco later that same year; third, the magnificent climax, in the Inter-American Treaty of Reciprocal Assistance (known as the Rio Pact) signed at Rio de Janeiro on September 2, 1947. Thus the slender threads of the 1820's have become invincible bands of steel at the half turn of the twentieth century. Western peace is the happy beneficiary.

In the presence of our friends from both north and south of the border, I want to reiterate the expression of my hope that the time may soon come when this continental fellowship will be geographically complete—as it already is spiritually complete—through the association with the Pan American Union, on some appropriate basis, of the great and splendid Dominion of Canada. This is not a new idea. The Inter-American Conference in Mexico City in 1945 expressed the wish "that collaboration of Canada with the pan-American system shall come ever closer." Nor is that all. When the beautiful Pan American Union Building was erected in Washington in 1910, there were placed around its inner courtyard the coats of arms of the countries which here make common cause for peace and progress in this hemisphere—and, prophetically, the coat of arms of Canada is already there with all the rest. By every rule of righteousness she is eligible to this association. I am wholly confident that whenever she shall wish she will be welcome. It would simply serve to dramatize the facts of life because it is entirely clear that in the spirit of our independent institutions—and in our purpose to keep them free—our continental brotherhood already is complete from the Arctic Circle to Cape Horn.

Any threat to this unity betrays the welfare of our neighbors to the north and of every one of these 21 sovereign Republics including our own. I am proud confidently to say that this is the firm and overwhelming sentiment of the people and the Government of the United States.

If and when there may be any unfortunate lapses in our close and friendly relationships, it is a necessity of the first magnitude that such situations shall be swiftly and equitably cured. This is the common concern of all of us because all of us are equals in both the responsibilities and the privileges of this great heritage.

I want to underscore that point. Pan-Americanism is a partnership affair. It must always operate as a partnership affair. More and more, in the last decade, we have been spelling this out at our various good neighbor conferences. As a result, Mr. Chairman, the truth of the matter is that the hopeful pattern for international peace and security has nowhere been more clearly woven—has nowhere been more effectively pioneered—than in these pan-American relationships. No other influence at San Francisco was greater in modeling the permanently advantageous features of the United Nations Charter. Indeed, it was largely pan-America which forced the recognition of the inherent right of individual and collective self-defense pending adequate action by the Security Council of the United Nations—a right which has become the key to contemporary planning on a far broader scale for the effective discouragement of armed aggression before it starts.

I take it that your Inter-American Bar Association will be particularly interested in this juridical evolution because it now affects the whole hemisphere. Indeed, it may well affect peace for the whole world. Therefore I chiefly tune my message tonight to this great concept and to the inter-American part in it.

In the more recent years, I go back to Buenos Aires in 1936 where, while emphasizing the inadmissibility of intervention in the affairs of any pan-American country, we jointly pledged intimate and mutual consultations (1) if the peace of the American Republics is menaced; (2) in the event of a state of war between American states; (3) in the event of international war outside America which might threaten the American Republics.

At Lima in 1938 we improved the procedure of consultation and extended it to economic, cultural, and other aspects of continental solidarity.

At Panama in 1939 we called for consultations in case any geographical region of America subject to the jurisdiction of any non-American state should be obliged to change its sovereignty and there should result therefrom a danger to the security of the American Continent.

At Habana in 1940 we improved the process of consultation—again calling for reciprocal assistance and cooperation for the defense of the nations of America.

At Rio in 1942 we reaffirmed our solidarity; took note of World War II; recommended the breaking of diplomatic relations with Japan, Germany, and Italy; and called for consultations prior to the reestablishment of these relations in order that this action should preserve the character of solidarity.

At Mexico City, in early 1945, we moved steadily, significantly, and closer toward the ultimate goal. We said:

"In case acts of aggression occur or there are reasons to believe that an aggression is being prepared by any other state against the integrity or the inviolability of the territory, or against the sovereignty or political independence of an American state, the states signatory to this act will consult among themselves in order to agree upon the measures it may be advisable to take."

Then came the San Francisco Conference where the Charter of the United Nations was born and where the chapter on regional arrangements, plus the famous article 51, dealing with the inherent right of individual and collective self-defense, were written into the Charter largely through the relentless and uncompromising insistence of pan-America.

I want to dwell briefly upon this episode because I believe the Charter's article 51 is destined to play a vast role not only in the consistent evolution of the United Nations but also in the unfettered pursuit of peace inside the Charter but outside its crippling veto. Already it is the core of the proposed North Atlantic Pact. It is important to know how and why it was written. I think I know something about it because it was my honor and responsibility to serve as chairman of the subcommittee which struggled for many long days and nights at San Francisco to find an acceptable formula. By acceptable formula I mean one satisfactory to the 21 American Republics which, in my opinion, would never have signed the Charter otherwise. By acceptable formula I mean equally one which could unequivocally preserve the overriding authority of the United Nations and yet leave pan-America's historic, traditional and always pacific cooperations unimpaired in the presence of international emergency.

The first tentative draft of the Charter permitted individual or collective enforcement action outside the Security Council, to prevent the renewal of aggressive policy by any former enemy state until such time as the United Nations itself should be charged with this responsibility. This right was specifically assigned to regional agencies. It obviously was intended summarily to protect European states against resurgent Axis aggression which the Security Council might not be ready or able to control. But there was no comparable recognition of the right of summary self-defense in other areas, where the Security Council similarly might not be ready or able to control aggression—or might be prevented from doing so by failure of the permanent members of the Security Council to agree. That is a polite definition of the veto which has paralyzed the Security Council upon at least 30 occasions.

Our American friends south of the border rose in rebellion against this discrimination. They knew they were members of the oldest and ablest and most successful and most pacific regional agency on earth. They demanded equality of recognition in this matter of summary, collective defense. Though wholly willing to accept the overriding authority of the United Nations, they wanted competent authority for their own pan-American regional arrangement. And, believe me, they meant business.

The urgency of the matter first came to my direct attention on the evening of May 5, 1945, when I met a small group of South American diplomats in the rooms of Assistant Secretary of State Nelson Rockefeller (in charge of Latin-American affairs). We found ourselves in complete agreement. On May 6, I submitted an urgent memorandum to Secretary of State Stettinius who promptly circulated it to the American delegation which, in turn, promptly and loyally embraced the cause. There were continuous day and night sessions among all concerned. The question had to be satisfactorily answered if the Charter conference itself were to be saved. On May 15 we found the answer. It was agreed upon by all the pan-American Republics. But even then they did not agree until Secretary Stettinius had also publicly promised to call a special, subsequent pan-American conference to implement these new provisions of the Charter.

Thus article 51 was born and subsequently entered the charter. Thus the subsequent Rio Pact was prophesied. And thus pan-America, through zealous fidelity to its own international peace ideals, wrote profound and pregnant history.

For the sake of the record, I read article 51 because you are going to hear much of it in days that lie ahead. It comprises just two sentences:

"Nothing in the present charter shall impair the inherent right of individual self-defense if an armed attack occurs against a member of the United Nations, until the Security Council has taken the measures necessary to maintain international peace and security. Measures taken by members in the exercise of this right of self-defense shall be immediately reported to the Security Council and shall not in any way affect the authority and responsibility of the Security Council under the present charter to take at any time such action as it deems necessary in order to maintain or restore international peace and security."

From the record, Mr. Chairman, it is crystal clear that regional agencies of the United Nations can plan collective security against armed aggression in advance of armed attack. They can use these plans only until the Security Council takes the measures necessary to maintain peace and security. If and when it does so, article 51 ceases to apply. But if the Security Council fails to act—or is stopped from acting for example, by a veto—article 51 continues to confound aggression. The United Nations is thus saved from final impotence. So is righteous peace.

Now let me once more pick up the trail of the chronology I was reciting to trace the evolution of this great pan-American adventure in peace.

Finally we got the Rio Pact. It unequivocally condemns war. It unequivocally recognizes and accepts the Charter of the United Nations as its well-spring and its paramount authority. But it implements article 51. It bridges the fatal gap. It solemnly agrees that an armed attack by any state against an American state shall be considered as an attack against all the American states to be

UNIVERSITY OF MICHIGAN LIBRARIES

met with whatever unified resistance the associated states decide for themselves, at the time, may be required until the UN Security Council itself adequately assumes this responsibility.

Thus our New World completed a full circle from the Monroe Doctrine in 1823, which was a unilateral warning to aggressors, to the Rio Pact in 1947 which is a multilateral warning that no would-be aggressor is likely to ignore.

The intense attachment of the United States to this philosophy of preventive action for the preservation of peace can be no more eloquently measured than by the fact that this Rio Treaty was ratified in the Senate of the United States with but one dissenting vote.

And why should we not believe in this philosophy of preventive action to maintain just peace?

It is the precise philosophy upon which the United Nations itself is modeled. It is the philosophy of the discouragement of war by advance notice that no aggressor can divide and conquer by force of arms—advance notice that no aggressor can win. It activates the United Nations theme. It previews the mobilized peace authority which we want to put universally into the United Nations itself.

Why should not we—of all people—believe in this philosophy of preventive action? It is the precise philosophy upon which Monroe Doctrine itself was based when we were but a swaddling Nation back in 1823. This is what the doctrine said:

"We owe it to candor and to the amicable relations existing between the United States and those powers (referring to contemplated American colonization by European powers) to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety." And then this: "With the governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny * * * in any other light than as the manifestation of an unfriendly disposition toward the United States."

Mr. Chairman, that warning worked. With only incidental lapse, it protected the New World through practically a century of peace. It spoke with "candor." It said what it meant. It meant what it said. It prevented trouble by frankly pointing out the price of trouble. No aggressor was willing to pay the price. It did not rely on vast armies in being deployed throughout the far-flung area which it sought to immunize against aggression. It relied upon something infinitely more powerful and more impressive. It relied upon the simple assurance to any potential aggressor that he would face odds calculated to cost him any chance of victory. It did not precipitate war. It "precipitated" and maintained independent peace.

The Rio Pact puts that same warning on a partnership basis. It multiplies its effectiveness by the number of its signatories. It speaks for two continents. It is the logical fruition of the brave wisdom of our own prescient forebears back in 1823. It is peace insurance for pan-America. It will keep the peace because no aggressor will pay the foreordained price for breaking it.

This sound and successful American philosophy of yesterday is just as sound and is calculated to be just as successful today and tomorrow. I do not want to detour into current controversy. But, with the greatest respect for those who may disagree, I cannot resist the temptation to say that this same philosophy of candor is the genius of the pending North Atlantic Pact in which our Canadian guests are equally interested with us. It is calculated to be equally successful as a keeper of the peace in other areas. In my earnest conviction there is not a syllable of aggression in it. No nation on this globe needs lose so much as one wink of sleep respecting it unless it is prepared on its own responsibility and initiative to identify itself as an international criminal through armed aggression against a peaceful neighbor. I have great faith this will not happen, for the same reasons that sustain my incorrigible peace-confidence in the Rio Pact as a supplement to the Monroe Doctrine.

But that argument is for another day. I only want to add, at this point, that I simply cannot understand how any of our own citizens can suspect—much less accuse—their own country of aggressive or imperialistic designs. All history denies it—in Cuba—in the Philippines—in two world wars—in peace pursuits which seek not a dollar of blood-money or the control of one single, alien soul anywhere on earth. Our rehabilitation aids to others, while ultimately involving our own intelligent self-interest and security, are without parallel in their humane vision. We want a live-and-let-live world. We hate war. We strive—and we must ever strive—for universal disarmament under adequate and automatic disciplines against bad faith. These are not the attributes of imperialism and aggression. Indeed, Mr. Chairman, the whole world pays its own unconscious tribute to its faith in us because, though we monopolize atomic bombs, no other people and no other government have any fears tonight that we will misuse or abuse this trust in the absence of the clearest and unmistakable and aggressive provocation.

I am proud of my country's record. I am proud of its motives and its purposes. And I am proud of its peace-associates north and south of the border.

Mr. Chairman, I conclude as I began. I present my warmest compliments to the Inter-American Bar Association. It personifies the dominant passion of our new world for reciprocal friendships, for unity in the defense of righteous peace, and for the sovereignty of liberty under law. What we seek for ourselves I am sure you will agree we would extend to others. We have no illusions that we can live unto ourselves alone—even on a hemisphere. The loss of peace with justice anywhere is in some degree a loss to peace everywhere. That is why a healthy United Nations continues to be of supreme concern.

Momentous peace-events at this very moment may be on the trestle board at Paris. That will be our prayer. We shall never blind our eyes to the grim reality that righteousness and human rights and fundamental freedoms everlastingly come first. We shall take nothing for granted. We shall not forget the famous aphorism that it does no good for the sheep to meet and pass resolutions in favor of vegetarianism so long as the wolves think otherwise. We shall not mistake words for deeds. But we shall never close our hearts to hope. We shall never lag in this leadership for peace with justice in a free world of free men.

Address by Hon. Warren G. Magnuson, of Washington, at Ceremonies at Grand Coulee Dam

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, May 31 (legislative day of Monday, May 23), 1949

Mr. MAGNUSON. Mr. President, a week ago last Friday I returned from the State of Washington, where I participated in some most impressive ceremonies at the Grand Coulee Dam. In Washington, D. C., the President of the United States pressed a button; and, in turn, we who were at the dam watched the light flash on, to put into operation the greatest hydroelectric power-production plant in the world. I ask unanimous consent that the remarks made by me at that ceremony be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This is a memorable day in many ways.

It is the day when Grand Coulee Dam rightfully comes into its own, as the greatest power-production plant in the world.

It is a day that witnesses both a beginning and an end.

It ends the century marked in history by the rugged forty-niners in their westward drive toward new frontiers.

It also marks 100 years of progress toward greater recovery of the resources of this Nation's vast river basins, because this is the centennial of the Department of the Interior.

The many who have volunteered their efforts and a great part of their lifetimes in reaching this milestone in development of the Pacific Northwest hold deep and humble gratitude in their hearts on this day of realization.

In their minds, I know, is the thought of others who pioneered in the struggle for hydroelectric development. Others, who spent their vigor and their lives in the struggle and who are as much a part of the strength of the Grand Coulee Dam as the concrete and steel it contains. They are not here, but they will never be forgotten.

This is a beginning of something as great. In the turn of the coming hundred years those who are yet to be born will be the witnesses and beneficiaries of marvels whose nature we cannot now dream, and only dimly sense.

It is our duty and our responsibility to build a firm foundation for that future.

The inexhaustible waters of the Columbia River and the realities of this massive electrical generation system give us courage. We know our bearings, and we are going ahead.

The goal, of course, is a level of development in which each of the living 145,000,000 Americans has a stake. They have made—and are making—this progress possible.

Each of us in the Pacific Northwest has a more direct and neighborly interest, for our day-to-day farming, and labor, and industry feel the impact of this progress. We know individually what it means to go without power, without irrigation, without flood control when those needs are urgent.

We know what remains to be done, not in the next hundred years, but in the years immediately ahead.

We know that industries, existing industries, are starved for power. We have seen our clocks run slow. Our cities have experienced brownouts. We know that only 50 percent of our farm land is irrigated—and much of that is inadequately irrigated.

We are aware that a treasury in minerals lies beneath us, waiting to be tapped. We know that reclamation and transportation and fish and wildlife development, and even our needs for recreation are involved.

And behind us, stretching more than 150 miles to a friendly northern border, is the vast man-made reservoir known as Franklin D. Roosevelt Lake—waiting to do the job.

The engineers, the scientists, the draftsmen and the thousands whose labor has gone into this project have done their work well.

Grand Coulee Dam, the greatest achievement of its kind on earth, is graphic evidence of that fact. So is this tenth gen-

erator, whose power strengthens a plant that already has produced 1,250,000 kilowatts in an emergency. Even this is not enough. The full and final installation will in time bring the total number of generators to 18—giving this plant a peak capacity of 2,250,000 kilowatts.

Even that is but part of the picture.

Grand Coulee is now one of the links in the chain being constructed. It is but one stopping place where the waters of the Columbia are forced to pause, to take part in the work of benefiting mankind.

Other links are being forged, or are under study. These, too, are great and essential links. They are the dam-construction projects whose names are so familiar: Chief Joseph, and McNary, and Hungry Horse, and Ice Harbor, and others.

We in Congress are devoting constant attention to them; and America is investing tremendous sums toward their realization. In recent days, an appropriation of $40,000,000 for McNary Dam, and another of $10,000,000 for Chief Joseph Dam, have been approved by committees, and other estimates are being prepared.

This, too, is but part of the picture.

We have come to the realization that more comprehensive administration of the Columbia Valley's resources is absolutely necessary to insure the proper tempo of development.

That kind of administration is needed here, at home, in the Pacific Northwest.

One month ago President Truman proposed such a home-rule type of administration—the Columbia Valley Administration.

We have introduced legislation which proposes to bring it about. It is legislation designed to add no new powers to the Federal Government—but it would bring present powers together in more workable and economical form—and bring them home to the Pacific Northwest.

It is only a proposal—one that needs your study, as much as we will need the advice and suggestions of the people of the Columbia Basin and our neighboring States.

There is nothing at present, except our work and hope for peace in the world, that represents an issue more important to us all.

We are spanning the ages, and are on the threshold of a scientific age, with all the promise that it holds forth.

The Columbia River is our heritage. It is already an instrument of living, and the key to scientific achievement ahead.

The future of the Pacific Northwest is bright, if we avail ourselves of the opportunities with which we are so richly endowed.

Federal Pay in Key Posts

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT
IN THE SENATE OF THE UNITED STATES

Tuesday, May 31 (legislative day of Monday, May 23), 1949

Mr. FLANDERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Dr. Bunche and Federal Pay," published in the Evening Star of May 27, 1949. It is appropriate material for consideration in connection with Senate bill 498, the so-called top-pay bill, which has been for many weeks on the calendar of the Senate.

I remark in passing that this bill, if passed in its present form, would give Assistant Secretaries $16,000, in place of the $9,250, after taxes, which Dr. Bunche would receive under present conditions.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DR. BUNCHE AND FEDERAL PAY

As Acting United Nations Mediator for Palestine, Dr. Ralph J. Bunche has demonstrated such outstanding ability that it is not surprising he has been offered the post of Assistant Secretary of State for Near Eastern and African Affairs. Unfortunately, however, he has decided to decline it, his decision being based primarily on an altogether understandable concern for the economic well-being of his family.

Thus, although grateful for the "very great honor" implicit in the offer, he has frankly told the President that its acceptance would involve too great a financial sacrifice. In his regular capacity as Director of the United Nations Trusteeship Department, Dr. Bunche earns a salary of $11,000 a year, plus an allowance of $3,000, all of it exempt from income taxes. As an Assistant Secretary of State, however, he would receive only $10,300. Out of this sum, moreover, after making deductions for his wife and three children, he would have to pay a tax of at least $1,050, which would reduce his real earnings to $9,250.

In other words, to accept the honor of becoming an Assistant Secretary of State it would cost Dr. Bunche $4,750 a year. Men without independent means can hardly be expected to be spendthrifts of that sort, especially when they have families to support in an era of high living costs. The point speaks for itself. Small wonder that able Americans are often hard to find for key posts in the Federal service.

Address by Hon. Hubert H. Humphrey, of Minnesota, Before India League of America

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, May 31 (legislative day of Monday, May 23), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by myself before the India League of America at a dinner for Mme. Pandit, Ambassador of India, at the Waldorf Astoria Hotel, New York City, on May 24, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I take particular pleasure in joining the members of the India League of America this evening in welcoming Mme. Pandit, India's new Ambassador in Washington.

Mme. Pandit brings a wealth of talent and experience to her new assignment; a staunch follower of that apostle of peace, the immortal Mahatma Gandhi, she was an active worker in the Indian National Congress for many years. She was the first woman to be appointed minister in one of the first elected provincial governments in India during the 1930's.

Her keen interest in the cause of international peace was effectively expressed in her leadership of the Indian delegation to the last three sessions of the United Nations General Assembly. In this international forum her active leadership for those principles of truth and freedom for which Gandhi had given his life, contributed to the process of building the United Nations as the firm bulwark for the international peace we all desire. For the past 2 years she has served her country as India's first Ambassador to the U. S. S. R.

We in the United States have watched with sympathy, affection, and understanding India's long struggle for independence, and we welcomed her with cordiality when, her immediate objective reached, she joined the family of independent nations 2 years ago.

The imagination of the American people had been captured by that struggle and by the strength and high purpose of Gandhi's leadership. Since Gandhi's tragic death, which so shocked and grieved the whole world, our eyes have been focused on the most highly esteemed of his disciples, the Prime Minister of India, Pandit Nehru, who is guiding the great Indian people through these difficult early days of their newly regained freedom. We look to Mme. Pandit, who is not only India's Ambassador, but also the illustrious sister of Prime Minister Nehru, as a faithful interpreter of India's leaders and people.

Mme. Pandit is no stranger to these shores. She has visited the United States on several occasions in the past, and two of her children spent part of their school years in this country. Her return to the United States now, in this high official capacity, I feel to be sincere evidence of her desire to promote mutual understanding among our two peoples.

There already exist many bonds which bind us in friendship to India. The traditional love of freedom and democracy held by the Indian people strikes a similar chord in us. We likewise believe that this democratic freedom can flourish only in a world at peace, a world in which the fruits of the earth and of man's ingenuity are freely carried to all peoples.

Like India, we believe that a free democratic political system exists for the benefit of its citizens. These ties between India and the United States now exist. It is now our pleasant duty to work for their strengthening.

In recent weeks events have helped to focus our eyes primarily on Europe. In Asia we have all been concerned and puzzled by the enigma of China. No such puzzling situation obtains in India. She is a great and rich country, a nation which fought beside us in the Second World War and which has associated itself in the cause of peace since the war. India is a nation of ever-increasing democracy, whose leaders today are among the great and wise men of our times. Her Government, under such leadership, is emerging as a politically and economically stable administration, despite the tremendous difficulties imposed by partition of the subcontinent and by the economic dislocations which India shares with most of the rest of the world. It is in India and the rest of southeast Asia that the real struggle for men's minds is now taking place.

There, newly enfranchised peoples will soon be able for the first time in modern history to go to the polls and determine the sort of government which will administer their countries. Many of these people are illiterate. Their knowledge of the democratic system is composed solely of a fundamental, instinctive love for freedom. The problems of these governments in education and in the maintenance of a standard of living above starvation level, are therefore enormous. And there is the ever-present danger that totalitarianism, in one form or another, may step in where men and women lack the necessities of decent living.

In the south Asian area we recognize India as an essential element in the maintenance of political and economic stability. Without stability in south Asia it is no exaggeration to say that there can be no real

UNIVERSITY OF MICHIGAN LIBRARIES

peace in the world. It is in our interests, therefore, in the cause of that peace which the American people so desire, to work in effective collaboration with the people and the Government of India.

The subcontinent has been the source of many great and ancient civilizations. We are now happy to be associated with a new India as she resumes her place in world affairs. I know that, working closely with other like-minded nations, she can be a powerful factor in our efforts to attain that common purpose.

Yes, I repeat, in south Asia we recognize India as an essential element in the maintenance of political and economic stability in that area. Without stability in southern Asia, without freedom for Asiatics, without education for the people of Asia, without food and nourishment for the children of Asia, there can be no real peace in the world.

India is not a question mark. In every way she belongs to the family of free nations. Her needs are no secret; they are all too evident. Her aspirations are not hidden; her ideals are not camouflaged.

With these needs, aspirations, and ideals in mind, our task here in the United States is clear if we would help build a free world:

First, we must recognize the needs of India as being equally crucial as those of Europe. With this in mind, we must understand that vast numbers of her peoples are poverty-stricken and uneducated, that India's national economy is only $13,636,300,000 for her 337,000,000 people as compared to our approximately $224,000,000,000 in 1948 for our 140,000,000 people. Her per capita income therefore is about one-fortieth of ours. It would be in the best interest of world peace and world order for America to extend direct financial assistance to India under the same terms as our Marshall-plan program for Europe.

To be sure, India can and will use the facilities of the World Bank, the International Monetary Fund, the United Nations Food and Agriculture Organization. These are the facilities which have been made available in this postwar period for the relief and rehabilitation of peoples who are recovering from the ravages of war and who are attempting to develop and improve their economies. Yes, these facilities are not only available but it is to the interest of all nations that they be effectively utilized. This, however, does not minimize our opportunity for direct assistance through grants and loans under terms similar to the ECA to our friend, the Republic of India.

Secondly, we must recognize the legitimate self-government aspirations of the countries of southeast Asia and avoid aid or comfort or encouragement to any European nation now attempting to maintain an old, antiquated colonial system by continuing to subjugate the peoples of southeastern Asia.

Thirdly, we must recognize that there are many areas in which our two countries can cooperate to our mutual benefit in the development of commerce and industrial techniques in the advances which are obtained from scientific progress.

India needs help to bring her riches out of the ground, to extend her industrial production, to feed her expanding economy. India needs our support in that venture quickly and adequately. In 1947–48 India reclaimed 32,306 acres of land for agriculture. She is now working to reclaim 100,000 acres more. Her industrial production is increasing. She is now producing electrical supplies, diesel engines, bicycles, superphosphates, caustic sodas, soda ash, sugar, hydrogenated oils and soaps at a new high peak. We must help her.

American private capital will find a welcome market in India. The government of that nation has indicated its friendly attitude toward private investment and industrial development. In view of the great potentialities for a mass market and the possibilities of development of the natural resources of India, it should be expected that American private capital will flow to India in ever-increasing amounts. We must remember, however, that the days of capital exploitation or of economic imperialism are over. Capital has a moral obligation to serve the people and not to exploit them. Private capital has every right to expect a reasonable profit. It also has an obligation to be reasonable in its relationships with the people and the government.

Fourthly, we must strengthen the ties that bind us and I suggest that we give serious consideration to the formulation of a program for educational opportunities and advancements, and in which Indian students are given an opportunity to make use of the educational facilities and opportunities in our country on the basis of scholarships provided by our Government. In turn, it is important that we encourage American students to go to India so that we may know each other and grow to respect one another.

Finally, we must recognize that America must redeem itself in the eyes of the people of India, and must earn for itself again the position of world moral leadership. The birth of a new India should lead us here to rededicate ourselves to the principles of human equality which gave the early sustenance to our new Nation. We must remember that we were the Nation which gave to the world the political ideal that all men are equal, that men are endowed by their Creator with certain inalienable rights—that all men have these rights. To do that, it is altogether fitting and proper that we forcefully demonstrate again our belief in these principles by acting to ensure a climate and an atmosphere in our society which would allow our brethren and fellow citizens of whatever color, race, creed, or national origin, to walk again with heads raised high and with dignity.

The future of the world, my fellow Americans, lies across the Pacific. Let us not allow that future to escape us. Let us understand that fact; let us understand that the Asiatic peoples are rising to greatness and strength. Let us understand that they wish to be our friends, that they can be our friends, and that they will be our friends if we welcome them as friends. Let us act like friends. Let us act toward them like fellow citizens in one for stability, maintenance, and sustenance. Let us in our attitude toward them and in our demonstration of that attitude, through our laws—including our immigration laws—prove the sincerity of our convictions.

The interests of the United States and India are interdependent. Together we can help build a world order and a world society based on freedom and democracy. Madame Pandit, in the agony of the world's crisis today, we urge you, your brother, your country, and your people, in your zeal for democracy, in your incisive, cool thinking, to help give us a vision which will blaze the path toward the realization of the great ideals we share.

Admission of Displaced Persons

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 31 (legislative day of Monday, May 23), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD a letter addressed by Mr. John W. Edelman, Washington representative, Textile Workers Union of America, CIO, to the editor of the Washington Evening Star and published in that newspaper on May 23, 1949, under the caption "Textile union official pleads for admission of displaced persons."

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

TEXTILE UNION OFFICIAL PLEADS FOR ADMISSION OF DISPLACED PERSONS

To the EDITOR OF THE STAR:

In your issue of April 29, there was a letter signed "Forus," strongly objecting to the admission of displaced persons to the United States.

If anybody should be concerned about the admission of displaced persons it certainly should be organized labor. And yet, the American Federation of Labor, the Congress of Industrial Organizations, the United Mine Workers of America, the International Association of Machinists, and rail labor unions have all gone on record favoring the admission of 400,000 displaced persons to the United States, with no strings attached. This stand is simple, American, humanitarian, and unselfish.

William Green, president of the American Federation of Labor, said on March 1, 1949: "It is our firm belief that the United States should admit 100,000 DP's for 4 years. We feel that this would be both morally and economically sound, and certainly should have no adverse effect on our economy."

Philip Murray, president of the CIO, said on March 3, 1949: "The United States should admit 100,000 displaced persons for 4 years. I wish to emphasize again that the interests of labor, in terms of employment or otherwise, are not in the least threatened by the admission of this handuful of people."

Proper and equitable displaced persons legislation has been on the legislative program of organized labor for more than 3 years, and we criticize the law now on the statute books as being inadequate, discriminatory, and practically unworkable.

MAJORITY ARE WOMEN AND CHILDREN

Almost 60 percent of the displaced persons are women and children. The majority, therefore, will be consumers rather than breadwinners. In effect this means that the displaced persons to be admitted to this country will stimulate employment by adding to the total and productive activity in our country.

Our friend Forus says in his letter that "It seems improper that our citizens, who have been struggling in low-grade positions for a long time, including farm labor, should be displaced by these displaced persons." That many Americans are struggling in low-grade positions is undeniably true; but that DP's are displacing these people is not true. So far there is no record of any DP who has displaced any American worker, whether that worker was struggling in a low-grade position or taking it easy in a high-grade position.

Furthermore, Forus believes that displaced persons "will not be so anxious to come to this country if they were required to do some real manual labor." The unfair inference is that displaced persons are lazy and shiftless and just no good.

Well, let us see who the displaced persons really are. They are the survivors of Nazi concentration camps, of slave labor battalions and of religious persecution. They have no home and no country they can call their own.

Three and one-half years after the war there are still almost 1,000,000 of these men, women and children, most of them living in the occupied zones of Germany, Austria, and Italy. These victims of barbarism and terror do not wish to and cannot return to

their homes of origin, now in the Soviet sphere of influence, because they fear oppression for religious or political reasons.

MANY SKILLED WORKERS INCLUDED

The bulk of the displaced persons are skilled and self-supporting. The skilled category in which there are significant numbers among the displaced persons are blacksmiths, painters, bakers, joiners, butchers, carpenters, electricians, auto and truck mechanics, locksmiths, shoemakers, and tailors. There are about 63,000 agricultural workers, etc.

It seems reasonable to assume that people equipped with such skills, who fought fascism and have rejected communism, and who for years have suffered the many hardships of a detention camp rather than go back to their lands of origin behind the iron curtain, are not exactly delicate when some real manual labor is to be done.

During the war years this country lost more than 900,000 regular quota immigrants who could have come in but didn't because of the war. Even if 400,000 displaced persons are admitted during the next 4 years this country would still be short of some 500,000 regular immigrants who could not enter the country during the war years.

To mouth sympathy for displaced persons but to let them rot in detention camps is sheer hypocrisy. Let us demonstrate both our faith in the soundness of the American economy and true American idealism by promptly enacting legislation which will enable this country to bring here our fair share of displaced persons.

JOHN W. EDELMAN,
Washington Representative,
Textile Union of America, CIO.

Protect Our Pets—Protest Vivisection

REMARKS
OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1949

Mr. BARING. Mr. Speaker, dog and pet owners, take heart! Recently some legislation was passed in the State of Illinois which proved very heartening to the thousands of dog lovers and pet owners, like myself, whose faith in the goodness of humanity was somewhat restored. At least, they felt a deep sense of admiration toward those legislators in Illinois who, by their sympathetic vote for humane legislation, paid a long overdue debt of gratitude to "man's best friend," the dog. By defeating H. R. 650, another victory has been gained for every warm-hearted citizen of this country who possesses a love for our little canine friends.

This legislative action in putting a stop to the atrocity which is being performed against dogs, not only strikes a blow at the practice of vivisection, but it proves a very important point. The vivisectors have been whipped on their dog-pound bills wherever the people have had a chance to fight them in State legislatures. They have failed this year to pass similar bills in Illinois, Pennsylvania, and Massachusetts. The residents of those States rose up in arms and kept the bills from passing.

Now the vivisectors are turning to Washington. The reason is simple. Residents of Washington are not allowed to vote. Their laws are made for them by the Senators and Congressmen from the States which we, as Congressmen, represent. In short, the people of Washington cannot complain to their Congressmen, simply because they have no Congressmen.

Working in a cowardly fashion, the vivisectors now are seeking to foist a dog pound ordinance on the people of Washington who cannot speak for themselves. The vivisectors are hoping that because people who do not live in Washington may not bother to object to a Washington city ordinance, they will be able to get their bills passed. That is why I have taken up this crusade in the interest of dogs here in Washington.

We must defeat two bills now pending in Congress, namely, H. R. 4349 and S. 1703, which would turn over to medical schools and laboratories all unclaimed animals in the District Pound. They would encourage wasteful use of animals, aimless research and unnecessary and cruel experiments. Such abuses are attested to by medical journal reports and by authenticated pictures.

Under the present law, pets at the Pound which are not promptly redeemed, are placed for adoption or mercifully destroyed. These bills would deprive pet owners of this assurance and such pets would die on dissecting boards of medical schools by the thousands. The 32,000 dog owners of the District of Columbia whose license fees amount to $100,000 annually, are entitled to the assurance they now have under existing laws.

As a champion of humane legislation for dogs, I am joining with countless red-blooded citizens of this country who are willing to go all out for the defense of our helpless fellow creatures who have to look to us for their protection. All of my life I have owned a dog. Ever since I was a little kid in overalls, I have had a dog for a companion. To me, a dog means a pal. No matter how unworthy we, as humans, may be, a dog is never unfaithful. His trust in us is complete. So is his forgiveness. Dogs do not ask very much from life, but how much they give to it. They share with us our joys—they suffer our defeats—and they always understand.

It is not necessary, however, to go any further in lauding the virtues of the dog. Any dog lover appreciates only too well the qualities of soul that can be attributed to the dog, to say nothing of the acts of courage, loyalty, and sacrifice that are constantly being publicized about them. Today's newspaper may relate the story of a stout-hearted little mongrel which saved a baby's life. Tomorrow's headlines may tell of the rescue of a woman from death through the exercise of a dog's intuition. These are the things which are known and fully appreciated by people who love dogs. They are things, however, that are forgotten and given no consideration by that group of sadistically inclined people who profess to be vivisectionists. Live-animal experimentation to them is a noble cause which they must pursue "in the interest of science." These so-called scientists so delude the reading public by their insidious propaganda that even thinking people are apt to become convinced that their falsehoods bear truth. So subtle are they in their presentations of so-called scientific proofs that the unsuspecting public could well be misled.

This is not a tirade against the members of the medical profession or those true servants of humanity who devote their entire lives to progress in the field of scientific research. These individuals are not numbered among that group of sadists known as vivisectionists, whose vicious practices lead to such unsavory pursuits as pet thievery, illegal dog traffic, and the public auctions of pets which have been so flagrantly exposed in recent newspapers. Enough has been publicized concerning the atrocities that are being perpetrated in the name of science by unscrupulous and criminally inclined persons—enough to engender the contempt and the uprising of every conscientious and tender-hearted citizen in the country. I am appealing to every pet lover in the United States to rise up in protest against the torturesome practice of vivisection. I love dogs, and I intend to fight to the last ditch to see that they are given fair play.

There are distinguished and honored members of the medical profession who are dog lovers like myself, and they feel just as vehemently against the matter of vivisection as I do. They admit that most of these atrocities which are performed under the guise of science are useless. Likewise, they confirm the fact that many of the cases and illustrations which are presented by the vivisectionists as material evidence to prove the value of their cruel experimentation are unsubstantiated, unfounded, and irrelevant. They concur in the belief that the human anatomy differs so greatly from the anatomy of our four-legged pets that much of the so-called experimentation of vivisectionists is not only utterly useless, but it is a means by which those individuals who engage in the cruel practice are able to satisfy their inhuman and sadistic tendencies. The next time that a proponent of vivisection comes up with the old bromide that it is all for the interest of science, do not you believe it.

I know doctors and nurses who have alined themselves whole-heartedly with the movement to stop vivisection, which certainly belies any claim to the efficacy of this deplorable practice. Reports that have been made on investigations that have been carried on in the vivisection laboratories are enough to cause any normal person to become heartsick. To see a poor, harmless, and pathetic little animal that has already probably been pitifully frightened during its capture by brutal racketeers, subjected to the relentless fate of a dissecting board, is not a sight that even a strong man can endure. And do not ever believe that these experiments are always painless, or that the victim is given an anesthetic. It is a rather gruesome thing when a fiendish vivisector cuts off a dog's leg, or otherwise dismembers its body, in order to test his reactions—or just to see if it hurts. Of course, it hurts. It does not take a vivisectionist to prove that fact.

UNIVERSITY OF MICHIGAN LIBRARIES

I know that there are many irate Members of Congress who feel about this matter exactly as I do, and they are out to defeat this atrocious legislation. When the issue of vivisection comes up for legislation, I am going to ask you to think for just a moment about that little dog of yours. All he wants is the right to life, liberty, and the pursuit of happiness, and his happiness does not demand very much. An affectionate pat, a kindly word, and a little sympathetic understanding is all that it takes to make him happy-hearted. If you are lonely, he will be your friend. If you are discouraged, he will lick your hand. Spare his life from the vivisector and he will repay you by allowing you to live with your conscience.

The destiny of our country's dogs is in our hands. Let us not let them, or their owners, down.

Jess Larson

EXTENSION OF REMARKS

OF

HON. WILLIAM G. STIGLER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1949

Mr. STIGLER. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely and well-written article entitled "New Role Looms for FWA Chief Larson," written by Mr. Robert K. Walsh, which appeared in last Sunday's Washington Star:

NEW ROLE LOOMS FOR FWA CHIEF LARSON—MAY BE HOUSEKEEPER FOR THE FEDERAL GOVERNMENT—WOULD BUY, MANAGE, AND SUPPLY FOR ALL AGENCIES

(By Robert K. Walsh)

Jess Larson, new Federal Works Administrator, could feel at home in a domestic diplomatic service if the Government set up such a special division for fostering friendly sentiments among Federal, State, and local official families.

The affable, 45-year-old Oklahoma lawyer almost went into world diplomacy. He was seriously mentioned last year for an Economic Cooperation Administration deputy.

But it is on the home ground rather than in the international field that he now must prove his talent for tact and trouble-shooting.

Soon after he takes over FWA he may find a still bigger job on his hands. Under a reorganization plan said to have a good chance of enactment at this session, FWA itself would become part of a General Services Agency charged with management, procurement, and supply of Government property.

Mr. Larson, by all accounts and signs, then would be the top GSA administrator—main housekeeper for the Federal Government.

QUALITIES RECOMMEND HIM

His knack of getting along gently but firmly with Congress, administrative associates, and State and municipal authorities unquestionably was a prime reason President Truman named him Federal Works Administrator and why the Senate speedily confirmed him.

Managerial, organizing, and legal experience were other reasons. His comparatively youthful age for so responsible a position seems to have worked in his favor, although he warns well-wishers to "smile when you say that," he is a boy wonder or a go-getter.

He was mayor of Chickasha, Okla., at 25, a fighting field artillery colonel at 40, and until recently head man in the Government's prize headache sector—the War Assets Administration.

Jess Larson is known by thousands in and out of the Government. Yet, he has remained relatively unknown to the public in general.

This man who looks like a gridiron fullback was so busy as a boy that he found little time for athletics except in later years to develop proficiency in polo.

LIKES POLITICS

This mild-mannered executive who often issues suggestions instead of flat orders and sits calmly while hot-tempered visitors sometimes purple the air and pound his desk, has been interested in military matters since he enrolled as a lad in the Missouri Military Academy. He led a field artillery battalion in landings in North Africa, Sicily, and Salerno, and was wounded, almost fatally, at the crossing of the Volturno River in Italy.

This expert liaison worker between Congress and one of its favorite targets—the surplus war property disposal agency—dates the beginning of his fondness for politics to political science studies at the University of Oklahoma College of Arts and Sciences.

His first Federal job nevertheless resulted from pure coincidence, he believes. While not taking sides in the argument whether the office seeks the man or the man seeks the office, he puts substantial stock in the theory that it helps a lot to be in the right spot at the right time.

The legal career of Mr. Larson—climaxed when he served as WAA general counsel in 1946–47—suffered several interruptions that threatened to turn him permanently into other work. At the end of his first year in the University of Oklahoma Law School, he had to take over active management of his family's ranching, dairy, and creamery enterprises. When his father's health improved 3 years later, the then 25-year-old Mr. Larson resumed law studies with a private firm in his home city.

"Meanwhile," he relates, "I say little prospect of setting the world on fire as a lawyer in the near future. Besides, I wanted to marry. At that moment an election for mayor was coming up. The mayor's salary had just been raised from $3,000 to $4,000. I decided I was the logical man, the people's choice.

"My friends tried to dissuade me. But in the Democratic primary, I defeated eight other candidates including the man who had been mayor 10 years. It looked like clear sailing in the general election, but that was only a few months after Oklahoma had gone Republican in the 1928 presidential election. I was lucky to win by a narrow margin over the Republican candidate."

WAS IN NATIONAL GUARD

During part of his 4-year term as mayor he was president of the Oklahoma Municipal League. From 1935 to 1939, as secretary to the Commissioners of the Land Office in Oklahoma, he actively managed farm mortgage assets, school land matters, oil holdings, and other operations of the department.

He was practicing law in Oklahoma City, specializing in municipal securities and contract litigation, when the National Guard was inducted into the Federal service. Starting as a major he wound up as a colonel.

Because of serious wounds he returned to the United States early in 1944 and shortly thereafter was assigned as head of the tactics department at the field artillery school at Fort Sill, Okla. Ordered to Washington in July 1945, he worked for the next year as member of a special committee for reorganization of the National Guard and Organized Reserve Corps.

IN MIDDLE OF WAA FIGHT

"When that assignment was drawing to a close and I had reason to believe I'd be in the Army for at least another year," he recalls, "I inquired about the possibility of being transferred to some legal work because I wanted to catch up on time I had been away from legal practice. So by pure coincidence they sent me over to WAA as assistant counsel."

That was in July 1946. The following December he was general counsel. Eleven months later he was sworn in as associate administrator. When Lt. Gen. Robert M. Littlejohn stepped out last November, Mr. Larson was chosen by President Truman to head the surplus property agency.

As counsel and associate administrator, he was in the thick of things. WAA was under heavy fire from some groups in Congress and from some segments of the public dissatisfied with various aspects of the priority and preference provision of the surplus-property-disposal program.

Associates say Mr. Larson performed feats of diplomacy in being friendly with everyone on the Hill and smoothing out many of the wrinkles and worries of WAA. His task as Administrator has not grown easier, despite the gradual liquidation of WAA. Nor will he be rid of it at FWA.

"I don't dare say anything in the nature of a parting shot as I leave WAA," he comments. "Under the present law, WAA is due to expire in December, and some of the long-range remaining functions might go into FWA. Moreover, if the proposed General Services Agency is established, it not only will handle whatever surplus property is subject to disposal, but also will deal with so-called excess property that can be moved from Government agencies that don't need it to those that do."

Declaring he has no illusions about the magnitude of the FWA operations and personnel, as compared with WAA with its peak of 59,000 employees in 1947 and its current total of about 4,700, Mr. Larson offers this summation that seems to shine as understatement of WAA:

"Since the war ended I don't think there has been a more exciting and stimulating activity in Government than the surplus property disposal program. I doubt if the public has realized its scope. It had its weaknesses, not all of them due to the agency itself. Though I don't know whether people are more honest than they ever were, I believe there has been a good record for honesty in the handling of the program as a whole."

GOOD SURPLUS SALESMAN

When Mr. Larson talks about WAA or FWA or the proposal for a regrouping of those and several other agencies into a General Services Agency, he explains intricate operations in understandable language. Many Members of Congress have commended his exposition of WAA activities and aims. He could be described almost as the No. 1 salesman of the surplus-property program.

At FWA he faces wider and different problems. In a GSA establishment he would direct still different and even more difficult matters. FWA, created by Executive order in 1939, is essentially a construction and maintenance management organization. It includes the Public Roads Administration, Public Buildings Administration and Bureau of Community Facilities as well as the Federal Fire Council. Among other things it administers Federal grants or loans to States

and local governments or other agencies. Since the war it has taken on the supervision of some industrial reserve facilities.

The proposed General Services Agency on the other hand, would be set up by congressional enactment for property procurement and utilization. The idea has been given impetus and shape by the Hoover Commission on Governmental Reorganization. The Senate Executive Expenditures Committee this month reported out a "Federal Property and Administrative Services Act" to bring this about.

When, as is expected, it becomes law, Mr. Larson seems most likely to be the man who will put life into it.

Petitions From Citizens of Danube, Minn.

EXTENSION OF REMARKS

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1949

Mr. H. CARL ANDERSEN. Mr. Speaker, I have been requested by ladies living in Danube, Minn., to insert the following two petitions in the RECORD, and am glad to make that request at this time:

DANUBE, MINN., *May 5, 1949.*

H. CARL ANDERSEN.

DEAR SIR: We, the Christian mothers of America, are deeply concerned about the welfare of our sons who are in training in camps for the defense of our country. We are urging all of our Congressmen to free these camps from the evil temptations of beer, alcohol, gambling, and prostitution, therefore we ask you to support the Pace bill, H. R. 886.

Mrs. Grace Kraft, Mrs. Gertrude Bredesen, Mrs. M. J. Schroeder, Minnie Wallert, Mrs. O. O. Reep, Mrs. E. C. Black, Mrs. A. W. Johnson, Mrs. Ralph Manthei, Mrs. Aaron Sommers, Mrs. Lydia Schendel, Rev. F. J. Breid, Mrs. Ferdinand Breid, Mrs. Art Jahnke, Mrs. D. W. Fuller.

DANUBE, MINN., *May 5, 1949.*

H. CARL ANDERSEN.

DEAR SIR: Inasmuch as the alcoholic-beverage traffic is making a planned and concerted attempt to infiltrate the American home through alcoholic-beverage advertising, particularly with such advertisements as the Home Life in America series in publications particularly devoted to and circulating in the American home, with disastrous effects in neglect of children by drinking mothers and an alarming increase in juvenile delinquency—we respectfully urge upon you the responsibility of Congress to meet this dangerous challenge to the American way of life by legislation outlawing alcoholic-beverage advertising over the air and through the channels of interstate commerce.

We urge consideration and support of the Bryson bill, H. R. 2428.

Mrs. Grace Kraft, Mrs. Gertrude Bredesen, Mrs. M. J. Schroeder, Minnie Wallert, Mrs. O. O. Reep, Mrs. M. J. Fischer, Mrs. A. W. Johnson, Mrs. E. C. Black, Mrs. A. W. Johnson, Mrs. Ralph Manthei, Mrs. Aaron Sommers, Mrs. Lydia Schendel, Rev. F. J. Breid, Mrs. Ferdinand Breid, Mrs. Art Jahnk, Mrs. D. W. Fuller.

The Basing-Point System and the State of Illinois—Illinois Paid Cement and Steel Trusts Untold Millions in Phantom Freight—Cement Bids to Illinois State Highway Department Show Power of Basing-Point System — Basing-Point System Nullifies Natural Advantages

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1949

Mr. PATMAN. Mr. Speaker, the prairie State of Illinois, with its rich farm country and industrial plants, like most other States, has paid the steel and cement industries enormous sums through the basing-point system of pricing. In the pioneer days of Illinois, people from other States came in because of the rich advantages offered by its land, streams, and forests. History records Illinois' industrial progress as its natural resources became known, and the great city of Chicago emerged from a rambling village to the foremost trading center of the whole Midwest. Illinoisans were, from the very beginning of the State's history, progressive in both industry and agriculture. Factories sprang up all over the State to take advantage of the technological progress of the times in the fields of steel processing, woodworking, and all of the other activities which make not only Illinois but our Nation great.

Illinois is rich in natural resources for making portland cement, and some of the industry's early plants were located in northern Illinois. Coal of all degrees of quality is found in Illinois' many seams, and cement-making materials are intermingled with the coal measures. So the problem of fuel was no problem. In fact, the greatest problem encountered by the people of Illinois in their industrial and agricultural progress has been, like in many other States, artificial price controls such as the basing-point system and the virtual control of the steel and cement trusts over basic materials.

BIG STEEL PAYS FOR GARY, IND., PLANT WITH PHANTOM FREIGHT ON SALES IN CHICAGO AND WEST

It is easy to see why United States Steel Corp. built the then largest single steel plant in the world at Gary, Ind., to reap the advantage of phantom freight on low-cost steel. The Federal Trade Commission at one time found that steel could be produced at a 20-percent lower cost at Gary than in the Pittsburgh district. The basing-point system, upon the completion of the Gary plant, began to take its toll by way of phantom freight from the whole industrial fabric of Illinois, as well as from the rest of the country, as I have heretofore pointed out.

However, at this time I want to show its effect on Illinois. During the life of the Pittsburgh-plus basing-point system, the base price of steel was always f. o. b. Pittsburgh. When a purchase was made from any other point in the country, cities such as Chicago and other destinations in Illinois, after the completion of the Gary plant, secured steel from this nearby source, but the steel was always sold f. o. b. Pittsburgh base, plus freight from Pittsburgh to destination. Over a period of years, this excess cost, which should not have been charged and which was an undue burden on Illinois' industry, was as follows:

In 1911, $3.60 per ton.

From October 16, 1914, to September 20, 1917, $3.78 per ton.

From September 20, 1917, to June 25, 1918, $4.30 per ton.

From June 25, 1918, to August 25, 1920, $5.40 per ton.

From August 26, 1920, to July 1, 1922, $7.60 per ton.

For several years prior to the Supreme Court decision in the cement case, April 26, 1948, Chicago had been a basing point for a number of steel products. Chicago, however, was not a basing point for all steel products and therefore continued to pay, as did the rest of Illinois, phantom freight until the Supreme Court decision as noted above.

CHICAGO AND MIDWEST MANUFACTURERS OF AGRICULTURAL EQUIPMENT PAID PHANTOM FREIGHT

Let us note how much phantom freight was realized through the Pittsburgh-plus system by Big Steel in the early 1920's, based on the record in the Pittsburgh-plus case. The per ton figures, based on freight charges from Pittsburgh to destination where United States plants were located, were:

City	United States Steel subsidiary	Phantom freight
Chicago, Ill.	Illinois Steel Co.	$7.60
Duluth, Minn.	American Steel & Wire Co.	13.20
Birmingham, Ala.	Tennessee Coal, Iron & Railroad Co.	15.30
South Bend, Ind.	Carnegie Steel Co.	6.85
Detroit, Mich.	Illinois Steel Co.	3.95

In terms of what this meant in enhanced steel costs to individual farm machinery producers in the Middle West, the record shows that particular consumers paid phantom freight under the Pittsburgh-plus pricing of steel, in the 1920's, as follows:

First. Deere & Co. paid $488,400 annually.

Second. J. I. Case Threshing Machine Co. paid $509,033 in 1920.

Third. Emerson-Brantingham Co. paid $100,000 annually.

Fourth. Litchfield Manufacturing Co. paid $68,000 annually.

These four farm machinery companies alone paid more than $1,000,000 in phantom freight annually, which they necessarily charged the farmer in the prices of farm implements. When it is considered that these four companies represent so small a sample of Middle West steel users that what they paid is hardly more than a drop in the bucket, the conclusion of the Commission that Pittsburgh-plus

UNIVERSITY OF MICHIGAN LIBRARIES

added millions of dollars each year to the price paid by steel users outside Pittsburgh becomes an extremely conservative statement.

The point to all this is that the general adoption of Pittsburgh-plus, which succeeded the older outlawed forms of agreements for controlling steel prices and competition, definitely fixed amounts of phantom freight, running into many millions of dollars annually, which Illinois and Middle West users of steel and their customers were required to pay. This burden of noncompetitive pricing was fine for the steel producers with plants strategically well located to benefit financially, but bad for steel users and their customers. Doubtless, then as now, many Middle West steel buyers were lulled into a false sense of security and tolerance by the stability of noncompetitive prices resulting from the system.

BASING-POINT BIDS TO ILLINOIS DEPARTMENT OF HIGHWAYS ON CEMENT SHOW IDENTITY INHERENT IN BASING-POINT SYSTEM

Illinois has only four cement plants although her requirements of cement for public and private works are much more than her production. There is no doubt that, had the cement trust not deemed it expedient to keep down Illinois production, her availability of materials would have induced the building of additional cement mills. In 1939, with an estimated consumption of 7,644,172 barrels, Illinois deficiency was 2,862,880 barrels.

In 1940, with an estimated consumption of 8,584,009 barrels, her deficiency was 3,646,882 barrels.

Skipping over the war years, we come to 1945, with an estimated consumption of 5,382,144 barrels, or a deficiency of 1,192,695 barrels.

In 1946, with an estimated consumption of 8,766,933 barrels, Illinois deficiency was 2,091,349 barrels.

Is there any doubt in anybody's mind that the control exercised over the cement industry through the basing-point system was responsible for a great and rich State, as Illinois is, to have a deficiency in the cement supply, with cement-making materials available in most sections of the State? The figures shown above are really very conservative because they are based on shipments from the mills within Illinois, and naturally these mills shipped a great deal of cement outside the State. Of course, there are other cement mills in the surrounding States, some owned by the same companies which operate the mills in Illinois. There is no doubt that, due to the locations of the cement mills within and without Illinois which supplied destinations in Illinois, the territory was so divided as to obtain for each mill the highest possible price and to exact from each customer as much phantom freight as the traffic would bear.

As evidence of identical bids, which are to be found not only in Illinois but in all States and to all purchasers of cement, whether they be agencies of the Federal Government, the State government, dealers, contractors, or other persons requiring this basic commodity, the following is offered:

On January 17, 1947, the Illinois Division of Highways received bids on approximately 50,000 barrels of cement to 102 destinations within the State. There were eight bidders: Alpha Portland Cement Co., Dewey Portland Cement Co., Lehigh Portland Cement Co., Lone Star Cement Corp., Marquette Cement Manufacturing Co., Medusa Portland Cement Co., Missouri Portland Cement Co., Universal-Atlas Cement Co.

These bidders, as is the custom of the industry, bid exactly the same price to each destination but added a clause of their own—a clause which was not in the invitation to bid; namely, that the bid prices were subject to an increase in price not to exceed 25 cents per barrel. The deliveries under the invitation were to be made during the period April 1, 1947, to December 31, 1947, and since the bids submitted were not firm bids, the Illinois Division of Highways elected to reject all bids and readvertised for new bids. The table of bids taken on January 17, 1947, follows:

TABLE 1

Destination (county)	Estimated amount of portland cement required	Bidder							
		Alpha	Dewey	Lehigh	Lone Star	Marquette	Medusa	Missouri	Universal-Atlas
		Destination price							
	Barrels								
Adams	500	$3.31	$3.31	$3.31	$3.31	$3.31	$3.31	$3.31	$3.31

[4] F. o. b. Granville.

Mr. Speaker, when new bids were taken by the Illinois division of highways, on April 8, 1947, they received firm bids; but, in a measure having its cake and eating it too, these bids of the Cement Trust were higher than the bids submitted at the previous bidding on January 17, 1947. You will note that for Adams County, for instance, in the table below, it shows the price as $3.46 per barrel, whereas the price in the table above was $3.31 per barrel. Going through to Franklin County, in the table below, we find that the price is $3.59 per barrel, whereas the preceding bid was $3.44 per barrel. And taking one more example at random, we look at Washington County, on the table below, and find the price is $3.52, whereas the previous price bid on the same requirements for the same destination was $3.37 per barrel.

On the table below, it will also be noted that there are two less bidders than participated in the first bidding; namely, the Lone Star Cement Corp., and the Missouri Portland Cement Co. In my study of the basing-point system, instances of this nature always raise a question as to why certain bidders do not come through with new bids when the first bids are thrown out for one reason or another. I have found instances of an occasional break-down in the basing-point system of pricing, and it may be that on these particular bids Lone Star and Missouri did not get word in time as to just what the plans were. It often has happened, under the basing-point system of pricing in the cement industry, that complementary bids are entered at higher prices when companies do not desire the business in order to give a semblance of competition and to keep the records straight. I wonder why this was not done in this particular instance? The table of bids received by the Illinois Division of Highways on April 8, 1947, follows:

TABLE 2

BASING-POINT SYSTEM NULLIFIES NATURAL ADVANTAGES

In the Federal Trade Commission Docket, No. 3167, before the Commission in the case of the Cement Institute et al., the basing-point system is described in one of its phases as getting all the traffic will bear, in these words:

If you will not disturb us in getting all the traffic will bear from customers most profitable to us, we will not disturb you in getting all the traffic will bear from customers that are most profitable to you.

And again, the docket is quoted on the effect of the basing-point system of pricing:

Protect my high net in my home territory and I will protect your high net in your home territory.

In the same docket, the reciprocity feature of the basing-point system was pointed out by F. L. Stone, president of Universal-Atlas Portland Cement Co., when he testified that he knew certain mills were base mills and certain others were not and that the nonbase mills—

Do not attempt to make their own prices; they simply follow the prices put out by others. Therefore, when we are figuring our prices in any individual case to meet competition, or to get at business against competition, we pay no attention to the so-called non-basing-point mill.

That is sufficient, in my judgment, to prove beyond a doubt that no customer of any cement mill could benefit by the mill's natural advantages. These natural advantages may have been merely location, but on the other hand such advantages may have been low production costs, low overhead, lower taxes, lower freight rates by way of shipment by water or a combination of rail and water, and any other ways in which any mill or factory would have an advantage, particularly in its own home territory over its competitors. The basing-point system and other like systems of price control never permit a customer to buy at prices which take into account any natural advantage of the supplier. It is an unsound, unwise system and a system which is often used to throttle competitors into submission and to control all sources of supply of any given product. It would indeed be an unhappy situation if the Supreme Court decision of April 26, 1948, outlawing this pernicious vehicle of commerce, were reinstated through any means, legislative or otherwise.

SMALL BUSINESS IN ILLINOIS WILL LOSE IF MORATORIUM PASSES

Illinois has many thousands of small business institutions. Not only in the field of natural resources has Illinois' small business thrived in the past but in the manufacturing field many of her products are known as the products of small business far and wide. I have already shown the tremendous sums, really sums that cannot be calculated, that all

business and agriculture have paid for fictitious and other charges under the artificial basing-point system of pricing. If the basing-point system is permitted to be revived, the advantages which have accrued to small business since April 26, 1948, when the basing-point system was outlawed, will all be lost.

I have contended that, given an equal opportunity in an equal market, small business can stand on its own feet and fight back against its bigger and stronger competitors. It is some disadvantage to be small. It is a disadvantage because a small business institution does not have the necessary facilities for accumulating capital or sometimes does not even have sufficient working capital. But despite these disadvantages, the hard work, the initiative, and the individuality that a small manufacturer or other small-business man has ofttimes make up for the lack of capital.

I do not believe that any of my colleagues would want to vote against the development of industry in his district or against small business enterprise in his district. I believe a vote for a moratorium on our antitrust laws is a vote against both the development of industry in any Member's district and against the small business institutions in his district. I hope that the evidence of the increasing opposition to any form of moratorium bills on our antitrust laws is an indication of their defeat by an overwhelming majority.

Save $3,000,000,000

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, what a relief to the taxpayer if the Federal Government, while carrying on its necessary activities, would save $3,000,000,000. And it can be done.

The Hoover Commission, created by the Eightieth Congress to advise how that could be done, has completed its reports. In those reports it points out that, without in any way curtailing the essential operations of the Federal Government or impairing their efficiency, $3,000,000,000 can be saved, if proper legislation is put on the books and is faithfully carried out by the executive departments.

For many, many years the people have known that their Government was wasting money and in many instances giving very poor service. It remained for the Hoover Commission and the studies made by that Commission, extending over a period of 18 months, and costing almost $2,000,000—it was well worth the money— to put its finger on the agencies and departments where savings could be made.

The Saturday Evening Post, the Reader's Digest, and many other publications have carried excerpts from, and made favorable comment on, the Hoover Commission's reports. As a result the people are aroused and they are demanding legislation which will save that $3,000,000,000. They are entitled to that reduction in taxation.

WILL THEY GET IT?

They will not. Unless Harry Truman, President, who says he favors the Hoover Commission's recommendation, modifies his demand that he be given absolute power to reorganize the whole structure of the Federal Government. Is he contemplating a reorganization of the Federal Government along the lines of the Pendergast political machine, which gave him his opportunity to become a political dictator?

We desperately need economy and efficiency. But the surrender of our form of government, our freedom, is altogether too high a price to pay for either or for both. For, in the end, if we establish a dictatorship in order to get either or both, we will have neither, but, in addition to waste and inefficiency, we will have tyranny—complete bureaucratic government from Washington. The war demonstrated we want none of that.

WHAT IS DELAYING LEGISLATION DESIGNED TO GIVE ECONOMY AND EFFICIENCY?

Nothing. Except the failure to pass the reorganization bill. Why it is not passed? Because the administration insists that the President be given authority, contrary to the Constitution, to send down to Congress reorganization plans which will become the law of the land unless both Houses—mark that—both Houses—within 60 days, by concurrent resolution, veto the plan. That proposal reverses constitutional legislative processes and would result in the people surrendering their control now exercised through the Congress over legislation to an all-powerful President.

The Senate has passed a reorganization bill which reserves to either House of Congress the right to veto any reorganization plan submitted by the President. That is a surrender of half of the constitutional legislative power of the Congress.

But the administration is not willing to accept that great concession—take a reorganization bill which would give the President all the needed power. Hence, the two Houses are deadlocked. Result? No reorganization. No saving. No efficiency.

Folks who want a reorganization, a $3,000,000,000 saving and efficiency, should tell the President—not the Congress, for the issue is on his doorstep—to accept the Senate bill and get a Reorganization Act. Then we will be on our way.

The present situation raises the question as to whether President Truman really wants a reorganization, economy, and efficiency. Some of us begin to doubt it, for he can get all three by the acceptance of the Senate bill.

On Reading Too Much Into a Local Achievement

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1949

Mrs. BOLTON of Ohio. Mr. Speaker, the Spence bill on housing, H. R. 4009, long anticipated for floor discussion, has brought to the fore again the Baltimore plan, a most worthy endeavor to bring about adequate repair and maintenance of so-called slum areas. An editorial that appeared in the Baltimore Sun on April 22 is so clarifying that I am including it at this point in the RECORD that it may be brought to the attention of the Members of the Congress:

ON READING TOO MUCH INTO A LOCAL ACHIEVEMENT

Baltimore's attempts to improve living conditions in slum areas through stricter enforcement of fire, health, and building regulations have drawn high praise from the National Association of Home Builders. Baltimore's law-enforcement campaign, according to the monthly organ of the home builders, "is providing much-needed minimum housing," "is gradually ridding this great metropolitan center of its slum areas," and "is markedly reducing the rate of juvenile delinquency." The association believes that other cities with a slum problem might well follow Baltimore's lead.

Before other cities are led to believe that Baltimore has found an inexpensive and sure cure for all slum conditions, the beautiful picture presented by the home builders should be toned down a bit. Baltimore's efforts to force compliance with the minimum legal standards of decent living conditions are neither providing much-needed minimum housing nor gradually ridding the city of its blighted areas. The slum clean-up campaign has brought about the replacement of windowpanes and plaster in some areas, improved sanitary conditions to some extent and compelled landlords and tenants alike to clear out rat-infested cellars and back yards. But the overcrowded, substandard buildings remain exactly that.

Nor is the Baltimore program markedly reducing juvenile delinquency. There was more juvenile delinquency in Baltimore last year than in the previous year, according to police records. The number of new cases of tuberculosis, another byproduct of slum conditions, also increased last year. So, flattering as the words of the home builders may be, the facts do not fit the praise. Nor is it strictly accurate to say that the Baltimore slum clean-up program is being achieved strictly through the enterprise of private home builders in cooperation with property owners and city officials. The local program is largely a health measure, supported by civic-minded groups, and it took the establishment of a special housing court to get the cooperation of vested interests.

Baltimore's housing-law-enforcement drive is an excellent one and deserves wide recognition. The city can blush with fitting pride at the publicity given its efforts by the home builders. But no one should assume that Baltimore is doing anything more than making a few dilapidated buildings a little more inhabitable. Housing-law enforcement is not slum clearance, and nothing will make it so.

UNIVERSITY OF MICHIGAN LIBRARIES

American Forum of the Air

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 31, 1949

Mr. CELLER. Mr. Speaker, in reading last Sunday's New York Daily News, I was most interested in a story, written by the able and widely read radio editor of the News, Mr. Ben Gross. Although Mr. Gross' articles are widely read, there are many right here in Congress who would welcome the opportunity to read this interesting story. It deals with a subject with which all of us are familiar—the manifestation of free speech which we find in Theodore Granik's American Forum of the Air.

Many of us have participated in Mr. Granik's program during the many years it has been on the Mutual Network. I like to call myself a charter member of his forum, for I had the distinct honor of appearing on his first broadcast 21 years ago. I know that many of you, like myself, are grateful for the opportunities we have had to present the issues of state to the Nation, in the straightforward, man-to-man fashion that is possible on the American Forum.

We are confident that his American television forum now on the National Broadcasting network will prove to be as great a success as his radio forum.

Therefore, Mr. Speaker, because I know that this article about the forum and its founder, Mr. Theodore Granik, will be of interest in and out of Congress, I insert same here.

LOOKING AND LISTENING WITH BEN GROSS

"He knows everyone in Washington." That's what they say about Theodore Granik, who for 21 years has presided as moderator of the Nation's oldest—and in many ways, greatest—public discussion program, the American Forum of the Air (WOR—Mutual, Mondays 10 p. m.). That is no exaggeration. For the 42-year-old New Yorker, a doctor of laws of St. Johns University, and a former assistant district attorney of New York County, has one of the widest circles of official friendships in this country. During the more than 2 decades he has conducted this program—at a financial loss—two men who became President of the United States and 90 percent of all Senators, Congressmen and Cabinet members have appeared on his show. Granik's is also the only radio program which is reprinted word for word each week in the pages of the CONGRESSIONAL RECORD. It, too, has provided dozens of headline stories for the press and now may be the source of more, as Ted has added a television version over NBC (Sundays, 3 p. m.).

So it wasn't surprising that, as we lunched in the Oak Room of the Plaza recently, Granik should have revealed such fascinating sidelights on the famous as these: President Truman is the kind of a human guy who will invite a fellow over to his house just to do a little "schmoosing" (talking) * * * Representative CLARE HOFFMAN, of Michigan, has no pockets in his trousers * * * and former Supreme Court Justice Owen D. Roberts "doodles" while he broadcasts.

YOUR REPORTER. Did you ever "schmoose" with the President?

Mr. GRANIK. Yes. While he was Vice President, and we were talking on the phone one Sunday afternoon, he said, "Ted, the family's away. I'm sitting here in my bathrobe. So why don't you drop in and we'll do a little schmoosing."

YOUR REPORTER. What kind of "doodler" is former Justice Roberts?

Mr. GRANIK. He draws clocks and triangles. I picked up his forum "doodling" one night and had him autograph it.

YOUR REPORTER. Tell me about some of the others.

Mr. GRANIK. Well, there's Ham Fish. He used to blast the mike. On the other hand, Senator TAFT likes to get away from the microphone. Incidentally, he's a terrific debater and ad-libber. What about Vice President BARKLEY? He's one of the greatest story tellers and humorists in Washington.

YOUR REPORTER. How did F. D. R. do on your program?

Mr. GRANIK. He had a tremendous impact when he appeared while Governor of New York. A magnificent speaker. It was from him I learned a great secret—the art of breaking up a speech, thought by thought, a different thought on each page, with the places for emphasis and pauses carefully marked.

YOUR REPORTER. Is it true that during the 20 years your forum ran sustaining on WOR and Mutual you weren't paid a cent for it?

Mr. GRANIK. Yes. But for the last year we've had a good sponsor who gives us complete freedom.

YOUR REPORTER. Have you changed your technique since you've gone into television?

Mr. GRANIK. No; except for one thing: I follow the instruction of the director who tells me not to lower my head, so that my bald spot won't show.

YOUR REPORTER. How will television affect politicians?

Mr. GRANIK. It will force them to abandon long-winded prepared speeches and speak in a heart-to-heart fashion. The man who is a conversational, sincere speaker—such as Senator TAFT, for example—will really come into his own.

YOUR REPORTER. Any exciting moments on your broadcasts?

Mr. GRANIK. Plenty of them. There was the time, for instance, when the late Gen. Hugh Johnson debating lend-lease with Senator CLAUDE PEPPER, of Florida, became so angry that he started to bop the Senator over the head with the mike. But I stopped that. And during one broadcast, Senator Sherman Minton, of Indiana, was so enraged by Congressman CLARE HOFFMAN that he picked him up bodily and was going to hurl him into the audience. I stopped that too.

YOUR REPORTER. Name some of the best debaters.

Mr. GRANIK. Norman Thomas; the two national chairmen of the political parties, Senator J. HOWARD MCGRATH, Democrat, and Representative HUGH SCOTT, Republican; former Secretary of State Byrnes; Secretary of Agriculture Brannan; Senators TAFT, BREWSTER, and CAPEHART, and Congressman HALLECK.

YOUR REPORTER. And who are the worst?

Mr. GRANIK. Please, Ben. I've got to live in Washington.

Forward With Truman

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 31, 1949

Mr. LYNCH. Mr. Speaker, under the unanimous consent granted me, I am including in my remarks an address made by the Honorable Oscar R. Ewing, the Federal Security Administrator, at the Concourse Plaza Hotel in New York City on May 19 last. The occasion was the annual dinner of the Democratic County Committee of Bronx County over whose destinies the country's most brilliant and effective leader, Hon. Edward J. Flynn, has presided as chairman for 30 years.

In his address, Mr. Ewing, who is a highly regarded member of the New York Bar, again vigorously and courageously championed the underprivileged in education, reasonable security against the hazards of old age and adequate medical care in time of need. His address follows:

FORWARD WITH TRUMAN

Tonight, at this great gathering of Democrats in my own Bronx County, I want to say a few words about President Truman's vision and the leadership he has given in expanding the great social reforms advocated by the Democratic Party.

As Federal Security Administrator, I have responsibility for the Office of Education, the Social Security Administration, and the Public Health Service, as well as numerous other activities of the Federal Government in the welfare field. I know how deeply the President desires that every American boy and girl have the best possible education, that every American citizen has reasonable security against the hazards of old age, disability, and destitution and that everyone is assured of adequate medical care in time of need.

In the field of education, there are parts of America that are veritable educational slums. In some States expenditures per schoolroom per year exceed $4,000. In other parts of the country the total expenditures per schoolroom per year are less than $400—and that includes the teacher's salary. Is it any wonder that during the war, Selective Service in 1 year found more than 7 percent of our boys too illiterate for military service?

To meet this tragic need the President has proposed that the Federal Government contribute $300,000,000 a year to the States to assist them in the operation of their schools. The bill was recently passed by the Senate over the bitter opposition of Republican Senators LODGE, BRICKER, and others. Senator LODGE attacked the bill on the ground that the formula for the distribution of the money would give the poor States more than the rich States. Of course. The poor States are the ones who need the help. The degrading influence of ignorance and illiteracy cannot be confined by the political boundary of a State line. You cannot quarantine an educational slum. Its degenerating effects may well spread all over the land. The people of all America have an interest in wiping out these ugly spots, no matter where they exist. And President Truman is giving militant leadership in the fight for equality of educational opportunity.

The President is giving equally courageous leadership in the fight for more adequate social security. He has asked that Congress broaden the coverage to include some 20,000,000 persons not now covered, such as agricultural employees, the self-employed, domestic employees, and employees of churches, hospitals, schools, and other nonprofit organizations; to increase maximum monthly benefits from $85 to $150, and increase minimum payments from $10 to $25; to qualify women at age 60 rather than at 65, as at present; to increase the benefit of the first child in a family from one-half to three-fourths of the primary benefit; to calculate benefits on the average monthly earnings in the best 5 years instead of on the coverage of all the time which has elapsed since 1936; to tax and calculate benefits on earnings up to $4,800 a year rather

than on $3,000, as at present; to adopt a new formula which would increase substantially the monthly benefits of all who qualify for them; to permit persons drawing benefits to earn up to $50 a month without losing their benefits, the present limit being $14.99; to permit persons to qualify who have been in the system one-fourth of the time since 1936 instead of one-half, as at present.

Our present program insures against loss of earnings due to two causes, namely, retirement because of age and the death of the wage earner. The President proposes to add two others—illness and disability, both permanent and temporary.

The President's recommendations mean that everyone would have his benefits increased by 70 percent or more.

The President has also recommended liberalization of our public-assistance law. At present, Federal help is limited to grants to States for the needy aged, the needy blind, and dependent children. That leaves a lot of needy persons not yet 65 but over 18, and who are not blind, but who must be cared for, if at all, by State or local governments. There are 800,000 such cases, mostly disabled persons, receiving help. The President thinks the Federal Government should participate financially in helping all needy persons.

Republican opposition to these great reforms is spearheaded by the spiritual leader of the Republican Party, Herbert Hoover.

He stated his opposition in a letter dated April 26 to the chairman of the Committee on Ways and Means of the House of Representatives, in response to a request for his views.

Mr. Hoover would reimpose upon the American people the philosophy of dog-eat-dog.

I have no quarrel with Mr. Hoover's right to express any opinion he pleases. On the contrary, I welcome this clear statement of his views, written in Waldorf Towers seclusion, for he has now stripped away the flimsy frock of pseudo-liberalism with which so many lesser men in his party have tried to drape the bare bones of Republican dogma.

Mr. Hoover's suggestions would destroy the old-age and survivors insurance program. Instead of having social-security pay-roll deductions continued year after year at regular rates, with excess collections put into a trust fund to help in future bad years, Mr. Hoover would have Congress levy new rates each year. How much would any beneficiary of social security get out of a Republican Congress? Just think how awful it would have been for our old people to have been dependent on the generosity of the good-for-nothing Eightieth Congress.

Then let us examine for a moment the question of cost, to which Mr. Hoover gives much typical Republican emphasis.

Mr. Hoover speaks, as he did in 1932, as if a Nation's wealth increased in inverse ratio to its tax load. Asserting that "our economy is up to the limit of endurance under this load," he points out that taxes amounted to less than $10,000,000,000 in 1935, when the Social Security Act was passed. Even more to the point, the tax burden was less than $2,000,000,000 during Mr. Hoover's last year in office. If his theory is sound, we must have been far better off than we knew. But if so, how explain the hunger, the rivers of red ink, the millions of hopeless unemployed in shantytowns from coast to coast, the utter despair. That is not wealth.

Mr. Hoover's theory is based upon the assumption that wealth is money. Nothing could be further from the truth. Wealth is neither money nor a lack of taxes. Wealth is men and women producing by hand and brain. This is what we must save, expand, improve, and treasure. Without this, all the gold in Fort Knox is dross and every greenback rubbish.

Mr. Hoover would abandon a system in which workers, during their productive years, contribute by their own efforts to their protection against the inevitable rainy day. And in abandoning this insurance principle, he would counsel the American people to live from hand to mouth, casting the total burden of old age and destitution upon the general tax revenues.

Does Mr. Hoover think this kind of dole will fulfill his old-time prophecy of a chicken in every pot?

Does he really think it is sound economy—or in keeping with his own lifelong professions of faith in rugged individualism?

Any wage earner or housewife can see—if Mr. Hoover cannot—that this proposal is the very negation of all they hold most dear.

One nonmaterial measure of the Nation's wealth is the extent to which it provides for the well-being of its children, its aged, its disabled, its unemployed, and its sick. Under the New Deal and, increasingly, under the Fair Deal, we have recognized for the first time our full responsibilities in this regard. But we have still to meet them in full. We have many programs, still inadequate, to care for our children. We have begun, and we hope to expand, our provisions for the aged, the disabled, the unemployed, and the sick. This is not waste. This is conservation.

In addition to better education and expanded social security, the President is vitally interested in improving the health of the country.

His program seeks to overcome the grave shortage of doctors, dentists, nurses, laboratory technicians, and hospital facilities. He would expand our public-health services, which are woefully understaffed and reach only a fraction of the people who could benefit from these services. He recommends vastly larger expenditures for medical research.

The program also seeks to remedy the extremely uneven distribution of medical services and facilities throughout the Nation. Most of our modern hospitals are located in, or near, our great centers of population, where the number of good-paying patients is the greatest. And it is here also that the large majority of our doctors, dentists, and nurses have set up practice. In other words, our small towns and rural areas are getting decidedly the short end of the deal.

But the crux of the situation is that we cannot expect any substantial increase in facilities or personnel, or any fundamental change in their distribution and utilization, unless some method is found to enable more of our people to afford adequate medical care. The blunt fact is that only one out of five families in this country can today afford anything like adequate medical care. The American Medical Association, itself, is on record as stating that only 20 percent of our population can meet the cost of serious illness without some outside help.

What, then, about the remaining 80 percent—the four out of five families to whom the possible cost of medical care is a constant source of anxiety? Sickness and disease usually strike suddenly and relentlessly. Savings can vanish overnight. Debts may be assumed which take years to pay off.

For nearly one-half of our population—the 70,000,000 people living in families whose total income is $60 a week or less—the situation is pretty desperate. In fact, I think, it can be fairly stated that the great majority of families in these income brackets cannot afford the medical care they need. As a consequence, unless they are willing to ask for charity, they get little or no medical care.

National health insurance is purely and simply a method whereby people can buy medical care through periodic payments based on the amount of the breadwinner's income.

What the President is proposing is a 3 percent pay-roll deduction on annual income up to $4,800—to be shared equally by employer and employee. This means that a man earning $50 a week would pay 75 cents a week. If he earns more, he would pay more, up to the maximum of $1.40 a week.

For these payments, a wage earner would be entitled to receive medical care for himself, his family, and his dependents. This care should ultimately cover all services necessary to prevent, diagnose, and cure disease—care by a general practitioner and by specialists, hospital care, laboratory service, X-ray, unusually expensive drugs and medicines, special appliances, eyeglasses, and dental care.

The administration of the plan would be primarily on a State and local basis. There would be a representative national committee of medical professionals and other interested groups to advise with the Federal Government on broad standards and principles of operation. But the actual community operation itself would be in the hands of the local people—doctors and representative citizens working together as a local committee.

These committees would consult with the doctors participating in the plan to determine a fair scale of fees—so much for a home visit, so much for an office visit, so much for, say, a tonsillectomy or delivering a baby, and so on. Instead of fee payments, the physician may, if he chooses, elect to be paid on a strict capitation basis—so much per patient per year. It would be up to the doctors.

A patient would be free to choose his own doctor just as he does now, and to change his doctor if he so desires. A doctor would similarly be free to reject any patient he doesn't want. No doctor would be required to practice under the plan. He could continue in independent practice if he so chose, or combine an independent and an insurance practice just as he does now with the voluntary insurance plans. He would in no sense—and I underscore the statement—be an employee of the Government and all talk of regimenting the medical profession is the sheerest sort of poppycock.

In actual operation, the chief difference between our proposal and the present system would be that the doctor would collect his bills from the Government instead of having to chase down his patients. I might also say, the doctor would collect his bills—period.

The cries of the American Medical Association that what the President proposes is socialism is utter nonsense.

By calling national health insurance bad names, they hope to kill it. If it were socialistic, I, too, would be fighting to kill it. It is no more socialistic than our fire department. All of us, through our taxes support the fire department. It is not maintained just by those who have fires. When you have a fire, the fire department does not first check your credit or make you put up the cash or sign a pauper's oath before the water is turned on. But today, far too many of our people are in this position with respect to medical care. When stricken, they must have the cash to pay for medical or hospital care. Cash taken from savings or by going into debt, unless of course, they are willing to take a pauper's oath and become a charity patient.

This is what the President wants to prevent.

My friends, I have briefly outlined the great programs of aid to education, expansion of social security and health insurance which the President has asked Congress to adopt. They are thrilling in scope and content. If adopted, they mean intellectual enjoyment, enlarged opportunities, peace of mind, better health, and richer lives for millions of our own people.

UNIVERSITY OF MICHIGAN LIBRARIES

These are the programs of the Democratic Party of the Nation and of the State of New York.

They are in the tradition of Al Smith, Franklin Roosevelt, and Herbert Lehman.

Harry Truman is our leader on the national scene. We will go forward with him in this battle of a militant democracy against ignorance, poverty, and disease.

We will fight to the finish to make our State and Nation all that we want it to be.

Public Health Legislation

EXTENSION OF REMARKS

OF

HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1949

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

ARKANSAS PUBLIC HEALTH ASSOCIATION,
Little Rock, Ark., May 4, 1949.

Hon. W. F. NORRELL,
Sixth District, Arkansas, Congress of the United States, House of Representatives, Washington, D. C.

DEAR CONGRESSMAN NORRELL: Your letter dated April 22, 1949, and enclosed copy of Senate bill No. 1581, is sincerely appreciated.

I have availed myself of the opportunity of studying this proposed bill, have also conferred with Dr. T. T. Ross, State health officer, as well as members and officers of the Pulaski County Medical Association here in Little Rock.

This bill has some very interesting good points, and also some very undesirable provisions. Most of us feel that a voluntary health-insurance plan should be devoloped which is fair and equitable to the population of the country and also fair and equitable to the medical profession. We feel that through this measure and others pending in Congress that school-health services, as well as providing for complete medical care for school children through Federal subsidy, is not especially in keeping with our democratic American traditions. We feel that, most certainly, there is a great need for additional well-trained physicians in our civilian population. We also feel that the grade A medical schools of this country should be urged and induced to increase enrollment, but this should not be done through the direct subsidy from Federal Government to institutions of medical education as proposed in this bill.

It is our feeling that local health services through the country should most certainly be expanded as soon as possible so that at least adequate minimum public health service will be available to at least 90 percent of our population. This, of course, must be done through local, State, and Federal participation or financing. For your information, I have been advised that shortly after June 1 the medical profession of the country, through the American Medical Association, proposed to draw up and submit to the Congress for introduction, an over-all bill to include voluntary health-insurance plan, school-health service, hospital construction, increased enrollment in medical schools, and also provide for adequate public-health service for the Nation.

It is my sincere hope that some satisfactory compromise can be reached between the proposals that will be submitted by the medical profession as a whole and the pending legislation that is now before Congress.

Yours very truly,

EDGAR J. EASLEY, M. D.,
President, Arkansas Public Health Association.

The Basing-Point System and the Moratorium Bills—Federal Trade Commission Explains in Detail—Ambiguities and Uncertainties Following Enactment of Moratorium Pointed Out—Enforcement of Federal Trade, Clayton, and Robinson-Patman Acts Jeopardized—Federal Trade Commission Answers Inquiry With Respect to Its Position on S. 1008 and H. R. 2222

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1949

Mr. PATMAN. Mr. Speaker, on April 29, 1949, I addressed a letter to the Honorable Lowell B. Mason, Chairman of the Federal Trade Commission, requesting the Commission to inform me of its official position with regard to the moratorium bills, S. 1008 and H. R. 2222. Chairman Mason, for the Commission, replied in some detail on May 16, 1949.

In order that the Members of Congress may have complete information as to the view of the Federal Trade Commission on the moratorium bills, I shall include both my letter of inquiry of April 29, 1949, and the Commission's reply of May 16, 1949.

FEDERAL TRADE COMMISSION CITES AMBIGUITIES AND UNCERTAINTIES IF MORATORIUM BILL IS ENACTED IN THE LAW

The Commission states in its letter under "general views" that—

The Commission believes that neither of these bills (S. 1008 and H. R. 2222) is necessary or desirable. Sellers have had and now have the right to quote and sell at delivered prices and to absorb freight. Neither of these practices is illegal per se under any decision of this Commission or the courts. Like many other practices which are normally harmless, these practices may become illegal if done through conspiracy in restraint of trade, if used as instruments of coercion or oppression, or if used to discriminate in such a manner that the effect may be substantially to lessen competition or tend to create a monopoly. Legalization of such effects merely because they arise through particular types of practices would present an anomalous situation. Unless the Congress desires through this moratorium to so change the existing law, the legislation is unnecessary, and the Commission is of the view that if such practices are given complete immunity without regard to what their effects may be in particular instances, such legislation would be extremely undesirable.

Stating other reasons for its opposition, the Commission's letter brings out the fact that—

The Federal Trade Commission Act since 1914 and the Robinson-Patman Act since 1936 have been in process of judicial construction and application. The reason generally advanced for a moratorium is to relieve business of uncertainties said to result from various court decisions. If this is the purpose, the passage of either of the bills referred to above would not only fail to accomplish that purpose but through the introduction into the law of new phrases and new standards which are in themselves uncertain and ambiguous would defeat the very purpose of the legislation.

Asserting, in effect, that a period of inaction would be created which would thwart judicial construction and jeopardize enforcement, the Commission in its letter said:

If, as we believe, the bills are subject to interpretations which change the existing substantive law, these changes would be applied to only two out of a great number of practices involving the same principles which would remain under present law without modification.

ENFORCEMENT OF FEDERAL TRADE, CLAYTON, AND ROBINSON-PATMAN ACTS SERIOUSLY HAMPERED

In reading the letter of the Commission it is well to keep in mind that, under the basing-point syster of pricing, two facts stand out very clearly. They are, first, no purchaser under the basing-point system ever pays less than the freight charges from the controlling basing point; and, second, most purchasers under the basing-point system pay more. Although suppliers of cement and other commodities under the basing-point system, sold in several basing-point territories, it was the applicable basing point and the division of territory which controlled destination prices. The fact that a purchaser could buy on a less freight rate from a nearby mill did not operate to the purchaser's benefit, particularly if the mill were a non-basing-point mill. The Commission also said in this connection:

The inevitable effect will be to seriously hamper the enforcement of both the Federal Trade Commission Act and the Clayton Act, as amended by the Robinson-Patman Act, as to all delivered-price and freight-absorption practices.

The Commission also pointed out the fact that in the Cement Institute case the Commission charged that the so-called delivered prices were not in fact true prices. In its findings the Commission used these words:

These and other actions of respondents have signified their intention to pass title to cement sold to the purchaser at the time of delivery to the common carrier and at the mill nets applicable to purchasers at particular destinations.

Therefore, as the Commission pointed out:

The members of that industry were actually selling f. o. b. mill, although they called their prices delivered prices.

The letters in full follow:

APRIL 29, 1949.

Hon. LOWELL B. MASON,
Chairman, Federal Trade Commission,
Washington, D. C.

DEAR MR. MASON: I request the Federal Trade Commission inform me, at its earliest convenience, of the Commission's official position with regard to the moratorium bills, S. 1008 and H. R. 2222.

This request arises for several reasons. First and foremost is the fact that the Commission is the governmental agency most affected by moratorium legislation. Second, an unidentified spokesman for the Commission is quoted in the press in a manner to create the impression that the Commission is doubtful of its position on the moratorium in the light of the Supreme Court decision in the Rigid Steel Conduit case. Third, the testimony of a Commission representative before the Senate Judiciary Subcommittee implies the Commission, except for one member, is unfavorable to a moratorium but this position is reduced from a positive to a negative one by the offer of qualifying amendments. Thus, the Commission assumes a cloak of indefiniteness and its opposition to the moratorium, if that represents the Commission's views, is overshadowed by the apparent acceptance of a modified bill. Fourth, the Commission is requested to state forthrightly, whether or not, in its opinion, the moratorium bills may not be used as a vehicle by which the basing-point system, individually or otherwise, will return to the American business scene.

Further, in addition to the foregoing questions, your opinion is sought as to the general effect of the moratorium on the broader aspects of the administration of the Clayton and Robinson-Patman Acts. The terms "freight absorption" and "delivered price" have been loosely applied by industry and others in referring to the proposed moratorium. These terms, in my opinion, have been misapplied in many instances, by design or otherwise; therefore, it is requested that the Commission in its reply give me a definitive answer with respect to the use of these terms in the light of the Cement and Rigid Steel Conduit decisions.

I will be grateful for the Commission's cooperation in affording me a prompt and complete answer.

Sincerely yours,

WRIGHT PATMAN.

MAY 16, 1949.

Hon. WRIGHT PATMAN,
Chairman, Select Committee on Small
Business, House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: With further reference to your letter of April 29, 1949, and the acknowledgment thereof under date of May 3, 1949, the Commission, with the exception of Commissioner MASON, sets out in this letter its views respecting H. R. 2222 and S. 1008, and comments upon the related matters mentioned in your letter.

H. R. 2222

Section 1 of H. R. 2222 contains a proposed policy declaration by the Congress which would not lapse at the end of the moratorium period specified in the bill, but would be of permanent effect. This becomes important because of the statement that "it has not been the intent of Congress" to deprive individual companies of the right to use "delivered-price systems" or the right to "absorb freight," and also because of the proviso limiting these activities only to those not carried on "through any combination or conspiracy in violation of the Sherman Act, as amended." The reference to "delivered-price systems" and the right to "absorb freight" will be discussed in the comment upon section 2 of the bill. The reference to the Sherman Act and omission of any reference to the Federal Trade Commission Act implies that the Federal Trade Commission Act may not be applied to combinations or conspiracies with respect to such matters.

The language of section 2 of the bill is such that if enacted it would import into the Federal Trade Commission Act and the Clayton Act more ambiguities and uncertainties than those which are said now to exist and which are advanced as reasons for the enactment of the legislation proposed. The section provides that neither of these acts shall be construed "as depriving individual companies, in the absence of conspiracy or combination or other agreement in restraint of trade, of the right to independently use delivered-price systems." Basing-point systems of delivered prices, among others, become systems only through common use by more than one seller. Because of a number of court decisions in cases instituted by the Commission in such matters, including the Cement Institute case, presumably the Congress is aware of the nature and character of such systems. In the light of that knowledge the words "individual" and "independently" in the clause mentioned above might be so construed that in the absence of direct evidence of agreement to use a basing-point system as distinguished from circumstantial evidence, the Commission could not find that an industry using a basing-point system was engaging in a "conspiracy or combination or other agreement in restraint of trade."

Whether or not the language of the bill about the use of delivered-price systems is intended to grant immunity not only to the use of delivered prices but also to discriminations that may appear between delivered prices is not clear. Its enactment would make that question a doubtful one which could only be settled by litigation. Basing-point systems of delivered prices commonly include charges for transportation in excess of the actual cost (phantom freight) upon some sales, as well as charges for transportation which are less than those actually incurred (freight absorption) upon other sales. If the effect of the bill should be to grant immunity to differences between delivered prices, then those differences which occur under a basing-point system and which cannot be justified under the Robinson-Patman Act on the basis of cost differences would, nevertheless, be legal no matter how injurious they might be to competition or how discriminatory they might be as between customers of the same seller, unless the system could be shown to be used through conspiracy in violation of the Sherman Act. Under such a construction, if a seller made sure that he sold only at delivered prices and if he did not do so by conspiracy with others, any discriminations between his delivered prices, no matter how monopolistic in character and result, and no matter how injurious to competition, would nevertheless be legal.

The other practice to be sanctioned by the proposed moratorium is the right "to absorb freight to meet competition in any and all markets." It is indeed dubious how this phrase "to meet competition" would be interpreted. Depending upon the interpretation of this phrase, the Commission might or might not be able to proceed under the Federal Trade Commission Act against a deliberate effort by a large company to destroy small competitors through freight absorption.

It appears that the Robinson-Patman Act grants only a limited right to justify price discriminations made to meet the equally low price of a competitor in good faith. The provision of this bill concerning freight absorption substitutes an unlimited right to meet competition, provided it is not done by conspiracy.

Section 3 of the bill leaves in doubt what effect, if any, it may have upon orders to cease and desist previously issued in numerous cases. It is safe to predict that its enactment would, at the minimum, result in numerous proceedings before the Commission seeking modification of orders, and thereafter litigation in the courts with respect thereto.

S. 1008

As introduced, S. 1008 and H. R. 2222 were identical bills. The Commission reported its views upon S. 1008 to the Senate Committee on the Judiciary substantially along the lines of the comment made above concerning H. R. 2222. After expressing its opposition to the original version of S. 1008, the Commission suggested certain amendments for use if the committee should, nevertheless, adopt the general principles of the proposed moratorium. These amendments were suggested in an effort to minimize, insofar as possible, the uncertainties which the Commission believed would flow from the enactment of the bill as introduced, and in an effort to avoid substantive changes in the law which might result and which the Congress might not desire to make even if it adopted the moratorium principle. These suggestions were not intended to indicate that the Commission would approve the bill if they were adopted, or to detract in any way from the Commission's expressed opposition.

The Senate Committee on the Judiciary reported an amended version of S. 1008. The substance of some of the amendments suggested by the Commission appears to have been taken into account in the bill as reported by the committee, and in some respects this bill is an improvement over H. R. 2222. However, for the following reasons it still is not a proposal which the Commission could approve.

Section 1 of the bill provides that neither the Federal Trade Commission Act nor the Clayton Act shall be construed to deprive individual companies, in the absence of agreement in restraint of trade, or the right "to independently quote and sell at delivered prices or to absorb freight for the purpose of engaging in competition in good faith in any and all markets." The committee report explains that the phrase "quote and sell at delivered prices" was selected in order to "eliminate any possible contention that the Congress intends to legalize * * * the systematic use of basing-point pricing." However, this interpretation of the language still leaves room for doubt as to whether or not the effect would be merely to continue the right which any seller now has of selling at delivered prices, or whether the effect would also be to legalize differences between delivered prices of the same seller which fall short of full use of a basing-point system but which injure competition or have monopolistic effects. The fact that the law does not prohibit the use of delivered prices as such, and that there has been no decision by the Commission or by any court which affects that right, would tend to support a construction of the bill that extended beyond the mere use of delivered prices as such. There is also doubt whether the words "for the purpose of engaging in competition in good faith in any and all markets" qualify the words "quote and sell at delivered prices" as well as the words "absorb freight." If the clause concerning purpose is interpreted to

UNIVERSITY OF MICHIGAN LIBRARIES

modify the right to sell at delivered prices, the effect of the interpretation is to strengthen the possibility that the bill will be held to protect not merely the use of the delivered-price method of computing prices but also differences which may appear between delivered prices.

The provision concerning the right to absorb freight for the purpose of engaging in competition in good faith in any and all markets is apparently designed to shift to the Government the burden of proving that the absorption was not for the purpose of engaging in competition in good faith. If so, this reverses the rules as to burden of proof which now appears in the good-faith provision of the Robinson-Patman Act. Injurious or monopolistic effects upon competition would no longer constitute the standard in determining the legality of freight-absorption practices. The new measure would be whether they were for the purpose of engaging in competition in good faith in any and all markets. A further change in substantive law would result from the fact that the ambiguous phrase "engaging in competition" is used instead of the provision of the Robinson-Patman Act concerning a "lower price * * * made in good faith to meet the equally low price of a competitor." In view of such changes of substantive law, the revised title of the bill is inaccurate in that it implies that the bill merely confirms existing law.

GENERAL VIEWS

The Commission believes that neither of these bills is necessary or desirable. Sellers have had and now have the right to quote and sell at delivered prices and to absorb freight. Neither of these practices is illegal per se under any decision of this Commission or the courts. Like many other practices which are normally harmless, these practices may become illegal if done through conspiracy in restraint of trade, if used as instruments of coercion or oppression, or if used to discriminate in such a manner that the effect may be substantially to lessen competition or tend to create a monopoly. Legalization of such effects merely because they arise through particular types of practices would present an anomalous situation. Unless the Congress desires through this moratorium to so change the existing law, the legislation is unnecessary, and the Commission is of the view that if such practices are given complete immunity without regard to what their effects may be in particular instances, such legislation would be extremely undesirable.

There are further substantial considerations. The Federal Trade Commission Act since 1914 and the Robinson-Patman Act since 1936 have been in process of judicial construction and application. The reason generally advanced for a moratorium is to relieve business of uncertainties said to result from various court decisions. If this is the purpose, the passage of either of the bills referred to above would not only fail to accomplish that purpose but through the introduction into the law of new phrases and new standards which are in themselves uncertain and ambiguous would defeat the very purpose of the legislation. An interregnum would be created during which no judicial construction could be obtained and in which enforcement of the acts supposed to be clarified would be jeopardized insofar as the practices covered by the bills are concerned. If, as we believe, the bills are subject to interpretations which change the existing substantive law, these changes would be applied to only two out of a great number of practices involving the same principles which would remain under present law without modification.

The termination of the Conduit case has not changed our opposition to a moratorium. In February the Commission expressed its interpretation of the second count of the Conduit case as applicable only to conspiracy situations. Our interpretation has not changed, and we do not think that the issues raised by moratorium proposals have changed.

EFFECT UPON BASING-POINT SYSTEM

You asked for a specific statement of opinion as to whether either of the bills mentioned above may be used as a vehicle by which the basing-point system, individually or otherwise, will return to the American business scene. The use of basing-point systems is continuing in a number of important industries. Only in a limited way and under particular circumstances has the use of any such system been prohibited, and this only as to specified parties after the facts have been determined by trial of the issues. Both of the bills under discussion specifically authorize, with only the limitations contained in the bills themselves, delivered prices and freight absorption. A multiple-basing-point system with a base at every mill need not utilize any means other than delivered prices and freight absorption for its operation. In this way all sellers in a given industry may use a multiple-basing-point system producing identical prices by each seller at each point of delivery and giving the base mill in each area the right to initiate all price changes there. Under H. R. 2222 the right to do this is confirmed by the authorization to use delivered-price systems. Under Senate bill 1008, as revised, though the committee report repudiates an intent to legalize a basing-point system, the bill's specific authorization to absorb freight in any and all markets covers the mechanism of such a basing-point system. There is a long line of court decisions holding that common employment of formulas for computing delivered prices which result in prices that are identical as among sellers to customers wherever located is in itself persuasive evidence of a conspiracy to employ such formulas. These cases follow a fundamental principle of judicial interpretation of circumstantial evidence. It is clear that either of these bills would run counter to this principle and might be interpreted to foreclose the Commission from using circumstantial evidence derived from the nature of the system. Thus, under either bill, those employing such a system probably could do so unless the Commission were able to prove by direct evidence that it was used by specific agreement. The application of the Robinson-Patman Act would be doubtful because of the language in the bills with regard to meeting competition in any and all markets, unless under H. R. 2222 it could first be proved that the system was used by conspiracy, or under S. 1008 it could first be proved that use of the system was conspired or that it was used for monopolistic purposes. It can be said with certainty that the passage of either of the bills would greatly hamper the Commission in proceeding against a basing-point system used to restrain competition and might make such proceedings futile in the absence of direct evidence sufficient to show that the use of the system was the product of outright agreement.

GENERAL EFFECTS

In your letter you asked the Commission's opinion of the effect of the proposed moratorium upon the broader aspects of the administration of the Clayton and Robinson-Patman Acts, and in this connection referred to the loose use by industry of the terms "freight absorption" and "delivered price." We have already indicated some of the broader effects of the moratorium in what is said above, particularly concerning possible resulting changes in substantive law, new uncertainties resulting from the insertion of new and undefined terms and standards into existing law, and the interregnum in enforcement which is likely to result. The inevitable effect will be to seriously hamper the enforcement of both the Federal Trade Commission Act and the Clayton Act, as amended by the Robinson-Patman Act, as to all delivered-price and freight-absorption practices.

During the existence of a moratorium, there could be little utility, and therefore little justification, for seeking to abate any specific instance of such a practice, no matter how injurious to competition or how monopolistic its effects may be, unless it is quite clear that the practice is not within the scope of the moratorium. It would be useless to seek to test the scope of the moratorium through cases designed to obtain judicial interpretation, for the moratorium would expire long before the results of any such test could be obtained. A moratorium would therefore result in opportunity to use delivered-price and freight-absorption practices in ways that strain the language enacted to the utmost limits of plausibility in private interpretations.

Some of the words and terms used in the moratorium bills have no judicially established definition, and some are used with various meanings by different people. For example, the members of the cement industry referred to their prices for cement as "delivered prices." In the Cement Institute case the Commission charged that the so-called delivered prices were not in fact the true prices. In paragraph 24 (c) of its findings as to the facts in the Cement Institute case the Commission found upon the basis of various subsidiary findings that: "These and other actions of respondents have signified their intention to pass title to cement sold to the purchaser at the time of delivery to the common carrier and at the mill nets applicable to purchasers at particular destinations." In other words, the members of that industry were actually selling f. o. b. mill, although they called their prices delivered prices. For purposes of administration of the Robinson-Patman Act the Commission has construed "price" as being whatever the circumstances of the transaction make it, and the label attached to it is not controlling. "Freight absorption" is frequently thought of as a reduction of the amount which a seller would ordinarily receive by all or a part of the transportation charge incurred in making the sale. Under many basing-point systems there are producers who have no mill price, and who charge delivered prices that include imaginary transportation charges from other mills, now generally known as "phantom freight." If these nonbase mills establish mill prices as high as the former delivered prices at their mills, they can keep the same delivered prices but eliminate the imaginary freight charge. If they set mill prices still higher, what was formerly phantom freight would then be absorbed freight, though the delivered price has not changed. By setting a mill price high enough every sale involving any transportation cost can be made to absorb freight. A price discrimination has the same effect, whether it is described as an additional charge to those who pay higher prices or as a reduced charge to those who pay lower prices.

The Commission believes that much of the interest in a moratorium has resulted from a lack of understanding of what the law actually is. Many people have been led to believe the issue to be whether or not f. o. b. mill pricing is now required by law, with a concomitant ban upon all selling at

delivered prices and all freight absorption. There is absolutely no warrant in any decision of the Commission or the courts for a belief that such an issue is involved. The Federal Trade Commission Act and the Clayton Act, as amended by the Robinson-Patman Act, are part of the laws passed by the Congress in furtherance of the national policy of maintaining a free competitive enterprise system in this country. The Commission has publicly stated that it does not advocate the imposition of a requirement that business enterprises price their goods f. o. b. mill or that they use any other form of geographic pricing practice. In the Commission's opinion, one of the principal virtues of the antitrust laws is the fact that they maintain freedom of choice and variety of behavior among businessmen, forbidding only the specific practices and conditions which have been condemned by law as destructive of competition.

Inasmuch as H. R. 2222 and S. 1008 have been reported by the Committee on the Judiciary of the House and the Committee on the Judiciary of the Senate, respectively, and the enactment of S. 1008 was recommended by the Committee on Interstate and Foreign Commerce of the Senate, copies of this correspondence are being forwarded to the chairman of each of these committees.

It is hoped that this affords you the information requested.

By direction of the Commission.

LOWELL B. MASON,
Acting Chairman.

N. B.—Pursuant to regulations, this report was submitted to the Bureau of the Budget on May 16, and on May 17, 1949, the Commission was advised that there would be no objection to the submission of the report to the committee.

LOWELL B. MASON,
Acting Chairman.

Resolutions of Kansas Conference of Congregational Christian Churches

EXTENSION OF REMARKS
OF
HON. ALBERT M. COLE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 31, 1949

Mr. COLE of Kansas. Mr. Speaker, under leave to extend my remarks, I desire to include a set of resolutions adopted at a meeting of the Kansas Conference of Congregational Christian Churches held in Manhattan, Kans., May 3, 1949:

We delegates to the ninety-fourth annual conference of the Congregational Christian Churches of Kansas held in Manhattan, Kans., on May 3, 4, and 5 do recognize our responsibility to our fellow men by endorsing as individuals the following resolutions. We urge our member churches to study them and take appropriate action:

1. We urge upon our Congressmen and Senators that in all legislation the fundamental principles of Christianity as enunciated by Jesus Christ be the basis for action.

2. We affirm the belief that war between the United States and Russia is not inevitable. We affirm the faith expressed in section IV of the report of the Amsterdam Assembly of the World Council of Churches: "War, being a consequence of the disregard of God, is not inevitable if man will turn to Him in repentance and obey His law. There is then no irresistible tide carrying man to destruction. Nothing is impossible with God."

3. We recognize the responsibility of our churches to build better race relations, and heartily endorse the recommendations of the President's bipartisan Committee on Civil Rights.

4. We believe that the present law providing for the admission of displaced persons is inadequate. We agree with the AFL and the CIO in requesting a higher numerical admission and a removal of restrictions as to nationality and religion. We also believe that the definition of a DP should be broadened and that the requirements for jobs and housing should be liberalized. Immigration should not be restricted on the basis of occupation as the occupants of DP camps represent a cross section of population in respect to occupation and abilities. For these reasons we favor the passage of H. R. 1344 and S. 311 and the Judd bill, which would remove race as a limiting factor in our immigration laws.

Radio Broadcast on Pending Legislation

EXTENSION OF REMARKS
OF
HON. RALPH E. CHURCH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 31, 1949

Mr. CHURCH. Mr. Speaker, under leave to revise and extend my remarks, I am inserting in the RECORD a transcript of a radio broadcast I made last Thursday, May 26, over Station WIND in Chicago, Ill.

During the past several weeks I have received literally thousands of telegrams, letters, and postal cards from my constituents expressing their views on the various measures pending in Congress. I am always glad to have their views. And I want the fine people I am privileged to represent to know how I stand on the issues.

I would like to write an individual response to each one of these communications. Unfortunately, because of the unusually large volume of mail I have received, it is a physical impossibility for me to make an individual personal reply.

By putting this particular radio broadcast in the RECORD I think I will be answering some of the major questions raised by my constituents, because the questions raised in the broadcast interview are, in general, the type of questions asked by my people in their letters to me.

ANNOUNCER. Tonight we have with us Congressman RALPH E. CHURCH, of Evanston, Ill., a member of the important Committee on Appropriations. We would like to get his views on some of the major issues in Congress.

Mr. CHURCH, you are one of the leading advocates of economy. What do you think are the prospects of reducing the cost of government?

I recall you gave a speech in Congress last week that caused considerable discussion when you called attention to the waste and extravagance in the work of repairing the Capitol roof. I think you called attention to the elaborate buildings and fancy plywood fence the contractor erected under a cost-plus-fixed-fee contract.

Mr. CHURCH. That is correct. It just happens to be one of many examples of the reckless manner in which the administration spends money. As I sa'd in that speech, the Truman administration may call all this extravagant spending a fair deal, but it is a raw deal for the American taxpayer. He is the forgotten man.

As to the immediate prospects of cutting the cost of government, I am sorry to say they do not appear very bright. There are some hopeful signs, however, and we just have to keep slugging away for economy, even though we are continually outvoted.

ANNOUNCER. What do you mean, Mr. CHURCH, that the immediate prospects for economy are not bright but there are hopeful signs?

Mr. CHURCH. Except the legislative appropriation bill, the House has passed all the regular supply bills. When these measures were before the House we made every conceivable effort, in committee and on the floor, to cut the amounts. But the spenders had the votes, and these bills carried $4,250,000,000 more than appropriated by the same bills last year.

For a time it appeared that the Republican economy drive in the Senate would result in at least a 5-percent cut. But there, again, the administration spenders have the votes. The economy drive has bogged down, and the Senate is sending the bills back to the House with even larger appropriations.

ANNOUNCER. With the House providing more money than was provided last year for the departments and with the Senate increasing the amount, how can there be hopeful signs, as you say, for any economy?

Mr. CHURCH. Well, I just do not want to give up all hope of achieving any savings, however discouraging the situation may appear. While the results to date may not show it, there is a growing sentiment in Congress to reduce Government expenditures. The fiscal experts have officially indicated that unless there is a reduction in the budget proposals we are faced with a deficit of $3,000,000,000.

To have an unbalanced budget in a year of prosperity or to raise taxes to meet the deficit is to invite economic disaster. The only safe, sound thing to do is to cut Government spending. And I think there is an increasing realization on the part of individual Members of Congress, if not on the part of the administration, that Government spending must be cut.

We just have to keep slugging away for economy. If we can't reduce the individual appropriation bills, maybe we will be able to get enough support to put through a bill near the end of the session to require the President to reduce all expenditures.

ANNOUNCER. The President may, however, veto such a measure. As you know, he has insisted that his budget is a minimum and has asked for an increase in taxes.

Mr. CHURCH. If the President should veto a bill requiring an over-all reduction in the cost of government, I doubt that we could muster the two-thirds vote necessary to override. Considering the economic outlook, with a lowering of prices, decline in the national income and decline in revenue, to veto such a measure would be a rash, utterly reckless act.

ANNOUNCER. What do you think about the savings that could be realized if the Hoover Commission's recommendations for reorganization of the Government are carried out?

Mr. CHURCH. I am glad you brought that up. A reorganization of the executive

UNIVERSITY OF MICHIGAN LIBRARIES

branch of the Government is something I have been urging and urging for many years. It was not until the Republican Eightieth Congress established the Hoover Commission that any complete study was made of the innumerable ramifications of the Federal Government, with its duplications and overlappings.

It is estimated that if the Commission's recommendations are carried out a saving of between $2,000,000,000 and $3,000,000,000 will be realized. Now that we have the Commission's findings and recommendations as a basis for reorganization, it is our job to see that they are substantially carried out.

This is an undertaking on which the administration has delayed and delayed much too long.

ANNOUNCER. Explain that, Mr. CHURCH.

Mr. CHURCH. The Hoover Commission recommended at the opening of this Congress that legislation be enacted to give the President authority to submit reorganization plans to Congress to go into effect 60 days after submission unless the Congress set a plan or plans aside by affirmative action. Such a bill passed the House in February, but the Senate took no action on it until last week. It probably would still be pending there were it not for the active work of various citizen's committees in the country urging adoption of the Hoover Commission's recommendations.

Because of this wholly unnecessary delay in getting this basic reorganization legislation through Congress, it is likely that none of this much-needed reorganization can be accomplished this year. There is no excuse for the administration's delay, because the measure had bipartisan support.

ANNOUNCER. But why do you think the delay may prevent any reorganization and resulting savings this year?

MR. CHURCH. Because under the terms of the bill the Congress is to be given 60 days to study and act on each reorganization plan. This is almost June, lacking a few days, and under the Reorganization Act the Congress is supposed to adjourn by August 1. Time is of the essence. In any case, I intend to keep urging and urging to try to get something done along the lines of the Hoover Commission's proposals.

ANNOUNCER. Let me ask you a few questions about some other measures that are pending in Congress. What are your views on the administration's proposal for compulsory health insurance? I understand the Committee on Interstate and Foreign Commerce has started to hold hearings on that subject.

Mr. CHURCH. Compulsory health insurance is just another name for socialized medicine. It is a bureaucratic scheme for political medicine. I am definitely opposed to it. I shall vote against it. I shall do everything within my power to defeat it.

The sponsors of this scheme have been trying to delude the people into believing that it would give free or low-cost medical coverage to all. The fact is that the cost would be tremendous. New Zealand has had socialized medicine for 10 years, and it takes 40 percent of all the revenue collected by that Government. The tremendous cost of this scheme would be hidden in income taxes and pay-roll taxes. The people would actually pay more, not less, for medical care, and it would be inferior care at that.

But entirely aside from the tremendous cost, with a horde of bureaucrats to be supported, it would destroy American freedom, not only as it relates to medicine but as it relates to our whole life.

To be sure, American medicine is not perfect. No human activity is ever perfect. But whatever its faults, in the field of medicine America is supreme. We have the best health record of any large nation in the world. In our generation 20 years of life have been added to the average expectancy of individuals at birth. And our great record has been made because our medical men have been free from police state control.

"Socialized medicine is the keystone to the arch of the socialist state." Those are the words of Lenin himself.

ANNOUNCER. There is another administration proposal I want to ask about. Mr. CHURCH, what are your views on the housing bill which has just been reported by the Committee on Banking and Currency?

Mr. CHURCH. That bill is another part of the Truman socialistic program. It would cost around $20,000,000,000 over the next 40 years. It has been represented to the American people as a solution of the housing shortage problem. I predict that this measure, if adopted, will actually aggravate the problem. In the end it will mean the nationalization of private property and property rights.

To be sure, there is a housing shortage. This is due to a number of factors. During the war period, because of the shortage of men and lack of materials, there was very little building. At the same time there was an increase in the number of families, a shifting of the population from farms to cities and increased earnings. In other words, the demand for houses increased rapidly while the construction was abnormally low.

The Republican Eightieth Congress removed the restrictions and controls on private enterprise. No sooner were those controls removed than the construction industry went to work.

During 1946, when the Truman administration had the power to control housing construction, only 435,800 new permanent dwelling units were completed. In 1947, with the controls removed, the number constructed almost doubled. And last year almost 1,000,000 units were built. That is a larger number than ever constructed in the entire history of the United States.

In other words, private enterprise is licking the housing problem. That is the American way and that, in truth, is the only way that this problem can be solved. Our job is to encourage private enterprise, not to destroy it with socialistic schemes and bureaucratic controls.

ANNOUNCER. I assume you opposed the public housing bill that passed the Senate in the Eightieth Congress but was not acted on by the House.

Mr. CHURCH. Yes; I did. I appeared before the Rules Committee in opposition to it. And let me point out that if the Eightieth Congress had not turned down that bill there would have been an even greater housing shortage than there is today. It was this action by the Eightieth Congress that helped generate the largest building boom this country has ever witnessed.

ANNOUNCER. You definitely feel then that this country is, under the Truman program, on the road to state socialism and that there is the real danger of a totalitarian state coming into existence.

Mr. CHURCH. Yes; I do. Each one of these various proposals has a certain popular appeal. Some Members of Congress think it is politically dangerous to vote against them. Maybe it is. But I intend to do whatever I can to help our people see the underlying dangers.

A socialistic state is not something that is established overnight. That is the way the Communists would prefer to have it done. They are supporting these various schemes to enlarge the functions and controls of the Federal Government, because they know that by the slow process of evolution we are reaching the same objective.

We are experiencing "creeping socialism." It is like a cancerous growth that finally, when it is too late to do anything about it, destroys the normal functions.

On the one hand we talk about reducing the size of this great sprawling Federal bureaucracy and reducing the cost of government so that our people can have relief from taxes, and on the other hand, there are these various proposals that necessarily mean a still larger bureaucracy, still higher government budgets, and still higher taxes.

If this process continues, aid for this and aid for that, this new Federal control and that new Federal control, the nationalization of medicine and insurance, and then perhaps the nationalization of education and the gradual nationalization of banks and industry, we will lose man's greatest heritage—freedom. Tomorrow will be too late. It is today we must act as a free, self-respecting, liberty-loving people, to stop this trend toward socialism.

Can Britain Compete?

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1949

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD a speech made by the honorable William Benton, former Assistant Secretary of State, before the American Chamber of Commerce in London on May 26, 1949.

Bill Benton is well and favorably known to many Members of the Congress because of his great leadership and unselfish devotion in getting the information and cultural program of the State Department under way. We should remember that Mr. Benton is an outstanding businessman and economist in his own right and, because of the soundness of the views expressed and the thought and study behind them, his speech to the American Chamber in London should merit our close consideration and appraisal.

Mr. Benton, publisher of the Encyclopedia Brittanica, urged the creation of an Anglo-American Council on Merchandising.

Such a council, Mr. Benton said, would be a logical parallel to the present Anglo-American Joint Council on Productivity, and would help to solve Britain's major economic problem—how to earn dollars by stimulating British sales to the United States.

In his address to the American Chamber of Commerce on the subject, Can Britain Compete? Mr. Benton declared that Britain's selling problem is becoming more acute than its production problem. Benton served as Assistant Secretary of State in Washington from 1945 to 1947. He is a vice chairman of the committee for economic development.

Americans will have a total of $414,000,000,000 to support their 1949 buying, Mr. Benton stated: $214,000,000,000 in personal incomes, if present rates are maintained, and $200,000,000,000 in a backlog of savings. Yet in its planning to build up exports, the Organization for European Economic Cooperation has

projected a gain of only $1,000,000,000 in western's Europe's sales to the United States for the period 1947–52.

This is a gross underestimation of the potential of the United States market—

Mr. Benton declared.

Western Europe's share of United States imports has dropped from 23 percent prewar to about 14 percent today. Far from straining our ability to import, Europe is getting a little more than one-half of the share of our dollars it used to take.

This is a peculiarly good moment for a vigorous invasion of the American market. Not only is our income at an all-time peak, but during the last 8 years of easy business many of our manufacturers have grown fat and soft. Many are vulnerable to aggressive competition. Many have forgotten how to sell.

Britain may never be able to compete with the United States in some mass-produced manufacturers, Benton said, but she can analyze the American market and can learn to compete in selling.

She can outdo the United States if she will apply herself to it.

The British manufacturer cannot only master American advertising and sales promotion techniques, but in my opinion, by brains and aggressiveness, can improve upon them. He can l arn to tailor his products for the American market, and design and package them so that they will win dollars by the thousands of millions.

There is reason to believe that important groups in the United States would welcome the creation of a joint council on merchandising, Mr. Benton stated.

We in America can teach the British some things—but we will discover we can learn a good many, too—and both countries will profit from a mutual exploration of problems of selling and promotion.

This would not be an entirely unselfish gesture by the United States, Mr. Benton argued.

The resolution of the present international political crisis may depend first and foremost on whether the Atlantic community, and the rest of the free world, can achieve stability on a high and rising level. * * * We have learned that our own welfare depends upon an expanding and healthy world economy. But there are other reasons as well, reasons that appeal to the economic statesman. One of them is that the competition will be good for us.

Benton proposed that American businessman say to their British friends: "We will help you to your feet. Then as businessmen we will fight it out, in every market, including our own, for our individual benefit, for our two countries' benefit and for the world's benefit."

Britain appears to be moving in two directions at once, Mr. Benton said: Toward nationalization on the one hand, and toward competition, as represented by the Monopolies Act, on the other.

My hope is that, as a byproduct of increased emphasis on world salesmanship, some of that competitive spirit will flow back into the internal economy, not only of Britain but of the rest of the world, even including the United States. Selling is by its nature less easy to regulate, control, or nationalize than production.

Some Americans are alarmed at the prospect of European industry made efficient by American know-how, and re-equipped with American capital goods, Mr. Benton conceded.

Yet, need they be alarmed? I had the privilege this month of inspecting some new charts prepared by Willard Thorp, our Assistant Secretary of State for Economic Affairs. They show that one-fifth of the world's population live in areas of the world that are relatively developed; another one-fifth live in so-called transitional areas; while three-fifths live in the industrially undeveloped areas. The United States between 1936–40 exported to the industrially developed one-fifth at the rate of $5.80 a year per capita, and to the undeveloped three-fifths at the rate of only 70 cents a year per capita.

Mr. Benton's speech to the American Chamber of Commerce in London follows:

CAN BRITAIN COMPETE?

It was 6 years ago that I first met so many of you here today. And it is to my American friends here that I shall largely address my comments.

It was in the wartime August of 1943 that I came to England as vice chairman of our war-born Committee for Economic Development. I came at the invitation of Lord Halifax to discuss postwar trade relations between Britain and the United States.

The big issues then seemed to be the classic issues of free trade—tariffs and import quotas, cartels, monetary stabilization, shipping subsidies and export subsidies, and the chosen instrument theory in aviation. No one then foresaw the depth and extent of the world political crisis that would carry over from the war. No one guessed the acute economic anemia in western Europe that was to call for massive transfusions of dollars.

My observations on that visit are on the record. I embalmed them in an article in Life magazine which the Life editors titled "Business in Britain." Its subtitle was "Britain's Industrial Leaders, Driving on the Left Side of the Economic Road, Worry About Postwar Collisions with the United States." In this article I predicted a rapidly expanding role for the Government in the British economy. One British editor reprinted the article under the heading, "The amazing impressions of Mr. Benton." What amazed him was that I thought Britain was driving on the left side of the road.

The forecasts I made in 1943 about the nature of postwar trade problems between the United States and Britain are still, I hope and believe, valid for the long term. For the shorter term the resolution of the present international political crisis may depend first and foremost on whether the Atlantic community, and the rest of the free world, can achieve economic stability on a high and rising level. The crisis cannot otherwise be resolved so long as the men of the Kremlin feel they can look forward confidently to a catastrophic depression in America, and to chaos in the free world.

Yes, economic stability seems now to be a better form of defense than a still bigger Navy or an enlarged Air Force or a more powerful atom bomb.

Although a key to the political crisis is economic health, we must also develop the ideological skill to interpret that health to the skeptics. If the "hordes" Mr. Churchill fears are to be kept out of western Europe, it will be by forces other than men bearing arms.

Our ideological skill with the skeptics is pitifully weak. During my service in the State Department I have often spoken on this subject. That is another speech, for another audience.

Today I shall explore with you the present state of our economic health. Nearly every business leader I know in the United States, and nearly all economists believe the economy of the United States is in good health. They would be glad to write an insurance policy on its life. Most of them are encouraged by the progress toward recovery in western Europe. A nominal decline in total business activity for 1949 is expected in the United States. This should be a healthy thing. It is or should be a movement toward a high-level norm. Many indexes tell us that this year will not be as good as 1948 but it will be good.

Personal incomes for March of this year—the latest figures available—were at the annual rate of $214,000,000,000. This is a little below the all-time peak of last December but above the level of a year ago. Liquid assets of individuals—the backlog of savings—have reached a record high of $200,000,000,000. This is a total of $414,000,000,000 available in 1949 to back up expenditures by American consumers.

I cite these figures because of their bearing on the present outlook for the British economy. When I was in England last May, and again in August, the big problem was production. Today we see the emerging shape of a newer problem—the inevitable second phase. That is the problem of merchandising.

Last year I repeatedly heard the criticisms of British production that Englishmen have now heard so often that they may be angered if not bored by them:

That British production suffers from obsolete plant and equipment.

That the productivity of labor in Britain is low and lags far behind the rate of the United States.

That scientific management in Britain does not keep pace.

These common criticisms are not justified to the degree that they may have been a few years ago. However, as some of the key production problems seem on the road to solution, they are rapidly being superseded by others. The President of the Board of Trade seems most alert to this. He said on May 10: "Our problem is not one of production, but of selling."

There are many who feel Britain can never compete with the United States in mass production in many lines of manufacture. She can become far more efficient in production, and indeed she must, but even with plants equally modern, many factors of cost may be unfavorable to Britain.

Yet Britain can compete in selling. Further, she can outdo the United States if she will apply herself to it. Selling depends on brains and aggressiveness. The British have plenty of the one and are cultivating the other. Brains and aggressiveness, in a few decades, built the State of Illinois, where I have business interests. Brains and aggressiveness can win for Britain a great and profitable slice of the rich American market.

I need hardly add that aggressiveness entails hard work and plenty of it. At the Palladium the other night I heard Ted Ray—I did not say Danny Kaye—win the crowd when he referred to "your husband coming home from what he laughingly calls his work." Yes, it was hard work which created Chicago's industrial empire out of the dreary prairies. Chicago looks east toward New York and New England and thinks that the lawyers and the financial men of the East do not know how to work as do the engineers and the salesmen who have built and who today run our great productive enterprises.

It is my opinion that if Britain is to achieve the balance she seeks with the dollar, she must aggressively launch a direct assault on American and Canadian markets.

There has been criticism of the organization for European economic cooperation for overestimating the level of Europe's exports in 1952, the year the Marshall plan is scheduled to end. This criticism may be right. But of the anticipated $5,000,000,000 increase

UNIVERSITY OF MICHIGAN LIBRARIES

in European exports between 1947 and 1952, only $1,000,000,000 of the increase is forecast from sales to the United States. This is a gross underestimation of the potential of the United States market. As I have pointed out, United States citizens have a record $414,000,000,000 to back up their spending this year—if they can be persuaded to spend their dollars.

I am in good company here. The president of the British Board of Trade says that the United States and Canadian markets for British goods can be greatly expanded and without any manipulation of the value of sterling.

Is there any modern business that has prospered waiting for customers to beat a path to its door, mouse-trap manufacturers not excepted? If he is to prosper the producer must take the initiative. He must be a salesman. As a salesman he must study the market, the pattern of buying, the consumer preferences, the best price ranges, and a multitude of other detailed questions. This is market analysis, plain and simple.

The British manufacturer can not only master American advertising and sales promotion techniques, but in my opinion, by brains and aggressiveness he can improve upon them. He can learn to tailor his products for the American market, and to design them and package them so that they will win dollars by the thousands of millions. The market is in the United States because the dollars are there.

I agree with the leader in the Times of last Saturday that "by their own exertions British manufacturers and British workers and British leaders must stop the rout." More important to the point I am trying to make, however, is my disagreement with another statement in the same editorial. The Times stated "The only cure for high prices is to lower them." No, there is another cure, certainly in the export trade, which is sometimes equally or even more effective: Better products more attractively designed and made and more skillfully promoted and sold—in a word, merchandised.

The United States is today importing from the ERP countries—including the United Kingdom—at a level that is still below the average of 1936–38, in terms of volume of goods, although the dollar value is higher. The volume of imports from Britain has only about reached the prewar level, which, as you will remember, was not high. But an equally significant fact is that western Europe's share of United States imports has dropped from 23 percent prewar to about 14 percent today. Far from straining our ability to import, Europe is getting a little more than one-half of the share of our dollars it used to take.

Yet this is a peculiarly good moment for a vigorous invasion of the American market. Not only is our income at an all-time peak, but during the last 8 years of easy business many of our manufacturers have grown soft and fat. Many are vulnerable to aggressive competition. Many have forgotten how to sell.

Only recently I heard Mr. Paul Hoffman, the Administrator of the ECA, argue that one of the great mistakes of American business during the depression of the thirties was that the first cuts in company budgets were too often made in advertising and sales. Mr. Hoffman told me the other day that his old company, Studebaker, recently increased its advertising outlay even though American manufacturers are spending proportionately far less on advertising today than they have since before 1900. (Advertising expenditures today are running at only 1.8 percent of national income in contrast to a half century average of 3 percent or better.) Mr. Thomas McCabe, another of America's great salesmen, though now a banker and Chairman of our Federal Reserve Board, said the same day: "Our merchandising has lagged way behind our production. If we in the United States were now as well prepared on selling and promotion as we are on production, there would be no danger whatsoever of any recession." Mr. McCabe added, "Advertising is to merchandising what electricity is to production." (I am glad to give this plug, a we Americans call it, for advertising, the business in which I was engaged prior to 1936, and which provided me with my first capital.)

When Mr. Wilson last month gave his eight-point program for enlarging Britain's exports to North America he explained: "We shall give every help and, where necessary, open favoritism to exporters to Canada and the United States in their production difficulties." He said that regional trade consuls, accompanied by business advisers, would be sent to each of four regions in the United States. He promised Government assistance for market research in the United States, and the freeing of dollars for sales promotion. On the export credit guaranty program he conceded that exporters to North America might require as he put it, "a less conventional conception of commercial risk." He pointed out that British exporters had concentrated on our eastern seaboard, neglecting our West and South. (They are not alone in this, as our New England manufacturers can testify, I am glad to assure them.)

I herewith suggest a ninth point for Mr. Wilson. I suggest the creation of an Anglo-American council on merchandising as a logical corollary to the council of productivity. I would hazard the guess that, as in the case of the joint council on productivity, we in America can teach the British some things—and we will discover we can learn a good many, too—and both countries can profit from a mutual exploration of problems of selling and promotion. I have reason to believe that important groups in the United States would welcome the creation of such a council on merchandising.

The United States interest in British economic welfare is, of course, not unselfish. We are learning that our own welfare depends upon an expanding and healthy world economy.

But there are other reasons as well, reasons which also appeal to the economic statesman. One of them is that the competition will be good for our internal economy. The Encyclopedia Britannica says, in its article on competition by Professor Hilton, of Cambridge University, and Professor King, of New York University, that competition is socially beneficial, for it provides a zest that might otherwise be lacking in industrial endeavor. The presence of an avowed trade enemy, the sense of danger, the imperative need for keeping in fighting trim, have produced in the past qualities of alertness, vigor, and self-reliance which the more amiable objective of service might not have fostered so keenly.

I believe the businessmen of the United States are now trying to say this to their British friends: "We will help you to your feet. Then as businessmen we will fight it out, in every market, including our own, for our individual benefit and our two countries' benefit and for the world's benefit."

This may sound unrealistic today. Is it unrealistic? If it is, I suggest that the American Chamber of Commerce in London dissolve. I suggest this group seek a new name. Let it become merely an American front in England, an American-Anglo friendship society.

Some of you may recall that Geoffrey Crowther once remarked that "Britain can compete the pants off the United States." Surely he has not yet proved to be anywhere near right. But for my part I hope he will prove to be a prophet with honor, not only in his own country but abroad.

Some Americans are alarmed at the prospect of European industry made efficient by American known-how, and reequipped with American capital goods. Yet need they be alarmed? I had the privilege this month of inspecting some new charts prepared by Willard Thorp, our Assistant Secretary of State for Economic Affairs. They show that one-fifth of the world's population live in areas of the world that are relatively developed; another one-fifth live in so-called transitional areas, while three-fifths live in the industrially undeveloped areas. The United States between 1936 and 1940 exported to the industrially developed one-fifth at the rate of $5.80 a year per capita, and to the undeveloped three-fifths at the rate of only 70 cents a year per capita.

World economic development benefits all nations. But as the less-industrialized areas acquire productive facilities the composition of world trade will undergo important changes. The simple exchange of manufactured goods for foods and raw materials will decline. Trade in semimanufactured goods will increase. The whole mechanism of trade will become more complex. In this process, the advanced manufacturing nations will gain in trade as backward areas develop But they must abandon, as rapidly and sensibly as possible, the production of goods that can be made more economically elsewhere, and must emphasize the production of goods which require complex manufacturing skills, large amounts of capital and new technology.

My hope is that, as a byproduct of increased emphasis on world salesmanship, some of that competitive spirit will flow back into the internal economy not only of Britain but of the rest of the world, even including the United States. Selling is by its nature less easy to regulate, control, or nationalize than production.

Britain today seems to be moving in two directions at once. The role of government in the economy has been greatly expanded by nationalization. On the other hand, with the passing of the Monopolies and Restrictive Practices Act last year, a step has been taken toward breaking up monopolies. This is a step toward what we Americans regard as free enterprise. As the president of the board of trade told the House at the time, Britain "cannot as a nation afford restrictive practices if they increase * * * costs abroad, if they prevent the fullest development of inventions and new techniques, or reduce output, or maintain prices at an excessive level to * * * consumers at home."

A group of important British industries has been recommended for investigation by the board of trade. Britain is now, and for the first time, recognizing "that vigorous competition may exert an important and beneficial effect upon national productivity." That is a quotation from the first report of the Anglo-American Council on Productivity.

Even a combination in Britain of modern plant, a highly productive labor force, and imaginative management may not prove sufficient without competition. Man is indeed fallible and his capacity to rationalize and to deceive himself seems unlimited. Where is management's measure of its efficiency? When the business executive claims his plant is modern, who is there to deny it? Who checks the productivity of man's labor? The deliberate encouragement of competition is needed both as a stimulus and as a yardstick. Reading the debate on the monopoly bill in Hansard, I found at least one honorable member of Parliament blaming restrictive business practices for retarding the British economy during the last 50 years. Can there be any doubt about this? He pointed out, in contrast, that during this period the United States had taken vigorous steps to encourage competition. Perhaps the British, who have tried most everything in recent decades, are now going to try competition.

Here we have a strange paradox. On the one hand, Britain moves toward nationaliza-

tion, and on the other Britain develops an urge toward competition. The rationalization of these trends is one of the great problems of our time. In Britain, the twentieth century trend toward nationalization grows in part from a lack of competition. In the United States, our faith in competition sometimes keeps us from recognizing the areas where it does not exist, or is ineffective, and where we should either enforce competition more vigorously or bring enterprises under Government control.

The United States also is moving in two directions at once. Every American is aware that government is assuming greater responsibility for the general economic climate of the Nation. We have come to accept some of the precepts of the welfare state as they have been outlined first in the New Deal and now in the Fair Deal. But at the same time, as I predicted to the dismay of some of my British friends in 1943, there has been no relaxation of the Sherman Antitrust Act, and our desire for competition is as deep as ever regardless of how we may on occasion prostitute it.

The role of the United States Government in controlling booms and depressions, we hope, is to be primarily at the fiscal and monetary level. We, in the United States, hope to regulate the climate, as the economist once put it, without rationing the raindrops. We seek to encourage competition and not to reduce it. Almost unanimously we agree that the Sherman Antitrust Act and the Clayton Act have spurred production just as they have spurred selling and promotion.

Just 2 days before I left the United States, Paul Hoffman told me that one of the most beneficent results of the Anglo-American Productivity Council will be its byproducts—the understanding and friendship it engenders. (Mr. Philip Reed agrees with this.) I have tried to suggest today the beneficent results that might flow from a more difficult kind of cooperation—cooperation in competition. I have suggested that, as Britain learns better to compete in the American market, and better to compete with America in all markets—as it applies to international salesmanship the energy and brains it has long applied to international politics and diplomacy—it will render an indispensable service to itself, to America, and to the free world. I have expressed the hope that its competitive spirit in world markets can feed back to give zest, alertness, vigor, and self-reliance to its own internal economy.

If these hopes are realized, you businessmen of two countries can give the world once more a living example of a free, stable, and expanding economy. Further, you can learn to give the lie to the forces of pessimism that preach the inevitability of collapse in a competitive economy. Yes, you can give the lie to the theory of the inevitability of crisis and war. Let us therefore march together—not left, not right—but forward.

Andrew Lawrence Somers

MEMORIAL ADDRESS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1949

On the life, character, and public service of Hon. ANDREW LAWRENCE SOMERS, late a Representative from the State of New York

Mr. SABATH. Mr. Speaker, the life of Mr. SOMERS sums up the American ideal. He started as a poor boy with the fortunate gift of more than ordinary intelligence and industry and even more fortunate, high character. By an assiduous devotion to duty here he rapidly rose to a stature of commanding leadership. He did not covet membership on the so-called most important committees, but with singular sagacity and foresight appreciated that his membership on secondary committees would lead to a gratification of his earnest desire to be of maximum service to his country and his party.

Little did most of us appreciate that our departed friend's membership on the Committee on Mines and Mining and the Committee on Coinage, Weights, and Measures would after long, constructive service in the House elevate him to a position where it was his responsibility and pleasure to lead in the early days of the New Deal the important legislation that revaluated gold and to the exalted position of chairman of the great and important Committee on Public Lands, which chairmanship he assumed at the beginning of the Eighty-first Congress.

The details of his public service are too well known to require extensive review anywhere. His record in office was that of a sterling patriot sincerely devoted to the welfare of the great Republic that he loved with a passionate and unremitting devotion. He was always a help and never a hindrance in effecting necessary and remedial legislation. Soon after the election of last November, when it was known he was to be called upon to head the great and important Committee on Public Lands, he told me of the wide and careful study he was giving to the problems of power, water, irrigation, reclamation, and conservation, which are so vital in the national economy. He seemed to view his elevation to that important chairmanship as a fruition of the strident efforts he ever made to improve and maintain the status of all our citizenry.

Mr. SOMERS' intimate friendship was not something he easily bestowed upon anybody. His autobiography in the Congressional Directory—"ANDREW L. SOMERS, Democrat, of Brooklyn, N. Y."—attests his self-effaciveness and humility, while his talents easily and automatically placed him in the vanguard.

It is easy to understand that if Mr. SOMERS could have his way there would be no laudatory mention of him today in this Chamber, which his herculean endeavors graced from March 4, 1925, to a short time before his untimely passing on April 6, 1949, many years short of the Psalmist's promise of threescore and ten. He would say, in his quiet and friendly fashion, that his passing, after a public service which won him the admiration and respect of a myriad of friends and constituents, was not an occasion for special comment. But we can take advantage of him today and disregard what we know would be the dictates of his sensitive soul. No one who knew him, no one who saw him pass by, could doubt the inner warmth, despite a misleading exterior, that was in him. And the warmth went back to him, as it always does, in a deep and general affection which his inordinate modesty can no longer minimize.

We grudge not our friend his rest, because there is a compensation which is our joy, that he left so much behind to keep sacred his name and his work; it is our grief that he was called away in the fruition of his power, which presaged ardent hope and brilliant promise.

Our friend cared nothing for the display and vanity of the world at large. These were to him matters of absolute indifference. While he had been well-schooled, yet there was always an absence of pomp and pedantry in all that he said and in all that he did. Holding tenaciously to the legislative judgments which he had formed, and fortifying the grounds upon which he had reached his conclusions, his modesty in defense of his opinions was as charming as it is rare among seasoned legislators.

As the earthy remains of our dear friend are interred, let us, in conclusion, realize our obligation to make safe and secure the government of the people which has been committed to our keeping; let us remember that it can thrive and grow only in an atmosphere of popular devotion and unselfish attachment; and, above all things, let us open our hearts to such influences and teachings as emanate from the life and death which we today memoralize.

The United States Naval Carrier

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 2, 1949

Mr. LARCADE. Mr. Speaker, under previous authority to extend my remarks in the RECORD, I wish to submit a copy of an article published in the New Orleans Times-Picayune recently by Mr. David Lawrence, Washington columnist, giving the history and value of our naval carrier in one of the branches of the armed services.

Mr. Speaker, it is my opinion that this article is very informative and illuminating, and is submitted as a matter of fairness, and without prejudice on my part to anyone named in the article by the author.

I think this article is a matter of great public interest at this time.

The article follows:

HOW TO LOSE A WAR

STRATEGY OF WAR CAN BE SETTLED BY ALL THREE ARMED SERVICES, BUT EACH SHOULD DEVELOP ITS OWN WEAPONS TO FIT ITS ASSIGNED MISSIONS—NAVAL AVIATION PROVED ITS VALUE IN WORLD WAR II—THE FUNCTIONS OF A CARRIER NAVY

(By David Lawrence)

Wars are won or lost at the planning stage—in the years that precede the actual combat.

Hermann Goering insisted on unification of all armed services in Germany and on domination of the whole military establishment by his air force. To the cries of the German Navy for a fleet and for better submarines, he turned a deaf ear.

UNIVERSITY OF MICHIGAN LIBRARIES

It was the failure to get control of the seas which defeated Germany. For otherwise the fuel and the supplies needed to support America's huge expeditionary forces could not have been safely transported across the ocean.

It was the inability, in particular, of German seapower to cross the English Channel which saved Britain from invasion in 1940.

In the Pacific, it was Japanese carrier aviation that swept down through the Philippines and on to Singapore almost unresisted.

Naval carriers swept down on Pearl Harbor.

Japanese naval aviation had full control for nearly 2 years thereafter and the American flag came down in many outposts in a series of heartrending defeats.

It was not until naval aviation was built up that the American Navy won back the whole Pacific and carried the fight to the shores of Japan itself. It was a costly campaign- thousands of American boys were sacrificed because of a blunder in our naval policy in the twenties and early thirties.

Without bases at Guam and Saipan and Iwo Jima and Okinawa—taken primarily by United States Navy carriers and the Marines—the big land-based bombers of the Army Air Force could not have dropped a bomb on Hiroshima.

Britain's lesson

Great Britain likewise suffered because she neglected carrier aviation. Thinking only in terms of land defense, the British gave the Royal Air Force complete command of air power, and it didn't develop naval aviation. As a result, serious losses were incurred. The Royal Air Force had no training in operations above the seas against naval vessels. It had no effective training in antisubmarine warfare. It allowed the two German battleships, *Gneisenau* and *Scharnhorst*, to steal through the English Channel at a critical moment because the Royal Air Force was not trained to ward off such operations.

The British Government finally admitted neglect and gave its Navy the air arm it had clamored for. The British Navy then had to go to school in the Pacific. In 1945 its first carrier task force was made a part of our carrier fleet. Only during wartime could the British naval arm learn what had been neglected before 1939. This was too late.

Scuttling the carrier Navy

Today history is repeating itself. Advocates of a concentration of effort on only one method of warfare are in the ascendancy in Washington as they were in Berlin, London, and Tokyo before 1939.

The naval arm of the United States is in peril. So also is amphibious warfare as developed and perfected by our Marine Corps.

One of the greatest military organizations of all times—the carrier Navy and the Marines of the United States—is in danger of disruption.

The process is a simple one. Control of funds means control of what weapons shall be developed.

Without consulting the Chief of Naval Operations and without giving the Secretary of Navy the hearing he pleaded for, the Secretary of Defense, Louis Johnson—acting with the approval of President Truman—canceled the construction funds of the Navy for its new carrier. Previously Mr. Truman had twice authorized the building of the new carrier, and so had Congress on two occasions.

In public protest, John L. Sullivan, Secretary of the Navy, resigned last week. It was a courageous act, comparable to the valor of Winston Churchill and Anthony Eden in their protests against wrong policy in Britain.

A carrier Navy is the only kind of Navy needed today. It's naval air, plus submarines for offense and defense, that makes a Navy. The carrier, of course, does not proceed alone. It is part of a task force protected by other warships with antiaircraft batteries and radar to detect the approach of enemy planes and submarines.

A carrier Navy gives us mobile bases, thus making it unnecessary for America to be at the mercy always of European politicians. It is inexpensive insurance against the possibility that land bases might suddenly be wrested from present control by Communist infiltration into European governments before a war begins.

A carrier Navy can furnish bases in any of the seven oceans where wars are fought in modern times. We will need such mobile bases in the next war, particularly for use in the Indian Ocean and in and around the Persian Gulf and in the Mediterranean to protect our bases in North Africa.

A carrier Navy was never intended to do the job of strategic bombing. This was well done by the Army Air Corps in the last war. Strategic bombing should be the primary function of the Air Force. That is what the Key West agreement said. But it also said that there was no reason why the Air Force should not be given assistance from the naval arm and that this would be an important part of our operations.

A carrier Navy hunts down submarines and protects the supply line of a land-based Air Force.

A carrier Navy bombs shore installations where submarines are concentrated and drops mines in narrow straits and passages inland through which submarines must pass on their way to the seas.

Mine operations are a technical business in which the Navy has spent long years of experimentation.

Fight over 100 feet

The new carrier was to have been only 100 feet longer and 30 feet wider than carriers now in the fleet. Yet this change in dimensions meant that our naval aviators could go 1,700 miles and come back to the same ships, instead of going out only 900 miles. This added range meant not only increased efficiency in dropping mines but it also meant protection for the carrier fleet against the land-based aviation of the enemy.

The new carrier called for a kind of construction which would make it unsinkable. Security regulations prevent disclosure of details, but it can be stated positively that no submarine operation known today could sink the new carrier. It would carry its own protection against air attack, too. It should be remembered that no big or fast carrier of the United States Navy was sunk from the air or by submarine in the last war.

The cost of the new carrier is relatively small—the equivalent of the cost of two battleships at 1944 prices. The upkeep expense would be no more than that of any other large ship. The carrier planes themselves would have cost lots of money, but the Navy was willing to sacrifice other parts of its program to build its new carrier.

Weakening our defense

This, however, isn't the real point. It isn't merely the desire of the Navy to build a particular type of ship that is the heart of the controversy. The basic principle at issue is whether the Navy can run the Navy and the Air Force can run the Air Force and the Army can run the Army.

Today the veto of what one service shall do is held by the other two services in the Joint Chiefs of Staff. This is a grave mistake.

The first principle looking toward a sensible solution of all this is to insist that the strategy of the war be decided by the three armed services in collaboration in the future as has been the case in the past. This really has been accomplished already by the unanimous agreement reached at Key West last year by the Joint Chiefs of Staff. In that agreement missions were specifically outlined and everybody agreed as to their meaning. Now that agreement has been torn to shreds.

The next principle is to permit each service to be the judge of what tools it needs to carry out its missions.

Once a lump-sum budget for each service is approved by the President, the Secretary of Defense, and the Director of the Budget, the technicians of each service should decide for themselves how to use to best advantage the money allotted.

To allow the Secretary of Defense to decide technical issues of armament could weaken America's defense. One-man decisions have weakened the arms programs of other countries in the past. It has already done so for America. It's the way to lose a war.

Appropriations Reform Act of 1949

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1949

Mr. BYRNES of Wisconsin. Mr. Speaker, we will never achieve sound economy in the operation of the Federal Government until we drastically reform our present creaking and inadequate appropriating machinery. The purpose of the Appropriation Reform Act of 1949, which I have just introduced, is to provide a basis for that reform.

The announcement by the chairman of the House Appropriations Committee that action will be taken soon to adopt a single appropriation bill is welcome news indeed, but it is only the first short step. We need to do much more. We need to do more particularly in the all-important field of relating Government outgo to Government income and relating both income and outgo to prevailing economic conditions. This cannot be done by a single appropriation bill alone. We must revise the entire budgetary and appropriation process.

To further this objective, the appropriations reform bill provides for—

First. Performance budgets and appropriations.

Second. Reorganization of the legislative budget and the Legislative Budget Committee.

Third. A Joint Committee on Appropriations, as a vital counterpart of the Joint Committee on Internal Revenue Taxation.

Fourth. A new timetable for the submission of reports essential to sound budgeting and appropriating.

Fifth. A consolidated general appropriations bill.

The necessity for adopting "performance" budgets and appropriations and for consolidating appropriations has been made abundantly clear. It is enough to say that these reforms are essential.

The principal contention of this bill is that there are three basic elements which must be considered when we spend Government money. They are, first, the needs of the Government agencies; second, the Federal revenue; and, third, the impact of the economic situation on both. If we delude ourselves into think-

ing we have solved our appropriating difficulties by doing all our spending in one bill, we shall have committed a grievous error. We must, before we can act on any spending bill, establish a guide which will take all of these factors into consideration.

It is for this reason I propose, instead of discarding the legislative budget, that we make it work, and that we make it work in such a manner that it will reflect our spending needs, our income, and the effect of the economic climate on both. We must have a searching and intelligent look at the entire picture before we pass upon the details.

For these reasons the bill provides for:

First. A Joint Committee on Appropriations. We are sadly in need of a coordinating committee between the House and Senate Committees on Appropriations. We need a group which can concentrate on the over-all aspects of our appropriations and expenditures in fulfilling the needs of the Government. We need a group which can provide reliable and well-considered information to the Joint Committee on the Legislative Budget concerning expenditures and appropriations. We need a group which will work full-time at the improvement of the appropriation process. We need a group, in short, which will achieve the permanence and prestige in its field that the Joint Committee on Internal Revenue Taxation has in its.

The bill establishes such a committee. It consists of 10 members; the 3 ranking majority and the 2 ranking minority members from both the Senate and the House Committees on Appropriations. It is provided with an expert staff to assist it in its complex work.

Second. A new Legislative Budget Committee, with a full-time staff.

Since our guide, the legislative budget, should take into consideration our needs, our income, and the effect of economic conditions on both, representation on this committee is accorded to members vitally concerned with these aspects because of their membership on spending, taxing, and economic committees.

The bill proposes that the Legislative Budget Committee shall be composed of the 10 members of the Joint Committee on Internal Revenue Taxation, the 10 members of the Joint Committee on Appropriations, and 5 members from the Joint Committee on the Economic Report. The present one-hundred-odd-man committee, heavily weighted in favor of the appropriating committees, is thus replaced by a 25-member committee, with equal representation between spending and taxing groups and with substantial representation from the top economic group.

This committee will have available the studies of the three important committees from which it draws its membership as well as the staff work of those committees. It is provided, in addition, with a small but expert full-time staff which will correlate the gathering of facts and figures it needs.

Third. A new kind of legislative budget.

Experience has demonstrated the impracticability of the adoption of a legislative budget resolution by the Congress. The major effect of this provision has been, perhaps, the introduction of acrimonious debate based largely upon political considerations, resulting in confusion and loss of prestige for the budget itself.

The bill provides that the legislative budget shall consist of a report from the Legislative Budget Commission. It shall include the committee's estimates of the required receipts and expenditures, and contain the committee's recommendation for the amount to be appropriated in the consolidated appropriation bill.

Such a report will be a balanced guide for the Congress when it takes up the actual appropriation. It will represent the considered judgment of the best minds Congress can bring to bear upon, one, Government needs; two, Government revenues; and three, the effect of economic conditions on both. As such, prestige and authority would be attached to its recommendations, and Congress would be in a sounder position to examine critically the consolidated appropriation which would be reported later by the Appropriations Committees.

Beyond this strengthening of the legislative budget, the bill recognizes the importance of the reports and documents which are essential to the budgetary and appropriating process, particularly the proper timing of those reports.

It proposes the following timetable:

President's State of the Union message, January 1—approximately.

President's Economic Report, January 15.

Report of the Joint Eonomic Committee, March 1.

President's Budget Message, March 15.

Report of Legislative Budget Committee, April 15.

Report of Consolidated Appropriation bill, May 1—suggested.

The basic idea behind this revision of the present timetable is to enable the Congress and the President to consider more carefully the impact of economic conditions upon our spending and taxing. For instance, the President's Economic Report, now issued simultaneously with the budget document, would precede the latter by 2 months. This would serve to discourage an attempt to justify proposed fiscal policies in the economic document and would encourage instead the preparation of a budget document in the light of economic conditions spelled out in the report. Similarly, the Legislative Budget Committee would have available the report of the Joint Economic Committee, representing the Congress' views on the economic situation. In addition, the latter submission of the President's Budget should bring about more complete and better budget recommendations.

The bill contemplates that the Senate and House Appropriation Committees would begin work immediately after the start of each session on any preliminary or completed estimates for individual agencies as the Budget Bureau makes them available. Thus, no time would be lost by the subcommittees in their review of departmental and executive requests.

We cannot, any longer, afford the luxury of piece-meal appropriations. Neither can we afford to appropriate funds without intelligent consideration of the total impact of Federal spending and taxing upon our national economy, nor the impact of economic conditions upon our ability to spend and tax. This Congress must take immediate action on a thorough-going reform of our appropriating machinery.

New National Labor Relations Law

EXTENSION OF REMARKS

OF

HON. ANDREW JACOBS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1949

Mr. JACOBS. Mr. Speaker, I have prepared and introduced a bill as a proposal for a new national labor relations law.

It was my purpose to make three general provisions:

First. To protect the right of each party to the bargain to organize and select representatives free from economic coercion from the other and to require such representatives to meet and bargain collectively—section 8 (a).

Second. To prescribe that such organizations so protected recognize and honor their public obligations by accepting qualified members and recognize and honor the natural democratic rights of those members—section 8 (b).

Third. That such organizations recognize and honor the public interest by the maintenance of such minimum production and service as is necessary to protect national health and safety—section 8 (c).

Every provision in this bill applies with exactly the same force and in the same terms to both sides.

True, one or the other side may be a more frequent violator of a given provision. But, aside from any technical error, this bill furnishes a sound, fair, and equitable body of rules by which labor and management can exercise their legitimate rights within the public interest.

In drawing these provisions I have striven to phrase them in keeping with principles of free enterprise.

For example, the Government dictates no terms of the labor contract, save and except when substantially all of an industry is covered. Then the bill prescribes that the parties shall provide for that minimum production or service necessary to protect national health and safety. Such provisions are subject to Board approval.

This regulation applies only to cases where it would become imperative for the Government to act when tempers are hot. Therefore I deem it the part of wisdom to require these provisions to be made in advance, as a condition of having so large a unit for bargaining purposes.

I have attempted to provide fair but adequate and firm remedies, seasonably obtainable, but without ex parte or preadjudication orders and decrees on less

UNIVERSITY OF MICHIGAN LIBRARIES

than the merits of the case. Such remedies are equally applicable to all parties.

In no instance are these provisions firmly bound to the thinking of any one person or group. What I thought was fair I included, or added; what appeared impractical or bad, I omitted.

Present Economic Conditions in Poland

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 31, 1949

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article on the present Polish economic conditions, which is most interesting and informative. The article also shows all conditions to be chaotic. The people of Poland constantly are feeling the nearness of Stalin.

The article follows:

"DEAR FREE WORLD, I AM WRITING TO TELL YOU WHAT IT IS LIKE IN POLAND"

(The scene is Poland. But it is a scene perceived only momentarily as the curtain parts. What is it like, asked a Polish émigré in western Europe, hoping to return. The answer came from a friend in Warsaw—able to send out a letter through uncensored channels. This is a translation of the letter, published originally in Polish. It applies to a relatively small segment of the Polish population—the white-collar workers and lower-bracket state employees. It does not speak for larger groups such as workers and farmers, who in some respects are relatively better off.)

In view of your desire to return to Poland (the letter read), I want you to understand clearly what your life here would be. I shall not write about the terror that prevails here, of the arrests and overcrowded prisons. You have heard about these things from your press.

What I want to write you about is the life of the average person, say a government employee, called a member of the working intellegentsia, someone, let us say, not burdened by any past political affiliations or connections with Fascist Poles.

Because you are young and have finished your studies you would find work quickly. The papers carry many advertisements promising good situations to teachers, doctors, engineers, mechanics, skilled workers, bookkeepers, etc. Let us look at these good positions that await you, the same good conditions in practically every office and state institution.

You might be able to get a salary of twelve thousand to fifteen thousand zlotys a month ($120 to $150 at the official exchange rate). A 20,000 zloty salary cannot be dreamed of by an ordinary government employee. Since you have no dependents, and with your university diploma you can get a seventh- or eighth-category job, carrying a 15,000-zloty salary, you will not starve. For about 1,500 zlotys a month, you can get your lunches in the dining room of the institution or office where you work. In some places the food will not be enough, to be sure; but that varies with the institution, dependent upon the management's honesty and efficiency.

To give you an idea how far your salary would carry you, here are the prices of some of the more important goods and services:

A pound of bread, 16 cents; a pound of flour, 63 cents; a pound of butter, $3.17; a pound of pork, $1.73, and of beef, $2.04; a pound of sugar, 82 cents; 5 pounds of potatoes, 33 cents; a pound of apples, $1.50 to $2; a pound of soap, $2.68; a pound of tea, $20 to $27.

An egg will cost you 20 cents, and a small roll 9 cents. For a streetcar ride you have to pay 10 cents to 15 cents; the fares vary in different cities.

If your shoes need a new pair of halfsoles, that will set you back by some $20, and if you insist on using tooth paste, you will have to pay $1 for a tube.

(For the convenience of our readers, the prices which were quoted in the original in zlotys for kilograms have been changed in dollar-cent prices for pounds.)

But do not think that you will always find everything you want. There are long periods when you cannot find either meat, butter, or sugar at any price. Right now we are in such a period. It has already lasted over 4 months.

And that you may not get a wrong impression, I must explain that the prices I have given you are those of the period before this shortage began. It is impossible to say what prices are today. There is neither meat nor any fat to be found now.

To go back to the matter of your returning. You should by all means bring enough shoes to last you several years, for one pair here costs from $150 to $200. Of course, the "world of labor" can get shoes through state factories at official prices, which are low, but:

1. The good luck of obtaining shoes this way is rare. (I have had such good fortune only once in the past 3 years.)

2. And the good luck is questionable. For the state factories turn out exceedingly shoddy production and the footwear from the Czech factories, with which we are supplied at 3,000 to 6,000 zlotys a pair, although a bit better, also goes to pieces very quickly.

Moreover there is no assurance that when you get a shoe coupon you will be able to buy shoes for yourself.

The clothing problem is equally trying. The official price for material from the state factories is about $60 a yard. The choice of material, shirts, and socks is very limited. The same materials and designs are found in all the stores, prices, of course, everywhere the same. If you want a blue shirt and do not find one in the first two stores you visit, but only white and green, you may save yourself further searching. You would not find a blue shirt in any store in Poland.

If, to your absolutely necessary expenses, you add the cost of light, gas, and heat * * * little will remain of your salary; but to that calculated expense you must add the monthly rent, which practically always exceeds our ability to pay. But the question of living quarters requires so much discussion that I shall leave that for another letter.

John Joseph Delaney

MEMORIAL ADDRESS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1949

On the life, character, and public service of Hon. JOHN JOSEPH DELANEY, late a Representative from the State of New York

Mr. SABATH. Mr. Speaker, the passing of Mr. DELANEY at the ripe age of 70 ends a life of great usefulness to the Nation, the State of New York, and his enlightened constituency. The most productive and salutary part of his life was devoted to the public service, in which he rose to monumental stature in an era of great and intelligent men.

If I mistake not, when our friend first came here in 1917 he was junior in years and Uncle Joe Cannon was senior in years. But he learned the difficult science of sound government rapidly and accurately.

In the sorrow of our parting, when the activity of his human life has ceased, and when our hearts and minds endeavor to fill the void that his going has left in our lives, we can best realize his worth, the need of him each individual soul amongst us had, and his value to the House of Representatives and orderly government of which he was so able a defender and whose principles he so luminously expounded.

I had the pleasure and satisfaction of serving with our honored dead during all his term. When he returned to Congress he became a very useful member of the Committee on Naval Affairs because of the special interest of his district in the Brooklyn Navy Yard. He served a good novitiate with that committee and then graduated to the important Committee on Rules, where I found him to be a consistently wise, conservative, dependable counselor in dealing with the multifarious and gigantic problems committed to that committee, especially during the war. Mr. DELANEY was in no sense provincial, but always viewed impending legislation from the viewpoint of how it would affect our whole Nation. Urbacity was a complete stranger to his character. His every thought was to advance the interests of the United States; and he possessed a keen, analytical mind.

Only in what a man does, in what he continues to do, and persists in doing, can he show character; and in this sense never was there a firmer, more consistent man than Mr. DELANEY. He was one of deep convictions; he feared nothing but God and the possibility of making a serious mistake.

His simplicity of character, so at war with pretense and affectation of all kinds, was supported by a reserve mental power which, when occasion called it forth, was a surprise to those who knew him but slightly. Indeed, the aim of his intellectual life in its entirety was to be rather than to seem. In short, he was genuine to the core.

The life and work of Mr. DELANEY are his best panegyric.

Today we find welcome consolation in the thought that our distinguished former colleague, though dead, is not entirely lost to us. We are taught by the spontaneous tribute paid on every side to his civic and governmental usefulness that the American people still gratefully dwell upon disinterested service for the public weal, and that patriotic impulses and high ideals still have an abiding place in the affections of the American people.

If we may hope that the teaching and example of our beloved dead have been endued by death with new potency, as forces creating better and purer citizen-

ship, and with graver import as instrumentalities in the development and stimulation of patriotic ideals, and if we may hope that our countrymen will with sincerity heed the way of civic and political duty they point out, we may not only be doubly sure that our dead is not lost to us, but may with confidence renew our faith in the American people as custodians of their scheme of free government.

Some men, when they die after busy, toilsome, successful lives, leave a great stock of scrip and securities, of acres, or factories, or the good will of great undertakings. Mr. DELANEY banked his treasure in the hearts of his friends, and they will cherish his memory till their time is come.

It is my pleasure to know our deceased's gracious wife, his son and daughter, to whom our sincere compassion goes unremittingly. May they find comfort in the great and good work their husband and father left as a priceless legacy.

Here today, amid memories so sacred and so sad, no discordant notes will rise in connection with him who is passed into the serenity of that cloudless life, wherein dwells eternal peace for all who receive the approval of the Divine Beneficence.

In conclusion let us sincerely believe that so long as men of Mr. DELANEY'S character and ability serve the Nation venality will never come nigh or menace us. Let us confidently realize that so long as public servants of his character and ability are in control, this great Republic will not be conquered and will not fail, and its renown, triumphing over every ordeal, will long shine among men.

Meet Some More Capitalists

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald, and I have added to it a statement of 200 foremen in a western New York company:

[From the Washington Times-Herald]

MEET SOME MORE CAPITALISTS

"Like To Meet a Capitalist?" is the title of a striking advertisement being circulated by the Union Oil Co. of California.

The capitalist whom you meet in the ad is one Bill Ryan, a foreman mechanic for a Long Beach, Calif., water company. He is a capitalist, because he owns 100 shares of Union Oil stock, which he began buying in 1940. That makes Mr. Ryan a part owner of the oil company.

Ryan, the ad goes on to report, is only one of the concern's 34,229 common-stock holders. The average number of shares held per person is 137; and the largest single stockholder owns only 1 percent of the total number of shares outstanding. All these people get cut in on the company's profits via dividends on their stocks.

We would like in this editorial to mention some more capitalists. The piece is one of a series in which we're attempting to explode some of the lies peddled around by the Communists and Socialist enemies of the United States capitalistic system.

The Marxist lie at which this editorial is aimed is the one about how only a handful of fat-slob capitalists own all the wealth-producing mechanisms of the United States and skim off the cream for their dastardly selves and families.

A considerably bigger corporation than Union Oil, and one of the chief villains in the Red-Pink horror stories, is United States Steel, chaired these days by Irving S. Olds.

If United States Steel is a malefactor of great wealth, then it has a lot of rascals aboard its pirate ship—228,006, to be exact. That was the number, in February 1949, of holders of Big Steel's common and preferred stocks.

Another large United States corporation is American Telephone and Telegraph. A. T. & T. is not owned by the descendants of Alexander Graham Bell, who invented the telephone. It has a total of 764,000 stockholders, most of them people of low or medium incomes, owning 30 shares apiece on an average.

SEVENTY-EIGHT MILLION CAPITALISTS

General Motors' capitalist-owners add up to 433,000. Of these, 320,000 own 50 shares or less apiece, and 140,000 own 10 shares per head.

Standard Oil of New Jersey, another bogeyman of the Marxists, is owned by the Rockefellers and 200,000 other guys and gals. The Pennsylvania Railroad has 208,000 owners; General Electric, 249,000; Radio Corp. of America, 206,000; United Fruit, 54,185; Standard Steel Spring Co., 7,400.

All these people, to repeat, are capitalists by strict Marxist definition. The complete picture of this phase of capitalism in the United States is that a total of 18,000,000 people hold stock in American corporations—meaning they share in the ownership of the means of production, and participate in the profits.

But our capitalist population is not limited to these 18,000,000 stockholders. Anybody who has an insurance policy is a capitalist—because the insurance companies invest their money in business stocks and bonds, and if those investments should quit paying profits the insurance companies would go bust and their policyholders would lose accordingly. The total number of life insurance owners in the United States last year was 78,000,000.

Since there are only an estimated 148,000,000 people in this country, the chances are somewhat better than 2 to 1 that if you want to meet a capitalist you have only to shake hands with yourself. And if you aren't a capitalist now, you hope to be one some day, unless you're devoid of ambition, which few Americans are.

BEWARE OF TERMITES

We have a considerable number of people who are determined to destroy the capitalist system—either by direct, violent action in the Communist tradition, or by overloading business with taxes and indirect charges and restrictions to the point where the Government will have to take over to keep things running.

If you're a capitalist now, it is to your vital interest that your stocks go on paying dividends or your insurance policy continue good. If you hope some day to be a capitalist, you surely want to buy into one or more solvent, profitable companies.

Therefore, it is to the vital interest of perhaps 145,000,000 of us to fight these would-be destroyers of United States capitalism in every way we can, and to keep on fighting them.

Some 200 foremen in a western New York company made up the following list of how profits are used:

To pay dividends to owners.
To increase credit standing.
To expand or modernize present plant or to build new ones.
To buy new machinery and equipment.
To pay for product and customer research.
To expand markets.
To protect the business during hard times.
To create more and steadier jobs.
To create better jobs.
To endow colleges, libraries, churches.
To foster medical and other public service institutes.
To help support the Red Cross, the Boy and Girl Scouts, YMCA, etc.

Two thoughts must come to our minds as we read over the list of things done with profits. Those things, in the first place, can get done because someone, somewhere, sometime, somehow managed to judge right and made more money than he needed for immediate use. He made a profit. Secondly, we must conclude that since the use of profits is so highly constructive, the making of profits should be encouraged. (From Trained Men, published by International Correspondence Schools.)

Draw Your Own Conclusions

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1949

Mr. WHITE of Idaho. Mr. Speaker, under leave to extend my remarks, I wish to include the following paragraphs from Sun and Mankind, by J. C. Piver:

On March 24, 1945, the Allies crossed the Rhine. The young people who surrounded us while we heard the news on the radio were not overly concerned about this event, one which we considered so transcendental, on a par with the return to the Ark of the dove with the olive branch in its mouth, signifying the end of the flood.

The men of our generation (1887) knew and should not forget the happy world of 1900–14, when one could travel all over Europe and America, nearly across the entire globe, without any need of a passport, identification papers, or any other document. Merely with a handful of pounds sterling, francs, florins, or gold marks, we used to come and go without the least difficulty, with such ease that it seems to us nowadays like a fairy tale. But how difficult it is for the present generation to visualize those good old days of yesteryear. They will hardly believe us when we recount them, and the experience of others is of little or no use to them.

Before going into the matter I think it is necessary to state in the first place that there are very few men of my generation left, especially those who have traveled as much as I have, and of these very few indeed who interested themselves in financial matters, a subject generally considered as boring by the majority of mankind.

I remember perfectly well that one morning in 1911 when I was a young man, in one of my trips to South Africa, I read in the papers that a German steamer was leaving the next day for Hamburg. I reached for the phone and asked the steamship company if a single cabin was available and they told me that it was. The next morning I went on board with two handbags, gave my ticket to the steward, locked my cabin, and

UNIVERSITY OF MICHIGAN LIBRARIES

went on deck to watch the departure—there was no other formality. During the trip I, of course, landed at every port without any identification paper or document whatsoever.

I remember that this crossing was made at the beginning of the year. We left Capetown in full summer and therefore we expected to feel bitter cold in Biscaya and the North Sea. I went to the radio station and sent a message to the Avenida Palace Hotel (agents of the Wagons Lits in Lisbon) asking them to reserve for me a single cabin on the Sud Express leaving Lisbon on the next day. I received a reply confirming my reservation. The next day, instead of remaining on board en route to Bologne, I landed at Lisbon, took a taxi to the Avenida Palace Hotel, asked the porter of the hotel for my ticket, and right on the ground floor of the hotel was the Sud Express train ready to leave. I handed my baggage to the conductor, sat on my wagon lit seat and off we went, first to the Spanish frontier and then to Irun, Hendaye, Paris. In this manner I avoided the bad weather in Biscaya and reached Paris 2 days in advance—all this without a personal document, passport, control of exchange, letter of credit, checkbook, or the kind of money people carry in their pockets today.

I want people to know and remember how easily one could travel in those days all over the world. To take a steamer for any country in the world was as easy as taking a taxi or a streetcar in your own city.

But for those of us who have lived through those wonderful days, it would be well to reflect and to endeavor to answer two questions:

1. What caused the unprecedented gigantic catastrophe of 1914? and

2. Why 25 years later (in the same generation) was it followed by another cataclysm comparable solely to the universal flood?

Sol Bloom

MEMORIAL ADDRESS

OF

HON. ADOLPH J. SABATH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1949

On the life, character, and public service of Hon. SOL BLOOM, late a Representative from the State of New York

Mr. SABATH. Mr. Speaker, the picture of life, as I have it in mind, is the process of movement from the base to the summit. It is always uphill, never down, and because it is always up, it is obvious and evident enough that some people never make it. Some people carry into life such a frivilous and polyandrous spirit that they never experience the thrill of the cool fresh atmosphere after having arrived at the summit. They play out on the way, because they do not know that life, basically, is a serious business. And then there are others, because they have drenched life in cinicism and despair, laughing jokingly at values and the attempts on the part of groups to establish values as central goals in life, who go through the slow process of self-strangulation. They know not the thrill of the arrival.

The subject of our eulogies of this hour was one who, in the face of almost unsurmountable obstacles, painfully wended his way along the thorny path to the summit. SOL realized that struggle always meant strength; he knew that pursuit built endurance, and only those who stood and laughed in the face of failure and stood up to fight again deserved the fruits of victory.

Born in Pekin, Ill., in 1870, he was unfortunate enough, through fortuitous circumstances, to be deprived of an early education; but extraordinary native ability provided the spur that well bridged that void.

When Mr. BLOOM first came to Congress the then Parliamentarian, Mr. Fess, was conducting a group that had for its purpose familiarizing new Members with parliamentary procedure, and Mr. BLOOM was a very attentive member of that group. From the very first to the last he took his work here very seriously. And he was ever engaged in the acquisition of knowledge that would better fit him for the duties and responsibilities that he suspected would some day, as they did, devolve upon him as head of the important Committee on Foreign Affairs.

Few of us appreciate the vast expenditure of his own time and money our friend made in traveling repeatedly to almost all the chancellories of the world to acquaint himself with first-hand knowledge of international conditions so that he might be well prepared here to act wisely and counsel his colleagues in connection with foreign affairs. Then, too, he devoted a great deal of his time to the study of history and economics, always stressing the international aspects.

And not only did our beloved dead visit the chancellories of the world. He associated intimately with and encouraged the humbler masses to look forward toward a better day everywhere he went. Few Americans were better and more favorably known throughout Europe, among all segments of the population, than was Mr. BLOOM, because he was their friend and always had an inspiring word and deed for their appeals for a more favorable status. He, having long suffered the pangs of severe adversity, well knew and understood the deserved requirements of the meek and the lowly. His knowledge in that connection was not theoretical or academic, but was very real; and he remedied conditions as best he could not only by word but by deed. In the field of philanthropy, for which he will long be gratefully remembered, he was practical rather than wordy.

Mr. BLOOM'S phenomenal success in private business is too well known to merit repetition; but I am sure that such success afforded him far less satisfaction than did his contant world-wide efforts to make this a better world for willing and righteous men and women. Doubtless he could have amassed a stupendous fortune in dollars and cents if he had confined his talents to, say, the real estate business in which he experienced an inordinate success; but would that transcend business success have elicited the spontaneous tribute from all over the world, or most of it, we heard when he left us? Would that great business success have satisfied the controlling yearnings of his philanthropic soul? I imagine he would rather have been what he was among us here than to possess all the material wealth of this world, because he never measured life and success from the dollars-and-cents viewpoint.

I look for qualities to explain such a life, because it cries out in my nature that such must be done, not because of some traditional reason but because we want to have some goals toward which our own lives can move in the days to come. In Mr. BLOOM I find such qualities as solidarity, strength, stanchness, stability, and superiority as descriptive terms of the type of abundant living that he has moved into, having merited what we call this earthly life abundant.

I always go back for some reason why a man is what he is, why he thinks like he thinks, why he does what he does. I shall try to ravel or unravel that secret as I have understood our good friend, Mr. BLOOM, through the many years of our association here. First of all, there was a solid personal character that we looked at, and that does not just happen all of a sudden. There are some reasons back behind life that is so nobly enriched because a person like him has lived. I am thinking in terms of his mind. Certainly the heredity of the bloodstream did present to him potentialities in the area of the mental; and, as I have suggested, he filled the void incident to lack of early schooling with a native ability and close and assiduous study all of his adult life. There was that important parental gift of native ability and strong, good character.

He seemed always to aline himself effectively on the side of rightness, justice, and even mercy. He had a concept of work that belongs to his secret nature, knowing that man must work and he has no other choice. But one can work as a man or he can work as a machine; he can work drudgingly or he can work gratefully; he can take a very low kind of work and exalt it; he can take the impassive sort of work and breathe the soul of life into it, or he can take the dull type of work and enliven it. And how our Nation in this day and time needs to get afresh this kind of concept of work—that it belongs in the central nature and character of successful men and women. I would not leave out the soul of the man for that is what makes him tick, so to speak. He had built along the line of life some chapels in his soul.

Mr. BLOOM knew, as many of us know, that there were some demands that life placed upon him that his own personal strength could not measure up to; that his own wisdom was not equal to the calls of the days in which he lived; and the establishment of reserve seats in his soul saved him time and time again from weakness to the way of strength.

And then some strong family life was his, for most of us are not what we are by ourselves. There are others that have stood in the shadows and encouraged and urged us on. And so in the family relation I think that is the reason God has arranged it so. He inspired because he was inspired, and all principles of the direction of home life were on the basis of the Ten Commandments, feeling there could not be any repeal of those made in life; that they were stalwart,

strong, controlling and could not be pushed over.

This good man would encourage without making egoists; he would provide opportunities without spoiling; discipline would be employed that would not break the spirit.

Aside from his official status he was stanch as a resident of this community also, and when all the monuments are in one will not be greater than the other, but this one is near the head of the list. His power to meet those who are called average citizens and to spill some of his wisdom and counsel over into them will always leave them wealthier.

Honor was at the very seat and very nature of himself, and he would not divorce it for any cause of unrighteous living that could be named. He was for the way of right and supported causes that would build up the spirit, and enthusiasms and salutary living in anybody's community.

But over these 26 years of public service the supreme recommendation that can be given to him is the broad and penetrating service he rendered as a seasoned, practical legislator. He was always burdened with the idea that posterity would catch up with him if he did not do just exactly right, and when he gave his promise or acted, it was the most honorable representation of his mind and spirit that could be made. We all know that, based upon performance alone, history will do this good man justice.

Nobody in an official relationship shall miss his mortal presence more than I, because he was a very definite asset to me over many, many years. I was pained when we stood in the presence of his deceased dear wife, his constant inspiration throughout the years, and his only solace were his confident faith in a future life and the continuing companionship of his talented daughter, who is, fortunately, left to carry on the Bloom tradition. Certainly that same amiable sentiment is cherished by the many thousands of Mr. BLOOM's beneficiaries, not only in this country but throughout the whole world.

Thus it is we stand today with reverence and affection to pay our poor and imperfect tribute to a noble son of the Republic. Fitly we apply to him the ancient words of the proverb writer, "Seest thou a man diligent in business? He shall stand before kings."

Worthily he lived, worthily he served. We honor him for what he was and for what he did. Shall we not believe that to him, as to the great laureate of England, these lines summed up his triumphant hope and unfailing faith:

Sunset and evening star,
And one clear call for me.
And may there be no moaning of the bar,
When I put out to sea.

But such a tide as moving seems asleep,
Too full for sound and foam,
When that which drew from out the boundless deep
Turns again home.

Twilight and evening bell,
And after that the dark.
And may there be no sadness of farewell,
When I embark.

For tho' from out our bourne of Time and Place
The flood may bear me far,
I hope to see my Pilot face to face
When I have crost the bar.

Faithful and chivalrous servant of the Republic, hail and farewell.

Secretary Brannan's Farm Proposal

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 31, 1949

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks, I include a splendid and very objective editorial taken from the May 28 issue of the Daily Pantagraph of Bloomington, Ill. This editorial deals with Secretary Brannan's farm proposal and sets forth various reasons why this measure should be most carefully and thoroughly studied by all Members of Congress. My purpose in placing this editorial in the RECORD is that Members may learn, through reading this editorial, what the Brannan farm proposal really would do if ever enacted into law.

BRANNAN'S FARM PROPOSAL WOULD REGIMENT ECONOMY

(By the Pantagraph)

Reasons why the Illinois Agricultural Association opposes the Brannan national farm program are clearly and forcibly presented in the adjoining column by F. E. Morris, vice president of the association. We commend a careful reading of Mr. Morris' letter.

It is called a farm program, but it actually pretends to offer more to the 80 percent of the nonfarm population. It proposes to pay a part of the grocery bill for this 80 percent. And all experience of Government assistance has shown that a little help calls for more and more help. All experience also has shown that more Federal and State help calls for more and more taxes. This boils down to letting Uncle Sam collect and spend our incomes. That is not capitalism and it is not free enterprise.

One point not developed by Mr. Morris is the inevitable growth of bureaucracy under the Brannan plan. Hundreds of thousands, if not millions, of Government workers and committeemen would be needed to check every detail of what every farmer got for his eggs, for instance, and what Uncle Sam should pay him to make the egg business profitable. This proposed increase in bureaucracy comes at a time when the farmers and the townspeople long for less control. Some farm committeemen are retiring because of the complications of the present plan that compared to Brannan's proposal, is simple indeed.

There is still another great loophole in the Brannan plan. It seeks to set a high price for the farmer and a low price for the consumer. But there is no guaranty that such would prevail. The price on which the subsidy is figured for the farmer is based on his sale price. And that is the price upon which the citizen will have to pay his tax bill to support the subsidy. But that does not mean the consumer will buy food at the price the farmer gets for it.

Take fresh vegetables as an example. The farmer sells to a buyer or commission firm. That firm sells to another commission firm or a wholesaler. The wholesaler sells to the grocer and he in turn sells to the consumer. Mr. Brannan has offered no assurance that the price of the vegetables would be any less to the consumer than they are now. The middlemen could easily be the greatest benefactors of this program. Actually the consumer could be subsidizing both the farmer and the middleman.

Farmers of Illinois do not want this program. Consumers who have an objective look should be even more opposed to it. We urge them to make their Representatives in Washington aware of their views. The issue is socialism versus an improved free competitive-enterprise system. If prices are to be guaranteed for the farmers and the consumers, then the rest of the economy cannot escape rigid controls. That means the end of freedom and initiative.

Statement of Hon. Lindsay C. Warren Before Senate Appropriations Committee

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Wednesday, June 1 (legislative day of Monday, May 23), 1949

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting and valuable statement made today by the Honorable Lindsay C. Warren, Comptroller General of the United States, before the Independent Offices Subcommittee of the Senate Appropriations Committee. The statement contains some most valuable information with respect to the work of the General Accounting Office.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and members of the subcommittee, I had hoped to use this opportunity to appear before your committee to discuss the work of the General Accounting Office in a general way. Due to the developments on our appropriation in the House, however, I am forced to place the major emphasis on a request which is entirely foreign to my nature; namely, the restoration of the full amount included in the budget estimates for the work of the General Accounting Office for the fiscal year 1950. The work of the Office is nothing new to most of you. We are not an Office of programs and projects. We are required by law to audit all Federal expenditures, and we have no choice as to whether we will conduct an audit or not. For a number of years there have been multibillion-dollar appropriations for Government. The result is that the audit and related tasks of the General Accounting Office have increased many times.

As a result of the war and postwar years, during which the appropriations for the Government reached an all-time high, the personnel of the General Accounting Office hit a peak of 14,904 in April 1946. Since that time, voluntarily and without any urging from the Congress, the number of personnel has been steadily reduced. There are now on the rolls 9,450 employees, a reduction of 5,454 in 3 years. It is my plan to continue this policy vigorously to the full extent consistent with the effective and timely performance of all duties with which the Office is charged.

UNIVERSITY OF MICHIGAN LIBRARIES

The estimates for the General Accounting Office for the fiscal year 1950 were very carefully prepared under my specific mandate that they were to be held to the absolute minimum under which we could carry on our work. Even after they had been submitted to the Bureau of the Budget, they were again gone over at the request of the then Director, Mr. James E. Webb, and reduced $388,000. Any cut now made in the estimates as submitted will force the serious curtailment of all activities of the General Accounting Office, and will cripple such constructive work as the audit of Government collections and expenditures, the development and installation of effective accounting systems, the audit of Government corporations, and the audit of wartime transportation vouchers, functions that are returning real money to the Federal Treasury and producing savings, in some cases many times the cost of their operations.

The report of the Committee on Appropriations of the House indicates that the recommendation for a reduction in the estimates for the General Accounting Office adopted by the House was made reluctantly and was based on the premise that there is a definite relationship between General Accounting Office appropriations and total appropriations for the Government. The report states that the General Accounting Office estimates for fiscal 1950 are more than six times the amount available for general activities of the Office during fiscal 1940, whereas the appropriations requested for the entire Government for fiscal 1950 are only three and one-half times the 1940 appropriations.

While I agree that there is a general relationship between our appropriations and those for the entire Government, I think it only fair in making any comparison between the two fiscal years to consider the entire amount available to the General Accounting Office for 1940, including the amount appropriated to the Office in the Emergency Relief Appropriation Act of 1939. This latter amount was not for relief projects, but for auditing, accounting, decision, investigating, and claims activities—no different than those having to do with regular Government expenditures. Including this amount, there was available to the General Accounting Office for fiscal year 1940, $10,531,540. Comparing this total with the estimate for 1950, the increase in our estimates is directly in proportion to the increase in the total appropriations requested for the Government for 1950 over the total appropriated for 1940—and this despite the fact that salary rates are now much higher than in 1940.

Moreover, I should like to point out, with all modesty, that the General Accounting Office as it now stands is not the same office it was a few years ago. Many new duties have been added by the Congress, and new approaches have been taken in performing our work which have made it more valuable not only in terms of money actually recovered and returned to the Treasury, but in terms of increased economy and efficiency. From 1940 to April 30 of this year the Office collected or caused to be collected and paid into the Treasury more than $635,000,000—almost two and one-half times the total cost of operation of the Office. The collection figure for the last fiscal year was approximately $107,000,000. For the current fiscal year to April 30 the figure is over $76,000,000.

A partial list of new duties imposed on the Office by law since 1941 can be found at page 976 of the House hearings on this bill. It includes those added by the Certifying Officers Liability Act; other related acts which tremendously increased our responsibilities in the audit of transportation payments; the George Act and the Government Corporation Control Act requiring us to audit all Government corporations; the Legislative Reorganization Act of 1946; and provisions of the Independent Offices Appropriation Acts with reference to property accounting (sec. 107 of this bill). These new duties, together with the increased use being made of the Office as the agent of the Congress by the Congress and its committees, take the daily time of hundreds of our employees and are among the most constructive and productive functions of the Office.

If the 10 percent cut in the General Accounting Office appropriations is allowed to stand it will have a drastic effect on every branch of our work, and will produce delays in meeting the work loads of the Office which may well result in loss to the Government far greater than any economy effected. I should like to mention briefly how this cut will affect the operating divisions of the Office.

OFFICE OF THE GENERAL COUNSEL

This particular office is responsible for considering all our legal questions. Such questions include matters arising in the various divisions as well as requests for decisions from the heads of the departments and agencies, as to the legality of proposed expenditures. This latter class is of extreme importance because such requests for decisions are made in advance of payments and involve, in some instances, the legality of entire Government programs as distinguished from payments in individual cases. We are always under the gun, and properly so, to dispose of such cases at the earliest possible moment. A 10-percent cut in the estimated cost of operating this office for 1950 will just about double the backlog of cases anticipated on June 30, 1950—in terms of time, there would be a 4 months' backlog.

CORPORATION AUDITS DIVISION

This division is responsible for the audit by commercial-audit methods of transactions of all Government corporations. The Government Corporation Control Act requires reports of our audits of these corporations to be made to the Congress not later than January 15 following the close of the fiscal year for which the audit is made. One of the reasons for placing this requirement in the law was so the Congress could have timely benefit of the reports in appraising the results of the corporations' programs and in passing on their requests for further funds. In making the reports we have furnished a résumé of the entire operation of each corporation and have made recommendations for changes in organization and methods and for new legislation, where necessary. Due to the tremendous backlog of work caused by our having to go back one full fiscal year at the inception of the audit, and to the difficulty of obtaining qualified personnel in sufficient numbers, we have not as yet been able to meet the deadline. As of now, there are 4 reports still due for the fiscal year 1946, 7 for the year 1947, and 15 for the year 1948. However, the reports that have been made, even though late, have had a valuable effect. They have contributed to the reduction in the number of Government corporations, and in just two cases have resulted in the payment of dividends to the Treasury approximating $22,000,000. We are presently exerting every effort to put this work on a current basis so that the audit reports will fully serve the purpose of the Corporation Control Act and be of greater use to the Congress and its committees than in the past. A reduction in funds for this work will prevent us from achieving this end.

ACCOUNTING SYSTEMS DIVISION

On January 6, 1948, after having been assured of the active assistance and cooperation of the Secretary of the Treasury and the Director of the Bureau of the Budget, I established in my immediate office the Accounting Systems Division and assigned to it the responsibility of developing, in cooperation with the Bureau of the Budget and the Treasury Department and all other interested departments and agencies, sound basic principles of accounting upon which can be built accounting systems designed to meet the requirements of the Congress, the executive branch of the Government, and the General Accounting Office. This joint accounting program, which is embodied more formally in documents signed January 6, 1949, by the Secretary of the Treasury, the Director of the Bureau of the Budget, and myself, contemplates the full development of sound accounting within each agency as a working arm of management in terms of financial information and control. At the same time, it envisions an integrated pattern of accounting and financial reporting for the Government as a whole responsive to the executive and legislative needs and adequately disclosing the financial condition of the Government. Recognition will be given to the need for a flexible basis for accounting development within agencies in the light of varying types of operations and management problems and to over-all fiscal reporting and auditing responsibilities. The accounting and reporting principles, standards, and basic procedures established will take into consideration the various areas of responsibility involved, the elimination of overlapping operations and paper work, and the fuller appreciation of efficient methods and techniques in accounting operations throughout the Government. Both savings in particular areas and much more effective results of accounting work are expected to grow out of this program. This is already being demonstrated in actual operation.

To curtail this activity at the present time would be a waste of much of the developmental work that has already been put into the program by Budget, Treasury, and the General Accounting Office and would most seriously retard the improvement of Government accounting.

CLAIMS DIVISION

The Claims Division handles one of our biggest jobs. It settles claims against the Government and collects debts due the Government. Last year over 300,000 claims were settled—$92,000,000 allowed and $17,000,000 disallowed. In addition this division collected for the Government $7,691,000. One of our current campaigns is to get up to date on the tremendous volume of war and postwar claims. This is not an easy task when we must ferret out the facts in each case and when most perplexing legal problems must be decided before a determination can be made as to whom and what to pay. We are presently disposing of some 18,000 claims a month but, conservatively estimated, we still have a 4 months' backlog. A reduction in funds for this work would not only delay consideration of claims of individuals against the Government but would also seriously affect collection of amounts due the United States. The backlog of work would materially increase and I have no hesitancy in saying that in some cases it would be many months before a claim could be reached for consideration. This activity is peculiarly close to the citizens and taxpayers of our country. With the present activities of the Government being of such magnitude many citizens become involved in claims against the Government or claims of the Government. If such claims do not receive prompt consideration—which they certainly should have—you gentlemen hear about it, and I hear about it.

AUDIT DIVISION

This division is responsible for the post audit of all Federal expenditures, with exceptions such as expenditures made

portation, expenditures by Government corporations, and expenditures made by the Post Office Department. It must not only see that payments made by the departments and agencies were legal and applied solely to the objects for which the appropriations were made, but also must enforce hundreds of restrictions and prohibitions which have been enacted into law. Audits are conducted both in the field and in Washington, and the transactions which must be examined are governed solely by the size and activities of the Government. This year this division will audit about 18,000,000 vouchers and examine well over 1,000,000 contracts. Collections as a result of the audit will exceed $13,000,000. At present the field audit is practically current, but the Washington audit is 12 months behind. We are committed to extension of on-the-site audits under proper conditions. A reduction in the audit force will prevent expansion of field programs, require discontinuance of recent field installations as well as the curtailment of others, and will materially increase the backlog of unaudited vouchers. The effectiveness which is gained from current and on-the-site audits will be lost to a considerable extent.

POSTAL ACCOUNTS DIVISION

This division is charged with auditing the multibillion dollar business of the Post Office Department and the postal service. The accounts and claims audited and settled arise from the activities of some 40,000 post offices, constituting the largest and most widespread public utility in the Nation. During the past 2 years there has been a marked increase in the volume of money orders and postal notes received, and present trends indicate this increase will continue. This operation is different from others in that the General Accounting Office does most of the administrative accounting work for the Post Office Department and the postal service. It is essential that this work be kept current not only to serve the administrative needs of the Department, but also to satisfy the requirements of law that the accounts of the Department be closed quarterly and statements of receipts and expenditures sent to the Secretary of the Treasury. At present, all phases of the audit are in a current status. Any reduction in the personnel of this division will retard the audit and create backlogs.

TRANSPORTATION DIVISION

In April 1948 I reestablished a Transportation Division to center in one place the work of settling claims for transportation charges and auditing of payments for transportation. The General Accounting Office has the sole responsibility for auditing all transportation payments made by the Government. This organization is carrying on an audit of current payments for transportation and a reaudit of certain wartime transportation payments previously audited under accelerated procedures. This activity alone collected back $36,276,000 during the fiscal year 1948. From July 1, 1948 to April 30 of this year $44,168,000 had been collected—over $8,000,000 more than the cost of the operations of the entire office for the fiscal year 1949. A cut will seriously affect the work of this division in that the audit will be further retarded and you gentlemen well know that the longer you wait to make a claim against someone the harder it is to collect. Any reduction in force in this activity will result in the loss to the United States, literally, of many dollars for each dollar curtailed.

OTHER ACTIVITIES

Without going into detail and by no means implying that the work is of less importance than that previously mentioned, a reduction in the budget estimates will seriously retard the work of the following organizations of the Office: the Accounting and Bookkeeping Division, where approximately 460,000 accounts are maintained and some 65,000 to 70,000 warrants examined each year, the prompt handling of which is essential; the Office of Investigation, which has people all over the country making investigations of irregularities in expenditures, resulting in substantial collections for the Government, and inspections of fiscal offices; the Reconciliation and Clearance Division, which performs mathematical, servicing, and record-keeping functions on which other divisions of the Office are vitally dependent, and which has the job of reconciling the monthly checkbook balances of the fiscal officers of the Government who issue about 1,000,000 checks each working day; and the staff operations, which include the Office of Administrative Planning, Division of Personnel, Office of the Chief Clerk, and the members of my immediate staff.

This request for funds is not personal to me. In fact my job would be much easier in some respects if we had fewer people. But I cannot disregard the serious effect a reduction in force at this time would have upon the work of the General Accounting Office as the agent of the Congress and upon the fiscal operations of the Government as a whole. For reasons which I have tried to make as clear as this statement permits, I am impelled to ask that the amount of $3,685,200 by which the House reduced our estimates be restored. I shall be glad to provide any additional information the committee may require.

Making Child Abandonment a Federal Offense

EXTENSION OF REMARKS

OF

HON. GEORGE H. WILSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 31, 1949

Mr. WILSON of Oklahoma. Mr. Speaker, the program of Federal-State assistance of dependent children under the provisions of the Social Security Act has been the only source of financial help that has saved many a child from near starvation, rags, and disease. No one will deny the beneficial features of this program but I feel compelled today to call to the attention of the House an abuse of this program that has increased its cost to the public tremendously and which has served to discredit its otherwise noble purpose. I would direct your attention to the fact that there are today around 1,200,000 children receiving assistance under this program at a cost of $352,000,000 a year. In 1939, when we had greater unemployment, only 666,000 children were thus receiving assistance. What has caused this phenomenal increase? Times are not so hard. Our population has not doubled to account for the doubling in assistance cases. The plain truth is that many able-bodied parents have flaunted State nonsupport statutes and have abandoned their children knowing that they will be cared for in any event.

I estimate that 35 percent of the cases on the assistance rolls for dependent children are cases where an able-bodied parent has abandoned a child or children. Two and one-half percent of all the children in the United States under the age of 18 are receiving such assistance and I am not at all proud of the fact that my State leads them all with 7.2 percent of the children under 18 on the assistance rolls. Most States have nonsupport statutes and many make nonsupport a felony. Our law enforcements officers and prosecutors are courageously endeavoring to apprehend parents who have deserted or abandoned their children and to require them to support their children or be penalized accordingly. I am informed that the Oklahoma Legislature has recently made it a mandatory duty of the county attorney to prosecute child abandonment cases. But this still is not enough. Local enforcement officers are not getting full information from the welfare authorities and their confidential records as to those cases of assistance involving abandonment. All too many of our lazy fathers find it convenient to leave the State and their dependents and find new interests in other States. They openly boast of their ability to beat support orders. A contempt order from court is not effective if the contemnor cannot be reached. Extradition under the criminal proceedings of those who have gone to another State to escape their parental responsibilities is a slow process and I hear of instances where extradition is refused. Even where expensive criminal proceedings are begun and extradition is sought and obtained, local officials of most States have but enough travel expense allowed to make two or three long trips a year.

Mr. Speaker, the problem I am pointing up is not one to make us abandon our program of assistance to needy children but the law should be amended to give Federal, State and local law enforcement officials any information on abandonment cases receiving assistance. It should further be made a felony to abandon or desert one's dependent child or children and then move in interstate or foreign commerce. My good friend and able colleague from the Fourth District of Oklahoma, TOM STEED, has introduced a bill which is admirably suited to accomplish this purpose. That bill is H. R. 4057. I wholeheartedly endorse that bill and urge its passage at this session of Congress. It will place responsibility for support where it belongs, on able-bodied parents. It will reduce juvenile delinquency because a parent who must support his or her children is going to care for them more and supervise their activities. And it will save our taxpayers the expenditure of many, many dollars and make creditable and effective this assistance program as a desirable adjunct of our social-security program.

The problem is clear and the solution is simple. The legislation I am supporting will attack this problem in this manner:

First. It will make it mandatory for the welfare worker to notify the county attorney when a child is given assistance because it has been abandoned by a parent. This information is now held confidential and cannot be given under existing law.

Second. When a parent crosses a State line after having abandoned a child,

UNIVERSITY OF MICHIGAN LIBRARIES

such parent immediately becomes subject to prosecution in Federal courts.

I shall continue my fight for this legislation until this child abandonment curse is eliminated.

An Atomic Aftermath

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following timely reference to the atomic bomb:

AN ATOMIC AFTERMATH

That toadstool form above Bikini isle,
Which mushroomed fraught with pestilence and death;
Hideous, wide publicized in press and screen
With prophecies men hope may ne'er come true:
This sets the tasks for me and you and you.
God grant us Christian leadership, matured
In practice as in word; for knowing not
His Message of the Mount, they must destroy
Who tamper with the secrets of creation.

THE TIME TRAVELER

A sea-worn traveler from a distant strand
Stood on a vessel's deck which stemmed the flood
Once roadstead to a world metropolis.
On either side rose banks of masonry
Whose blasted outlines showed the hand of time
Through moss and vine which fain would hide the walls
Decadent 'mid the rubble of what once was great.
And as the traveler viewed the scene, he mused:
This waste reminds of many an ancient tale—
Once small contrivances took in a flash
These pictures we now sketch with tedious pains,
In lines and tints more faithful to the scene.
They e'en could flash their pictures o'er the seas
With living voices on the ether's wave
And tell the varied happenings of the hour
To audiences ten thousand miles away.
They once shot thru the air on wings of steel
And traveled to our distant home in days
Where months are now consumed in ships of sails
As bring us to these ruined shores of yore.
And where these piles of wreckage lie, there stood
A city vast, whose night outshone the noon—
They drew the lightning from the clouds and air,
Conveyed it o'er the land on far flung wires
In retail to the homes and shops and marts
As light and heat, and motive power for steel
That nerveless toiled as brawn and brain for men
No more to poverty in thrall. So say
The legends of that past and distant day.
'Tis gone, that dazzling age when men aspired
And touched the multiple-dimensioned realm
Where dwells the awesome prime creative power
Which men attribute to divinity.
Their sages found the secret of the suns
Which give Orion brilliance and to earth
Gives life and growth. From the atom's unseen core
They plucked and harnessed it—a potency
To light the lamps of heaven, or fires of hell.
Yes, men aspired and nigh became as gods
Wielding creation's forces with a skill
That could have built on earth a paradise
Exempt from deadening toil and futile strife,
A realized republic of mankind,
With babel nullified about a tower
Of world-wide welfare widening to the skies.
But not in lofty purpose sages wrought,
No peaceful need conceived the lethal plan
To forge a mightier missile to destroy,
Feigned as a final weapon to end war,
Which leveled cities with explosive breath
And scattered vapors emanating death
And blasted lives unborn. Extermination
Became the fear, then study of each nation,
Till all built up to form a mad obsession
That held a jittered world in fast possession,
With minds combustible from premonitions dire
Of pestilential bombs and dread atomic fire.
Little was left to tell the gruesome tale—
In that last battle of the hemispheres
Civilization exploded in one flash
The pride and progress of 10,000 years,
Empires of wealth and military power,
Triumphs of industry and engineering lore,
Glory of art and bibliographic store
Lay shattered waste 'mid poisoned atmospheres.
The palaces of those imperial powers
That dared dispute dominion of the skies
Became the broken haunts of sickened clans,
Remnants of races, in seed and body maimed,
Unmindful of ancestral antiquities,
Inbecile to civilization's complexities.
Some peoples did survive with life and genes
Untouched by strife at Earth's antipodes,
And there truncated from the parent stem
Material culture waned. All had been lost
If there had not been an inheritance
Of spiritual significance to man
Which lives not in the mechanized paraphernalia of private gain and war,
Whose undue quest determined death and doom.
And now we travelers from those bounds remote,
In time far distant from that mortal day,
Are drawn by urges to lay curious hands
On principles once fatal to those sires.
Perhaps in yonder ruined piles there lie
In printed page or model undecayed
That science, fraught with human weal or woe
As lists the heart that guides the hand thereto—
Learning which may be manna from on high
A sustenance and blessing to the race,
Or may become the fire from Heaven rained
That purged the godless plain of Sodoma.
We come from far, seeking for weal or woe,
God grant us Christian maturity, for they
Who do not know His Message of the Mount,
In practice as in word, can but destroy
By tampering with the secrets of creation.

—*John Francis Lemon.*

Realistic Liberalism

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, June 1 (legislative day of Monday, May 23), 1949

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Realistic Liberalism," delivered by me upon the occasion of the commencement of the New School for Social Research, New York City, on May 31, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, yours is a school of liberal outlook and pragmatic approach. Your aim is to discover the higher social values and the techniques by which these values can be implemented within the framework of a free society.

This is also the aim of true liberal statesmanship.

When Aristotle, that brilliant philosopher of antiquity, deigned politics as ethics, he was simply saying that politics must strive to attain the highest possible social values in the context of one's times.

Aristotle's ethical concept of politics was the genesis of realistic liberalism. It was based on integrity, and not demagoguery.

Realistic liberalism calls for essential honesty: A desire to promote the greatest possible good for the greatest possible number without violence to liberty or jeopardy to free institutions.

It is not a simple task to formulate an acceptable definition of liberalism; the term has meant different things to different men at different eras of history.

To Adam Smith it meant "laissez-faire" and the complete abrogation of governmental restraints.

To John Stuart Mill it meant "the good life" under a system of agrarian socialism.

To William Jennings Bryan it meant the free coinage of silver and the dismantlement of the citadels of high finance.

To many in more recent years it has meant an extension of governmental authority to provide a more equitable balance between the well-to-do and the underprivileged.

Yet, though their specific objectives have varied, every genuine liberal movement in the history of the world has been propelled by a deep-rooted faith in the dignity of man and his inalienable rights to political freedom and economic emancipation.

Humanitarianism, then, is the common denominator of the true liberal philosophy.

Humanitarianism impels us to desire to clear the slums, to build adequate homes for everyone, to grant Federal aid to public education, to provide insurance for sickness and unemployment, and security for one's declining years.

It is precisely because liberalism is essentially humanitarianism that it has lent itself to exploitation and abuse by political charlatans and self-seekers.

The irresponsible demagog who calls himself a liberal will readily promise swift and complete fulfillment of every human yearning without heed to consequences or repercussions. There are altogether too many such men in public life and the American people must learn to beware of them.

The realistic liberal—and there are altogether too few of that sort in American public life—will measure the extent to which the national economy can accommodate the agenda of social needs and will press for as much of the program as can be completed at any given time without serious dislocation.

That is the difference between the fair-weather liberal and the realistic liberal.

The realistic liberal weighs values and consequences before making a decision. His first concern is to preserve the stability of the American Nation upon which our freedom and our standards of living and the peace of the world are all conditioned. He is mindful of the fact that an economic crisis, brought about by inordinate spending, could not be isolated without our own boundaries; and that once we lose our position as a citadel of financial strength, our resistance to Communist aggression will also collapse; and all the Marshall-plan billions we shall have spent will go down the drain, a complete and irretrievable waste of our substance.

These are but few of the factors an honest liberal must appraise in determining the extent to which social reforms can be carried out at the present time.

That large segments of our population deserve healthier environment and greater security cannot be gainsaid. That these needs are urgent is no longer debatable. Yet, right now, the most pressing problem that confronts the American people is to halt the impairment of the Nation's economic stability that we may keep our heritage of freedom and make it the pillar of peace. This value must therefore supersede all others in the thinking of every honest, American liberal.

There are, to be sure, large segments of the liberal program that can be promptly consummated without material cost to the Federal Government. I have in mind legislation to outlaw discrimination in employment. Here is a measure, consonant with the finest of liberal traditions, that embodies the essence of humanitarianism and toleration.

I shall continue to press this legislation, notwithstanding the ramparts of any melancholy combine of reactionary political forces.

We can also take a forward step by initiating Federal aid to public education and adopting the more urgent features of housing legislation three times passed by the United States Senate.

But we must watch the budget. The debt and the budget—make no mistake about it—are intimately related to the problems of liberty and peace.

Should reckless spending precipitate disaster, the very people whom we are striving to help would be the principal victims of the catastrophe.

Misery is a breeder of radicalism; and should that day come, our people might listen to any demagog who promises a panacea at the expense of free government. Seeds of discontent planted in the soil of adversity produce the ugly fruit of despotism.

These, then, are the contingencies a realistic liberal must always bear in mind. The fair-weather liberal who thrives on promises to everyone of every thing is false to the traditions of American liberalism and a menace to his country's mission as the guardian of freedom and peace.

Those are true liberals who advocate human progress within the orbit of free and stable institutions.

Liberalism is a blending of freedom with humanitarianism.

Liberalism is enlightened democracy working in socially beneficent directions.

Liberalism rejects reaction of every type, imperialism of every form and totalitarianism of every shade.

Liberalism is not a harlot to be picked up on the street by any demagog; nor is it a brothel for the fellow traveler, nor a mask for those who would subvert our charters of liberty.

We who are liberals, we who truly believe in freedom and human progress must assert ourselves without fear or equivocation.

We live in a critical period.

Here and everywhere the trend is toward greater and greater governmental authority and lesser and lesser individual and community responsibility.

Here and everywhere the individual and the community are becoming increasingly dependent upon a strong centralized state.

Here and everywhere demagogues are peddling the deadly drug of statism under the fraudulent label of liberalism.

The basic problem of government—the reconciliation of liberty with authority, of individual freedom with social organization—presents itself more acutely today than at any other period of history. It has, in fact, assumed more and more the form of dilemma so urgent and inescapable that large sections of humanity have given up liberty in exchange for the modicum of security to be derived from the effective regimentation of society by authoritarian government.

Democracy is thus challenged to prove that freedom and organization, the two needs of human beings living in society, are not incompatible and mutually exclusive.

The American system, with its federalism, separation of powers, written constitution, and doctrine of judicial review, provides a most effective institutional equipment for meeting this challenge.

I am confident these institutions will rise to the occasion if the people are alerted to the stakes that are involved. For free institutions are only as strong as the public opinion that supports them.

The great need of the moment is for men and women who can provoke public opinion and canalize it in directions that are constructive.

In the last analysis, the fate of democracy lies in the hands of those who mold the Nation's thinking.

I am sure the new school is fully cognizant of this titanic responsibility. The caliber of your president and of your faculty bear ample testimony to the quality of leadership you can provide at this critical period in our Nation's history.

In the halls of learning, as in the Halls of Congress, we need vision, courage, and integrity. These are no times for cowardice, opportunism, or mediocrity. The decisions we make, the orientations and outlooks we develop over the next few years will determine our success or failure in the mighty struggle for democratic survival.

The Basing-Point System and the New England States—New England Made Huge Contributions to Cement Trust in Phantom Freight—Rockland, the Only Cement Mill in New England, a Non-Basing-Point Mill—Basing-Point System Does Not Permit Customer To Reap Benefit of Lower-Cost Transportation—New England States Arbitrarily Apportioned Among Members of Cement Industry—Small Business in New England Will Benefit by Defeat of Moratorium

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. PATMAN. Mr. Speaker, the New England States have been important to the American scene since the earliest days of our history. No one region of our country has contributed more t the development and culture of our people than have the six States comprising the New England States. We are all familiar with the high lights of New England's progress and development. We have been taught from infancy of New England's contribution to freedom of religion, of speech, and of the press, the founding of the Plymouth Colony, the Boston Tea Party, the Green Mountain Boys, Nathan Hale, the founding of the first university in America, and of the eloquence of Daniel Webster. We have learned and know of New England's great fisheries industry founded in the early days of her history when her trade and commerce extended to every point in the known world. We have learned of the adeptness of New England's people in the arts and crafts, and in the manufacture of thousands of useful articles of commerce.

BASING-POINT SYSTEM UNFAIR TO NEW ENGLAND

I have a great admiration for the people of New England and for the many things which New England has contributed to our way of life. The careful and exacting methods of New England's craftsmen have given us many of our fine tools and machines to carry on the development of our manufacturing industry throughout the country. In her decorative arts, both for utility and ornament, New England's contribution in the working of gold, silver, copper, brass, and steel, is matchless. Withall, the New England States of Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont, are States which challenge the imagination when thinking of New England's past, present, and future. It is unfortunate that the New England States, like all other States, have been subjected to monopolistic and unfair trade practices of the basing-point system of pricing; the system which the Supreme Court outlawed on April 26, 1948, and which its proponents desire to have Congress legalize by way of legislation or by the passage of a moratorium bill which will furnish a convenient screen to hide behind while reconstituting and reinvigorating the now decadent basing-point system.

NEW ENGLAND PAYS PHANTOM FREIGHT TO THE CEMENT TRUST

In all of New England, one cement plant has been built in recent years. This plant is located at Rockland, Maine. Most of the cement used in New England of American origin was produced in New York and Pennsylvania. The basing points for shipment of cement into the New England States were Alsen and Hudson, N. Y., and Northampton, Pa. The Rockland plant, of the Lawrence Portland Cement Co., with its main office in New York City, was not a basing-point plant. In other words, freight on all cement shipments into New England was paid by the purchaser on the basis of freight rates from Hudson and Alsen, in New York, and Northampton, in Pennsylvania. The Howes Cave plant in New York, owned by the North American Cement Corp., of New York, and the Glen Falls plant, owned by the Glen Falls Portland Cement Co., and the Cementon plant of the Alpha Portland Cement Co. of Easton, Pa., were all non-basing-point plants. The trade territory embracing New England was divided approximately as follows: First, a small portion of northern Connecticut, all of Massachusetts with the exception of the Cape area south of Boston, the States of New Hampshire and Vermont, and a good portion of Maine was alloted by the Cement Trust to Alsen and Hudson, N. Y. Second, the southern two-thirds of Connecticut, most of Rhode Island, and the

UNIVERSITY OF MICHIGAN LIBRARIES

Cape territory south of Boston was allotted to the Northampton, Pa., basing point. Third, another large portion of Maine comprising mose of the northern half, and a great deal of the territory along the coast, was common territory for Northampton and the Hudson and Alsen basing points.

The fact that there was a cement plant at Rockland, Maine—a non-basing-point plant—which had lower freight rates to hundreds of destination points in New England, did not weigh upon the conscience of the Cement Trust for an instant, because it has grown fat and plush on the unearned dollars collected from the buyers of cement by way of excess or phantom freight. The Rockland mill of the Lawrence Portland Cement Co., as set forth in Docket No. 3167 of the Federal Trade Commission in the matter of Cement Institute et al., controlled no territory whatever. In the words of the brief for the respondent, filed in the United States Seventh Circuit Court of Appeals:

For example, Rockland, Maine, mill of petitioner Lawrence, would control all of Maine and parts of New Hampshire, Vermont, and Massachusetts, if its freight advantage were the controlling factor. Instead, it controlled no territory whatever. It waived its freight advantage in all the territory named and allowed Lone Star and other mills of the Hudson Lehigh Valley groups to control the price in that territory. At the same time that it waived, and because it waived such advantage, the Hudson Valley mills found their natural disadvantage of location removed. In the same way, the nonbase mills at Glen Falls, Howes Cave, Jamesville, and Portland Point, N. Y., waived their freight advantages over the mills in the Hudson and Lehigh Valleys and allowed the latter to fix the delivered price quotations without regard to such advantages. By the same token, the Howes Cave and Lehigh Valley mills were relieved of their handicap. The mill at Portland Point has a freight advantage over all other mills in substantial and contiguous parts of New York and Pennsylvania, but the delivered price quotations in such territory are determined by the Lehigh Valley mills, which are at a substantial freight disadvantage when selling into that territory. The same state of affairs exists in varying degrees in all basing-point areas where some of the mills are nonbase mills.

It is necessary to point out that the Hudson basing point was controlled by the Universal Atlas Cement Co., a subsidiary of the United States Steel Corp., and the largest single producer in the business. The Alsen basing point was controlled by the Lehigh Portland Cement Co., while the Northampton basing point was jointly controlled by the Lawrence Portland Cement Co., owner of the Rockland plant, and by the Universal Atlas Cement Co., owner of the Hudson plant. It is easy to see how the cement trust could control territories, not only control territories in New England, but control territories everywhere in the United States. This statement is not a mere assertion, it is documented throughout the case involving the Cement Institute and other companies in the aforementioned docket. It was not merely coincidence which moved the Supreme Court in its decision to say that "the core of the charge was that the respondents had restrained and hindered competition in the sale and distribution of cement by means of a combination among themselves, made effective through mutual understanding or agreement to employ a multiple basing-point system of prices." It was also no coincidence that the basing-point system was described by our High Court as "a handy instrument to bring about elimination of any kind of price competition."

It is well to remember that under the basing-point system of pricing, as used by the cement, the steel, the flat glass, and other industries, no purchaser ever paid less than the actual freight, and most purchasers paid more than the actual freight because of the arbitrary and discriminatory basing-point-pricing system.

ILLUSTRATIONS OF PHANTOM FREIGHT ON CEMENT IN NEW ENGLAND

The following destinations are used as examples of destination points in the several New England States which, under the basing-point system, paid phantom freight before the system was outlawed by the Supreme Court. The rates used to compute the freight are those filed as an exhibit—Commission's exhibit 1110–R in Docket No. 3127 of the Federal Trade Commission, rates which have been increased since that time. Specifically the rates were those as published in tariffs on file with the Interstate Commerce Commission and the public utilities commission of the respective States, effective July 1, 1935, with emergency charges authorized by the Interstate Commerce Commission in Ex Parte 115 until June 30, 1936, unless sooner canceled or extended, and as compiled by the Cement Institute. You will recall that a barrel of cement weighs a little less than 400 pounds, and is usually sold in sacks, 4 to a barrel, weighing slightly less than 100 pounds each.

As stated above, the computations which follow are based on rates in effect 12 years ago, which rates have materially increased since the action brought forward in Docket No. 3157. The Cement Trust had one of these handy books for each State or group of States, and thus were able to consistently and continually bid identical prices to purchasers at each and every destination.

MAINE

A table for Maine, based on exhibit No. 1110–R, follows:

Destination point in Maine	Applicable basing-point freight charged per barrel	Lowest mill freight charged per barrel	Phantom or excess freight per barrel
Abbot Village	$1.01	$0.72	$0.29
Annabessacook	.78	.47	.31
Augusta	.78	.47	.31
Bangor	.99	.70	.29
Columbia Falls	1.08	.82	.26
Deep Cut	.76	.43	.33
Detroit	.91	.61	.30
Dexter	.95	.67	.28
East Lyndon	1.25	.95	.30
Fairbanks	1.10	.72	.38
Golders	.78	.45	.33
Hardings	.76	.41	.35
Ingalls Road	1.14	.76	.38
Jonesboro	1.08	.82	.26
Kennebec	.80	.51	.29
Lewiston	.76	.47	.29
Muscongus Bay	.78	.33	.45
Newcastle	.78	.33	.45
North Freeman	1.18	.72	.46
Old Orchard Beach	.72	.47	.25
Penobscot	1.06	.80	.26
Portland	$0.72	$0.47	$0.25
Rockland	.82		.82
Shattucks	.78	.37	.41
South Rowhegan	.89	.61	.28
Topsham	.76	.41	.35
Warren	.80	.28	.52
Waterville	.80	.49	.31
Yarmouth	.74	.45	.29

You will note in reading the above table of a few destinations in Maine, that the fact that Maine had a cement plant located within its borders did not assure the State of Maine, its counties, its municipalities, nor the industries in Maine, when buying cement, any advantage because of the location of the Rockland Cement mill. I do not think it possible to express adequately the unfairness of a trade practice which would deny the natural advantage accruing by reason of location, or for other reasons.

TAXATION WITHOUT REPRESENTATION

The people of New England have, within the bounds of reason, as worthy a cause in preventing the return of the basing-point system as was the cause of taxation without representation. Certainly the people of New England have no representation as a people in the councils of the Cement Trust which taxes them with these unearned, unfair, and unpredictable amounts of excess freight in the purchase of a basic commodity. If I were speaking directly to New Englanders, rather than through the written word, I would be inclined to say, "Rise up Minute-Men, rise up Green Mountain Boys, rise up all ye patriots, and defend yourselves against the onrushing tide of monopolistic and collusive practices in violation of our antitrust laws." I would say, "Stand firm against any legislation that would subvert the antitrust laws and put small business and the individual in a position where they are at the mercy of those who would restrain, restrict, and monopolize our trade and commerce."

MASSACHUSETTS

A table for Massachusetts based on exhibit 1110–R follows:

Destination point in Massachusetts	Applicable basing-point freight charged per barrel	Lowest mill freight charged per barrel	Phantom or excess freight per barrel
Amesbury	$0.67	$0.57	$0.10
Andover	.63	.59	.04
Arlington Heights	.65	.61	.04
Barnstable	.80	.70	.10
Boston	.63	.61	.02
Bourne	.78	.68	.10
Brockton	.76	.67	.09
Cambridge	.63	.61	.02
Cataumet	.78	.70	.08
East Saugus	.65	.59	.06
Fall River	.74	.67	.07
Haverhill	.65	.57	.08
Ipswich	.67	.57	.10
Lawrence	.63	.57	.06
Lowell	.61	.59	.02
Lynn	.65	.59	.06
Middleboro	.76	.67	.09
New Bedford	.78	.67	.11
Newburyport	.67	.55	.12
Onset	.78	.68	.10
Plymouth	.78	.68	.10
Pocasset	.78	.68	.10
Salem	.65	.59	.06
Salisbury	.67	.55	.12

Destination point in Massachusetts	Applicable basing-point freight charged per barrel	Lowest mill freight charged per barrel	Phantom or excess freight per barrel
Sandwich	$0.78	$0.70	$0.08
Taunton	.74	.65	.09
Wareham	.78	.68	.10
Wellfleet	.84	.70	.10
Beverly	.65	.59	.06
Clinton	.59	.59	
Deerfield	.51	.51	
Dover	.63	.63	
Longmeadow	.51	.51	
Melrose	.65	.61	.04
Milton	.65	.65	
North Attleboro	.74	.63	.11
Worcester	.57	.57	

It is not my intention to make too extensive comment on each one of the illustrative tables which I am including in this article, but rather I will let the tables speak for themselves. Please remember, however, that these are merely illustrations, and the record in docket No. 3157 includes every destination point on every railroad in all of New England. It would be helpful if the whole volumes of these rate books could be reproduced, but space has some limitations. I do not mean to say that all destination points pay phantom freight. I do repeat, however, that most destinations under the basing-point system, as operated by the cement industry, did pay phantom freight.

VERMONT

A table for Vermont based on exhibit 1110–R follows:

Destination point in Vermont	Applicable basing-point freight charged per barrel	Lowest mill freight charged per barrel	Phantom or excess freight per barrel
Albertson	$0.70	$0.57	$0.13
Beecher Falls	.76	.67	.09
Castleton	.49	.37	.12
Centervale	.68	.63	.05
Concord	.68	.63	.05
Danville	.68	.65	.03
East Brighton	.74	.63	.11
East St. Johnsbury	.68	.63	.05
Fair Haven	.49	.37	.12
Fitches	.72	.61	.11
Florence Junction	.70	.57	.13
Gilman	.70	.61	.09
Hollister	.70	.57	.13
Hydeville	.49	.37	.12
Lyndon	.68	.65	.03
Miles Pond	.70	.61	.09
Newport	.70	.68	.02
Northfield	.65	.65	
Norton	.76	.65	.11
Orleans	.70	.67	.03
Proctor	.53	.41	.12
Putney	.55	.55	
Rutland	.51	.41	.10
Springfield	.63	.63	
Stevens	.72	.61	.11
Summit (Essex County)	.76	.63	.13
Wallingford	.51	.41	.10
West Rutland	.51	.39	.12

I say with praise that Vermont is known among our States as the home of folk who have a keen eye and a steady hand when a trade is to be made. But no matter how keen the eye, or how steady the hand, if you bought cement or steel, or other products using the basing-point system, your trading abilities were reduced to a mere nothingness. Where there is no basis for a trade, and where there is no competition, I ask in all seriousness what recourse has a purchaser, whether public or private, against such tactics and such systems?

CONNECTICUT

A table for Connecticut, based on exhibit 1110–R, follows:

Destination point in Connecticut	Applicable basing-point freight charged per barrel	Lowest mill freight charged per barrel	Phantom or excess freight per barrel
Baltic	$0.67	$0.59	$0.08
Bridgeport	.57	.55	.02
Canterbury	.68	.59	.09
Clinton	.63	.59	.04
Cobalt	.63	.55	.08
Danbury	.57	.51	.06
Jewett City	.68	.61	.07
Hartford	.53	.53	
Madison	.61	.59	.02

Connecticut was a little bit better situated under the basing-point system, as it applied to cement, because the destinations in Connecticut on the whole were closer to the basing points. This was not altogether true because most of Connecticut was based on Northampton, Pa., rather than on the closer basing points of Alsen-Hudson. The freight rates were higher from Northampton than they were from the Alsen-Hudson district. As described above, the arbitrary division of territory among the members of the Cement Trust produced this inequitable situation. You cannot have free and open competition and free markets on a basic commodity like cement or steel when States are divided up among the suppliers of the product so as to reap the greatest advantage pricewise and marketwise.

RHODE ISLAND

A table for Rhode Island, based on exhibit 1110–R, follows:

Destination point in Rhode Island	Applicable basing-point freight charged per barrel	Lowest mill freight charged per barrel	Phantom or excess freight per barrel
Anthony	$0.70	$0.63	$0.07
Barrington	.74	.65	.09
Bristol	.74	.65	.09
Coventry	.70	.63	.07
East Greenwich	.70	.65	.05
Greene	.70	.61	.09
Hope	.72	.63	.09
Kingston	.70	.65	.05
Middletown	.76	.70	.06

West Norwick	.72	.63	.09
Wickford	.70	.67	.03

It should be kept in mind as we review these tables that all of the States in New England, with the exception of Vermont, have fine harbors through which coastwise trade and traffic from all over the world flow steadily. The tremendous barge movement in Long Island Sound, and up through various bays and inlets of southern New England, and the lower water rates for the barge movement in this area, were not taken into consideration in the sale of cement. This was equally true under the basing-point system for shipping all up the coast of Massachusetts, New Hampshire, and Maine. Had cement, steel, and some other basing-point system commodities been allowed to move at the lower water rates, the savings for a great portion of New England in these commodities would have been much greater than can be shown in the all-rail tables. It is well known that a goodly percentage of the coal consumed by New England moved out of Hampton Roads, Va., and the New York harbor area. Colliers and barges shuffle back and forth loading and unloading fuel for New England the year around. Oil moved by tanker into the New England harbors, and many of the basic commodities and raw materials, move into New England over its trackless waterways with the savings and transportation accounted for in the price. This cannot be said of commodities sold under the basing-point system.

NEW HAMPSHIRE

A table for New Hampshire, based on exhibit 1110–R, follows:

Destination point in New Hampshire	Applicable basing-point freight charged per barrel	Lowest mill freight charged per barrel	Phantom or excess freight per barrel
Andover	$0.70	$0.59	$0.11
Berlin	.72	.57	.15
Concord	.63	.61	.02

Wolfeboro	.72	.57	.15

New Hampshire shows a high rate per barrel for excess or phantom freight exacted as unearned profit from the State of New Hampshire and from its citizens. An examination of each of the tables above will find phantom freight in a greater or less degree. In New Hampshire the cents per barrel of excess freight are greater than in Connecticut and Rhode Island. Regardless of the degree or the difference of phantom freight in the New England States, or in any other State, the fact remains that the basing-point system, by its ability to extract

UNIVERSITY OF MICHIGAN LIBRARIES

these excess sums in the sale of cement, creates a monopoly. Where there is more than one unit in an industry, which has a monopoly on any particular product, there must be tacit understanding or real agreement.

BASING-POINT SYSTEM DOES NOT CONSIDER LOWEST RATES OF FREIGHT TO DESTINATION

There are many ways by which goods and merchandise can be transported and a variety of transportation charges, depending upon the method of transportation. Under the basing-point system in some of our heavy goods industries, the purchaser is not permitted to receive the benefit accruing from the most economical method of transportation. There are many combinations in the use of transportation facilities which produce lower charges for transportation. As examples, there are combinations of rail-water-rail; there are combinations of rail-water or water-rail; there are combinations of truck-rail or truck-water, and many other combinations of methods of transportation which produce the most economical way of transporting merchandise. Under the basing-point system none of these methods have any effect.

BASING-POINT SYSTEM DOES NOT CONSIDER LOCATION OF PLANT IN RELATION TO MARKETS

Under the basing-point system no attempt is made by the perpetrators of these systems in our basic commodities to permit a plant to serve in relation to its natural markets. The natural advantage of location is wiped out by the fact that purchasers are placed arbitrarily in the position of paying the highest transportation rate from a distant point rather than the lower transportation rate from a nearby source of supply. Such was the case in a large portion of New England when the plant at Rockland, Maine, was made a non-basing-point plant. There were other cement plants located in New York which were non-basing-point plants and which had more favorable rates into certain portions of New England. But, since Alsen-Hudson and Northampton controlled the whole territory of New England, New York, most of Pennsylvania, New Jersey, and Delaware, it requires little imagination to realize the great price that New England and her nearby sister States have paid as ransom under the basing-point system of pricing.

BASING-POINT SYSTEM IN STEEL IN NEW ENGLAND

Space does not permit going into all the ramifications of the distribution of steel into the New England States. I hope to go into this situation fully in the near future. However, it will be recalled that for a great number of years, despite the location of steel plants at Bethlehem and other points in eastern Pennsylvania, all steel moving into New England was under the Pittsburgh-plus system. I have found no evidence that steel was ever permitted to move coastwise under the beneficial and lower water rates. At the time the Supreme Court outlawed the basing-point system, there was also a large steel plant at Sparrows Point, Md., on the Chesapeake Bay, and the steel industry in eastern Pennsylvania had expanded enormously since the Pittsburgh-plus system was abolished. Some of these eastern Pennsylvania plants and the Sparrows Point plant were basing points for certain steel products. However, no evidence is immediately available that customers in New England ever received under the basing-point system the benefit of the lower water rates. It is my understanding that all prices quoted by the steel industry from any basing point were always sold on the basis of the higher all-rail rate.

SMALL BUSINESS IN NEW ENGLAND

New England is noted for the number and character of its small-business enterprises, parficularly in the manufacturing field. The hundreds of small plants within New England have long paid artificially high prices to the Cement and the Steel Trusts. It has been shown in the Rigid Steel Conduit case that for certain steel products the New England manufacturer paid the freight from Pittsburgh or his raw material, no matter where he bought it, and then was forced to charge his customers the additional freight from Pittsburgh on the finished product. Certainly the purchasers of steel products in New England, where such products are manufactured in profusion, are entitled to pay no more than the freight from the point of manufacture.

In order to survive, small business must be permitted to have access to free markets. Small business cannot win through to victory unless its opportunities are at least equal to those of its bigger and stronger competitors. Recent figures published by the Federal Trade Commission and the Securities and Exchange Commission, showed that in the fourth quarter of 1948, concerns with less than $250,000 annual turn-over came out on the average with a slight deficit after taxes. In the face of these figures, and others which are equally discouraging at the moment, for Congress to pass a moratorium on our antitrust laws is, to me, unthinkable. I have previously spoken of the increasing opposition to moratorium legislation and to legislation which would in anywise weaken our antitrust laws. There is no doubt in my mind that monopoly is on the march. The free-enterprise system is in danger. I earnestly hope that the growing opposition in Congress bespeaks the defeat of any bill which will permit monopolies like the steel and cement trusts to reconstitute their price and market control mechanisms.

The Lawyer's Role in the Western Hemisphere

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Wednesday, June 1 (legislative day of Monday, May 23), 1949

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "The Lawyer's Role in the Western Hemisphere," delivered by me at the sixth conference of the Inter-American Bar Association, at Detroit, Mich., on May 22, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, distinguished guests, delegates to the sixth conference of the Inter-American Bar Association, ladies and gentlemen, as a Member of the Congress of the United States which, on June 15, 1948, by resolution, welcomed the Inter-American Bar Association to this country and wished it unparalleled success and, as a Latin American on both sides of my ancestry, may I take a few moments to welcome personally the delegates who come to this conference representing legal associations from countries of the hemisphere extending from Argentina and Chile to Canada. We are happy to have you here as our guests. We hope that your stay with us is as pleasant for you as is our pleasure in entertaining you.

In addressing you this evening I am mindful of the distinguished speakers who preceded me and those who will follow. With complete humility I beg you to bear with me while I endeavor to contribute a few ideas which I hope may serve a useful purpose in the deliberations of this conference.

I consider the opportunity of speaking to you this evening as one of the crowning highlights of my life for, I, too, am a lawyer by profession and from another standpoint of the law, a legislator, for honored by the free choice of the voters of my native State, New Mexico, I am privileged to represent them in the Senate of the United States.

I have a lawyer's appreciation of the importance of the law, either legislative, executive, traditional, or natural, and the role it has played in the degree of civilization which society in the Western Hemisphere has achieved. Consequently, to find myself surrounded by the foremost legal figures of this hemisphere is a great honor and I sincerely thank the president and the secretary general of your association for the opportunity of addressing you. I also thank the members of the Michigan Bar Association for their most generous and courteous reception.

The Inter-American Bar Association is a truly great organization. It is great because the motives which impelled its foundation and have guided its progress throughout its history are sound and unchanging. The doctrines expounded at every conference since 1941 by great jurists and leaders of your group, have chartered the basic rights of man. Though your history only begins with the first conference in Havana in 1941, those fundamental rights, which were postulated at that conference, and which have been continually reaffirmed at every subsequent conference, are eternal truths which have fired the imagination of free men since the dawn of civilization.

In our hemisphere, two great basic concepts of the law have been bequeathed to us by history and tradition. Two sources, represented by either Blackstone or Justinian, have given us the legal systems which enrich our civilization.

It is easily understood why those adhering to one concept or the other take justifiable pride in their own national and traditional institutions. But, ladies and gentlemen, it is the commingling of the two through conferences such as this one which will produce those new legal concepts which will advance civilization even further and make our hemisphere greater. Both systems are based on the freedom and dignity of man. In this hemisphere neither system can claim to be more sound or to protect liberty more adequately or to afford more complete justice. Bolivar loved liberty as much as Jefferson;

Andreas Bello defended its legal principle as ably as Charles Evans Hughes.

It was to be expected in the natural evolution of society that the great legal minds of the hemisphere would ultimately find each other and because of their greatness and mutual respect find a common meeting ground. A lawyer in Canada or Mexico, or Guatemala, or in any other American Republic, must of necessity feel a sense of oneness with other members of his profession. There is a common approach to the law—a firm recognition and request for the right of the individual to have and enjoy life, liberty, justice, and the pursuit of happiness.

The Inter-American Bar Association was the logical medium through which men trained in the law could meet and compare and exchange ideas.

To these legal precursors who conceived and sponsored the creating of this association I say we owe a great debt. Dr. James Brown Scott and the others who sought to create an association through which lawyers in this hemisphere might strive always to perfect the law, to defend the rights of the individual, to promote equality as applied to individuals and to nations, and to foster the spread of democratic ideals. The steady growth of the Inter-American Bar Association is mute testimony to the realization of their ideas.

At the first conference of the Inter-American Bar Association at Havana in 1941, your Secretary General William Roy Vallance, speaking in behalf of the delegates in response to the addresses of welcome, commented on the great danger that was then threatening the democracies of the Western Hemisphere. The war had started in Europe in 1939 and its effects had already been felt over here. Mr. Vallance called for unusual action on the part of all to preserve democratic institutions. How true his words were then and how true they are today. He struck a telling blow when he insisted that though military unity and concerted action were necessary, certainly the communion of minds would count far more toward achieving continental solidarity than force. He called on your association to improve laws, develop legal institutions and fight always for the freedom of the individual. To what more noble purpose can we dedicate ourselves; freedom and human dignity are worth fighting for.

Lawyers are molders of society. Who has a greater responsibility? Is there a more noble profession? The democracies in this hemisphere erected and the highly organized civilization thereby perfected, are a tribute to the faithfulness with which our profession has discharged this trust.

Lawyers by instinct and training saw the inherent evil in the political philosophies which denied the inviolability of the individual, despised justice and reason, and worshiped brute force.

As lawyers we are fully aware that society is ever changing; that it is never static and that the law must adjust and adapt itself to the dynamic pattern of society. But as lawyers we are equally aware that the law is based on fundamental truths which are immutable and will never change.

The cause of international morality and the inherent rights of man so ably championed by Licenciado Ezequiel Padilla at the conference of American states at Rio de Janeiro, was based on principles as enduring as those which govern the tide and the stars and planets.

Nations whose political philosophy is based on brute force and a materialistic concept of the nature of man, must of necessity seek to destroy freedom of individuals and, if strong enough, ride roughshod over the rights of other nations.

We were faced with such a situation in 1941 and it is lamentable that though we successfully waged the most destructive war in history against the forces of evil, we face an alarmingly similar situation today.

In this conference, political and economic factors should not necessarily enter into the discussions, and even though the legal, economic, and political aspects of society can be studied separately it is impossible in the light of the complexity of our society to evaluate accurately any one element without considering the interrelationship of the three. To approach the various legal subjects which are on the agenda of the conference and which special committees have been studying for many months, we might well examine some of the political and economic factors which affect the social organization we have built in this hemisphere.

In regard to the political aspects, I assume that the resolutions adopted in previous conferences professing adherence to democratic principles, allegiance to international law, confidence in international organizations, and insistence on the protection of human rights will forever be graven in the minds of the members of the legal profession of our hemisphere. And we may conclude that you will strive always to rest these concepts on a sound legal basis. We must be prepared to recognize any threat to our institutions as readily today as in 1941.

By the same token, the economic factors which cause us to study foreign trade practices, contracts, copyrights, taxation, and so forth, must be recognized and considered in our deliberations on these subjects.

The great war which taxed the moral energy and physical resources of the world ended almost 4 years ago. At that time it was the earnest desire of all peoples that we enter upon a period of peace. Through the creation of international organizations it was hoped that friction between the states might be eliminated and that an era of peace would be the good fortune of mankind.

In 3½ years these hopes have changed to disillusion and despair. The inexorable advance of the "iron curtain," establishment of the Berlin blockade, pressure on Scandinavia, Greece, Turkey, and Iran, the swarming of the Communist hordes across the Yangtze, and the imperialistic wars in Indonesia and Indochina have created a feeling of insecurity throughout the world. Man everywhere views with terror the possibility of a new world conflagration.

As a result of this tension, the foreign policy of the United States has been directed toward Europe to the well-nigh complete ignoring of Asia and the southern half of our hemisphere.

I must earnestly point out that such a policy is fraught with danger and must be corrected. The consequences hold a threat not only to the security of the United States but also to the security of this hemisphere and the future of western civilization itself.

No one seeks to write off western Europe as a factor in world politics, but so long as communism threatens the peace of the world we must in truth admit that only the atom bomb keeps the Red Army from marching to the Atlantic. It is apparent that the Reds, like the Germans before them, have no respect for the industrial and military potential of America, but once the Communists have the bomb and choose to move they will surely overrun Europe.

I have consistently advocated complete support of the United Nations and other organizations dedicated to international cooperation. The Congress has supported enthusiastically the bolstering of the sagging economy of western Europe. I am confident that Congress will back the Atlantic Pact and provide for military aid to western Europe. Nevertheless when civilization itself is being threatened it seems foolhardy for us to ignore the tremendous contribution which each nation of the Western Hemisphere made during the last world conflict. How much more could they do in the future if we would only put into practice the fourth point of President Truman's inaugural address and help them, through technical instruction and economic assistance, to elevate their standards of living?

The attitude of the United States in concentrating its attention solely on Europe constitutes a complete reversal of our foreign policy, for by tradition, we have always focused our attention on the Western Hemisphere, as is exemplified by the Monroe Doctrine. Originally perhaps, we confined our attention to the Caribbean and Central American areas, but now the United States has interests much farther north and south, Canada on the north, and Central and South America on the south, are of strategic importance in the defense of the United States and of this hemisphere.

I attended seminars on the contribution of Latin America to the war effort at the Army Industrial College (now the Industrial College of the Armed Forces) in Washington immediately following the war, and on every occasion, the military, economic, and political experts who spoke, emphasized the importance of Latin America as a source of strategic and otherwise unobtainable supplies during the recent war. We cannot, in the United States, ignore the fact that Latin America is one of the most important sources of raw materials and foodstuffs in normal times and during war, literally the only source of certain vital commodities.

During the last war, Latin America and Canada were the only source of supply for many important items. To Latin America was assigned the task of supplying many commodities and materials which it did not produce before the war. Dare we lose sight of the fact that in the event of another war, it may be the only source of supply of these commodities?

George Waythe, chief of the American Republic branch office in the Division of International Trade of the United States Department of Commerce, in an article entitled, "Latin America's Resources Spur Broadening Developments" in the April issue of the Foreign Commerce Weekly, states that in the last war, Latin America not only provided large quantities of foodstuffs, fibers, vegetable oils, and medical products, but in the mineral field supplied the entire import requirements of the United States for antimony, white arsenic, bauxite, bismuth, vanadium, quartz crystals, and crude petroleum, as well as more than half the imports of beryllium, cadmium, copper, lead, manganese, molybdenum, tantalite, tin, tungsten, zinc, fluorspar, amorphous graphite, and natural asphalt.

It is also significant that at the seminar to which I referred previously, Mr. Douglas Allen, who was described by John McClintoc of the State Department, as one of the best-known and best-liked businessmen in South America, had this to say:

"I would also like to stress the feeling in the Latin American countries, that during the war when we need Latin America we will pay a great deal of attention to them, but the minute the war is over and the need ceases, we will no longer pay any attention to them."

The problem of the economic development of Latin America and the policy of the United States toward a program of economic assistance in order to foster that economic development must be resolved, and it must be resolved in terms of an international policy for the economic welfare of Latin America. This is a matter of concern to the entire Western Hemisphere. This problem was formally recognized at the Conference on Problems of War and Peace which took place in Mexico City in 1945 when the Economic Charter of the Americas and the establishment of the Inter-American Economic and Social Council were perfected.

UNIVERSITY OF MICHIGAN LIBRARIES

Let us see what was affirmed by the Economic Charter of the Americas, and investigate whether American policy has been in accord with the charter and see what some of the consequences may be if it has not been in accord. The charter affirmed the desirability of policies which would encourage "the attainment of high levels of income, employment, and consumption free from excessive fluctuation in order that their peoples be adequately fed, housed, and clothed and have access to services necessary for health, education, and well-being."

In general, postwar trade has been maintained at levels far greater than were normal before the war, still the standard of living of the people has not been elevated—there has been no improvement, and for that matter, due to inflation, the vast bulk of the population may be said to be far worse off than before the war.

Personally, I am of the opinion that the Latin American has a sound case for large-scale American assistance and that he has just cause to be offended that European recovery should have been given priority. I believe that grave doubts as to our sincerity will arise in Latin America if we do not immediately reverse our policy insofar as it concerns Latin America.

My opinions are based on economical and political reasons but they have a moral basis as well. The contribution of Latin America during the war was magnificent. Perhaps there are many in the United States who are unaware and therefore do not agree with these arguments; yet, it must be admitted that Latin-American attitudes must be taken into consideration in the formulation of our global foreign policy. If the Government of the United States does not understand and does not sympathize with this point of view there is bound to be extreme political disagreement in the future, which may well have disastrous consequences for the people of this country, and of the entire hemisphere.

I do not blame the Latin-Americans for not being content to return to pre-war conditions. I sympathize with them in their earnest desire for greater industrialization and I earnestly believe that the United States is morally obligated to assist them in the furtherance of industrialization by granting economic and technical assistance immediately.

Why not a Marshall plan for Latin America?

If we are to save Europe from the imminent peril of communism by spending our money to improve the lot of the people, why, by the same token, must we not improve conditions in Latin America where the danger of communism is even greater because so proximate. So, a fortiori, we must extend credit to our neighbors, if not for altruistic reasons, than for self-preservation. They are not merely neighbors across the street, but live right next door to us.

My discussion this evening has been conducted in the broadest of terms but I cannot close my remarks without expressing specifically my profound respect for the members of the Inter-American Bar Association and the distinguished officers who have so ably championed the cause of justice and humanity. I am certain that your efforts in this conference will be crowned with success and that even stronger efforts will be directed toward the legal protection of human rights, and reliance on international law. A more definite conviction of the necessity for international adjudication of the differences between nations must result from this conference.

Your attention has been most courteous and I thank you again for the privilege of addressing you.

Address of Hon. Harley M. Kilgore, of West Virginia, at Commencement Exercises at West Virginia State College

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Wednesday, June 1 (legislative day of Monday, May 23), 1949

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a commencement address delivered on Sunday, May 29, by my colleague the distinguished senior Senator from West Virginia [Mr. KILGORE] at West Virginia State College, at Institute, W. Va.

There being no objection, the excerpts from the address were ordered to be printed in the RECORD, as follows:

I appreciate the honor of being invited to attend this commencement service which marks another milestone in the history of this outstanding school.

Since my college days—and I must admit it was some time ago—I have had the pleasure of visiting many schools both in this country and in Europe.

During these visits I have asked many people, "What makes a fine school?" Far too many have given surface answers. "It has a fine campus." "It has a modern science building." "The tradition of fraternity row."

Fine things, yes. But they do not make a great school. If a school is to be a real success it must be more than a good physical plant. It must be a living institution dedicated to one of the noblest of all aims—that of bringing enlightenment into the world.

The fame of West Virginia State College has spread far beyond the borders of our State. This is no accident. It is due in large measure to a wise, able, patient, industrious man—Dr. John W. Davis.

Under Dr. Davis' guidance, West Virginia State College has earned a reputation of being far more than just another college. It is a ranking institution of learning.

Those of us who have had the pleasure of knowing Dr. Davis are proud of his great achievement. In many respects this class today is another tribute to a good and honorable man who has been a credit to his race, his profession, and his country.

During his long career, Dr. Davis has faced many obstacles. He has had a long, hard struggle building this institution of learning. There is never enough money to operate a State college. But far more difficult is the task of overcoming the prejudices of people who do not understand.

During recent weeks the Nation has learned to know and respect another great educator, Dr. Ralph Bunche, U. N. Mediator for the Near East. World leaders have applauded his great achievements in ironing out the age-old difficulties in the Middle East.

The task was so grave a man of lesser ability might easily have inflamed opinion and spread the Middle East conflagration to other nations. The cessation of hostilities in that area is a great tribute to Dr. Bunche.

I regret there are too few people of the stature of Dr. Davis and Dr. Bunche. If we had many such leaders in every State, the struggle to achieve real democracy here at home and lasting peace abroad would be far easier.

We must recognize that we do not have many such men. We must recognize the tragic fact that many people base their decisions on prejudices rather than reason, on fear rather than hope.

The world cries for peace, yet there is no peace. There is widespread discrimination against man because of his race, creed, or color. There is hunger and even starvation in many areas of the world. There is fear in the hearts of millions of people.

There are far too many blotches on the picture of civilization in the United States. Some are deep ugly scars that can be removed only through the common cooperation of every citizen who believes in the dignity of man.

Can we succeed in this tremendous task? I think the answer is "Yes." I think we have made tremendous progress since the days of World War I. Great areas of illiteracy have been wiped out and supplanted with areas of understanding.

We are moving forward steadily. The rate of progress is not as fast as many of us would like. But we are moving forward into an era of great enlightenment—an era that will bring a fuller realization of the importance of the dignity of man.

Our hopes for the future rest largely in the hands of young men and women who fought World War II. In that great struggle against totalitarianism, our young men and women learned to respect the abilities of their fellow citizens of different races, creeds, and colors. Our boys on the far-flung battlefields of the world learned to respect the boys of other nations.

These young men and women must be encouraged to continue this education to the end that citizens of each nation can learn to respect the citizens of other nations; that the survival of our civilization rests upon moral fiber. Let us explore for a moment our world-wide aims in this tremendously important field of human endeavor.

We in the United States have undertaken many huge projects in our effort to bring about a greater spirit of cooperation between all nations. We stand ready at all times to achieve the goal—so eloquently expressed by President Truman—"not peace in our time but peace for all time."

These past 3 years have been difficult. The Soviet Union has conducted a ruthless campaign to dominate the nations of western Europe as well as those of eastern Europe. This campaign has failed. This is due in part to our help through the Marshall plan.

Only time can tell what will be the outcome in China and the rest of the Far East. That vast sprawling area with its millions of underfed people has swallowed and digested many regimes. It has changed the complexion of some, and completely disfigured others.

Our hope is that eventually the people of China will gain control of their Government, and it will be democratic in spirit and nature and not of the right or left brand of totalitarianism.

I spoke of the future in Europe. There is reason to believe the days ahead will be brighter. Regardless of the outcome of the Big Four Conference in Paris, there is every indication these nations are moving toward greater and greater economic and political stability.

We pray the Big Four Conference will bring to an end the cold war; but we must keep in mind the problems are tremendous in scope, and it will not be easy to find a common ground of agreement.

If we can find a way to reestablish a democratic government in Germany, the way will be paved for negotiation of the peace treaties and the eventual restoration of trade between the nations of Europe.

This phase of our foreign policy has been widely discussed. As President Truman so ably expressed it on June 11, 1947:

"Free men everywhere know that the purpose of the United States is to restore the world to health and to reestablish conditions in which the common people of the earth can work out their salvation by their own efforts."

This statement is the basis of a less widely known phase of our foreign policy which was outlined to the Nation by the President in his inaugural address last January.

In his words:

"We must embark on a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas."

The announcement of this program has evoked widespread interest both at home and abroad, but unfortunately it still remains the least known part of our over-all foreign policy.

The newspapers generally refer to this program as "point four."

In outlining this program the President emphasized the tragic fact that more than half the people of the world are living in conditions approaching misery. Their food is inadequate. They are victims of disease. Their economic life is primitive and stagnant. Their poverty is a handicap and a threat both to them and to more prosperous areas.

Let me quote from the President's inaugural address:

"For the first time in history, humanity possesses the knowledge and the skill to relieve the suffering of these people.

"The United States is preeminent among nations in the development of industrial and scientific techniques. The material resources which we can afford to use for the assistance of other peoples are limited. But our imponderable resources in technical knowledge are constantly growing and are inexhaustible.

"I believe we should make available to peace-loving peoples the benefits of our store of technical knowledge in order to help them realize their aspirations for a better life. And, in cooperation with other nations, we should foster capital investment in areas needing development."

This program offers a real challenge to our Nation.

Basically the broad purpose of point four can best be achieved through the realization of several specific and related aims.

1. To promote world-wide economic stability and productivity by achieving a better balance in the world economy and by expanding international trade. This will assist in the recovery of Europe and elsewhere by opening new markets and sources of raw materials to the United States and to countries now largely dependent on us.

2. To strengthen the United Nations system by supporting cooperative international action for economic development and by making maximum use of the United Nations and related agencies.

3. To strengthen political democracy by helping the peoples of underdeveloped areas toward a better life and by giving them new hope for the future.

4. To promote world peace by working toward all these mentioned goals and by showing the world that development can take place peacefully and with increasing personal freedom. The energies of peoples will be directed into channels of constructive effort aimed at greater productivity, greater exchange, and greater consumption.

Point four is based on a firm belief in democratic cooperation among peoples. To succeed it will require the cooperation of business, private capital, agriculture, and labor in this country.

There will be guaranties to the investor, but at the same time they will be balanced by guaranties in the interest of the people whose resources and labor go into these developments, for we are clearly opposed to the spread of imperialism.

Our President emphasized that the "old imperialism—exploitation for foreign profit—has no place in our plans. What we envisage is a program of development based on the concepts of democratic fair-dealing."

Every nation will benefit through point 4. Through more constructive use of human and natural resources we will hasten the day when the world can truly proclaim an era of understanding.

I wish to caution you in one respect: This is not a miracle dream. Words will not achieve the goals set forth in point four.

We must be willing to offer economic as well as technical aid to underdeveloped areas. We must recognize at the outset that the program is long-range in nature and few visible results can be expected overnight.

Bear in mind there are no stereotyped patterns of economic development applicable to all, or even to many countries. Different countries have different needs and different possibilities.

Development must take into account and, so far as possible, be adapted to local resources, attitudes, social and legal structures, customs and practices.

In the poorer and less developed areas a basic improvement in health, literacy, and vocational skills may well be prerequisite to increased production and improved standards of living.

For the somewhat further developed areas, priorities are likely to be quite different, with emphasis on improvement in the functioning of Government and increases in industrial productivity.

I mention these facts to reemphasize the scope of point four.

Too often we seek miracles. If we look for miracles from this program, we will be disappointed. We must seek a steady improvement in world political and economic conditions. This we can achieve if we are willing to bend our efforts in that direction.

If the United States had been in a position to launch a point four program 20 years ago, the world might not be in the present state of turmoil.

If we had started 20 years ago to vigorously assist in the development of backward areas on a basis of democratic cooperation we might have avoided the present-day threat of communism in the Far East.

The possibilities of point four are unlimited. I wish to say again it is a long-range program. It will take years and possibly decades to raise the standards of living in backward areas, but each step we take will bring greater economic improvement here as well as in the areas we are assisting.

We have learned through painful experience that no nation long can exist as an island of plenty in a sea of want. By present-day world standards we are an island of plenty. If we are to retain our position in world affairs we must take the leadership in assisting the less fortunate, peace-loving peoples of other nations.

President Truman expressed our aims in these words:

"Only by helping the least fortunate of its members to help themselves can the human family achieve the decent, satisfying life that is the right of all people.

"Democracy alone can supply the vitalizing force to stir the peoples of the world into triumphant action, not only against their human oppressors, but also against their ancient enemies—hunger, misery, and despair."

The challenge is great. How we meet the challenge may well determine the future course of history.

In these final words, I can only say you are leaving this phase of your formal education at a time when it will not be easy to buck the headwinds of prejudice and fear. You will have to fight hard to earn the respect of many of your skeptical fellow citizens. But though the fight be hard, by the same yardstick the victory will be sweet. And, it will hasten the day when mankind will recognize and appreciate the true importance of the dignity of man. Only through courage and faith can man raise his standards of civilization.

We pray to God we will have the strength and the faith to spread the light and warmth of true democracy to every section of our Nation, as well as the other nations of the world. God willing we shall succeed.

Shelling It Out

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. MULTER. Mr. Speaker, the following open letter addressed to Josef Stalin appeared in the New York Post of May 27, 1949. Its publication was sponsored by the Shell Products Co., Inc. Its contents are most interesting, despite the fact that we know in advance that Mr. Stalin will not reply:

Generalissimo JOSEF STALIN,
Premier of the Soviet Union, the Kremlin, Moscow, U. S. S. R.

DEAR MR. STALIN: I presume to write you on the basis of a relationship formed by our previous correspondence. That is, I once wrote you on another matter. You didn't reply. This makes us practically pen pals.

I want to acknowledge first that I'm fully aware of the Soviet Union's historic attitude toward racial minorities—that it has sought to set for the world new patterns that would forever abolish any thought of racial discrimination. Some of your bitterest critics have found it best to remain silent while this phase of your program is discussed.

And so it comes as a distinct shock to hear and read reports that in your country, as well as in those bordering it and devoted to similar principles, definite campaigns are being waged against those who happen to be Jews by birth, though not balked at praising religious practice.

Some of these reports I have, frankly, discounted because they come from openly anti-Soviet sources. But they've been piling up—and they now come from people who have no special anti-Soviet bias * * * people who have not hesitated to praise Russia for its antidiscrimination policy.

One of them is Dr. Tabak, of Baltimore, president of the Rabbinical Council of America, who did not hesitate to preface his grim remarks by acknowledging that "forces of the Soviet Union have saved these people (Jews) from the clutches of the Nazi murderers * * *." He then gave the other, sorrier side of the picture.

Within recent months, too, it was bewildering to watch the Soviet delegates and their ideological allies in the United Nations vote steadily for full freedom and political parity for Israel, while at the same time blocking in every possible way the migration of Jews to Israel from their countries.

It was equally baffling to learn that the world Communist press was, at the same time, whipping up its followers into a rage against Israel's leaders and those Zionists in other countries who worked so valorously that Israel might live.

UNIVERSITY OF MICHIGAN LIBRARIES

You must not be startled when we, on the outside, feel forced once in a while to add up the facts and find confusing inconsistencies.

Your press and your leaders cry out that the foreign press exists only to invent new lies about Russia. Protesting a lie is one thing; dispelling it with the visible truth is something else.

Here's something we don't have to wrangle out in the pink marble palace in Paris, where the Foreign Ministers are meeting. We can agree on this just between ourselves. Look:

How about letting in an unbiased American committee, maybe through the back door, for a fast "mosey" around? They'll see quickly if anti-Semitism has really reared its ugly head in—of all places—Russia. If travel to adjacent territories is necessary, why, then, you know some of the boys in the top spots there, too. You can arrange it, I'm sure.

The visitors wouldn't have to ask too many questions. A few would do—like:

"Anybody here taking a beating because he belongs to a minority—Jewish or otherwise?"

"Anybody here want to emigrate to Israel? If so, line up on this side of the room."

It'll be as simple as that.

What have you got to lose? Please let me know. You can even call me from Moscow—collect.

Sincerely,

DAVID KAY.

Functions and Responsibilities of the Modern Lawyer

EXTENSION OF REMARKS

OF

HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, July 1 (legislative day of Monday, May 23), 1949

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by William T. Gossett, vice president and general counsel of the Ford Motor Co., at a luncheon in honor of the delegates to the sixth conference of the Inter-American Bar Association, given by the Ford Motor Co. at Edison Institute, Dearborn, Mich., on May 24, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I would like to add my own word of welcome to the greetings which you have already received. We are very glad indeed to have you here, and I deeply appreciate the privilege and the honor of being given the opportunity to speak to such a distinguished group.

Anyone who refers to the purposes of the Inter-American Bar Association is aware of the high value which is placed upon the virtues of getting together—of getting to know one another—of personal contact.

We in Ford Motor Co. fully share your respect for human relationships of this kind, especially in the international field where the risks of misunderstanding are always multiplied.

The very fact that the nationalities and experiences of this group are diverse makes it all the more desirable, it seems to me, for each of us to speak on a subject with which he is familiar. That is one road to an understanding of each other. I would like, therefore, to make some brief comments regarding the functions and responsibilities of the modern lawyer in advising the modern corporation.

Before the turn of the present century, the lawyer in this country was very largely concerned with clients who were already in difficulty at the time legal counsel was sought. That was the golden age of advocacy; and more often than not the lawyer's principal responsibilities were those of an advocate. He frequently was eloquent and sometimes dramatic. He dealt with situations that had developed to a condition of a crisis. Like the country doctor, he was called in during emergencies to do what he could for his client. His job was to attack or defend. For the most part his eyes were turned toward the past—toward the events leading up to an existing situation. He sought to achieve the most satisfactory result which an existing set of conditions would permit.

During the latter part of the nineteenth century, however, a new and revolutionary force began to make itself felt throughout the world. It was to have a significant influence upon our profession. The wheels of the industrial revolution were turning at increasing speed. We had begun to catch clear glimpses of the great material gains for large numbers of people which were made possible by harnessing power to machines and achieving mass production.

Because mass manufacturing and distribution created a demand for capital on a vastly greater scale than that to which we had been accustomed up to that time, it became necessary to devise a method of meeting that new need. The answer was the stock corporation.

I am not sure that we are always conscious of the extent of the corporation's influence on our time. It was to become more than a legal device through which private business transactions might be carried on. It was to become the most effective means of organizing the economic life of a dynamic and enterprising democracy. Indeed, some historians feel justified in saying that we live today under the influence of a "corporate system."

The impact of the corporation on the legal profession was great. Increasingly the function of the lawyer was to construct corporate institutions and empower them to perform the important tasks for which they had been created. In the process, he had to foresee the problems which corporations would face. No longer could the lawyer be content to rely upon ancient postulates and precedents; he was required to use his imagination, to make thoughtful preparations for the future, to do a constructive job. More and more the attention of the lawyer was given to the prevention of litigation—to the anticipation of troubles—to the avoidance of difficulties. Instead of looking backward, his responsibility was to look ahead.

Increasingly during this whole period the lawyer found himself confronted by questions of business policy. Many corporation lawyers exerted strong influence in the councils of business and industry; and a large number of them became the active heads of business enterprises.

Meanwhile, there were other byproducts of the rise of the corporation, and many of these were to have a profound effect upon the legal profession.

The corporate form provided a method of organizing and financing large-scale operations on a long-term basis. To achieve the advantages of mass production—and they are very great advantages—it was necessary to create large organizations.

The law and the lawyer had a new situation with which to deal. As corporations increased in size and influence and were accorded by the courts the status of persons under the fourteenth amendment to our Constitution, smaller enterprises often found themselves at a competitive disadvantage.

The rise of the corporation also had its effect upon the individual citizen; more and more people acquired the social and economic status of employees. Available statistics indicate that a little less than a third of the total employed in this country were self-employed in 1890. Since then the percentage has been declining, until today only a little more than 18 percent of the total employed are self-employed.

The changes which progress brings are always more numerous than we foresee. With the expected we often get liberal doses of the unexpected.

Finally, and perhaps inevitably, there were abuses of power. Bigness was sometimes used to destroy competition. In a number of cases groups of corporations, engaged in the same business, combined to form so-called trusts under agreements designed to restrict or eliminate competition, by fixing prices or dividing up markets or pooling patents.

With the wisdom of hindsight, we now see very clearly that something was missing from the calculations of some of those, the lawyer among them, who developed the policies and the structures of that time. We see today that there was an inadequate sense of the social responsibilities of institutions, especially large institutions, which unavoidably affected the lives of great numbers of people.

With power comes responsibility. For a time, however, the power was more apparent than the responsibility.

It is interesting to remember that throughout this period, the means of mass communication were also developing and were, in fact, a part of the same industrial revolution. In the past 60 years the aggregate daily circulation of newspapers of this country has increased from approximately 4,500,000 to about 53,000,000; so that today we have a newspaper for every 3 persons as compared to 1 for every 13 people in 1888. Radio, of course, did not exist until the early 1920's. Today well over 90 percent of all American homes—and a very high percentage of American automobiles—have radios. Meanwhile, universal education was becoming an accomplished fact, and higher education was expanding beyond even our own dreams.

It is significant that the industrial revolution and the corporation contributed to the development of public opinion as a powerful force, and that public opinion began presently to react to the abuses of the overzealous nineteenth and early twentieth century corporations.

We can take 1890, the year of the enactment by Congress of the Sherman Antitrust law, as approximately the beginning of this period when public policy began to put legal limitations upon corporate activities. It has been followed since by a number of other antitrust statutes, all designed to eliminate restrictive-trade practices and provide for the free play of competition in interstate and foreign commerce.

Soon after enactment of the Sherman Act the courts held that agreements among competitors for the purpose of fixing prices were illegal. Under accepted common law and civil law jurisprudence, a sale by an agent had always been considered a sale by his principal. Nevertheless, when a manufacturer sought to fix prices for his products by designating competitors as his agents, the Supreme Court of the United States was quick to hold that the accepted legal relationship of principal and agent could not be utilized to thwart the purposes of the statute.

The law recognizes the exclusive right of an inventor to exploit the subject matter of his patent. Yet when the patent was used to compel the purchase of unpatented articles, or agreements were made combining a number of patents to create an overriding monopoly or to eliminate competition, the courts held such practices illegal.

The enactment of the antitrust laws reflected the basic aim of the American people to prevent restrictions upon competition.

By their decisions in many important cases, the courts have carried out the will of the people. Our legislative bodies and our courts cannot and should not be responsive to mere whims of public opinion. This would be fundamentally inconsistent with the basic principles of constitutional government. But subject to that limitation, and with adequate protection for the minority, the considered judgment of the people should and usually does become effective through our laws.

The process, which we may say began about 1890, has been accelerated in the present century, particularly during the 1930's, when both the Congress and the State legislatures in this country were kept very busy enacting laws governing the conduct of business and industry.

A few examples will suffice:

Constitutional sanction of the principle of income taxation in accordance with ability to pay was achieved by the sixteenth amendment to our Constitution. By the legislation which followed, corporate and stockholder income was required to bear an increasing share of the cost of government.

Workmen's compensation legislation established the principle that industrial accidents were one of the costs of doing business. No longer was it necessary for the employee to litigate the common-law negligence of his employer.

Employees who were unemployed through no fault of their own were provided for by unemployment compensation legislation. The cost of unemployment thus was established as a social responsibility of business, which was required to finance the cost of the program.

Old-age security for workers was recognized as a national problem and a program for the payment of retirement incomes was established by Federal legislation. A substantial portion of the program's cost is borne by American industry.

In the Fair Labor Standards Act, a floor was placed under wages and a ceiling upon straight-time hours of employment. The sweat-shop long previously had been eliminated from most of American industry; but this new legislation sought to eliminate abuses still practiced by a small minority.

Viewed in today's light, it seems incredible that the right of collective bargaining should ever have been questioned, and that the Wagner Act should have been necessary to assure that right to employees. The Wagner Act is a good example of what may result from short-sighted labor policies. On the other hand, the Taft-Hartley Act which restored to management-labor relations much of the balance which had been destroyed by union practices under the Wagner Act has been a reminder that society will not allow abuses of power to labor any more than it will to management.

The purpose of the great bulk of the legislation to which I have referred has been to impose upon business responsibilities commensurate with its powers and privileges. The social merit of some aspects of the legislation is open to question. I do not wish to be understood as giving it my blanket endorsement. But we must recognize that enactment of most of this social and economic legislation has been in response to the demands of public opinion and generally to satisfy some basic public need.

Against this brief and hastily sketched background—much of it is familiar, not only to our Canadian friends but as well to many of our colleagues from the South—how shall we appraise the function and the responsibility of the lawyer, particularly the lawyer who contributes to the policies and conduct of the modern corporation?

With the increasing complexity of business relationships and with the development of this mass of regulatory legislation, the corporation lawyer's problem in advising his client has inevitably become more and more exacting. At the same time, the need for legal advice has been intensified, and the responsibility—as well as the opportunity—of corporate legal counsel has increased commensurately. The lawyer representing business today, if he is to live up to the challenge of his new responsibilities, will endeavor to avoid the errors of the past; he will shun the kind of advice which is motivated by a desire to preserve the rubrics of a vanished era; he will be alive to the social, economic, and political implications of the time; he will avoid a narrow, short-sighted approach to his clients' problems; he will act with due regard for the social responsibilities of the enterprise; he will have the courage to advise against a business program or device which, although legally defensible, is in conflict with the basic principles of ethics. Failing this, he not only will be ignoring his obligations to society, he will be doing a disservice to his client, who may find himself in the position of winning a legal battle but losing a social war.

This, it seems to me, is no more than a reiteration of the ancient truths on which the law has been based since its beginnings. Long before men had anything which we would today call a law they were governed by the force of custom—by public opinion. From the beginnings of history, every conqueror of a foreign land has discovered that, with all of his pride, his trappings, and his show, he could not substantially change the habits or the thinking of the people. Public opinion, deeply rooted in customs, has always proved to be a mountain too big for Mahomet.

This is not to imply that the lawyer should be a weather vane entirely subservient to the popular will, or that he should follow a quixotic line. There are times when he will be constrained to lead an unpopular cause or take a position not subscribed to by a majority of his fellow men. Any lawyer worthy of the name will not hesitate to fight ill-founded claims or unreasonable demands; and he will avoid counseling the easy road of appeasement. But his clients' interests will not be well served by advice which ignores the deeper aspirations of his time.

What is true nationally is equally true on an international stage. The problem, if anything, is greater there because public opinion is more diverse and has its roots in a greater variety of experiences and conditions.

The challenge now is to our wisdom, to our consciousness of the public will, to our social sense.

And the challenge, it seems to me, is all the greater for the reason that the lawyer today exercises a powerful influence on the actions and policies of business enterprises. If he is wise, they will be more secure not only today but tomorrow—and so also will the whole fabric of private enterprise be more secure. If he is short-sighted, the individual enterprise and the system will be less secure.

The future, it seems to me, calls upon us to combine, if we can, the eloquence of the advocate, the structural sense of the legal architect, and the wisdom of the great judges of the law, who never have failed to see that the law is a part of life and cannot be separated from the aims, the ethics, the hopes, and the will of people.

Almost 35 years ago one of our great judges had this to say about our profession:

"The profession of the law has its fate in its own hands; it may continue to represent a larger, more varied social will by a broader, more comprehensive interpretation. The change must come from within; the profession must satisfy its community by becoming itself satisfied with the community. It must assimilate society before society will assimilate it; it must become organic to remain a living organ. * * * The lawyer must either learn to live more capaciously or be content to find himself continuously less trusted, more circumscribed, till he becomes hardly more important than a minor administrator, confined to a monotonous round of record and routine, without dignity, inspiration, or respect. There can be no ambiguity in the answer of those who are worthy of the tradition and the power of a noble calling."

I think we have entered upon a period of great opportunity. It should encourage the best in our profession.

Adult Education

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 1 (legislative day of Monday, May 23), 1949

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Mr. Hugh J. Betts, principal of the Knoxville Evening High School in Knoxville, Tenn. Mr. Betts has had 25 years of experience in the field of public adult education and his views on the need for a Federal program of adult education to eradicate illiteracy will be of interest to all those concerned with this problem.

I also ask unanimous consent to have printed following the letter a copy of an article entitled "Adult Education Will Make Better Citizens," written by Mr. Betts and published in the April 1949 issue of the Tennessee Teacher.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

KNOXVILLE EVENING HIGH SCHOOL,
Knoxville, Tenn., May 18, 1949.

Hon. HARLEY M. KILGORE,
United States Senate,
Washington, D.C.

MY DEAR SENATOR: It is my understanding that you are continuing your fight in the Senate to eliminate as far as possible adult illiteracy in the United States through the passage of the National Literacy Education Act.

If there are any figures or information pertinent to the problems revealed in the enclosed article, which was published in the April 1949 issue of the Tennessee Teacher, you are more than welcome to use them. From time to time I would appreciate being informed on the status of this piece of national welfare legislation.

For the past 25 years I have been engaged in public adult education. I have seen thousands of adults take a new place in the American way of life through the inspiration, personal satisfaction, guidance, and knowledge gained through schools and classes operated exclusively from public funds for the adults of this community.

No other field of service would give me any greater satisfaction than to see made possible for all adults of the United States an opportunity to learn those fundamental and basic subjects which are now considered mandatory for the children of our country. When parents with little or no basic education are given an opportunity to begin their education and to advance with their children, we will have a closer family circle, and a more sincere interest in the education of youth. It is only natural for people to

UNIVERSITY OF MICHIGAN LIBRARIES

become more interested in the education of their children when they are actually attending school themselves.

Respectfully yours,

HUGH J. BETTS,
Principal.

[From the Tennessee Teacher for April 1949]

ADULT EDUCATION WILL MAKE BETTER CITIZENS

(By Hugh J. Betts, principal, Knoxville Evening High School)

Over a quarter of a million adults 25 years of age and over in Tennessee were functionally illiterate when the 1940 census was taken. Approximately 1,000,000 had not gone beyond the eighth grade, and a total of 1,148,152 had not completed high school.

These figures do not include the thousands of youths aged 18 to 24 who had no schooling beyond the high-school years. Yet these youths faced the serious problems of getting a job, marriage, and the starting of a family.

Recent public-opinion polls have shown the degree of civic ignorance exhibited by present-day adults, one poll revealing that only 10 percent had any clear understanding of the Marshall plan. The increasing problems of crime and delinquency, divorce, economic conflict, and mental illness indicate the crucial need for further education in the ways of living and working together.

If, as many educators are pointing out, living in a modern democracy requires that adults be informed, and if it is impossible to crowd into the period of childhood enough education to last for a lifetime, perhaps we ought to examine what opportunities are being offered in our communities for the further education of adults.

VOCATIONAL TRAINING

In the field of vocational training the Smith-Hughes and the George-Barton Acts provide financial assistance to States in giving instruction in the four fields of vocational agricultural, vocational home economics, trades and industries, and distributive education for both in-school youth and adults. All of the larger cities and many of the smaller cities of Tennessee conduct classes in these fields, under the auspices of the local boards of education. The Federal grants are administered by the State department of education, and must be matched by funds provided within the State.

The classes for adults operating under the Federal laws are limited for the most part to persons employed in the field in which they are seeking additional training. Aside from the fact that there is relatively little opportunity for persons employed in one of these fields to obtain training in another, the vocational needs of adults in our communities are pretty well cared for.

But what about opportunities for growth and development in those areas having to do with establishing and maintaining a home, being a well-informed citizen, personal and social development, and constructive use of leisure time? In how many communities are school buildings—the natural community centers for education—open in the evenings for instruction and guidance for adults and out-of-school youth?

LEGAL PROVISIONS INADEQUATE

In the face of such desperate need the question arises as to why more school systems do not offer programs that are stimulating and helpful in those areas of living where adults obviously need help. One important reason may be that legislative provision for such programs is inadequate.

The State school code permits boards of education to provide evening schools for persons over 16 years of age. Under the Public Acts of Tennessee, 1917, chapter 19, page 59, and under section 22, Public Acts of Tennessee, 1925, is recorded: "Be it further enacted, that county and city boards of education in this State are hereby authorized to establish and maintain night schools for persons who are over 16 years of age; provided, under rules and regulations prescribed by the State board of education, said night schools, when established, shall be a part of the public-school system of said county or city, and any funds that are now available or which may hereafter become available for the maintenance of said system, shall be available for establishment and maintenance of said night schools at the discretion of said board of education.

"In the apportionment of all State and county school funds, the average number in attendance each night shall be recorded as constituting a part of the public school attendance in the same manner as pupils who attend day schools.

"County and city boards shall, in accordance with the rules and regulations prescribed by the State commissioner of education, adopt courses of study that will best serve the locality at which said night school is located; and full and complete reports of all night schools shall be made by said board of education on forms furnished by the commissioner of education."

The practice of charging tuition may work well enough where certain tangible needs are being met as, for example, the qualifying for a high-school diploma, or the learning of a definite craft or skill as woodworking or typing. But in those less tangible and highly important areas of civic proficiency, successful family living, and personal development, experience has shown that those who most need education and development cannot be reached under a fee system.

THE QUESTION OF TUITION

Parents in the lower educational and income brackets do not respond favorably to invitations to pay a fee for trying to become better parents. Likewise, citizens of a community do not feel that they ought to be charged a fee for the privilege of meeting together in study groups to consider problems of local, State, or National Government. The question may reasonably be raised as to whether young men and women ought to be charged a fee for engaging in activities to improve themselves personally and socially—such activities, for example, as public speaking, personality development, correct language usage.

Under present conditions, therefore, boards of education have a choice of offering limited programs of rather formal courses to those who can and will pay a sizable fee or of offering a broad program built around the needs and interests of adults and paid for out of general funds. The difficulty with the latter alternative is that with the present need for expansion of school facilities for the elementary grades, the demand for more special services for the handicapped child, and the need for increasing teachers' salaries, the abilities of most school boards to raise funds locally is already stretched to the limit.

IN OTHER STATES

If we look abroad to see what other States are doing, we can note that there is an increasing tendency toward meeting the problem by the provision of State aid. Twenty-one States now provide State aid to boards of education for the development of adult education. The amount of such aid ranges from $30,000 per year in Florida to $4,500,000 per year in California. In Pennsylvania, where adult education is an integral part of the total program of public education and is financed through the school foundation program, local school systems were reimbursed over $300,000 in 1947. In New York State, reimbursement is made for a wide variety of adult education activities on the basis of $2.50 for each class session of 40 minutes. For the year 1946, nearly $600,000 was returned to boards of education (excluding New York City) under these provisions, and in 1947 approximately three times that amount was returned.

Examination of the State programs in States having substantial programs of adult education, such as California, New York, Pennsylvania, Colorado, Connecticut, Delaware, and Virginia, reveals a pattern which may be worth studying for Tennessee. Most of these States, for example, have one or more supervisors of adult education in their departments of education as do at least one-half of all the States. Several of them have also established divisions of adult education in their State departments and State universities.

ENLARGE THE STAFF

Likewise, the State superintendent of public instruction needs assistance. If standards are to be set, if adequate data are to be collected and published, if programs are to be stimulated, and the training of leaders to be encouraged, one or more top-level persons in general adult education would need to be added to the staff of the State department of education.

Furthermore, under present financial stringencies local boards of education need some financial aid in establishing programs of general adult education. Experience tends to show that after such programs have operated successfully for a few years, local funds for their support become easier to obtain. But at the outset it would encourage local boards to establish such programs if they could count on a certain amount of reimbursement from State funds.

I Speak for Democracy

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 1 (legislative day of Monday, May 23), 1949

Mr. MARTIN. Mr. President, last Wednesday evening, May 25, Mr. Richard Hollinger, a member of the graduating class of the Annville (Pa.) High School, delivered a very able address entitled "I Speak for Democracy" at the high school commencement exercises. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As a graduating student in the year 1949 I feel the responsibility of doing my share for the promotion of the form of government under which I have been born and educated.

Since the democratic way of government has been challenged in this time of epoch-making history some people are wondering if it is fate or our form of government that has placed the United States first among the nations of the world? All would agree it is our democratic way of life.

Freedom was sought for and nourished by our forefathers and has been cherished, and defended at home and abroad, during peace and war by every true American.

If we turn the pages of history, we will note that democracy was not forced on the people who sought to establish a new nation but was chosen by the people themselves.

Therefore the good will and faith of our people are united, for we are free, and equal, all of us; no other nation in the world grants its citizens such freedom. This freedom means that in every corner of the land there

is a man ready to meet his duty and accept his opportunity, and so fill his place among free men. We have no peasant class, no servant class, no superior class. We have only a free people able as individuals to face the future and deal with it as free men. That is equality.

Democracy enables and encourages men to compete in free and private enterprise. Our land frontiers may be gone; however, this age is not only an age of agriculture and of industry but of science and of atomic power. Where in the world may men choose their occupation and advance in it according to their own genius and initiative. Some of the most talented men and women of Europe have come here because America gives them the freedom that private enterprise alone can offer.

In America we are part of our Government, as well as part of the governed. Our ballots and the ballots of our fellow citizens speak louder than the thunder of dictators. We cherish the privilege of voting for whom we please. We may criticize the Government without fear; when someone knocks at our door, cold shivers do not run up and down our spines. Who would not defend such a nation of free men?

Then, too, democracy has encouraged the finer arts, such as all free men enjoy. The world-wide popularity of American literature is a new and important feature of the present age. Nowhere in the world can one find better public libraries, such beautiful art museums, or such excellent symphony orchestras as in America.

Education with Americans is a religion. A much greater percentage of the population than in Europe attend the universities. No democracy can serve its citizens well unless those placed in positions of trust are well selected; therefore the urgent need for an enlightened, well-educated public.

In democratic America the men who appeal most strongly to the public are not pompous, powerful dictators, but those who are benevolent and willing to help their fellow citizens. This relation of good will among all adds much to the charm of life in America.

Democracy encourages scientific research in all phases of human life. The United States has taken the lead in sustained efforts to organize, scientifically, almost every aspect of life. All benefits derived from such achievements are immediately passed down to each and every one of us.

But America is not only a land of free men, of ample resources, of cultured and happy citizens, but a land which is devoutly interested in the good will and peace of the whole world.

The cherished dream of every loyal American is an abiding hope that men everywhere, the world over, may come into a full realization of the blessings enjoyed by free men.

Postwar Americans appreciate more deeply the beauty and quiet peace of their native land and are determined to preserve our democratic way of life for us and our posterity.

German Cartels

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article written by David M. Nichol, which appeared in the Washington Star of May 26, 1949:

SACKS HEARING OPENS IN REICH ON CARTEL TESTIMONY CHARGES

(By David M. Nichol)

BERLIN, May 26.—An American Civil Service grievance committee here is studying a case which may decide how freely military government officials will talk in future to congressional and other investigating groups from Washington.

The case concerns Alexander Sacks, New York attorney who was a member of the decartelization group which was in charge of breaking up Germany's huge and vicious cartels or trusts.

For some time there have been doubts about how effectively this is being done. Last December former Secretary of the Army Royall sent a committee headed by Federal Trade Commissioner Garland S. Ferguson to find out.

The committee's report, which was submitted to Acting Secretary of the Army Gordon Gray in April, was a sizzler. It said the decartelization program had been junked and placed responsibility on a number of officials, including William H. Draper, Jr., former Under Secretary of the Army.

Mr. Sacks was among the witnesses who appeared before the Ferguson group. In addition, he was asked by the committee to present a written "comment." About the same time he was transferred to a new job with the Civil Administration Division.

In January, before the report was presented, Mr. Sacks was suspended on charges of attacking the "good faith and integrity" of Mr. Draper and other "key military government officials." In February, on direct orders of the Army Department, he was reinstated.

In April, when the report was presented, Mr. Sacks' attorney in Washington, Wendell Berge, asked the Army Department for formal notification that the case was closed on the grounds that the report sustained and confirmed Mr. Sacks' testimony. This was given in a letter dated May 13.

On May 14, as one of his last official acts as American military governor in Germany, Gen. Lucius D. Clay ordered a new suspension and fixed a grievance committee hearing. Three days later Mr. Sacks again was reinstated, but the grievance committee was ordered to go ahead with the charges.

Today's proceedings were in the form of opening skirmishes only. Mr. Sacks, small, precise, and determined, asked that the hearing be transferred to Washington for two reasons.

One, he said, was that he wanted to call 10 witnesses, including General Clay and Mr. Draper, who are now in the United States.

Second, he charged that Acting Military Governor Maj. Gen. George P. Hays, had prejudiced the case in press conference comments and in letters he wrote as long ago as last year.

HAYS MUST GIVE O. K.

General Hays, in the normal course of events, would have to approve or disapprove the grievance committee findings. He once accused 19 members of the decartelization staff of being disloyal, because they had questioned some of the military government's procedures.

The grievance committee, headed by John Tromer, of the personnel office, said it would rule tomorrow morning on Mr. Sacks' request. It adjourned without hearing other testimony.

Mr. Sacks is no novice at trust busting. He was Department of Justice representative in France and Germany in 1945 on cartel problems and formerly served under Mr. Berge in the Antitrust Division in Washington.

Mr. Sacks' suspension for testifying before the Ferguson group would seal most military government lips on any similar future occasion.

Mr. Speaker, of just as much interest is the following article on the same subject which appeared in the New York Post of May 27:

WASHINGTON MEMO

(By Charles Van Devander and William O. Player, Jr.)

WASHINGTON, *May 27.*

The Acting Secretary of the Army and the acting American military governor in Berlin are frantically tossing a very hot potato back and forth across the Atlantic. The situation is comical, but the point at issue is far from funny. After the Army brass gets through with their familiar game of passing the buck, somebody is going to have to answer this deadly serious question: "Are the German cartels actually going to be smashed this time, as the United States Government has promised, or are Hitler's industrial collaborators going to be given one more chance to bid for European domination?" There is not much evidence that the Army cut-ups know or care a hoot about the issue of cartels.

What makes them nervous is the knowledge that that man in the White House and several important individuals in the United States Senate are keeping an eye on their innocent sport.

The immediate problem facing the Army brass is what's to be done about Alexander Sacks—and who's to do it. If the answer is wrong it can blast the whole issue of cartel smashing out of the arena of rather dull editorial reflections and into the front-page headlines.

Sacks is the ex-Justice Department trust buster, now employed in the decartelization branch of AMG, who had the temerity to accuse his superiors of laying down on their assignment to break up the German industrial combines. To make it worse, his charges were backed up by a civilian committee appointed by former Army Secretary Royall to review the progress of the decartelization program.

After being twice suspended by Gen. Lucius Clay, former military governor in Berlin and twice reinstated by orders from the Pentagon, Sacks finally came to trial Wednesday before a military grievance committee in Berlin. The Army indictment charges him with "making statements attacking the integrity and good faith" of his superiors in the decartelization branch. Sacks doesn't deny the statements, which are on the record, and insists that the real issue is whether they are true. Technically, the grievance committee in Berlin would have to find him guilty of making the statements, since he admits and repeats them. But that would only pass the buck to the Pentagon, where Sacks has an automatic right of appeal and where a public Washington trial would open up the whole issue of how the anticartel program is going.

At his arraignment Wednesday, Sacks moved that the hearings be transferred at once to Washington. Maj. Gen. George P. Hays, who succeeded Clay as acting military governor, apparently heaved a sigh of relief. General Hays is in the position of an innocent bystander who suddenly finds himself in the middle of a deadly brawl. He said he would take the motion to transfer the whole business to Washington under advisement.

But when General Hays checked with the Pentagon he found himself dealing with another equally innocent bystander, with an equally fervent desire to stay out of a fight he didn't start. Kenneth Royall is gone and his spot is being filled for the moment by Acting Secretary of the Army Gordon Gray. The Acting Secretary wants the Sacks issue

UNIVERSITY OF MICHIGAN LIBRARIES

settled in Berlin, where it originated. What's more, he wants it settled in such a way that it won't come to Washington on appeal. In other words, the Pentagon wants Sacks cleared and restored to duty with as little fuss as possible.

Who's going to try Sacks, and where, is still up in the air. But the question of whether or not the decartelization program has been sabotaged, and by whom, won't be settled by a diplomatic acquittal in this case. The Army Department still has to find something to do with the damning report of the committee which Royall appointed last year. At the moment Acting Secretary Gray is juggling this report, while vigorously batting the Sacks hot potato back to Berlin.

Freedom Is the Issue

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an editorial which appeared in Il Progresso Italo-Americano on Sunday, May 29, 1949:

Recent days have witnessed much excitement over granting fellowships in atomic studies to Communists. The storm over the Potomac, first stirred by the disclosure that the avowed Communist Hans Freistadt, a post-graduate student of nuclear physics at the University of North Carolina, is the beneficiary of American generosity, has yet to blow over. And before it does, much dust shall have unfortunately fallen on many a citizen's mind.

It would be sheerest idiocy to discuss this question in a vacuum. The issues involved here are many. They are basic. They affect not only America's national security and world peace. There are at stake here the very fundamentals and essence of our entire way of life. Obviously, questions of such magnitude cannot be examined or understood without considering at the same time the international situation at hand—that is, the actual and active relations among the nations of the world.

PLAIN TALK

We are indebted to Tovaritch Hans Freistadt himself for placing the heart of the issue squarely. In his recent testimony before Congress, the comrade from the campus of North Carolina University spoke very much to the point when he said:

"Once scientists and science students are discriminated against because of their political views or lawful political activities, the whole concept of academic freedom as we have known it is in danger."

The ambitious comrade is right. But his axiom is wrong. He assumes, and he would have us believe, that the Communist Party is a genuine political party in the normal sense of the word as understood and viewed in our democratic way of life. This assumption is impudent nonsense. It is an arrogant lie. It is the most dangerous fraud for which too many honest, but gullible, liberals have fallen.

The Cominform and its various agencies and branches and collaborators in our own and the other democratic countries serve only as military espionage agencies and agents of a giant and aggressive imperialist power—totalitarian Russia. There are no American or Italian or French Communists. There are only Russian-controlled Communists in the United States, Italy, and France. These Communists are conscious agents and their fellow travelers and dupes are at best unconscious instruments of the Kremlin clique which is dedicated to promoting world chaos and conflict in the non-Soviet areas so as to facilitate their being conquered by totalitarian communism. Hence, every Communist Party is only a fifth columnist of Russia—with first and sole loyalty to Russia, operating under orders of and for the sole benefit of the Russian dictatorship. No matter in what country the Communists operate, they are Russian nationalists hiding behind a flag of so-called internationalism.

To speak of the Communist Party in the same vein as the Democratic, Republican, Liberal, or Socialist Party is either downright dishonest or hopeless ignorance. And Tovaritch Freistadt is certainly not ignorant—whatever else he is or may be. He knows very well that if the Republican, Democratic, Liberal, Socialist, or any other democratic political organization happens to win an election, the other defeated political parties have a chance to win in another election, the next time. These losers in a democratic election are not robbed of their rights or resources by the winners. Bu' if the Communists—who themselves do not believe that they can come to power through the ballot or majority vote—should ever happen to get control of our Government by hook or crook, then there would be no more elections. All other party offices would be closed down, their leaders arrested, deported or liquidated, their assets confiscated, and their organizations outlawed.

WHY FEED TERMITES?

Such a party—the Communist Party and its members and stooges and tools—are not entitled to the same consideration, rights, or status as the bona fide political parties which are organic parts of our national body politic. The fact that the Communist Party and its Russian fifth columnists want to exploit and insist on being granted democratic rights does not make them democrats. The fact that they take advantage of loopholes in our law does not make their aims, aspirations, purposes, and all their practices lawful. The only reason the Communist Party and its lick-spittles and spies demand democracy is in order to utilize its rights for the purpose of destroying our democratic system and robbing the people of all liberty.

Comrade Freistadt and his ilk, who are most undeservedly enjoying the benefits and fruits of the very American democracy they seek to destroy, are like all the other Tovaritches, silent on one very important matter. While they yell for rights in America, only in order to utilize these rights for the destruction of American democracy, they are persistently and stubbornly silent about the total lack of democratic rights in Russia and never ask for them in the U. S. S. R. Freistadt and his ideological mentors have never uttered even a single word to demand the abolition of the savage political discrimination in Russia. They have never protested against the liquidation of political dissidents, intellectuals, artists, students, and scientists in totalitarian Russia. These whining comrades always howl for democratic rights for the purpose of destroying America and other lands of democracy, but they never even whisper in behalf of democratic rights for the purpose of destroying any Communist dictatorship.

The American people had better wake up. Not a penny of our money should be spent on educating those who would ruin our free society and turn our land of liberty into an enslaved satellite of Communist Russia. Yes, the issue is freedom—freedom versus Communist totalitarian tyranny.

United States Loyalty Probes

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, June 1 (legislative day of Monday, May 23), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Loyalty Probes: Do They Violate Basic Rights?" published in the Christian Science Monitor of May 28, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES LOYALTY PROBES: DO THEY VIOLATE BASIC RIGHTS?

NEW YORK.—The Government's loyalty program is absolutely necessary for the protection of this country from infiltration by Communists, John Kirkland Clark, member of the President's Loyalty Review Board, says.

A contrary opinion was voiced by Prof. Thomas I. Emerson of the Yale Law School, who characterized the program as an "irrational and dangerous response to a prevading fear which has taken hold of a large segment of American leadership."

The speakers discussed the subject at a conference on our civil rights in a postwar world sponsored by the New York County Lawyers' Association here this week.

Mr. Clark stressed that the pattern of Communist offensive throughout the world has been "an infiltration of enemy agents into the governmental system in key positions of authority which enabled a comparatively small minority to wrest the power away from the peaceful majority."

This country must see to it that it does not "pay those who are working to undermine our Government out of our National Treasury and enable our enemies from without to work through agents within our own Government."

The Loyalty Board member said he has never seen or heard of any action in any of the Board's proceedings which in his judgment constituted a violation of constitutional rights.

Dr. Emerson, on the other hand, said the whole program "challenges directly the entire body of principles underlying the American concept of political freedom."

He warned that the pattern of employee investigations is spreading rapidly. In Florida, he said, a State law requires that university instructors not only be loyal but also believe in the segregation of the races.

The California Senate has passed and sent to the lower house a bill requiring lawyers to take a loyalty test, he reported.

"The loyalty program," Dr. Emerson declared, "is based upon procedural short cuts which are in complete contradiction to American notions of fair play. An accused employee has only a hazy idea of the offenses with which he is charged, he does not have a chance to confront his accusers, he is denied the right of cross examination, he does not even know what the evidence against him is."

Ferdinand Pecora, State supreme court justice, proposed that Congress establish a permanent nonpolitical staff to conduct investigations connected with proposed legislation. Such a mechanism would remove the temptation to indulge in political fishing expeditions, he declared.

At another session, Miles F. McDonald, Kings County district attorney, and Robert

Daru of the New York County Criminal Courts Bar Association, argued for and against the use of wiretapping by law-enforcement agencies.

Mr. McDonald defended wiretapping for purposes of national defense and in some cases involving criminal gangs. Mr. Daru declared that wiretapping was a gestapo police method which did more harm to the cause of law and order than the advantages it may yield in individual cases.

Arthur Garfield Hays, general counsel to the American Civil Liberties Union, declared that there is more danger from the suppression of civil liberties by Government agencies in the name of protection against communism than there is from Communists themselves.

Subversive Textbooks and Teachings

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. DAVIS of Georgia. Mr. Speaker, the efforts of communism to dominate the world today are causing the taxpayers of the United States to have to spend the sum of approximately $22,000,000,000 this year to protect ourselves and other liberty-loving peoples of the world from the threat of Communist advancement. In its attempt for world-wide conquest, communism has two methods of approach, one by the use of force and violence and the other by the use of propaganda. Much Communist propaganda has been disseminated through the use of subversive textbooks and teaching materials. One of our patriotic organizations is actively fighting Communist propaganda in subversive textbooks and teaching materials, namely, the Sons of the American Revolution.

The Georgia Society, Sons of the American Revolution, has forwarded to me for presentation to the Congress of the United States, its petition for redress of grievances.

Under leave previously granted, I insert herewith a copy of this petition:

PETITION FOR REDRESS OF GRIEVANCES

To the Senate and House of Representatives of the Congress of the United States:

We hereby petition for an independent and impartial investigation of the interstate traffic in subversive textbooks and teaching materials as requested in the petitions now on file presented by the national society and the California society of the Sons of the American Revolution, and we do hereby join in and make ourselves a party to those proceedings.

We request the Congress to grant us all relief possible in this matter by determining the facts and giving them to the people with appropriate recommendations.

Dated this 24th day of May 1949, in the city of Atlanta, State of Georgia.

GEORGIA SOCIETY, SONS OF THE AMERICAN REVOLUTION,

By HATTON LOVEJOY,
President.

By SAMUEL E. MOTTE,
Secretary.

The Brannan Plan for Farm-Price Support

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, June 1 (legislative day of Monday, May 23), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Memphis Commercial Appeal on May 16, 1949, and part of an article in the May 14, 1949, issue of the same newspaper, by William H. Nicholls, professor of agricultural economics, Vanderbilt University, Nashville, Tenn.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Memphis (Tenn.) Commercial Appeal of May 16, 1949]

The farm price-support proposals of Secretary of Agriculture Charles F. Brannan have been greeted with condemnation and criticism.

They have been called communistic and socialistic; too closely to operate and a complete regimentation of agriculture.

There are, certainly, some phases and some recommendations in the plan which are abhorrent when considered under the American way of thinking.

At the same time, the plan advances thoughts and ideas on price support which have the merit of having been used successfully before, or recommended by farm and other leaders who are credited with much more conservative views than are attributed to the Secretary's advisers.

William H. Nicholls, professor of agricultural economics, Vanderbilt University, discussed the price-support features of the Brannan plan in a special objective article in yesterday's issue of the Commercial Appeal.

He found merit in the proposal that farm income be supported by production payments and that prices be allowed to seek their own level on the open market. Weakness of the Brannan plan, he reported, is that it suggests this program for the unstorable farm production, but does not recommend it for wheat and cotton and the other storable commodities.

Another weakness is the rigidity of the price supports proposed by the Secretary. These price supports lead to the need for restricted production, Dr. Nicholls found. He suggested that with a flexible price support, announced in advance, the flow of farm products could be better controlled by offering high supports when high production is wanted and low supports when curtailment of any product is desired.

Still another weakness, Dr. Nicholls found, is too great reliance on price supports in solving the farmer's problems. With half the farm population producing only 10 percent of the farm income, there is little hope of aiding them by price supports, especially if production and marketing quotas are in effect, he warned.

The Commercial Appeal long has advocated a more balanced and diversified farming, with prices which permit farm products, especially cotton, to meet competitors in the open market.

We have recognized the need for security for the farmer, but have opposed the high-level loan-and-purchase programs of the past on the ground that they tend to encourage the inefficient, to maintain submarginal lands in production for which they are not suited, and to make too many too reliant upon Government hand-outs.

The Brannan plan, as far as its price- and production-support proposals are concerned, seeks to create an economy of plenty rather than one of scarcity; of low consumer prices and adequate farm prices.

Cost, as Dr. Nicholls pointed out, will depend largely at what level supports are placed.

The plan will, however, permit the consumer to benefit from the increased supply.

Under the present system of purchasing by the Government of excess stocks, such as potatoes, the consumer pays first for what he buys; then, through taxes, for what was purchased by the Government and taken off the market and destroyed.

The Brannan plan seeks to encourage diversification through the diversion of grains to livestock and the conversion of other lands to pasture; by relatively higher support prices for meat than for the grains or the crops normally grown on the land turned into pasture.

Some of the most severe critics of the Brannan plan are finding, on contemplation, that it contains many of the things they have long advocated, and many things which they have opposed in the past, and will continue to oppose.

There obviously is some good in the Brannan program, and some proposals that have no place in the American way of life as we know it.

Rejection of the plan as a whole will solve nothing.

Consideration of its merits, as well as its faults, can lead to a farm program which will be beneficial to all America and not some single group or class.

[From the Memphis (Tenn.) Commercial Appeal of May 14, 1949]

BRANNAN PLAN HAS ITS MERITS, BUT ITS PRICE SUPPORTS HOLD GRAVE THREAT, EXPERT CLAIMS

(By William H. Nicholls, professor of agricultural economics, Vanderbilt University)

NASHVILLE, May 14.—While subject to a number of limitations, the Brannan plan—as tentatively proposed by the Secretary of Agriculture on April 7—represents a constructive effort to correct some of the shortcomings of present and past agricultural legislation.

Its most important feature is the proposal that production payments rather than direct purchases be used to make good on the minimum price levels which Congress has guaranteed for so-called perishable farm products. If enacted into law, this policy would give consumers at all times the benefits of any lower free-market prices.

The need for a new approach to the price problems of agriculture has been dramatized by the experience with potatoes. In order to maintain prices of potatoes at statutory support levels, the Government will have spent about $225,000,000 this crop-year in direct purchase of potatoes alone. Because potatoes cannot be stored commercially or exported, the Government has been forced to divert its large-scale purchases from human consumption into livestock feed, minor industrial uses, or outright spoilage and destruction.

PEOPLE DOUBLY PENALIZED

As a result of this wasteful method, the American people have been doubly penalized—first, as taxpayers, because of the large Government losses that have occurred; second, as consumers, because the smaller supplies permitted to reach retail channels force them to pay higher prices than would have prevailed if this new plan had been in effect. Although this same situation has continued for several years, no effective counteraction has been taken. In fact, the Government is currently following the same policy on eggs

UNIVERSITY OF MICHIGAN LIBRARIES

and butter under its mandatory obligation to support certain price levels for these commodities, which are in oversupply largely because the support levels are too high to clear the market. Hence, on these products, as on potatoes, the Government faces the prospect of loss without benefiting consumers.

Under Secretary Brannan's proposal, the entire production of potatoes and eggs—as well as meats, milk and other perishable price-supported products—would be allowed to reach consumers through regular commercial channels at free-market prices. If the average market price of any of these products should fall below its announced price-support level, the Government would compensate producers to the extent of the difference by direct payments.

To repeat, for any given support level, producers would be as well off as before, while consumers would gain by being able to buy larger supplies at lower prices whenever surpluses existed at support-price levels. Whether or not costs to the Government were greater or less would depend upon the support levels that were established.

SAVINGS TO CONSUMERS

No attempt is made here to estimate the savings to consumers if this feature of the Brannan proposals were adopted—especially if storable products were also included, as they should be. However, it is evident that the savings in the American food and clothing bill would be enormous. Most of such savings would be used to buy more food and more industrial goods, to the benefit of the entire national economy.

Another positive benefit of the Brannan plan is the recognition that, if the American people generally are to achieve more balanced and higher-level consumption as a consequence of reasonable prices, we should expand our production of livestock products by the increased use of feed and grain crops. It takes seven times as many acres to feed the Nation on livestock products as if the public consumed the grain directly. Hence, if applied to all crops production payments would encourage greater consumption (through their conversion into livestock products) of prospective surpluses of feed grains.

While continuing to use a base period for determining the support levels for individual farm products, the Brannan plan tentatively substitutes a recent 10-year period (initially 1940–49) for the distant and outmoded 1910–14 base used in all agricultural legislation before the Agricultural Act of 1948. Like the later act, the Brannan proposal would (for example) establish support prices for dairy products and livestock which were higher—relative to support prices for wheat, corn and cotton—than those based on 1910–14 parity relationships.

WOULD LACK FLEXIBILITY

These changes would bring the support prices of most farm products somewhat more nearly into line with the relative levels needed to create incentives for bringing about desirable shifts in production within the agricultural economy. Nevertheless, it must be recognized that this 10-year period was one of abnormal and artificial price relationships, distorted by prewar price supports, wartime price ceilings, and postwar inflation. The Brannan plan would establish rigid price supports on individual commodities upo.. the basis of this abnormal period. As a result, the secretary would lack the desirable administrative flexibility essential for setting price supports at the levels necessary to stimulate or retard production according to prospective demand.

From a purely economic point of view, there are several major objections to the Brannan plan in its present form. First, it limits consumer benefits to perishable products only. If the principle of free-market pricing and production payments is sound, why should the so-called storable crops be left out of the plan? For instance, take cotton. Certainly, we all agree that prospective cotton surpluses are quite probable and that we must find extended markets if we wish to avoid huge storage stocks and production controls. Cotton is now being priced out of important parts of its domestic market, stimulating the continued substitution of rayor and other synthetic fibers for cotton in both clothing and industrial uses.

Again, why should wheat be eliminated? In view of the continuing increase in wheat acreage and the prospect of declining foreign outlets, wheat threatens to become a chronic-surplus crop. If drastic acreage controls are to be prevented, the use of wheat as livestock feed must be greatly expanded by pricing it competitively with corn. Furthermore, isn't the American consumer entitled to cheaper flour and bread if adequate supplies are available in a free market? Without the use of production payments, the prices of wheat and cotton will also be supported above world price levels. Therefore, it will be possible to maintain their export markets only by direct or indirect subsidies which are at the expense of American consumers and taxpayers and inconsistent with our over-all foreign-trade policy. Given the support levels proposed for corn and wheat, the Brannan plan would also require fixing price supports on livestock products at unnecessarily high levels. Consequently, Government expenditures for production payments on perishable (livestock) products—even under conditions of high-level employment—might have to be so high as to threaten public acceptance of this basically sound production-payment and use-expansion policy.

Second, under the Brannan plan the proposed support prices are much too high and too rigid. For the most important storable commodities—cotton, wheat, and corn—it proposes rigid support levels approximating 90 percent of current parity. No provision is made for administrative authority to lower specific support levels in the event of excessive stocks which are already imminent for some of these commodities.

COMPARED WITH 1948 ACT

In this regard, the Brannan plan is much less satisfactory than the 1948 Hope-Aiken Act, which at least provided for flexible price supports, dropping as low as 60 percent of parity if and when supplies should exceed normal levels by more than certain specified percentages. Under the Brannan plan as now constituted, surplus production of cotton, wheat, and corn would not be discouraged by the use of lower price supports. As a consequence, stocks of unmanageable size may quickly come into public storage.

To repeat, production payments for storable commodities are not provided in the Brannan proposals, so that large-scale storage, while involving huge sums of public funds, will withhold potential benefits from consumers.

The development of huge stocks will necessarily force action in the form of drastic acreage or marketing quotas. Such quotas would discourage the consolidation of uneconomically small farms into larger, more highly mechanized family units and delay the shift of production to those regions in which production costs are relatively low.

Thus, they would tend to freeze production, penalizing less efficient producers at the expense of the more efficient, while holding consumer prices at unwarranted levels. Allotments and quotas would also cause many low-income farmers and farm workers to hang on at a subsistence level instead of shifting out of agriculture whenever alternative nonagricultural employment exists.

WIDE LATITUDE NEEDED

If these difficulties are to be avoided, Congress must give the Secretary very wide latitude in establishing support levels for individual commodities. He should be empowered to use the pricing mechanism to encourage expansion or contraction of production of specific farm products, depending upon prospective stocks and domestic and export demand. Approximate price-support levels should be announced sufficiently in advance to permit farmers to make suitable production plans with less uncertainty, and should be made good by production payments.

The effectiveness of using advance price guaranties to bring about an expansion of needed crops was demonstrated by the wartime experience in soybeans and peanuts. By the same token, when contraction of certain crops may be in the public interest, the price mechanism could and should be used in reverse.

Admittedly, by the proper application of this principle, production would be maintained in the more efficient, lower-cost areas, and marginal production would tend to be eliminated. Such an adjustment will take time and may require supplementary public measures to facilitate adjustments and minimize economic distress.

For this reason, Congress should authorize the Secretary—whenever he finds it necessary to lower specific support prices by more than a certain percentage—to implement this policy by temporary adjustment payments, tapering off (according to a preestablished plan) over a given period. Receipt of these payments should be conditional upon the performance of specific steps which will facilitate diversion or elimination of unneeded agricultural resources away from chronic surplus crops.

Postscript to Battle

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. MULTER. Mr. Speaker, the following article appeared in the New York Herald Tribune of May 29, 1949, and is most timely:

POSTSCRIPT TO BATTLE

(By Henry Beetle Hough)

If you drive through New England, you will see a certain Civil War monument again and again. It is the figure of a Union soldier wearing the loose-caped overcoat and soft cap of the period, hands clasped about the barrel of a grounded musket.

One of these soldiers, though doubtless cast in the same foundry, is different from all others. It stands on a pedestal near the steamboat docks at Oak Bluffs on the island of Martha's Vineyard, and one may read these words: "Erected in Honor of the Grand Army of the Republic by Charles Strahan, Co. B, Twenty-first Virginia Regiment." If you are a stranger, you will realize with surprise that the Twenty-first Virginia was a regiment of the Confederacy.

The story is this. Not long after the close of that bitter fratricidal war, Lieutenant Strahan, who had fought gallantly for the South, moved to the North for his health. He bought a small newspaper at Oak Bluffs, and through a period of years became attached, by mutual respect and liking, to his fellow citizens.

It was his idea to raise funds for a monument to honor the Union veterans; but he had a further wish, that when hatred at last had died, another inscription might be added in honor of the veterans of the Confederacy. That was in 1895.

In 1925, when Lieutenant Strahan was 80, his neighbors decided the time had come. A new plaque was placed on the pedestal and a new unveiling was held.

"The chasm is closed," the inscription reads. "In memory of the restored Union, this tablet is dedicated by Union veterans of the Civil War and patriotic citizens of Martha's Vineyard in honor of the Confederate soldiers."

The monument bears no date. Its figure has not survived intact—the musket has mysteriously disappeared, and the soldier's hands now grasp empty air. But so far as present and future generations are concerned, it has stood there all the while in common tribute to brave men—of the North and of the South. It has been accomplished because one man had a longer view than most, and by honoring former foes, put it into their hearts to honor him and his comrades. On Memorial Day, his lesson is poignant and clear.

Dismissal of Roy James

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 1 (legislative day of Monday, May 23), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on the dismissal of Mr. Roy James entitled "Something's Rotten," which appeared in the Washington Daily News of May 24, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOMETHING'S ROTTEN

Last Saturday you may have seen our exclusive story about Mr. Roy James, Government worker.

The story told how Mr. James had been ordered fired by the Civil Service Commission.

It said he's worked for the Government 18 years, had a spotless loyalty record, and a fine career record.

Mr. James had resigned from the Government (so that he wouldn't violate the Hatch Act) to run for Congress against Representative FRANCIS WALTER, Democrat, Pennsylvania. Mr. James lost. He came back to Washington and got another government job.

Mind you, there's nothing derogatory in Mr. James' performance or loyalty. He has been cleared by the Army (where he works as a civilian), by the Navy (he was an officer during the war), and by the FBI.

But Representative WALTER is the Democratic patronage chief in the House. There were visits to the White House.

And then the Civil Service Commission orders Mr. James fired.

What goes on here?

Representative WALTER says he doesn't like Mr. James, principally because he's a Republican.

The Civil Service Commission says its order to dismiss Mr. James was "routine."

That's about the most horrible admission it could make. We hope the Civil Service Commission doesn't crawl on its belly that way all the time. Routine, indeed! From the outside, this case looks like a clear perversion of the Civil Service Commission's powers. An inquiry is needed. Simply calling it "routine" won't do.

Civil-service standards either mean something, or they don't. The protection of these standards is the duty of the Commission. If it allows competent citizens with Civil Service status to be fired simply because they are either Republicans or Democrats, then the Civil Service Commission is traitor to its trust, and a house cleaning in that Department is a "must."

One last thought about this matter: How do you like the arrogant hypocrisy of legislators who mouth pious phrases about the necessity of a strong and secure and efficient civil service, weep big fat political tears over inefficiency in government due to political preference, and then sabotage the very Government itself by trying to gun decent citizens out of their jobs simply because they were political opponents?

How Conservation Has Encouraged Development in Arkansas

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 31, 1949

Mr. HARRIS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address of Gov. Sid McMath, of Arkansas, before the Interstate Oil Compact Commission at Jacksonville, Fla., Tuesday, May 10, 1949:

We are all deeply appreciative, Governor Warren, of the cordial and sincere welcome extended us today. I think it is especially fitting that this meeting of the Interstate Oil Compact Commission, a group of States dedicated to the conservation of oil, should be held at this time in the great State of Florida, a comparative newcomer in the production of oil but with tremendous potentialities. Stimulated by the actual discovery of oil in Florida, the lease hounds have moved in and I am informed there is now over 20,000,000 acres of land under lease. Twelve rigs are in actual operation in widely scattered areas and who can say that this is not the beginning of a development that may eventually cause the value of oil produced in Florida to rival that of the citrus crop or the tourist trade, two of your most widely publicized industries. It is indeed fortunate for the State of Florida and the other Southeastern States that your oil development is coming at this time. You will have the benefit of the experience gained by the other producing States and all the information available on the newer and improved techniques in the production of oil which is being disseminated by the Interstate Oil Compact Commission. The work of the compact is to encourage discovery and development and to secure the greatest ultimate recovery of the product when found.

It was not so in my State and we gained our experience at great cost. The first commercial production of oil in Arkansas was obtained in the El Dorado field in the year 1921. A succession of fields was developed in rapid order, the greatest of which was the Smackover field discovered in 1923. All were produced in the manner typical of that day and the waste was appalling. I shall not dwell on this for the history is well known to everyone in the industry. An analysis of cores from a well recently drilled in the Smackover field shows that only 17 percent of the oil originally in place in the sand has been recovered, yet the field has produced over 400,000,000 barrels of oil, and is now in the stripper stage. Think what a difference it would have meant if we had secured a recovery of from 50 to 75 percent of the oil in place as we are doing in our newly discovered fields. After the exploitation of our earlier fields there followed a period of inactivity and our daily production declined from a peak of 500,000 barrels per day at the height of the Smackover boom to a mere 12,000 barrels per day in the year 1936. Then with the perfection of the seismograph it was possible to map our deeper structures and Arkansas again assumed an important place in the industry. Thanks to a few of our farsighted citizens who had kept abreast of developments in conservation in other States, a move was initiated to pass an adequate conservation law and avoid repeating the mistakes of the past. This resulted in the passage of our present Conservation Law, Act 105 of the Fifty-second General Assembly, approved February 20, 1939. This was widely acclaimed at the time and has been used as a model by all States which have since passed conservation statutes. This was followed in 1941 by legislation authorizing the governor to join the Interstate Oil Compact Commission. We have been an active member of the compact since, participating in all its deliberations, serving on its committees and accepting all our responsibilities therein.

Production of oil has steadily increased in recent years and in the year 1948 we ranked tenth in volume of oil produced. Oil plays an important part in our economy and in the value of its products is exceeded only by agriculture and lumbering. It contributes a substantial part of our tax revenues. Oil has carried its fair share of the tax load but we have imposed no burdensome or discriminatory taxes that would retard exploration and development. This policy has proved wise in my State and I am sure will be equally beneficial to the newer producing States. Oil has been responsible for the growth and development of many of our towns and cities and to the general well-being of our people. It has resulted in a large increase in our per capita income. Thus the proper functioning of our State government is in a large measure dependent upon a prosperous and thriving oil industry.

Arkansas has promoted the cause of conservation out of all proportion to the daily volume of oil produced. Arkansas has become the proving ground for new and advanced techniques in producing oil and gas. Arkansas pioneered in the utilization of sour gas. Today in our major oil fields there are desulfurization plants reclaiming a former waste product, feeding it into transmission lines where it is transmitted to heat our homes and furnish fuel for our industries. Many industries have been located in our State because of ample supplies of this valuable fuel. We have made notable progress in the use of casinghead gas. Today less than 7 percent of the gas produced in our oil fields is flared, and this only in small pools where it is uneconomical to install gathering facilities.

Arkansas has played a leading role in the development of pressure maintenance. The midway pool in Arkansas was the first limestone reservoir in which the injection of fresh water was attempted as a means of maintaining pressure. The results were so phenomenal that it is now accepted as a standard practice not only in Arkansas but throughout the industry. We have not neglected the injection of gas also as a means of pressure maintenance. Over 50 percent of the oil produced in Arkansas is from fields having some form of pressure maintenance. As a result of this we shall obtain recoveries of two and three times the amount obtained under conventional production methods. Our oil reserves have been increased by this method in the sum of

UNIVERSITY OF MICHIGAN LIBRARIES

120,000,000 barrels, or four times our present annual production. Think what this means to the royalty owners, operators, and to the State government.

Arkansas has taken the lead in secondary recovery. Act 302 of the fifty-fourth general assembly directed the oil and gas commission to survey and study the prospects for the secondary recovery of petroleum in the oil fields of Arkansas and to report the results of the survey to the assembly. Never before had a detailed survey of all the fields of a State been attempted. The report, which was the culmination of 4 years' work, was completed and submitted to the fifty-sixth general assembly and is a milestone in the development of the science of secondary recovery. The first fruits of this work was the unitization of the Lisbon field which was approved by the commission only a few weeks ago. Operators estimate that more oil will be recovered in this field by secondary recovery methods than was recovered under primary methods.

Development has kept pace with improvement in conservation methods and operating techniques. Operators are anxious to search for oil in Arkansas for they know that if they are successful in their search, they will reap the greatest possible benefits from their discoveries. There is not a section of the State today with any oil possibilities that is being overlooked. They are going back and working over areas in the vicinity of the older fields. Only last month an intrepid wildcatter opened up a new deep field within sight of the tall buildings of El Dorado, a city made by oil, and then went over and discovered a prolific new shallow field almost within a stone's throw of the derricks of wells that have been producing since the year 1922. With the widespread development and exploration campaign now going on I am confident other fields will be opened and the year 1949 will see a substantial addition to our reserves which have been increasing for the past decade and totaled 300,000,000 barrels as of January 1, 1949. These achievements have been realized by a competitive industry operating under our free enterprise system and encouraged by a beneficent State government. We have accepted our responsibilities by passing an adequate conservation law and having it ably administered by capable men with a thorough understanding and knowledge of the industry.

What has been accomplished was aptly expressed recently by Mr. Paul Torrey, outstanding consulting engineer and chairman of the Interstate Oil Compact Commission's Secondary Recovery Advisory Committee, who said: "The work being done in Arkansas is marvelous in regard to the recovery of oil and as a result Arkansas has become the leading State in the United States with respect to the efficiency of oil recovery."

The benefits that have attained to my State through such a program will in my opinion prove equally beneficial to other States in which the production of oil is beginning to assume importance.

Gentlemen, I have dwelt on Arkansas because after all it is the State with which I am most familiar. Its daily production is small enough when compared to that of our neighbors, Texas, Oklahoma, and Louisiana, to enable our operators and our Oil and Gas Commission to give careful attention to the problems of developing newer and improved techniques in the production of oil, and act, as it were, as a pilot plant for the larger oil-producing States who are properly occupied wits the problems inherent in their size. The great State of Texas, for example, had recently to take the lead (by cutting back their production in excess of 750,000 barrels per day) in the prevention of economic waste which threatened the welfare of the oil industry and therefore the security of our country in peace and war.

When, along with a million other Americans, I was island hopping in the South Pacific, it was a great comfort to us to know that there was an unfailing source of fuel and power in the form of petroleum produced within the borders of our own country to take us wherever we had to go. Our mission could not have been accomplished without this and the next time, if there is a next time, the mission cannot be accomplished if our domestic oil industry in peace is caused to stagnate by a flood of foreign oil.

Given a favorable economic climate, the idea that we will ever "run out of oil" on this continent is patently ridiculous. Back in 1928 there were those in and out of Government who thought that we were running out of oil. The then Secretary of the Interior was one of those and it was proposed that our domestic reserves be locked up, hoarded, and that our needs be imported from foreign fields. It was a program of reservation, not conservation. At that time our reserves in this country were about 10,000,000,000 barrels and our annual production in the neighborhood of 1,000,000,000 barrels. Domestic producers, after a long fight, convinced the Congress that they could supply an abundance of oil at a reasonable price and by virtue of an excise tax, the flow of imported oil was reduced. The test of their view came with World War II. At that time the domestic industry was not only meeting all domestic requirements but in addition had a million barrels per day of excess producing capacity immediately available for war needs. This excess producing capacity carried us through to victory and it was, I believe, General Marshall who said: "No plane failed to fly; no ship failed to sail for want of oil."

Today our known petroleum reserves are at an all-time high. Since 1930 we have added to these reserves (which we should really just consider underground working stocks) a volume equal to all that we consumed, plus an additional 50 percent. Our reserves are now twice what they were in 1928 when the prophets of doom were hanging crepe on the industry. They are also great in some other parts of the world. Therein lies a danger to the full and effective functioning of our domestic industry. It is today a principal threat. Along with the development of our oil resources we have developed an enormous demand for the products of petroleum. The counterpart of this market does not exist anywhere else on earth. It is tempting both to companies which have concessions in other countries and to the governments of those countries which are intent on turning their oil into cash.

But our oil producers cannot continue to explore and develop if they are displaced in their own market. The economic difficulties which can come from the increasing tide of imported petroleum need no explaining to us here. We are well aware of the threat to employment, to State finances, to the distribution of oil royalties, rentals, and bonuses among landowners. As officials of our respective States and as citizens whose concern for the national welfare is ever in our thoughts, we must be conscious of the need of maintaining an industry on which we have relied and which has never failed us since the first use of petroleum was begun in the United States.

What I am saying is not to be taken as criticism of our American companies operating abroad. They are ably demonstrating to foreign lands what American enterprise can accomplish and what their own citizenry could accomplish were it free. But the full burden of reducing production when necessary to prevent above-ground physical waste and economic waste must not fall solely upon the States who are represented here today. Our companies operating abroad must assume their share of this responsibility (and I am glad to say that action of some of them in recent weeks indicates that they are assuming their responsibility) or we will threaten our domestic supply, which after all is our only reliable supply, for our needs in an emergency.

The group in this room, the States you represent, and the petroleum industry are composed of rugged individualists. You do not want to run to Congress for Federal aid in the form of subsidies or any other form of artificial support. But if imports are not brought into balance to supplement rather than supplant domestic production, as those companies committed themselves to do when they subscribed to the national oil policy of the National Petroleum Council, then it will become our duty to ask the Federal Government to restrict the flow of foreign oil by import quotas or excise taxes in order that we may continue to fulfill our responsibilities.

Fair Play and Common Sense

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. MULTER. Mr. Speaker, with the press so full of articles and editorials of criticism of the work of Congress it is well that we pause to take cognizance of the following commendation which appeared in the New York Times of May 31, 1949:

FAIR PLAY AND COMMON SENSE

A report from Washington has it that some members of the House Un-American Activities Committee are planning a rebellion against the secrecy and inactivity of the committee since its reorganization early this year. Particularly in respect to the charge of secrecy, this is one of the most encouraging comments on the work of the committee that we have heard in some time. We hope that the rebellion—if one is really afoot—fails to move Representative Wood from the course of moderation and restraint that he wisely established on becoming chairman.

As for the other charge the committee does not seem to have been especially inactive. It has released data on alleged Communist espionage; it has held some public hearings; it has indicated that investigations are under way. But it is true that the bulk of the committee's work this year has been behind closed doors, with a minimum of fanfare and publicity. This, it would appear, is the crux of the attack now being made on its procedure, and this, it seems to us, is precisely the type of procedure for which it should be commended instead of condemned.

The activities of this committee under the chairmanship of Representative THOMAS and former Representative DIES were attacked, and deserved to be attacked, because of the almost uncontrolled public character assassination in which it indulged without giving the accused any fair opportunity for reply. This was not the way to ferret out un-American activities; this was in itself highly un-American activity.

The basic purpose of this committee should be to gather facts which may be useful to our National Legislature in framing laws. Insofar as this involves investigation of espionage it is obvious that such inquiry cannot be carried out effectively by means of a new headline every day. In the interest not only of efficiency but also of decency and fair play the time for publicity is after, not before or during, such investigations. Then publicity may well be desirable and necessary in the interests of accuser, the accused, and the public.

Point 4 Plan Crystallizes

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans States of Monday, May 30, 1949:

POINT 4 PLAN CRYSTALLIZES

Nebulous when it was broached by President Truman as the fourth point in his inaugural address, the program to help the world's undeveloped regions is rapidly taking shape. If it adheres to schedule and budget hearings are concluded this week, "point 4" will make its maiden appearance before Congress 1 week from today.

Any sound plan to elevate living standards is of special interest to New Orleans; bettered standards are a stimulus to world trade. But compounding this port's interest is point 4's concentration on development of republics in its own front yard.

Critics frightened at the President's "bold new program" last January envisioned a world WPA or a new version of Henry Wallace's milk-for-Hottentots scheme with Uncle Sam catching the check. With the rounding out of the program criticism has largely subsided.

The first-year price tag, the State Department hopes, will be $55,000,000—altogether a modest amount considering Europe's Marshall plan billions. For salaries of the know-how men, technical experts, $30,000,000 would be expended. They would help in masterminding by surveys and other specialized ways plans for improving undeveloped nations.

To provide special training for foreign engineers, agriculturists, and others in the United States $10,000,000 would be spent. The $15,000,000 balance would cover equipment and supply exports. Thus, it is to be seen that actual financing of the developments depends upon the foreign countries themselves.

News from various sources last week indicated growing attention paid to the program. The National Foreign Trade Council proposed that the State Department set up a foreign development division for the program and urged bilateral treaties setting forth basic rights for United States private investments abroad.

The United Nations Economic and Employment Commission told governments to quit shackling imported capital and, as well, encourage domestic investments. Recommending negotiation of bilateral agreements with the countries helped, the National Association of Manufacturers urged protection of private initiative against discrimination.

Goal of the Department of Commerce, said Under Secretary Cornelius Vanderbilt Whitney, is $1,000,000,000 annually in long-term private American investments in foreign enterprises. And the State Department, meanwhile, loosed an avalanche of 7-page primers to explain the point 4 program on which the Nation is to embark.

Growing interest in what 5 months ago was a hazy plan is a healthy sign. For it comes from the solid point of view that no nation of the world, however great, can afford not to concern itself with the welfare of mankind.

Basing-Point System Explained by Hon. Wright Patman, of Texas, Over Midwest Radio Network—Chairman of House Small Business Committee Unmasks Fallacies of System Outlawed by Supreme Court—Quotes Supreme Court, Which Described Basing-Point System as "Handy Instrument To Bring About Elimination of Any Kind of Price Competition"

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. MANSFIELD. Mr. Speaker, my colleague and friend, Hon. WRIGHT PATMAN, the eminent chairman of the House Small Business Committee, of which I have the honor to be a member, recently participated in a radio program that was broadcast over eight Midwest stations. The subject was the basing-point system of pricing and its effect on our great States west of the Mississippi River. Mr. Walter Cronkite, for many years a distinguished war correspondent as well as foreign correspondent for the United Press, participated in the discussion. Mr. Cronkite recently returned from Moscow, where for 2 years he was chief correspondent for the United Press, and now is reporting and interpreting Washington and foreign news for a number of our great West-Central radio stations. They are KWK, St. Louis; KMBC, Kansas City; WOW, Omaha; KSO, Des Moines; WMT, Cedar Rapids; KSCJ, Sioux City; KOMA, Oklahoma City; and KTUL, Tulsa.

The outlawing of the basing-point system in the Cement case by the Supreme Court has had a salutary effect upon regional development in our Western States. The so-called heavy basic industries will add new units at points in the West where the natural advantages of location and raw materials will accrue to the benefit of our people. Word of such additions is already coming in. With the defeat of the moratorium on our antitrust-law enforcement, no longer will the unrelenting hand of big-business-controlled monopolies saddle arbitrary price controls and territorial divisions on our western economy. Steel and cement, particularly, are needed in ever-increasing quantities for the development of the West. I believe we should be able to supply our needs from nearby sources of supply without having the prices rigged and without paying freight—phantom freight—from points a thousand or more miles away.

I commend this broadcast to every Member of Congress who is interested in giving a new meaning to the oft-expressed admonition, "Go West, young man."

The broadcast follows:

Mr. CRONKITE. For a good number of years there has been considerable talk about something called the basing-point system. Of late, there has been even more than the usual amount of discussion on this matter.

Newspapers and we of the radio have been telling you that it is an important matter; that it is particularly important in our part of the world; that it has a direct bearing on the prices that we pay for many of the things we buy and hence directly influences our entire economy.

But what is this basing-point system, how does it work, how does it affect us, what have all the recent news stories been about, and what does the future hold in relation to it?

Those are questions which it occurs to me haven't been adequately answered of late. I think it is time to review this question and strip away, if we can, the complex, legalistic language that surrounds this thing.

So I've asked Congressman WRIGHT PATMAN, of Texas, 20-year veteran of the House of Representatives and long-time foe of monopoly practices in business, to help us. Congressman PATMAN is chairman of the House Committee on Small Business and has been the leader of the fight to get the basing-point system abolished from our economic system.

Just what is the basing-point system—in other words, what is a basing point?

Mr. PATMAN. The basing-point system is an artificial pricing system, Mr. Cronkite, in which one or more arbitrarily selected shipping points are used as a basis for calculating prices—by the addition of freight charges—to any given destination. These arbitrary points are termed basing points. The strategic aim of the basing-point system is—first, to secure the highest possible price; second, to control markets and suppress competition; third, to create a monopoly by excluding others from the industry, thereby restricting production, restraining trade, and destroying free enterprise. To operate the system successfully there must be understanding, agreement and combinations which results in collusive action, conspiracy, and other forms of unlawful activities.

Mr. CRONKITE. Well, Congressman PATMAN, getting this down to a level we can all understand, how does this affect a steel user in Kansas City, or Omaha, or Oklahoma City?

Mr. PATMAN. Users of steel in Kansas City, Omaha, or Oklahoma City, in fact, in all points west of Chicago, had Chicago as a basing point for the past several years. Therefore, Mr. Cronkite, buyers of steel in Kansas City, Omaha, and Oklahoma City were forced to pay freight charges from Chicago, even though they may have bought this steel from a mill in Kansas City or St. Louis from which points the freight charges are less than from Chicago.

Mr. CRONKITE. These higher artificial, rigged prices are then passed on to the final consumer, I suppose; in other words, the farmer who buys farm equipment has to pay a much greater price for that equipment than if the basing point did not exist.

Mr. PATMAN. Yes, that is right, Mr. Cronkite. For example, a farm-equipment manufacturer in Kansas City, Mo., may have purchased his steel from a local steel mill but since that steel had added to the mill price—the freight charges from Chicago—every ton used in the manufacture of farm equipment carried a much higher price than if the basing-point system had not been in existence. In the purchase of farm machinery and other steel products—and in the purchase of cement and many other commodities which have been subject to the basing-point system in the past, farmers and other customers have paid many millions of dollars in what is called phantom freight. Phantom freight is the difference between the actual freight charges from point of shipment and the freight charges from some

UNIVERSITY OF MICHIGAN LIBRARIES

distant point, which is added arbitrarily to the f. o. b. mill price to arrive at the destination price.

Mr. CRONKITE. There has been a great deal of news lately about the basing point and various Court decisions on it. Just what is the status as of this moment—do we still have the basing-point pricing system, or has it been outlawed?

Mr. PATMAN. The basing-point system has been outlawed by decisions of the Supreme Court, Mr. Cronkite. The outstanding decision was the Supreme Court decision in the Cement case, handed down April 26, 1948. This decision had the effect of outlawing the basing-point system. The Supreme Court described the system as a "handy instrument to bring about elimination of any kind of price competition. The Supreme Court found the basing-point system in the cement industry to be based on collusion among members of the industry. Recently the Supreme Court affirmed the decision of the seventh circuit court of appeals in what is known as the Rigid Steel Conduit case, which had the effect of further emphasizing the monopolistic and unfair pricing methods of the basing-point systems.

Mr. CRONKITE. Now there is some move here in Congress, I gather, to get the basing-point system reinstated.

Mr. PATMAN. Yes, several bills have been introduced in the Eighty-first Congress in both the House and the Senate which would have the effect you mentioned. In these days of ever-growing monopolies, I sincerely believe that no law should be passed which would weaken our antitrust laws—but rather such laws should be strengthened and their prosecution vigorously carried on by the Federal Trade Commission and the Department of Justice. Giant trusts are on the march and statistics show that fewer than 100 corporations in this country do more than three-fourths of our trade and industry. Since 1940—and while our boys were in the front lines fighting in our country's defense—these giant monopolies were far back of the lines planning the complete control of all business in our country through the elimination of small business—the elimination of free markets and of free enterprise. We must fight hard—altogether—to hold the line or we shall all be working solely in the interests of big business.

Mr. CRONKITE. What do the chances appear to be for this legislation?

Mr. PATMAN. Of course, Mr. Cronkite, I feel very strongly that the so-called moratorium bills, Senate bill 1008 and House bill 2222, should not be passed by the Congress. I know there is considerable opposition to the bills in Congress, and I believe that opposition is on the increase as the full import of this type of legislation is recognized. Our listeners are no doubt well informed of the activities of big business and big-business lobbies in Washington in the interest of this legislation. One high-powered lobbyist, I understand, is paid the huge sum of $11,000 per month, plus all expenses of every kind and character. The basing-point system has been outlawed by the courts, and now the Cement Trust, the Steel Trust, and others using the basing-point system of pricing ask Congress to upset the Court decisions and weaken our antitrust laws by way of legislation. The people are fully advised in the matter, I am sure, and I hope they will add their voice to the ever-growing opposition to any moratorium legislation on our antitrust law.

Mr. CRONKITE. Congressman PATMAN, you stated that opposition to the moratorium bill is on the increase as the full import of the legislation is recognized. Will you elaborate a little on the full meaning of the moratorium?

Mr. PATMAN. Certainly. The basing-point system of pricing is easily recognized by the fact that destination prices are practically always identical. Thousands—I mean literally thousands—of abstracts of bids to the Federal Government, to the States, and to municipalities, have been examined over the years and the prices found to be identical regardless of the number of bidders. Of course, I do not mean to say that an occasional price is not different, but these rare occasions are found, usually, to be errors on the part of the bidder rather than by design. Not only have invoices and abstracts of bids to governmental agencies been examined, but the Federal Trade Commision examined 60,000 invoices to cement dealers in 20 cities in the United States and found the same pattern of identical prices which had been bid to public bodies. As the Supreme Court well said in the Cement case decision, such prices eliminated any kind of price competition. Mr. Cronkite, when price competition is eliminated, you have created a monopoly, and Congress has long recognized that monopolies are not good for the people, but, only good for the favored few who operate them. If the moratorium bill becomes law and the hand of the Federal Trade Commission and of the Department of Justice is stayed, it will be extremely difficult to secure evidence that the basing-point system of pricing is again in operation. In other words, in my opinion, a moratorium, however innocent-looking on the surface, will only serve big business in its use of artificial, discriminatory, and destructive pricing system, and all of the work of a half a century will be nullified; and the issues which have been so clearly stated—and so satisfactorily resolved in the interests of the people—will be again thrown into the realm of doubt.

Mr. CRONKITE. One final question, Congressman PATMAN. I gather that some local industries fear that with the basing-point eliminated, big steel, the cement, and other interested industries, will go out around the country building new plants and that they will run the smaller local industries out of business. Do you believe there is any real basis for these fears?

Mr. PATMAN. Emphatically no. The Steel Trust, Cement Trust, and other trusts have already expanded their productive capacity at locations which suited their convenience. The basing-point pricing system has often been used as a price weapon to destroy small business enterprise in these industries, which now are deprived of that weapon, and so small steel mills, cement plants, and small manufacturers of a thousand items can now meet big business on its own ground without being destroyed by cutthroat pricing methods. Small business enterprise is the backbone of our economy. It must be nurtured and expanded. Small business must look forward resolutely, because, when big business is deprived of its artificial pricing methods and its power to rule and ruin, I am confident that small business will be revitalized and will go forward without fear and with unbounded courage and optimism in its own future and in the future of our beloved country.

Mr. CRONKITE. Thank you very much, Congressman WRIGHT PATMAN, of Texas. Congressman PATMAN has been with us today to help clarify the present status of the basing-point system, and to explain for us its effect on us. As chairman of the House Committee on Small Business, he has been instrumental in the fight to eliminate the basing point and all other restrictive, monopolistic business practices.

This is Walter Cronkite, speaking from Capitol Hill in Washington and returning you to our local studios.

Message to the Citizens of Iowa of 2049

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. LeCOMPTE. Mr. Speaker, the editor of the Chariton (Iowa) Leader, W. D. Allender, has prepared a message to the citizens of Iowa of 2049, 100 years from now, and has printed the message in this paper. The paper is to be placed in the cornerstone of the new Register and Tribune building now being erected in Des Moines and this cornerstone, or vault, is to be opened in the year 2049.

Because of the importance of this message to future generations and the interest attached thereto, under unanimous consent I extend my remarks in the RECORD and include this historical message:

TO THE READERS OF 2049

To you who read this in 2049 we leave you greetings. How we wish we might remain on earth, impolitely lean over your shoulder, and read them as you do. We'd probably laugh with you at some of the then obsolete expressions current in our day.

We assume there will be older people living in your time who will long for the "good, old days." That nostalgic group every century preceding ours has had them, so why should yours be different? Be glad you are alive in the middle of the twenty-first century and escaped mingling with some folks, most of them needlessly alarmed, we sincerely hope, over the atom bomb and what Russia's Joe Stalin will do next. We hope you will be living in a better democracy than we have built to date, although the general concensus of opinion is that ours in 1949 is doing a very good job of building in that direction. We hope wars actually will be a thing of the past and that you people now living will have and exercise the power to keep it obsolete.

Three years ago you celebrated Iowa's two-hundredth anniversary of statehood. Perhaps you might be interested in a thumbnail history of Lucas County's advancement.

Shortly after Iowa's land was opened to settlement men drifted in from east of the Mississippi and found the prospect pleasing. A year or so later the Mormons, seeking a refuge from persecution, crossed the county en route to Utah. Those travelers drove oxen and averaged from 4 to 6 miles a day, and were satisfied they made good time. Other migrating families, now known as pioneers, followed the first adventurers and stayed to create homes, build schoolhouses and churches, and embark in trade.

Chariton, the county seat, came into being in the early fifties of the nineteenth century. Early it was a crude village. By 1949 it had grown to be a city of more than 6,000 inhabitants.

In 1949 we drove automobiles and considered speeds of 50 miles per hour on improved roads as safe. Automobiles to you in 2049 may be as far behind the times as were horse-drawn vehicles of our day. In that event, you may be enlightened to know that an automobile was a gasoline-propelled carriage used for covering short distances or for touring the country. Everyone, when he bought his first car, was so happy to own it, until he got his first repair bill. Gasoline-propelled trucks transported freight of all

descriptions. Busses carried passengers to points nearby or far away. In 1949 the car was regarded as an essential by practically every family.

We would have liked to list all the business firms in Chariton for this record, but that would have entailed the use of considerable space and the likelihood we'd have unintentionally overlooked mentioning some. But we will call the 2049 reader's attention to some of the industries the citizens of 1949 pointed to with considerable pride.

Earlier in the twentieth century coal mining was an important local industry, but that had been on the decline a few years preceding the time this was written. The product mined was a fuel used for warming houses and heating water in boilers whose steam drove a type of engine you would consider quite crude. Perhaps atomic energy by now has been replaced by a superior power.

In 1949 Chariton industries turned out brooms, overalls, work clothing, cake decorations, steel products, etc. Our steel-manufacturing plant even built boats during World War II, the last war, we pray, your histories record.

Chariton's trade area lapped well over into adjacent counties, and Saturday was the big day every week. On Saturday nights negotiating one's way through the crowded sidewalks was often difficult. The influx of visitors—and you may be quite certain their presence was enthusiastically welcomed—paused to chat with neighbors they saw the preceding Saturday or friends they had missed contacting for several weeks. If you had been in a hurry, which was almost a useless state to be in, you would have gathered a conglomeration of varied conversations that might run like this:

"I walked around behind her, slapped her on the rump, and yelled, 'Whoa'." The sedate-appearing farmer who made that statement was not speaking slightingly of the smarter human sex, but was relating an incident in the life of a skittish mare. The next man you might have passed could have been bragging of his gift of a fifth of bourbon, which would seemingly blend into the conversation between two nearby men lamenting that "everything is so dry and the oats may suffer." Four or five feet beyond, as you made a little progress, you might have run onto a trio of young ladies admiring a fourth girl's engagement ring and gushing over the setting. Immediately ahead, and within hearing distance, three or four other ladies were also discussing settings that had nothing to do with weddings, unless it was a promotion to provide eggs for a wedding cake.

If you of the twenty-first century do not have those Saturday night crowds to contact or mingle with, you will be missing something that was the lifeblood, heart, and soul of a country county-seat town in 1949.

You might be interested in knowing the names of the presiding officers of some of our organizations in 1949. We don't claim this list is complete, but we hope it is:

Rotary Club, John Neighbour; Lions Club, Orville Hill; Woman's Club, Mrs. O. A. Stafford; Daughters of Union Veterans, Mrs. Otto Brown; Chariton Federated Garden Club, Mrs. W. L. Frank; Girl Scout commissioner, Mrs. Howard Gentry; P. E. O. Chapter, Mrs. Lazear Throckmorton; Navy Mothers Club, Mrs. Harriet McRoberts; Beta Sigma Phi, Mrs. Ellsworth Johnson; American Legion Auxiliary, Mrs. Frank Dunshee; Veterans of Foreign Wars Auxiliary, Mrs. Martin Krutsinger; BPW Club, Miss Nora Johnston; D. A. R., Mrs. George Harlan; P.-T. A. Council, Mrs. Robert Dale; Franklin P.-T. A., Mrs. Charles Downard; Garfield P.-T. A., Mrs. Oscar Willits; Columbus P.-T. A., Mrs. John Shelton; Alma Clay P.-T. A., Mrs. Harold Clark.

Masons: Blue Lodge, S. S. Murphy; Royal Arch, George Noble Russell; Council, Eddie Davies, Knoxville; Commandery, Harold Blackman; Order Eastern Star, Mrs. Tom Nutt; White Shrine, Mrs. George Noble.

Odd Fellows lodge, Walter Cain; Encampment, Walter Cain; Rebekah lodge, Mrs. John Probasco; Encampment Auxiliary, Mrs. Everett Bumbarger.

Knights of Pythias lodge, Earl Clark; Pythian Sisters, Mrs. Charles Hickman.

Eagles lodge, Howard Taylor.

Ministerial Association, Rev. Aleck Ulmet.

American Legion, Glenn McCurdy; Veterans of Foreign Wars, Germain Mullins.

Charitan Chamber of Commerce, D. L. (Moody) Smith. Lake View Golf and Country Club, Noel Cloud. Chariton Gun Club, Luther Johnson.

(If we've missed any we heard about it 5,199 weeks before you did.)

County officials in 1929 were: State representative, Ray Shepard; auditor, Mrs. Louis Krutsinger; treasurer, Herman Atwell; clerk of the courts, Orlan Wells; sheriff, Paul Laing; recorder, Mrs. Ella Metz; attorney, A. V. Hass; coroner, William Dunshee; board of supervisors: Guy Bowman, chairman, Floyd H. Bond, and Ralph Cackler; Hon. Davis, the member elect.

The men and women working for the Leader when this issue of May 17, 1949, was printed were: Will D. Allender, editor and manager; Floyd E. Flack, news editor; Brace M. Owings, advertising manager; Tom McCausland, circulation manager; Mrs. Evan Ellis, society editor; Miss Thelma Richards, bookkeeper; Roger Davis, superintendent of mechanical department; Joseph Crane, linotype machinist-operator; Miss Ella Anderson, linotype operator; Noel McKinley, advertising compositor; Max Williadson, stereotyper; Tom Evans, advertising compositor and linotype operator, and Russell Adams, shop devil.

Need for Reduction of Government Machinery

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 1 (legislative day of Monday, May 23), 1949

Mr. BYRD. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter which appeared in the Richmond Times-Dispatch, written by Mr. Jacob Billikopf, who has devoted much of his time to educational and philanthropic causes and is a man of outstanding ability.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEFEAT OF MR. HOOVER'S PLAN WOULD BE TRAGIC—MR. JEFFERSON ALSO ASKED FOR RELIEF FROM PARASITES

EDITOR OF THE TIMES-DISPATCH:

In a letter Thomas Jefferson wrote to William Ludlow at the age of 81, he had this to say among other things:

"I think that we have more machinery of government than is necessary, too many parasites living on the labor of the industrious. I believe it might be much simplified to the relief of those who maintain it."

Calling the above to the attention of our former President Herbert Hoover, he made this observation:

"I was glad to have that quotation. And the Federal civil employees have grown from 1,500 in Jefferson's time to 2,100,000."

There can be no question but that we have today much more machinery of government than is necessary. As the Hoover Commission has demonstrated, there is an enormous amount of waste, duplication and featherbedding. If the recommendations outlined in the reports were turned into reality, a great many overlapping and duplicating agencies, boards, and bureaus could be abolished, consolidated or reorganized, thus saving the taxpayers $2,000,000,000 to $3,000,000,000 annually.

Congress has appropriated nearly $2,000,000 to the Commission which has done a marvelous job. It would be a tragic waste of money and effort if the proposals were to go by default.

JACOB BILLIKOPF.

PHILADELPHIA, PA.

General Pulaski's Memorial Day

EXTENSION OF REMARKS

OF

HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a resolution of the Common Council of Middletown, Conn., memorializing the Congress to pass the General Pulaski's Memorial Day resolution now pending.

"Resolution of the common council memorializing the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in Congress

"Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as General Pulaski's Memorial Day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the present session of the United States Congress; and

"Whereas the 11th day of October 1779 is the date in American history of the heroic death of Brig. Gen. Casimir Pulaski, who died from wounds received on October 9, 1779, at the siege of Savannah, Ga.; and

"Whereas the States of Arkansas, California, Connecticut, Delaware, Illinois, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, Nevada, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, West Virginia, Wisconsin, and other States of the Union, through legislative enactment designated October 11 of each year as General Pulaski's Memorial Day; and

"Whereas it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing and commemorating the heroic death of this great American hero of the Revolutionary War; and

"Whereas the Congress of the United States of America has by legislative enactment designated from October 11, 1929, to October 11, 1946, to be General Pulaski's Memorial Day in United States of America: Now, therefore, be it

"*Resolved by the Common Council of the City of Middletown and State of Connecticut*, That we hereby memorialize and petition the Congress of the United States to

UNIVERSITY OF MICHIGAN LIBRARIES

pass, and the President of the United States to approve if passed, the General Pulaski's Memorial Day resolution now pending in the United States Congress.

"That certified copies of this resolution, properly authenticated, be sent forthwith to the President of the United States, the Vice President of the United States, and each of the United States Senators and Representatives from Connecticut."

The within and foregoing is a true and attested copy of the original resolution, passed and adopted by the Common Council of the city of Middletown, on March 7, 1949, nine members voting in favor thereof, and approved by His Honor Herbert C. F. Bell, mayor.

EDWARD P. WYSOCKI,
City Clerk.

What Dickens Said

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of Tuesday, May 31, 1949:

WHAT DICKENS SAID

It is an essential part of every national character to pique itself mightily upon its faults, and to deduce tokens of its virtue or its wisdom from their very exaggeration. One great blemish in the popular mind of America, and the prolific parent of an innumerable brood of evil, is universal distrust. Yet the American citizen plumes himself upon this spirit, even when he is sufficiently dispassionate to perceive the ruin it works; and will often adduce it, in spite of his own reason, as an instance of the great sagacity and acuteness of the people, and their superior shrewdness and independence.

"You carry," says the stranger, "this jealousy and distrust into every transaction of public life. By repelling worthy men from your legislative assemblies, it has bred up a class of candidates for the suffrage, who, in their every act, disgrace your institutions and your people's choice. It has rendered you so fickle, and so given to change, that your inconstancy has passed into a proverb; for you no sooner set up an idol firmly than you are sure to pull it down and dash it into fragments; and this because, directly you reward a benefactor, or a public servant, you distrust him, merely because he is rewarded; and immediately apply yourselves to find out, either that you have been too bountiful in your acknowledgements, or he remiss in his deserts. Any man who attains a high place among you, from the President downward, may date his downfall from that moment; for any printed lie that any notorious villain pens, although it militate directly against the character and conduct of a life, appeals at once to your distrust, and is believed. You will strain at a gnat in the way of trustfulness and confidence, however fairly won and well deserved; but you will swallow a whole caravan of camels, if they be laden with unworthy doubts and mean suspicions. Is this well, think you, or likely to elevate the character of the governors or the governed among you?" (Charles Dickens' American Notes (1843).)

Memorial Day

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address I delivered at the Memorial Day exercises of Stephen J. Ryan Camp, No. 7, United States Spanish War Veterans at the Oliver School Hall, Lawrence, Mass., on May 30, 1949:

"Four score and seven years ago * * *." With these immortal words Abraham Lincoln dedicated in 1863 the cemetery at Gettysburg to those who fell in one of the most decisive battles of history. He spoke of the year 1776, 87 years before, when "our fathers brought forth on this continent a new Nation, conceived in liberty, and dedicated to the proposition that all men are created equal."

On this Memorial Day of 1949, we say "Four score and six years ago," for that is the time that has elapsed since Lincoln's classic words of consecration. The 86 years which have come and gone since then, almost identical with the span of which the Great Emancipator spoke, but in the framework of the nineteenth and twentieth centuries, bear witness to the great growth of the American experiment even as it has beaten off serious challenges to its very life.

Lincoln spoke of Thomas Jefferson's proposition which had been a slogan of the Revolutionary War, the rallying cry that "All men are created equal." Today, all over the land, speakers refer back to the fresh meaning which Lincoln gave to that faith when he concluded with the ringing phrase, "That this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, and for the people, shall not perish from the earth."

But even as Lincoln, burdened by the tragedy of brother fighting against brother, of civil war, and of slavery, looked forward with confidence to the triumph of popular government, we too, shall gather from this day, new heart to face the problems which lie ahead.

We mark another milestone on our way and recall to mind those whose sacrifices have won for us the opportunity to finish the work which they who fought and died in freedom's name "have thus far so nobly advanced."

On this day set apart to honor the dead, we pause in our labors to think of them and the inspiration which their lives should carry forward into ours. For we are their inheritors. It is good to step aside for a moment from the traffic of life to consider how far we have come and what remains before our journey is completed. And to measure our contributions by the light of those who have gone before us. It is a time of soul-searching as we honestly try to answer this question: "Are we living up to their belief in us?"

Remembrance is a tender and reverent experience.

By fitting ceremony we pay tribute to the dead.

From this meeting place where we humbly acknowledge our debt to these who once served in the armed forces of our Nation, we put aside the diversities of race and class and creed. It is as if the democracy of the dead reminded us of the brotherhood which should animate the living. It is a sober thought which teaches us that unity is born of respect and cooperation. If we hold to this through all the distractions of life we shall become better Americans and better human beings. And in so doing we shall contribute our share to the development of a society built on tolerance and upon the encouragement of responsible individualism.

History is full of the contradictions which mark men's efforts. From the beginnings of time there have been wars and rumors of wars. Men of one religion have engaged in bloody battles with those of another religion, both sides believing themselves to be in the right. Other groups have fought for material gain, deceiving themselves with various justifications. National pride has often served as a cloak for aggression. Through greed, intolerance, ignorance, or fear, millions of men have gone forth to fight and die. It is not easy, especially for the young, to give up the precious gift of life. The spirit of sacrifice is not the monopoly of any one group. The heroism to which men rise in time of combat has its roots in the belief that they are helping their own people. It is the extension of the protective instinct found in family life, to a larger group in society. That it is sometimes mistaken and often cruel does not conceal the point that men have believed sufficiently in conflicting goals to die for them. Our problem, and that of the world itself, is to devise a system for adjudicating differences without resort to war. Different as men may be, if faced with all the facts, they have a common core of decency upon which justice must depend. With the swift and easy avenues of communication opened up by science, the world is in a far better position today for the two-way exchange of knowledge which is the greatest hope for peace. For in the free trade of facts, propaganda cannot survive.

The slogans which call men to battle change and are soon forgotten, but all through our history you will find one underlying motive which has inspired our citizens to become fighting men in time of common danger. As if by instinct, they will sacrifice to defend, not a nation as such but for the homes and loved ones, the friends and neighbors, and the fair way of life we are developing here.

Long before there was a city of Lawrence, and at a time when these 6 square miles were part of neighboring townships, a handful of men left their farms to fight in the Revolutionary War.

The city was still young when the Civil War began. Even before the attack on Fort Sumter, local militia companies had offered their services to the Federal Government. The first Union regiment to start for the city of Washington, where the seat of government was defenseless and momentarily expecting a Confederate attack, was the Sixth Massachusetts. While passing through Baltimore, the troops were mobbed by Confederate sympathizers. Four Massachusetts men were killed, and on this first casualty list was the name of Sumner H. Needham, a Lawrence man, who was also the first soldier to give his life in action in the War Between the States.

During the 4 years of that conflict, as the young Nation was torn from within by revolution, Lawrence gave 2,617 men to the cause of unity—202 never returned.

As we look back, our passions tempered by the mellowing years, we view the enemy of those days with compassion. He, too, was brave in spite of his fears. He also suffered and died for a cause larger than himself. We are thankful that the war ended in victory for the North, but, somehow, we feel that it was the mutual sacrifice on both sides that was necessary to fuse the democratic unity of our people.

Lincoln was the last casualty of that war, the final tragic climax which convinced friend and foe alike of the need for unity based on

law. The cost in terms of lives and suffering must not be repeated again. It wasn't. The Union of the States grew and strengthend and prospered. Today it is a model for the world to emulate as it gropes toward that greater federation of the nations which is the sole hope for peace and understanding of the people who inhabit the earth.

The school books say that the battle of Gettysburg was the turning point of the struggle between Union and secession. But as we recall that fateful engagement from the reports of those who were there, the issue fades into the background. We see the men on both sides and our hearts are purged by fear and pity at the youth and courage and talent which went forth to sacrifice on that day.

And when the smoke of battle had cleared away, the North had won. If by some miracle those Americans who now live in our Southern States had power to turn back the pages of history and reverse the decision at Gettysburg, I know they would not do so. A grim price was paid for the unity which was won fourscore and six years ago, and the lesson of that lives on in us.

We think of the men who died at Gettysburg.

And strange as it may seem, we find our thoughts turning to Gen. George Pickett and the 15,000 men he led on that gallant hopeless charge up the slopes of Cemetery Ridge. For they were then known as the enemy.

Before the charge began, Pickett handed General Longstreet a letter to a girl in Richmond he was to marry if he lived. On the back of the envelope he had scribbled one last thought which read: "If old Longstreet's nod means death, good-by and God bless you, little one!" A fellow-officer handed him a flask of whiskey but Pickett refused the drink. He had promised the little girl back home that he wouldn't.

Almost a mile to go, up the long and gradual rise of open ground, in full view of the Union troops who held the crest. With the blue flag of Virginia leading them, the 15,000 men of Pickett's Brigade began their march. Over field and meadow they walked, unhurried and undaunted. Union artillery tore gaping holes in their ranks but they marched on only to meet the close aim of rifle fire.

As men fell, others stepped up to take their places.

It was the 3d day of July 1863. The sun was bright, and white clouds floated lazily in the sky. It was a day rich with the promise of life. The grain was ripening in the fields. There would be a good harvest this year. That's what a man should be thinking of as he paused in his labors to survey the handiwork of himself and nature. And tonight when the sun goes down we can sit with the members of our family to enjoy a well-earned respite. There will be music and pleasant talk and—

But this was Gettysburg, in 1863, and there was stern work ahead to try the souls of men.

Grim harvest was at hand as the flower of the Confederacy was being cut down on the slopes to Cemetery Ridge: 15,000, 14,000, 10,000, still they marched on, led by riderless horses who then fell, as men fell, many never to rise again.

Maybe half the 15,000 who started out managed to reach their objective. At last they could fight as man to man. For brief minutes, the flag of the South waved over the defences, but their numbers were no match for the reinforcements of the North.

General Meade of the Union Army rode up, observed that the attack had been repulsed and cried, "Thank God." When Robert E. Lee heard that his men had been defeated he was visibly affected. "They deserved success as far as it can be deserved by human valor and fortitude," he said. "More may have been required of them than they were able to perform."

When the sun went down on Gettysburg it marked the beginning of the end for the Confederacy.

But I sometimes wonder how the Union troops felt when the battle was over. Not on that night, for the living on both sides were exhausted after the struggle. Perhaps a day or two later, when the fever of battle and victory had passed, they remembered men like themselves, but dressed in gray, who walked toward them up the mile-long, sun-lit slope.

Would they never stop in spite of the sudden death which reaped their ranks? Such courage seemed invincible.

It was, in a sense. The South had lost a decisive battle but had won an immortal memory. Many years after, at the end of a day that was as bright and warm with sun as Gettysburg, Union veterans would sit smoking their pipes in the quiet shade of their homes, oblivious to the small talk of their wives, and the laughter of children at play. They were thinking of Pickett's men. Not as enemies but as fellow human beings, with a faith that knew no fear.

And perhaps they searched for the answer to this question, "What inspired Pickett's men with sublime and self-sacrificing courage?"

History says that the South lost and that the Nation regained the unity which has since been the key factor in its success.

Between the lines of history, however, we read the human story. The men of the South were also fighting for freedom. That they were wrong in the way they sought freedom is now of little consequence. Through the years there have been adjustments—voluntary adjustments—and the cause of union has been strengthened.

We of the North and the South have found a common meeting ground for our common faith. Since that time, whenever our unity has been threatened, we have fought side by side. The sons of Pickett's men joined with Meade's in the charge at San Juan Hill. In 1898 our combined forces went out to liberate oppressed peoples from the yoke of Spanish imperialism. We have made good on our promise, and have given to Cuba and to the Philippines the freedom which we promised them. Company F of the Ninth Regiment, composed of Lawrence men, took an active part in that campaign.

In World War I more than 6,000 from this city served their country. Five hundred were members of the famed Twenty-sixth (Yankee) Division which was in the thick of the fighting at the Marne, which, like Gettysburg, was one of the decisive battles of history. A Lawrence man, by his heroic example under fire, became one of the great epics of that war. Captain Leahy, though mortally wounded, put all thoughts of personal consideration aside as he turned to his subordinate and said, "Hanson, the command is 'forward'." These words, symbolic of his inspiring devotion to duty have become a part of our national heritage in which we of Lawrence take sober pride because he was a product of our city. We raise men who "have the goods."

In World War II, over 11,000 of our sons and daughters served in the armed forces. Their names are found on the honor rolls of gallant troops who fought in North Africa, who were at Casino, Normandy, with Patton's tanks, and who waded ashore at every island stepping stone in the Pacific. They fought under the ocean and in the skies, and wherever they were called in line of duty, they proved more than equal to the sturdy citizenship they had learned and lived * * * in Lawrence.

Thousands of Italian immigrants, distressed by lack of opportunity in the country of their origin, crossed the ocean and settled in the Greater Lawrence area between 1890 and 1910. How well they took root in their new homeland is evidenced by the industry, the hospitality, the love of family, and the sacrifices they have made for the education of their children. All these factors have strengthened our community life, but none more so than the generosity with which their sons and daughters supported the war effort. The Campagnone family gave three of its sons on the field of battle in defense of those freedoms under God, to which we are devoted. In the history of our city, no one family has ever given so much. Before such devotion, we bow our heads in reverence. On a similar occasion, President Abraham Lincoln wrote to a Massachusetts mother, attempting to console her. Of this note, Carl Sandburg has said: "More darkly than the Gettysburg speech, the letter wove its awful implication that human freedom so often was paid for with agony. In these words Lincoln performed a rite, managing language as though he might be a ship captain at midnight by lantern light, dropping black roses into the immemorial sea for mystic remembrance and consecration. Here was a piece of the American Bible."

In this beautiful and gentle letter Lincoln said, "I know how weak and fruitless must be any word of mine which should attempt to beguile you from the grief of a loss so overwhelming. But I cannot refrain from tendering you the consolation that may be found in the thanks of the Republic they died to save. I pray that our Heavenly Father may assuage the anguish of your bereavement, and leave you only the cherished memory of the loved and lost, and the solemn pride that must be yours to have laid so costly a sacrifice upon the altar of freedom."

The deep compassion of Lincoln's words, touched all hearts. Above and beyond the military victory, time brought healing understanding. The sons, the grandsons, and the great grandsons of Grant's men and Lee's men fought side by side at San Juan Hill, at the Marne, and at Okinawa. They were joined by men whose parents had been born in other lands, but all fought as one to protect the rights of people from tyranny in any form.

Needham, Leahy, Campagnone, these are the leaders of that gallant company to whose memory we pay reverent tribute on this Decoration Day. Consider these names, so different in their origin, in their race and in their creed. What brought them together as brothers, above the artificial distinctions which have caused so much strife in the history of this world? It was the growing power, fostered by the freedoms they have enjoyed here, to know each as fellow human beings. In the progress and the confidence inspired by this fraternal spirit, men develop the best that is in them and are willing to die, if need be, for the sake of their children and the greater fellowship toward which our way of life is working.

Each generation, with the story of its struggles and its heroic accomplishments has its day and then steps aside. And the one which follows builds on the moral and spiritual heritage which has been won for them.

On this Memorial Day, we participate in civic ceremonies and then visit the final resting place of those to whom we owe so much. When I was a boy, the United States had not grown up to that position of power and responsibility which made her the decisive factor in two world wars. As I stood on the side walk along the route of march, watching the aging veterans of the Civil War, I thought of their immortal courage at the battle of Cold Harbor, where 7,000 young Union soldiers gave up their lives in a single hour. I did not know then that this was the highest sacrifice in all of America's fighting history from the Concord River, yes, even to Iwo Jima and the Battle of the Bulge.

UNIVERSITY OF MICHIGAN LIBRARIES

It is significant that our National Cemetery at Arlington, Va., was once an estate owned by George Washington. Later it belonged to the distinguished leader of the Confederacy, Gen. Robert E. Lee. And the first hero to be interred there was a Union soldier.

The ranks of the Union veterans have thinned away. This year will witness the last encampment of the Grand Army of the Republic. Not only to the men who fell at Gettysburg and Cold Harbor but to their comrades who survived them half way into another century, and to their organization which nourished us with reminders of courage and sacrifice, we owe a special prayer, a final tribute.

And when we visit our local cemeteries and see the bright new flags on the green lawns of those who fought and died for liberty-in-unity, I believe that we shall be inspired by memories of their devotion.

Needham, Leahy, Campagnone, from this faith in one another, ever growing from generation to generation, we shall go on striving for that peace and good will among all men which will be the greatest victory.

Society for Encouragement of Barber Shop Quartet Singing in America

EXTENSION OF REMARKS

OF

HON. WILLIAM L. PFEIFFER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. WILLIAM L. PFEIFFER. Mr. Speaker, under permission to extend my remarks, I include the following announcement regarding the international convention to be held in Buffalo, N. Y., on June 10 and 11, of the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America, Inc.

The Treasury Department, United States Saving Bonds Division, selected Keep America Saving as the theme song for their opportunity bond drive, which was composed by Frank H. Thorne, of Chicago, a former international president of the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America, Inc. The national director of the Savings Bonds Division, Mr. Vernon L. Clark, wrote to Mr. Thorne:

> Please accept the Treasury's congratulations and sincere thanks for your Keep America Saving, the winning bond song in the competition sponsored by your society. We're delighted and believe that SPEBSQSA quartets can give the opportunity drive a tremendous lift by singing Keep America Saving to audiences across the land.

I am informed that the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America, Inc., will meet in international convention in Buffalo, N. Y., on June 10 and 11. Planned as one of the biggest musical events in the city's history, the convention will attract more than 3,000 songsters. Forty quartets have qualified for the semifinals and finals. Each quartet is selected in elimination contests staged in their respective districts. From the original 40 groups, competition during the 2 days of convention will eliminate all but 5. The international champions will be chosen in the medalist competition Saturday night, June 11. The Buffalo Bills of Buffalo, N. Y., is one of the three qualifying quartets from the central western New York district.

National Health Act of 1949

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. JAVITS. Mr. Speaker, on Tuesday last, together with six other Members of the House of Representatives, CLIFFORD P. CASE, New Jersey; JAMES G. FULTON, Pennsylvania; ROBERT HALE, Maine; CHRISTIAN A. HERTER, Massachusetts; THRUSTON BALLARD MORTON, Kentucky; and RICHARD M. NIXON, California—I introduced the National Health Act of 1949. In its leading editorial today, the New York Herald Tribune calls this act A Republican Middle Way.

Our bill meets the major challenge to the Republican Party referred to in this editorial as its presents feasible alternatives where there is a demonstrated national need like that for adequate medical care. This bill shows that the problem of medical care can be met at least as adequately and even better, without jeopardizing freedom of initiative or vesting direction and control in the Federal Government. Under the Administration's health-insurance plan payments to doctors and hospitals will come from or through the Federal Government. Under this bill hundreds, perhaps several thousand, local voluntary health plans will be paying doctors and hospitals for their own subscribers, yet coverage would be universal and on a basis of equality, and no one would have to take a means test to get Federal-State aid, but it would come about automatically through the subscriber's own local voluntary health plan. The responsibility of the middle way, as indicated by this bill, is to show that our system of private economy is virile and flexible enough to satisfy far more amply than Government alone, the aspirations of our people for well-being in the modern day.

A REPUBLICAN MIDDLE WAY

A major challenge to the Republican Party, as it opposes the growth of statism, is to demonstrate how essential social goals can be otherwise attained. Better health for the Nation is one of the essential goals. In this field, Republicans are now shaping constructive means and policies, whereby the encouragement of local initiative and enterprise may be substituted for the Federal dictation implicit in the administration proposal for national compulsory health insurance.

Republicans in Congress have offered two separate approaches to this problem. Both address themselves first to the expansion of the Nation's health and medical resources. They would provide (as, be it said, would the administration bill) Federal aid to the States for the construction of more hospitals and the training of more doctors and nurses to overcome present crippling shortages. In addition, the Taft-Smith-Donnell bill introduced 6 weeks ago would aid the States in setting up health programs to make good medical and health care available to those unable to pay the full cost. The main criticism of that approach has been that it probably necessitates an undemocratic means test.

This week, two Senators and seven Representatives identified with the liberal Republican wing, have offered a measure which goes far to meet the criticism. Putting its emphasis on fostering the development of State and local voluntary insurance plans, this measure would base subscribers' premiums on a fixed percentage of income. A yardstick for full family coverage detailed in the bill would require premiums of 3 percent of a subscriber's income up to $5,000. If the actual cost of such coverage were $114 a year, a subscriber with a $3,800 income would be paying his full share. Lesser premiums paid by families with lower incomes would be partially balanced by higher premiums paid by those with incomes nearer $5,000. Persons with still larger incomes could join, but the States would probably make different benefit provisions for them. Whatever deficit the local plan incurred would be made up from joint Federal-State funds. It may be said that the scaling of premiums to income is itself a means test, but by making coverage available to all and by making no payment directly toward an individual premium, the measure avoids any stigma attaching to the low-income subscriber. As a matter of fact, most doctors scales charges roughly to patients' means, overcharging the wealthy to make up for undercharging the nonwealthy.

The virtue of this approach is that it fosters freedom of action and assumption of responsibility by individuals, doctors, communities and States. Citizens may subscribe or not, doctors may participate or not, and States are free to experiment with full or partial coverage and with most other details of the voluntary plans. Yet there is incentive for States, citizens, and doctors to join in a voluntary solution of a mutual problem. The plan as a whole makes adequate health protection available to all. Republicans in Congress have pointed the way to promote better health, preserve better government, by advancing these thoughtful and constructive proposals.

Bonus for North Dakota Veterans

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 1 (legislative day of Monday, May 23), 1949

M.. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Good News for North Dakota Veterans," published in the Bismarck (N. Dak.) Leader of May 26, 1949. I invite the attention of Senators to the fact that half a million dollars was taken from a State-owned industry and turned over to the veterans' fund.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOOD NEWS FOR NORTH DAKOTA VETERANS

Of particular interest to North Dakota veterans in respect to the bonus is the announcement that the State mill has deposited $500,000 with the State treasurer to pay the mill's share of the soldiers' bonus as provided for by the recent legislature. Even the Fargo Forum couldn't twist that story around to discredit the mill; and the Forum won't be able to find anything unfavorable to say about the millions the Bank of North Dakota is paying into the bonus fund either.

We'd just like to remind our readers once more that the ROC and the daily press have always fought the NPL-founded mill and bank—the very institutions that are now paying a big share of the veterans' bonus. We hope the State's veterans will remember these facts when they go to the polls next time.

There probably would be a much smaller bonus in North Dakota—or maybe even none at all—if it weren't for the foresight of the NPL in building the mill and bank against the bitter opposition on the daily press and the conservatives of the State.

Corporate Propaganda Financed by Income-Tax Deductions—Another Full-Page Ad Blasts Administration Policy Toward Excessive Corporate Profits

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. PATMAN. Mr. Speaker, another full-page advertisement in the interests of the corporate community appeared in several Washington newspapers on May 18, 1949. This latest article is entitled "The Star Gazers and Social Dreamers Won't Like This One," and is one of a series paid for by the Standard Steel Spring Co., of Coraopolis, Pa. It would be interesting to know how many of the readers who saw that full-page ad realized that indirectly it was financed by Uncle Sam himself, since corporations are allowed to deduct the cost of advertising when computing their income tax. That one page ad in one paper cost approximately $1,020. When $1,020 is multiplied by numbers of newspapers throughout the country, the sum lost in income taxes begins to look sizable.

The article begins with the statement that the people are being sold down the river without being given the facts upon which to act, and then proceeds to state that American corporations are owned by 18,000,000 common stockholders. This figure has been challenged by other experts as far too high. But if there are 18,000,000 stockholders who have invested their earnings and if they are being sold down the river, the selling is being done by the corporate managements who refuse to distribute to those stockholders their rightful share of corporate profits. The 18,000,000 common stockholders are not only deprived of the facts upon which to act but more important, of a chance to act. And I have received hundreds of letters from stockholders from coast to coast to substantiate that statement.

CONTROL OF AMERICAN ECONOMY IN HANDS OF FEW GROUPS OF CORPORATIONS—NOT INFLUENCED BY COMMON STOCKHOLDERS

Standard Steel Spring Co.'s article emphasizes the fact that the ownership of the corporations is in the hands of a great many people but ignores the fact that the control of those corporations is in the hands of a very few people. United States Steel Co. is mentioned as an example of a corporation owned by many small stockholders. An illustration of the influence or rather lack of influence of the 228,000 common stockholders of United States Steel is brought out in this excerpt from an article which appeared in Time, May 16, 1949:

> For 48 years the important business of the annual stockholders' meeting has been transacted across the Hudson River in Hoboken, N. J., in a small bank building. Last week at Big Steel's annual meeting, only 350 stockholders (out of a total of 228,000) bothered to come. But not even all of them could find a place to sit; for 3 sweltering hours 50 of them had to stand in a cramped, stuffy room.

Who does control the economy of our country? The officials, directors, and preferred stockholders of the Nation's large corporations and financial institutions are the directing force—not the 18,000,000 common stockholders. As Standard Steel Spring Co. points out, the common stockholders invested their money "to make a profit." But very few of those stockholders are receiving an equitable share of corporate profits. The lion's share is going to management personnel as salaries or is being retained in expansion and contingent funds. In some cases profits are retained by management to avoid personal income taxes; in other cases, to strengthen and extend the power of the corporation in its field of industry.

Few of us are naive enough to believe that corporate wealth is controlled by the common stockholders, but few of us do know the extent to which corporate managements are bound together into a corporate community for the purpose of controlling the American economy. In a study made by the National Resources Committee 250 of the largest corporations in the United States were found to be interrelated into 8 different major interest groups: The Morgan-First National Bank of New York; the Rockefeller; the Kuhn-Loeb; the Mellon; the DuPont; the Chicago; the Cleveland; and the Boston—The Structure of the American Economy, National Resources Committee, June 1939. The largest of the 3 interest groups, that classified as the Morgan-First National group, includes 41 of the 250 largest corporations in the country. The separate companies in this group are not directly controlled by J. P. Morgan & Co. or by the First National Bank of New York, but are interrelated through those two institutions. The group is made up of 13 industrial corporations headed by the United States Steel Corp.; 12 utility corporations, including the American Telephone & Telegraph Co.; power companies controlling in 1935, 37 percent of the electric generating capacity of the country; 11 major railroads or railroad systems; and 5 financial institutions including the 2 for which the group has been named. The relationship between the corporations in this interest grouping is explained in the following quotation from the Structure of the American Economy:

> The climate of opinion within which their separate policies are developed is much the same, many of the same people participate in the formulation and review of the policies of the separate corporations, financing is carried on for the most part through the same channels, and in many other ways this group of corporations constitutes an interrelated interest group.

The second group in importance is the Kuhn-Loeb group made up of 12 major railroads whose financing is handled by Kuhn-Loeb & Co. Three of the interest groups are based upon family holdings of substantial blocks of stock in various corporations: the Rockefeller, the Mellon, and the Du Pont groups. The remaining three interest groups are not as closely knit as the companies in the first five groupings and include corporations whose activities center in particular localities: Chicago, Boston, and Cleveland.

These eight groups exercise influence over the policies and management of corporations having assets totaling over $61,000,000,000. These are the big groups which exercise the real control over the American economy—not the 18,000,000 persons who hold shares of common stock in American corporations—and the power of these corporate groups is continually being increased by the retention of earnings.

EFFECT OF NONDISTRIBUTION OF EXCESSIVE CORPORATE PROFITS ON STOCKHOLDER AND ECONOMY—COSTLESS CAPITAL EXTENDS CONTROL OF LARGE CORPORATIONS

What do the stockholders usually get from these corporations? An elaborate brochure justifying the no-dividend policy. What can the stockholders do about the situation? Not much—for only in rare instances are they able to organize effective stockholder committees to challenge corporate management policy. Further evidence of the disregard for the legitimate interests of the common-stock holders can be obtained from any stockholder of Long Island Lighting, Pittsburgh Steel, Missouri Pacific Railroad, Allegheny Corp., the Van Swearingen interests of Cleveland, Farnsworth Radio & Television Corp., and many others.

The article by Standard Steel Spring Co. states that "this question of whether business shall remain free reaches deeply into the lives and homes and future of every last one of us and our children." We can certainly agree with that statement. And the way to insure that business does remain free is to strengthen our antitrust laws and revise our tax

UNIVERSITY OF MICHIGAN LIBRARIES

laws to prevent the control of our economy from being held by a very few groups of large corporations. If dividends are not distributed and the power of corporate managements continues to multiply by stock manipulations, reorganizations, and interlocks, then our American economy will not be free. The next step from control by a few individuals is control by the Government.

Two of the factors which are making it increasingly difficult for small and medium businesses to maintain a place in our economy are these: First, nondistribution of stock dividends dries up one source of funds for these small businesses; second, the interlocking relationships between the large financial institutions and the large corporations dries up another source of capital funds. The number of small businesses being established is now decreasing after a postwar increase for the reason that initial financing is almost impossible to obtain. And the number of small businesses going out of business last year reached its highest mark since 1942.

BENEFICIAL RESULTS IF CORPORATE DIVIDENDS ARE DECLARED

Let us look at some of the results if corporate profits were fairly distributed. In 1948 American corporations earned $21,000,000,000 in profits after the payment of taxes, and paid out to stockholders only $7,000,000,000. If the stockholders had been paid in dividends at least two-thirds of these earnings, as customary before World War II, the stockholders would have received $7,000,000,000 more than they were actually paid. This distribution of corporate profits would have given small investors funds to use in ventures of their own or for reinvestment. Over $1,000,000,000 in revenue from personal income taxes would have been collected by the Bureau of Internal Revenue to help prevent a deficit in the Federal budget for the coming fiscal year. The corporations would have been able to retain $7,000,000,000 in addition to their allowances for wear and tear, depletion, and obsolescence.

The Division of Business Economics, Department of Commerce, recently announced that over 7 percent more corporate dividends were distributed during the first quarter of 1949 than were distributed in the same period of 1948. I hope this indicates that corporate managements are beginning to recognize their obligations to their stockholders. Voluntary distribution of excess profits can do much to forestall legislation for that purpose. Perhaps a beginning awareness of that fact is indicated by this recent increase in dividends.

Standard Steel Spring Co. labels attempts to force distribution of excessive corporate profits as baseless efforts to shackle and restrain. However, I want to point out that greater distribution of corporate profits will go a long way toward removing a few shackles and restraints and toward freeing the American economy from the control of a relatively few large corporations, which are using excessive profits to perpetuate their supremacy.

Atlantic Pact—Gentlemen, You Are on Notice

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by Prof. Curtis P. Nettels, of Cornell University, which points up a highly important fact in connection with the Atlantic Pact. I am also including an editorial that appeared in the Chicago Sunday Tribune of May 15, 1949:

THE ATLANTIC PACT

(By Curtis P. Nettels, professor of American history, Cornell University)

The Atlantic Pact tells us that the 12 members have a "common heritage and civilization * * * founded on the principles of democracy, individual liberty, and the rule of law."

Among the members is Portugal, an unabashed dictatorship. Presumably, we are as one with the Portuguese, or are to become so.

The preamble of the pact says, in effect, that we are to act with the other members in such a way as to promote their freedom, civilization, stability, well-being, and defense.

Any action, on any subject, might be justified by these inclusive terms.

In order to "implement" the pact, it provides for a Council. Said Council "shall set up such subsidiary bodies as may be necessary." It may make recommendations. To whom? Obviously, in the case of the United States, to the President.

Such recommendations will bear the authority of the Atlantic alliance. If the alliance is approved by the Senate, it will possess the sanction of a treaty of the United States; its actions will rate as the supreme law of the land.

How will Congress fare in this situation? In most instances, Congress will not have a voice concerning the acts of the Council. Such acts would bear the authority of the President. The idea now in vogue at the State Department holds that the United States is a sovereign nation, invested with unlimited powers, and untrammeled by the Constitution. We are also told that the President alone is the one to exercise these unlimited powers.

The pact says that we, along with the other members, are resolved to unite our efforts for collective defense and the preservation of security. Thus the President is to have authority to place the military forces of the United States fully at the service of the Atlantic community, even to the point of merging them into a supranational military establishment.

The Atlantic Council and the President, without the approval of Congress, might take any action that would not require a special appropriation. Should an appropriation be requested, would Congress be able to refuse? Suppose the Council should frame a program which Congress would have to implement with funds. Such program would come before Congress with the overpowering sanction of the 12 member states. Could Congress reject anything which an agency of 12 states, created under a United States treaty, would have declared to be vitally essential to the freedom, civilization, well-being, or defense of the whole North Atlantic area?

In fact, the recommendations of the Council would come before Congress with the force of a United States law. Such recommendations would have been made under the sanction of a treaty of the United States; they would therefore rate as the supreme law of the land. Congress would simply have to provide the money necessary to give effect to a freshly enacted law.

The pact commits us to a program of continued mutual aid. With reference to such program, will not the action of the Atlantic Council, when endorsed by the President, be as compelling as its power regarding defense and war? Will not such action impose a binding commitment on Congress? Will not the Council and the President exercise, in fact, the power to tax as well as the power to engage in war?

Adoption of the pact by the Senate would effect a political revolution. It would replace the Federal Constitution with a new charter. It would create a superstate, endowed with an unlimited jurisdiction. It would invest the President with an unlimited and uncontrolled power. It would reduce the Congress to a state of impotence in its dealing with the North Atlantic area. The great powers of Congress, as regards war, defense, foreign affairs, and appropriations, would be transferred to the President, to be exercised at the behest of 11 foreign states. Is it a coincidence that the pact declares that the United States and Portugal have a "common heritage and civilization founded on the principles of democracy, individual liberty, and the rule of law"?

[From the Chicago Sunday Tribune of May 15, 1949]

HIDDEN SUPERGOVERNMENT

Concealed in the proposed North Atlantic Pact are provisions for a supranational government. The pact provides for an Atlantic Council which is authorized to create such subsidiary bodies as may be necessary, the whole apparatus to be concerned with implementation of this treaty.

It is generally supposed that the pact refers only to the defense of the 12 member nations, but, in fact, it takes in much more ground than that. It provides that they are to strengthen their institutions, to promote conditions of stability and well-being, to eliminate conflict in their international economic policies, to encourage economic collaboration among all of them, and to engage in continuous and effective self-help and mutual aid.

These terms are so broad as to cover practically anything relating to political, economic, and social endeavor. A council and subsidiary bodies with authority to act with reference to defense, economic well-being, and civilization (a blanket term dragged into the preamble) have a virtually unlimited jurisdiction. It would be difficult to name a single subject on which this supranational government would not be empowered to rule. Because a treaty, once adopted, becomes the supreme law of the land, anything done by the United States representatives in this supergovernment would have binding effect.

The questions which Senators have asked of a procession of witnesses testifying in behalf of the treaty before the Foreign Relations Committee have ignored this extremely grave aspect of the pact. Yet, some of the testimony, and some of the auxiliary statements of proponents of the pact, should warn the Senate of what is intended.

It is no accident that a powerful group of eastern internationalists has seized the treaty as a means of furthering its persistent goal of formal political union of the United States with Britain and western Europe. This agitation centers around former Justice Owen J.

Roberts, of the Supreme Court; Robert P. Patterson, former Secretary of War; and Will L. Clayton, former Under Secretary of State for Economic Affairs, the world's largest cotton broker.

In his testimony, Clayton boldly stated that federal union would not only guarantee peace but bring prosperity and a rising standard of living. He proposed that the United States take the lead in summoning a convention of representatives of the nations composing the Atlantic alliance, in order to explore political union.

James P. Warburg, former New York banker, flatly stated that the pact is the idea of former Prime Minister Winston Churchill, of England, who has been talking up British-American political union for years. Robert A. Lovett, former Under Secretary of State and Assistant Secretary of War, admitted that the pact had been dreamed up as long ago as the Bretton Woods Conference of 1944, when the World Bank and International Monetary Fund were planned.

At that time we were still fighting Germany and were on excessively friendly terms with Russia, so that there was no Red menace to justify any such postwar alliance. The unmistakable indication of this admission is that the pact was originally conceived as being primarily political and economic in nature, that it still remains so, and that the supposed Soviet danger is being exploited now to justify a political and economic union with Britain and western Europe.

A distinguished student of American history and government who has apprehended this pattern writes us that the general trend of American foreign policy is fast bringing Americans up against the issue of the survival of the independence of their country. He finds that there is a widespread movement to accomplish its destruction, manifested in recent interpretations of the American Revolution. A new school has arisen which repudiates the Revolution, discredits the American cause, and thereby denies the Nation a valid title to existence.

The Atlantic Pact and the avowed intentions of such people as the Messrs. Roberts, Patterson, and Clayton, aided by the supine Senate and the slumbers of the people, can readily lead to the final sell-out of the United States as an independent nation.

Flood Control in the Missouri River Valley

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. BOLLING. Mr. Speaker, under the unanimous consent granted me to extend my remarks in the Appendix of the RECORD, I include a resolution recently passed by the annual convention of the Missouri State Federation of Labor, urging enactment of MVA legislation:

Whereas in the year of 1944 the President and the Congress of the United States, because of devastating losses of life and property due to the great floods in the Missouri River Valley, issued a directive to the Corps of Army Engineers and the Bureau of Reclamation to immediately design plans and effect action for the prevention of such floods in the valley and to develop the natural resources of the valley; and

Whereas this now being the year 1949, and with nothing more constructive in the way of a proposal to offer than that of what is known as the Pick-Sloan plan, and which plan has been denounced by a task-force committee of the Hoover Commission as a wasted effort and an enormously wasteful expenditure of money if allowed to be perpetuated: Therefore be it

Resolved, That the Missouri State Federation of Labor again go on record as favoring a more sound and practical program of flood control and resources development than that of the condemned Pick-Sloan plan and recommend to the President and the Congress of the United States that a program for such development which is proving itself most successful in the Tennessee River Valley shall be adopted for the Missouri River Valley, and that Senator MURRAY's bill, now in Senate committee and known as the Missouri Valley Authority bill, be enacted into law.

More State Department Myths About China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. George Sokolsky, a man whose knowledge of China is based on long first-hand experience there and whose analyses and recommendations regarding that country and our policies there have proved as consistently right as our Government's have proved wrong:

(By George E. Sokolsky)

Among the most amazing statements to emanate from Washington is something about an agreement in 1937 between Chiang Kai-shek, the Chinese Communists, and the United States. Of course, there was no such agreement.

What did happen, so far as I have been able to gather the facts, was that China and Japan were at war. It was then the policy of Soviet Russia to be anti-Japanese. Therefore, it was possible to get the Chinese Communists to agree to fight with the Kuomintang army. Apparently there was also an agreement for Chiang to supply the Communists with arms.

Then came the Stalin-Hitler alliance, which universally affected Communists, who thereupon became pro-Nazi and antiwar. The Chinese Communists, as true members of the Third International, thereupon stopped fighting Japanese but fought Chiang Kai-shek instead.

Since then, it has been an on-again, off-again relationship, the Chinese Communists pursuing a straight Kremlin line in which they were actively supported by the State Department, also on an on-again, off-again basis.

When Mr. Truman told a couple of Republican Senators about a 1937 agreement, which in some manner binds us to the Chinese Communist armies, he spoke about something which does not exist beyond the arrangements for cooperation which were published in the newspapers at the time.

If there is a different agreement involving the United States, let the State Department produce the document.

It is just like the stories that are going the rounds that the Soongs and the Kungs and other Chinese have huge deposits in American banks. All foreign deposits in American banks are recorded in the Treasury, the Federal Reserve banks, and other places.

They have the figures. They know who owns the deposits. Let them publish the facts.

Some of the pro-Communist groups give fantastic figures of what the Chinese have on deposit here. My information, unofficial of course, shows that all deposits from China, business, official, and private, including American and European firms and individuals, come to around $250,000,000.

Maybe the State Department has more accurate figures. Let them publish those figures. They have them. Maybe someone will be hurt if such figures are published. Is that very important?

It is not likely that the United States will reverse its altogether wrong policy on China. The State Department is undoubtedly in conversations with the British, which give me the impression that they, the British Foreign Office and the American State Department, would like to recognize the Chinese Communists in return for arresting their movement into Hong Kong, Burma, the Malay Peninsula, Indonesia, French Indochina, and India.

Dean Acheson takes the position that these speculations are without foundation. Well, the course of events will show who is telling the truth.

The Chinese Communists would, of course, accept such a proposition because it is meaningless for us and valuable to them. It is like the treaty Mr. Roosevelt negotiated with the Russians in 1933, in accordance with which we agreed to recognize them and they agreed not to interfere in our affairs, to do no propaganda here, and certainly not to steal our national secrets.

Of course, they have not kept any of their promises, as the evidence has been disclosed in our courts, in the investigations of congressional committees, and in the proved effort to use unions as revolutionary agencies.

Similarly at Potsdam we entered upon a series of agreements with the Russians, which they have broken. At the Paris Four Power Conference, we are not going to tell the Russians that all matters are to be on the basis of the Potsdam agreements.

Rather, to use the diplomat's phrase, we are starting de novo, with all the advantages theirs. That has been their general experience with us.

We make an arrangement; they break it; we start anew where they leave off, after they have taken advantage of us. So all this Anglo-American secret negotiating with Mao Tze-Tung, which the British favor because they figure that they might save Hong Kong or Singapore or some other British interests or possession, is an expedient to ease an embarrassing situation.

But they will be tricked by Mao, who is already at work in Hong Kong, Burma, in Indonesia and French Indochina.

Melvin Price and Rail Safety

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. KARSTEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of May 19, 1949:

Representative PRICE, of East St. Louis, has been a consistent student and advocate of railroad safety since he went to Congress 4 years ago. When he urges the enactment

UNIVERSITY OF MICHIGAN LIBRARIES

of a bill to broaden the powers of the Interstate Commerce Commission respecting railroad safety, he knows what he is talking about.

However satisfactory it may sound when broken down into a cold statistic of so many killed and injured in so many million passenger-miles, Mr. PRICE isn't satisfied with the railroads' record of killing 50,000 and injuring half a million in the past 10 years. He wants the ICC empowered to compel railroads to install radio communication and other modern safety devices, and to promulgate and supervise the enforcement of safety rules.

If these powers were added to the ICC, and if the ICC exercised them diligently, a dramatic reduction could be made in the casualty toll on American railroads. Many, perhaps most, of the wrecks that are occurring nowadays could be prevented.

Some of the railroads are doing conspicuously fine work in installing the machines and the methods that will prevent them, but the performance of the railroad industry as a whole is so poor that it belongs more properly to the days of the wood-burning engine and the gas light, when 60 miles an hour was racing speed.

If his colleagues in the House will listen to Mr. PRICE, they can make thousands of Americans in the next decade literally owe them their lives.

Freedom Manifesto

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Wednesday, June 1 (legislative day of Monday, May 23), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the basis of a proposed Freedom Manifesto, being an article written by Edward J. Meeman, the thoughtful editor of the Memphis Press-Scimitar, including Mr. Meeman's introductory statement relative to the Freedom Manifesto. I feel that this is an important document. It is receiving attention and praise throughout the country. I hope Members of Congress will read it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A FREEDOM MANIFESTO CALLED FOR BY MEEMAN TO SAVE WORLD FROM CENTURY-OLD COMMUNIST MANIFESTO

GAINESVILLE, FLA.—The world needs a freedom manifesto to replace the Communist manifesto, which was issued by Karl Marx and Frederick Engels in 1848, and which has dominated the world for 100 years.

So declared Edward J. Meeman, editor of the Memphis Press-Scimitar, in an address delivered last night at the University of Florida at Gainesville.

And he proposed a basis for such a freedom manifesto, saying: "We are in this year of 1949 starting a new century. Let us make it a century of hope."

THE PART OF THE PRESS

Meeman first looked at the press and its part in the program of freedom.

He pictured the press as "the common meeting ground of all the component elements of society—capital, labor, agriculture, business, the church, schools and colleges, radio, the theater, foundations, civic organizations, political organizations and government in all its branches," and as "the forum even of the nations." In the press "these institutions and groups report each other and are reported," he pointed out. "In the press, each of them goes before society as a whole with their work, their needs, their claims; here society as a whole goes to each of them. In the press they are criticized, praised, blamed, and judged—and in the press each of these institutions criticizes and judges each other. To the press they come for the understanding, appreciation, and support of others for which every individual and group yearns."

MUST BE INDEPENDENT

This being the function of the press, Meeman said, "obviously the press must not be controlled by any of the institutions of society. It must be independent of them all, lest it be partial to one and less than fair to the others." It must not be controlled by political parties, the church, business, or labor—"most certainly it must not be controlled by government * * * for under such regulation newspapers would soon lose their freedom and no fault of newspapers under freedom would be as bad as the effects of government gag * * * the ideal ownership of a newspaper is by an individual or group who has no large economic interest except in newspapers and hence no client but the public."

"Freedom and democracy cannot exist without free newspapers; free newspapers cannot exist without freedom and democracy," Meeman summed up.

OUR GRAVE DANGER

He surveyed the grave danger of attack on our fredom and democracy by "Soviet Russia and her allies of world-wide communism, both revolutionary governments and fifth columns in other countries." He said we do not expect immediate attack "because we do not think they are ready for attack," but that "we fear either that they will blunder into war against us before they are ready or will continue to prepare for a war against us which they, not we, believe inevitable."

"We do not have a plan that will assure victory and remove the mortal danger which now confronts the free world," Meeman said. "We have not even faced the facts of our situation."

Then he told of how the doctrine of Marxism, launched in 1848, has eclipsed the sun of world peace that shone for 100 years after Napoleon's fall, and how two exhausting world wars have crippled Britain, "in whose era of preeminence the modern world went forward in freedom and the prosperity which results from freedom."

There were dark spots in that 100 years, Meeman admitted, "yet as we look back from today's broken, disordered, and fearful world to the nineteenth century, it seems like a golden age."

WHY WE'RE IN TROUBLE

"Why are we in this fix? Because we persist in living in a world of illusions instead of a world of reality. The free world, which successfully united and armed to the teeth in order to win World War I, thought it safe to go pacifist and disarm. We never understood the nature of communism. * * * We fought a great war at tremendous expenditure of men and resources, and we fought it all under an illusion—that when it was over the Russian ally our arms and help had made strong would cooperate with us to build world peace. It never was true. Russia did not deceive us; we deceived ourselves. The program of the rulers of Russia, never abandoned, has always been enmity to the free world and a determination to overthrow it by lies, fifth columns, violence, and revolution."

The free world is in danger, Meeman said, for this reason: "Britain can no longer protect the free world because it was weakened by two exhausting wars, during which new and menacing powers arose in Europe. The free world is in danger because British power has not been replaced by any other peace-preserving power. The United States is not strong enough even to protect itself, much less the whole world.

"We must erect a new power to protect the free world. That can be done only by forming a federal union of the democracies. This union would be formed in the same manner as the United States was formed out of the Thirteen Colonies. The Great Union would be composed of most or all of these democratic nations: The United Statee, Canada, Britain, Eire, Holland, Belgium, Luxemburg, France, Switzerland, Norway, Sweden, and Denmark.

"Why continue with inadequate and quack remedies?"

Then Meeman discussed the compaign for a federal union of the free conducted for years by Clarence Streit, and showed how such a union, uniting nations of a common heritage of democracy and freedom, would wield such a preponderance of the world's power and resources that no totalitarian nation or group of nations could match it.

EVEN WITHOUT THIS MENACE

Even without the Russian Communist menace it would be necessary for the free nations to band together "to preserve freedom itself and promote its extension in a world much of which is not free and is indifferent to freedom," Meeman said.

"The great union is the essential, but it is not all that we need to do. We need to continue to work in the United Nations to make it more effective and to promote world understanding through it. We need to continue to work for closer relations and understanding with Latin-America. We need to back the legitimate Chinese Government, our ally, in its struggle with the Communists.

"Thus we fight the fires of revolution. We thus cope with the flames that would consume us. But it is not enough.

"We have a great job to do at home. We must build green fields of well-being and prosperity which the flames of revolution cannot touch.

"For the last 100 years the world has been dominated by the Communist manifesto. * * * True liberalism has been under attack from Marxism from without. As the democratic nations have been weakened by human fifth columns, so the democratic philosophy has been weakened from within by the poison of Marxist conceptions and related statist conceptions.

"By its fruits shall we know this philosophy. The Marxist century has ended with half the world in slavery and the other half in fear.

"We are, in this year of 1949, starting a new century. Let us make it a century of hope.

"Let us, in the year of 1949, issue a freedom manifesto. The Communist manifesto led mankind to slavery and despair. The freedom manifesto will guide the world to liberty and hope.

"Let me propose a basis for the freedom manifesto:

PROPOSED BASIS OF THE FREEDOM MANIFESTO

We proclaim the free society.

Let us begin with the economic, since economics is basic. We do not accept the Marxian theory that man is animated only by materialistic motives. We do not believe that ideas and ideals are only an expression of a predetermined economic system; but we do believe that ideas and ideals which do not find expression in the way we work, buy, sell, distribute, and consume are vain. So we express freedom in our economic life.

Marxism teaches that one economic system succeeds another in automatic evolution—slavery, feudalism, capitalism; Marx-

ists claim that capitalism is destined to be followed by socialism or collectivism which is to be the final and permanent system. This we deny.

ECONOMIC DIVERSITY

There is no need to accept, or reason to choose, a society dominated by one economic form. In our free society, various economic forms exist side by side, in competition with each other, and flourish as they meet human needs and conceptions of the good life; they diminish as they do not meet these needs.

In our free society there is self-employment—the person who employs himself repairing radios, or watches, or automobiles, or making by hand furniture, or baskets, or hats, or cookery * * *.

There is the partnership.

There is the cooperative, where a group of people join forces to produce, to sell, or to buy.

There is the corporation. Corrections are needed in corporate structure and practice. Stockholders should have more voice and take more responsibility. Workers should share profits and have a sense of owning and belonging. Perhaps, even, corporations need to develop and perhaps can develop, souls. However, which of us would want to live in a society without corporations? Not everyone wants to work for himself, or in a cooperative, or for the Government, or to depend on such forms to meet all his needs. There are things which the corporation can do better than any other economic form. So the corporation is permanently one of the economic forms in our free society.

There is government or public ownership. Public ownership is sometimes inefficient, sometimes bureaucratic; but there are economic activities which government—municipal, State, or National—can do better than a cooperative or a corporation. So we will have government ownership in our free society. We shall get away from bureaucracy and inefficiency by an extension of the TVA idea. That is, through the Government corporation instead of the bureau, through regionalism instead of centralization in the capital, we shall induce Government enterprise rather than mere Government operation.

NO FINAL DECISION

In our free society, we never make a final decision as to how much of one economic form we shall have and how much of another. If a Government operation is not working well, the people will not hesitate to sell it to a corporation or a cooperative. If it is indicated that a corporate activity should be under public ownership, the people will not hesitate to buy it. Experience and a sense of values, not dogmatic theory, will determine their decisions, and decisions are always subject to review. We find what is better by never-ending thought and experiment. However, changes from one form to another are made without confiscation, and without harm or loss to individuals.

PRIVATE PROPERTY

The right of private property is fundamental.

The institution of private property is not evil; it is a positive good. Property is necessary to the freedom and dignity of man. A propertyless man can have spiritual freedom and dignity, but not complete freedom of movement, activity and enjoyment; he cannot be an effective citizen in a vigorous democracy. If property is not owned by individuals it will be owned by the state, and the state will thereby become a dictatorship. We need to have property more fairly acquired, more widely distributed, and more securely held against loss and confiscation. High taxes from war and excessive governmental activities are one form of confiscation. A free society requires that most of its citizens shall be responsible property owners.

LABOR MOVEMENT

With such a conception of the need of private property, the labor movement will necessarily change its strategy. Instead of moving on and on in the industrial field toward the confiscation of profits, it will see them as a necessary thing. It will strive to increase the property holdings of the workers it represents. Under a system in which private property is becoming ever more widely held, the workers represented by labor unions would become owners of stocks in their own and other industries. Workers should become owners; owners should be workers. Thus we can attain a stability under which society will not move, with the inevitability of gradualness, into a centralized Socialist state.

RESERVES

Under such a system there should be few periods of recession or depression.

However, corporations should build up reserves for pensions and for employment, in order to avoid lay-offs or discharges in slack times. This will minimize dependence on Government and strengthen the property system.

But no security outside oneself can equal the security of ownership of property in a system in which property is made secure.

The ownership of property by individuals and the building up of private savings reserves should be that reliance.

DECENTRALIZATION

A healthy rural life is the foundation of a free society. A family living on its own acres is the ideal.

We favor the decentralization of property, of industries, of population. Our cities are too big. They should be remade to make possible more wholesome living. Bring the country to the city, as we have already brought urban comforts to the countryside. Eliminate smoke, smells, noise, and traffic hazards. Bring to the country the interest and variety of the city; to the city dweller that self-expression that comes from working with growing and living things.

MASS PRODUCTION

Mass production should have brought man freedom from drudgery, not slavery to mechanism and to artificial appetites for unneeded things or cheap satisfactions. The object of mass production should not be something not needed or to be thrown away after a brief use.

The commercial manufacture of food and clothing outside the home, the commercial performance of services for the individual which the individual should do for himself has been carried too far. We need to do more things for ourselves with our own hands.

Exaggerated, high-pressure advertising is illegitimate. Man is not a consumer. He is not a waste container for industries whose wheels dare not stop. Industry is a servant whose wheels turn at the command of man to satisfy his needs. We are not slaves of the industrial machine.

POLITICAL DEMOCRACY

Freedom depends on a vigorous political democracy also.

Citizens should take responsibility for government in their counties, towns, and cities. When citizens committees, without selfish motives, organize permanently to maintain nonpolitical county-manager government, as is done in Cincinnati, they are accepting their responsibility. Then there is no room for a boss.

UNION OF THE FREE

We do not despair of the United Nations. We wish to continue our efforts to make it ever more and more effective as the organization of our "one world." But we put freedom first. Freedom is fundamental. If freedom is to be preserved and extended in the world as a whole, then the nations which have long practiced freedom must federate. They must have a common policy in international affairs, a common defense force, a common currency, common citizenship, and a customs union. Therefore, we favor a federal union, not merely a military alliance, of the Marshall-plan countries—those contributing and those receiving. We favor a great union of the free, and we urge that the first steps be taken now. If the present crisis which threatens freedom should pass, it will still be necessary, in order to avert or to cope with future dangers, that the free nations be permanently united with each other. To the great union should be added other states, from time to time, as they wish to join and can qualify through having established within themselves the practice of freedom and democracy.

MAN

In order to bring into being and preserve this free society, we must have men who are determined to remain free, and who know how to remain free. There is nothing wrong with the nature of man. He need only awaken to what he really is, and live in the fullness and perfection of his true nature. He was made for dominion over a self and a world which offer him satisfaction and joy. Man is the expression of God, the fulfillment of the Divine Being. When man lives as one with God, and wields God's infinite power, he will not desire any puny power over other men. He will not submit to any human being so foolish as to wish to lord it over him. Here is the key to human freedom.

How shall we get such men, such citizens for our free society? By cultivating them. The principles are laid down in all religions. Religions do not agree on the reasons why men should be good, but they substantially agree on what men should do. The need is to get these teachings practiced. This can best be done by forming groups or circles of laymen in each faith to meet with each other to study practice of religion and to encourage each other in that practice. It is useful also to form cells which cut across denominational lines for the encouragement of the practice of individual responsibility in freedom.

Thus men will be trained to live and help other men to live in the sunlight of freedom in the joy of their self-expression which belongs to all the sons and daughters of God.

For the correction, completion, enrichment, and activation of the freedom manifesto I invite the communication and cooperation of all men and women everywhere who love freedom.

Government of Chile Awards the Order al Merito Bernardo O'Higgins to Mr. Edward Tomlinson

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the CONGRESSIONAL RECORD the speech of Ambassador Felix Nieto del Rio at the time he presented to Edward Tomlinson the Order al Merito Bernardo O'Higgins on behalf of the Government of Chile.

Ambassador del Rio, an outstanding and accomplished diplomat, stated, in a

UNIVERSITY OF MICHIGAN LIBRARIES

few words, the reason for this recognition by the Republic of Chile of the best American authority on Latin America. Ed Tomlinson needs no introduction to the people of the United States or to the Members of the Congress. As a truthful reporter of facts he has served his country well; as a truthful reporter of facts he has well served Latin America also.

Ed Tomlinson knows whereof he reports and Ambassador del Rio knows whereof he speaks. The people of the Americas—both North and South—have long recognized the worth of Ed Tomlinson's unbiased and impartial news coverage; his probing for facts beneath the surface; and his skill in portraying events as they actually are.

My congratulations to the Republic of Chile for recognizing the worth of Ed Tomlinson's contributions to the cause of democracy in the Americas, and my congratulations to Ed Tomlinson for the awarding of an honor richly deserved and well merited.

The address follows:

Mr. Tomlinson, it is, indeed, a great pleasure for me to confer upon you in the name of the Government of Chile the Orden Al Mérito "Bernardo O'Higgins," in the rank of commander. This order was established by the father of Chilean liberty and is bestowed by my Government in recognition of service to the nation, to democracy, and to mankind.

You have chosen for many years to devote your high talents to the task of understanding and good will between the nations of the Western Hemisphere. On the radio and in the press of the United States, and in various well-known books, you have endeavored to impartially inform the people of this country about the Latin-American nations and the Latin-American peoples, about their way of life, their cultures, their hopes, and their aspirations, as expressed in their everyday work, in the work, programs, and policies of their governments. If there were only more enlightenment of this kind in all countries, the task of the salesman and diplomat would be made much easier and the progress of our western world would increase geometrically.

Much remains to be done to raise the standard of living of the American people outside of the United States and to build among them a structure of enduring friendship and mutual knowledge, which may resist the forces of destruction and evil now unleashed.

My Government wishes to award your work and encourage you, Mr. Tomlinson, to carry it on unceasingly, because the goal of American unity is worth every effort and every sacrifice.

The Rape of Freedom

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article from the Santa Cruz Riptide:

"I HAD RATHER BE A DOG, AND BAY THE MOON, THAN SUCH A ROMAN"—SHAKESPEARE, JULIUS CAESAR, IV, III, 27, BRUTUS TO CASSIUS

(By W. F. Alder)

The rape of freedom as Americans have known it since 1778 is well under way.

One hundred and seventy-one years ago the Constitution of this land was born and put into practice.

That Constitution set forth a way of life within which Americans might live in the pursuit of happiness and retain personal liberty.

Now that liberty, and all the word implies, has been traduced and is far on its way to destruction.

A sinister and wholly malign cult has taken possession of many of the inner shrines of our freedom.

Communism and socialism, two fundamentally synonymous heresies in the lexicon of human freedom, are not only marching upon us—they have found lodging in the temple. And they brazenly proclaim their right of entry.

With the development of our liberal arts and sciences, we have explored the near shores of atomic physics and have discovered wellsprings of incalculable potentialities—for the good of mankind or for his destruction.

We have repetitively and categorically stated to the world that these forces will not be used for conquest of others by ourselves. We are not international burglars.

We had taken what we thought to be adequate steps to safeguard by secrecy the lives of all men against the misuse of these atomic forces by those whose sole purpose is to subjugate the world.

These would-be world conquerors have been trying by every stratagem and subversive practice to infiltrate our defenses and learn our lifeguarding secrets.

We created an Atomic Energy Commission to study, perfect, and harness this vast energy source for the ultimate good of mankind and the immediate security of a nation dedicated to the freedom of all men.

A group of scientists comprising the National Academy of Science, a private institution, nominated a certain group of men to constitute a national research council. The Congress of the United States has no supervisory control over these bodies, nor their memberships. The unswerving loyalty of some of these members is now open to serious question. We did not anticipate subversion of our security by our executive personnel.

The selection of scientific personnel to man our atomic research laboratories and master the imponderable forces of this newly discovered source of energy resides in the personal judgments of these men.

Speaking on behalf of these, Dr. A. M. Richards, of the National Academy of Science, supported Director David P. Lilienthal, of the Atomic Energy Commission, in his coldly enunciated statement before a congressional committee, that self-confessed Communists could well be proper personnel to groom for the laboratory and research staffs developing our highest echelons of national defense. These "diners-out from whom we guard our spoons." (Macaulay, Political Georgics.)

Director Lilienthal has consistently insisted that student-candidates for scholarships awarded by the Atomic Energy Commission be not questioned in respect to loyalty to the United States lest their intellectual freedom be impaired.

He has stoutly defended the awarding of scholarships to known Communists.

A case in point is that of Hans Friestadt, Communist graduate-student at the University of North Carolina, whose appointment he defends on the premise that this Austrian-born son of a Vienna Communist newspaper publisher, was to be trained only in the a-b-c's of nuclear physics. Hans Friestadt conducts the Karl Marx Study Club at the University of North Carolina and bombards the student body there with subversive articles in the campus newspaper, the Tar Heel.

Current investigations by the Congressional Atomic Committee and interrogations of Director Lilienthal now bring forth the information that other known Communists have been included in these scholarship awards and that it is unmistakenly evident that Lilienthal had full knowledge of their subversive connections prior to his making the awards. The FBI had turned in adverse reports on each of these men.

While it now appears that these awards will be rescinded, that of itself is not sufficient. The stark reality of the matter is that the supposedly sacrosanct Atomic Energy Commission is so loosely administered, whether by design or sheer ineptitude, that our atomic research program has been open to subversive infiltration, and no one knows just how far the process has progressed.

If the top group administering our atomic program is so wanting in judgment as to flagrantly disregard our national insistence that the spread of communism in the United States be halted, how, in heaven's name, is it capable of exercising good judgment in the conduct of the billion-dollar program entrusted to its management?

Lilienthal explains and validates this training of young Communists by the usual party-code double-talk euphemism, "intellectual freedom."

Boiled down to its literal meaning, this asserts that any Communist, regardless of his oath to support the Communist ideology and its source, the Polit Bureau of Russia, he, as a candidate for, or incumbent in, employment in our atomic research program, must be kept "intellectually free" to desert the nation which trained him and go over to the enemy at any time his intellectual freedom seems to demand—or the Kremlin crooks a beckoning finger.

Freedom of speech, and mind are thus based, pardon me, debased, to suit the individual's personal motives and convictions. He, himself, sets the measure of his duty to his country and fellow citizens. This seems to be the thesis of Director Lilienthal's coterie of collaborators.

It is not within the province of these atomic administrators to decide questions of national ethics. They have but one responsibility—to guard with their whole honor the trust their high position imposes.

Polemical subjects are the sole business of Congress, though it is stretching the word to make it include patriotic duty. We shall permit no argument about that.

Our right of free speech does not envision license to contribute to the delinquency of minors, political adolescents, nor the incitation to murder men or the freedom under which they live. We do not condone conspiracy to do murder. That in itself is a felony.

How then can we construe as a violation of free speech, interdicting expression of such intent or purpose?

Freedom of our myriad sons yet to be born is far more precious than the mere life of any individual amongst us.

Have we not asserted this principle on countless crimsoned battlefields? And on the blood-flecked snows of shoeless Valley Forge?

What sophistry is this which describes free speech as the God-given right to give aid and comfort to an avowed enemy who plots the murder of some of our bodies and all of our souls? At this juncture I seem to remember Byron's Childe Harold: "In pride of place, here last the eagle flew."

Yet, according to David P. Lilienthal and a parade of scientists before the congressional investigating committee, this intellectual freedom they carp about is Americanism at its best.

I had rather be a dog, and bay the moon, than such an American.

And I remember, too, the anguished cry of Lady Macbeth: "Out, damned spot! Out, I say!"

Will Messrs. Lilienthal, et al, remember? Sometime? Ever?

Things You Don't Buy May Cost You the Most

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. BOLLING. Mr. Speaker, much of the talk of economy in Government which we hear today is designed only to prevent the passage of much-needed social legislation, social legislation which in the long run will save our taxpayers billions of dollars. In connection with this thought and under the unanimous consent granted me, I include the following interesting editorial from the Machinist of May 12:

THINGS YOU DON'T BUY MAY COST YOU THE MOST

The cost of President Truman's Fair Deal is beginning to give some people cold feet. They've figured out that we can't finance public housing, raise school teachers' salaries, set up a real health-insurance program, and guarantee farmers a comfortable living without it costing this country big money.

The Fair Deal is no promise of pie in the sky. If we get it, we're going to have to work to pay for it. We have to make up our minds whether the improvements the President has proposed are worth the several billion dollars they're going to cost.

It's going to cost us either way. It's like buying a car. If we go on driving the prewar jalopy, the bills for repairs keep on going up until, sooner or later, it's cheaper to buy a new model. Mr. Truman thinks the Fair Deal will cost our country less than trying to keep the old model in repair.

Take health insurance. When the Government pays the doctor bills for every working family in the country, it's going to cost six to eight billion dollars a year. That's a lot of money. But we know that sickness—a lot of it preventable—is now costing us Americans about $27,000,000,000 a year in doctor bills, lost wages, and lost profits from absenteeism. And that's not adding a cent for unnecessary suffering from lack of adequate doctor's care.

Take that $300,000,000 bill for aid to education. We know that if we don't vote that one, our public-school system will continue to run down. Our children won't be as well equipped to meet the problems of life as we were. What's that going to cost our country?

Or take the public housing bill. That's going to cost $4,000,000,000 over 10 years. But stop and add up the cost of juvenile delinquency and crime that is spawned in our city and rural slums. How much do we pay for epidemics that bred in our slums?

What about the social-security plan? Suppose we let our aged continue to crawl for relief instead of assuring them a decent pension when they reach retirement age? Won't that drive them to support the Townsend plan or even more costly remedies?

And what about the new farm plan to guarantee a decent farm income and, at the same time, cut the price of health-giving foods like milk, eggs, meat, fruits, and vegetables? Aren't lower prices to city consumers and the extra food they're going to eat as a result worth what it will cost?

There's no question that we're going to have to work to pay for this program. The question is, Will we work just as hard without getting any of it?

The loudest complaints we hear about the cost of the Fair Deal come from families who can afford to run up doctor bills, who have their kids in private schools, who live in comfortable homes, carry plenty of insurance and aren't worried about where their next steak is coming from.

Memorandum of Association of Immigration and Nationality Lawyers in Opposition to H. R. 10

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. BARRETT of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit the following memorandum of the Association of Immigration and Nationality Lawyers in opposition to H. R. 10:

The Association of Immigration and Nationality Lawyers is a national association of lawyers admitted to practice before the Immigration Service and the Board of Immigration Appeals. Some of its members are former officials of the Immigration Service and the Board of Immigration Appeals of the Department of Justice.

The association is interested in advancing the science of the administration of law pertaining to immigration, nationality, and naturalization.

This statement is submitted in opposition to H. R. 10 because we believe that some of the provisions of this bill introduced by Congressman HOBBS are unconstitutional and repugnant to American principles of democracy. Our association has always maintained a vigorous anti-Communist and anti-Nazi subversive attitude.

THE BILL IS REPUGNANT TO AMERICAN PRINCIPLES

The Hobbs bill authorizes the indefinite detention of aliens who entered the United States within 10 years preceding the issuance of a warrant of arrest against them. Aliens who have committed no crimes may be thus detained in imprisonment for the rest of their lives. In the Seventy-seventh Congress, Congressman HOBBS introduced a similar bill known as H. R. 3. At that time extensive hearings were held and many witnesses testified against the bill because it contained similar provisions. Paul Allen, national executive secretary of the Descendants of the American Revolution, stated at that time:

"I want to go on the principles of American Government, which should be considered as well as the exact provisions of the bill. Now we are opposed to the method in the bill and the theories which attempt to justify the bill, and we are particularly worried about what this bill might be put to.

"You see, we do not like the detention provisions and the system of supervision that the founders of this country actually struggled against. It is part of the same thing which the early Americans objected to in the British rulers who were sent over here. * * *

"The fact that the bill is aimed at aliens does not justify it in our minds."

John Haynes Holmes stated in opposition to H. R. 3:

"If they (aliens) commit offenses they can be tried and imprisoned. If they are law abiding they should be free on bond available whenever deportation is practicable. Any other treatment of aliens is repugnant to American principles."

THE BILL IS UNCONSTITUTIONAL

In Petition of Brooks (5 F 2 (d) 238) Judge Anderson, of Massachusetts, stated:

"The right to arrest and hold or imprison an alien is nothing but a necessary incident of the right to exclude or deport. There is no power in this court or any other tribunal in this country to hold indefinitely any sane citizen or alien in imprisonment except as punishment for a crime. Slavery was abolished by the thirteenth amendment."

In *Wong Wing* v. *United States* (163 U. S. 228) the Supreme Court stated:

"To declare unlawful residence within a country to be an infamous crime, punishable by deprivation of liberty and property, would be to pass out of the sphere of constitutional legislation; unless the provision were made that the fact of guilt should first be established by judicial trial."

The Hobbs bill proposes to provide for imprisonment of aliens, in some cases perhaps for the rest of their lives, where they have committed no crime and where the imprisonment would result from administrative decisions without a judicial trial. It is the opinion of our Association that these provisions of the Hobbs bill transcend the bounds of the Constitution.

Further, we are opposed to section 5 of Hobbs bill because these provisions seek to repeal the Administrative Procedure Act insofar as it applies to immigration, deportation and nationality. The Administrative Procedure Act was intended to require administrative agencies, including the Immigration Service, to make its rules and precedents public, to permit representation by counsel, to authorize court review, to require separation from prosecuting and adjudicating functions, and to require independent hearing examiners. For years these administrative reforms have been advocated in immigration matters and before administrative agencies generally. The purpose of the Administrative Procedures Act is to grant a fair and impartial hearing. We are opposed to any legislation which would attempt to whittle down the Administrative Procedures Act.

We also wish to call attention to the concluding sentence in section 5 of the Hobbs bill which states that the provisions of 503 of the Nationality Act shall not be applicable in any case involving a determination of the right of a person to be admitted or to remain in the United States under the provisions of any of the immediately foregoing described laws. We confess that on first reading we believed that this language was intended to abolish section 503 of the Nationality Act. We think that the language is susceptible of that construction. We understand that the intention of the author was to make former citizens who have been expatriated and who come to the United States to establish their citizenship by court proceeding, subject to the detention provisions of the Hobbs bill. It can hardly be contended that former citizens who might have lost their citizenship by some innocent act such as by mere residence abroad, by voting in Italian elections, or by service in an army of an ally, are such dangerous aliens that they should be subjected to incarceration.

Instead of incarcerating our former citizens, we believe that where their loyalty is established, they should be afforded an expeditious method of regaining their valued rights of American citizenship.

UNIVERSITY OF MICHIGAN LIBRARIES

few words, the reason for this recognition by the Republic of Chile of the best American authority on Latin America. Ed Tomlinson needs no introduction to the people of the United States or to the Members of the Congress. As a truthful reporter of facts he has served his country well; as a truthful reporter of facts he has well served Latin America also.

Ed Tomlinson knows whereof he reports and Ambassador del Rio knows whereof he speaks. The people of the Americas—both North and South—have long recognized the worth of Ed Tomlinson's unbiased and impartial news coverage; his probing for facts beneath the surface; and his skill in portraying events as they actually are.

My congratulations to the Republic of Chile for recognizing the worth of Ed Tomlinson's contributions to the cause of democracy in the Americas, and my congratulations to Ed Tomlinson for the awarding of an honor richly deserved and well merited.

The address follows:

Mr. Tomlinson, it is, indeed, a great pleasure for me to confer upon you in the name of the Government of Chile the Orden Al Mérito "Bernardo O'Higgins," in the rank of commander. This order was established by the father of Chilean liberty and is bestowed by my Government in recognition of service to the nation, to democracy, and to mankind.

You have chosen for many years to devote your high talents to the task of understanding and good will between the nations of the Western Hemisphere. On the radio and in the press of the United States, and in various well-known books, you have endeavored to impartially inform the people of this country about the Latin-American nations and the Latin-American peoples, about their way of life, their cultures, their hopes, and their aspirations, as expressed in their everyday work, in the work, programs, and policies of their governments. If there were only more enlightenment of this kind in all countries, the task of the salesman and diplomat would be made much easier and the progress of our western world would increase geometrically.

Much remains to be done to raise the standard of living of the American people outside of the United States and to build among them a structure of enduring friendship and mutual knowledge, which may resist the forces of destruction and evil now unleashed.

My Government wishes to award your work and encourage you, Mr. Tomlinson, to carry it on unceasingly, because the goal of American unity is worth every effort and every sacrifice.

The Rape of Freedom

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article from the Santa Cruz Riptide:

"I HAD RATHER BE A DOG, AND BAY THE MOON, THAN SUCH A ROMAN"—SHAKESPEARE, JULIUS CAESAR, IV, III, 27, BRUTUS TO CASSIUS

(By W. F. Alder)

The rape of freedom as Americans have known it since 1778 is well under way.

One hundred and seventy-one years ago the Constitution of this land was born and put into practice.

That Constitution set forth a way of life within which Americans might live in the pursuit of happiness and retain personal liberty.

Now that liberty, and all the word implies, has been traduced and is far on its way to destruction.

A sinister and wholly malign cult has taken possession of many of the inner shrines of our freedom.

Communism and socialism, two fundamentally synonymous heresies in the lexicon of human freedom, are not only marching upon us—they have found lodging in the temple. And they brazenly proclaim their right of entry.

With the development of our liberal arts and sciences, we have explored the near shores of atomic physics and have discovered wellsprings of incalculable potentialities—for the good of mankind or for his destruction.

We have repetitively and categorically stated to the world that these forces will not be used for conquest of others by ourselves. We are not international burglars.

We had taken what we thought to be adequate steps to safeguard by secrecy the lives of all men against the misuse of these atomic forces by those whose sole purpose is to subjugate the world.

These would-be world conquerors have been trying by every stratagem and subversive practice to infiltrate our defenses and learn our lifeguarding secrets.

We created an Atomic Energy Commission to study, perfect, and harness this vast energy source for the ultimate good of mankind and the immediate security of a nation dedicated to the freedom of all men.

A group of scientists comprising the National Academy of Science, a private institution, nominated a certain group of men to constitute a national research council. The Congress of the United States has no supervisory control over these bodies, nor their memberships. The unswerving loyalty of some of these members is now open to serious question. We did not anticipate subversion of our security by our executive personnel.

The selection of scientific personnel to man our atomic research laboratories and master the imponderable forces of this newly discovered source of energy resides in the personal judgments of these men.

Speaking on behalf of these, Dr. A. M. Richards, of the National Academy of Science, supported Director David P. Lilienthal, of the Atomic Energy Commission, in his coldly enunciated statement before a congressional committee, that self-confessed Communists could well be proper personnel to groom for the laboratory and research staffs developing our highest echelons of national defense. These "diners-out from whom we guard our spoons." (Macaulay, Political Georgics.)

Director Lilienthal has consistently insisted that student-candidates for scholarships awarded by the Atomic Energy Commission be not questioned in respect to loyalty to the United States lest their intellectual freedom be impaired.

He has stoutly defended the awarding of scholarships to known Communists.

A case in point is that of Hans Friestadt, Communist graduate-student at the University of North Carolina, whose appointment he defends on the premise that this Austrian-born son of a Vienna Communist newspaper publisher, was to be trained only in the a-b-c's of nuclear physics. Hans Friestadt conducts the Karl Marx Study Club at the University of North Carolina and bombards the student body there with subversive articles in the campus newspaper, the Tar Heel.

Current investigations by the Congressional Atomic Committee and interrogations of Director Lilienthal now bring forth the information that other known Communists have been included in these scholarship awards and that it is unmistakenly evident that Lilienthal had full knowledge of their subversive connections prior to his making the awards. The FBI had turned in adverse reports on each of these men.

While it now appears that these awards will be rescinded, that of itself is not sufficient. The stark reality of the matter is that the supposedly sacrosanct Atomic Energy Commission is so loosely administered, whether by design or sheer ineptitude, that our atomic research program has been open to subversive infiltration, and no one knows just how far the process has progressed.

If the top group administering our atomic program is so wanting in judgment as to flagrantly disregard our national insistence that the spread of communism in the United States be halted, how, in heaven's name, is it capable of exercising good judgment in the conduct of the billion-dollar program entrusted to its management?

Lilienthal explains and validates this training of young Communists by the usual party-code double-talk euphemism, "intellectual freedom."

Boiled down to its literal meaning, this asserts that any Communist, regardless of his oath to support the Communist ideology and its source, the Polit Bureau of Russia, he, as a candidate for, or incumbent in, employment in our atomic research program, must be kept "intellectually free" to desert the nation which trained him and go over to the enemy at any time his intellectual freedom seems to demand—or the Kremlin crooks a beckoning finger.

Freedom of speech, and mind are thus based, pardon me, debased, to suit the individual's personal motives and convictions. He, himself, sets the measure of his duty to his country and fellow citizens. This seems to be the thesis of Director Lilienthal's coterie of collaborators.

It is not within the province of these atomic administrators to decide questions of national ethics. They have but one responsibility—to guard with their whole honor the trust their high position imposes.

Polemical subjects are the sole business of Congress, though it is stretching the word to make it include patriotic duty. We shall permit no argument about that.

Our right of free speech does not envision license to contribute to the delinquency of minors, political adolescents, nor the incitation to murder men or the freedom under which they live. We do not condone conspiracy to do murder. That in itself is a felony.

How then can we construe as a violation of free speech, interdicting expression of such intent or purpose?

Freedom of our myriad sons yet to be born is far more precious than the mere life of any individual amongst us.

Have we not asserted this principle on countless crimsoned battlefields? And on the blood-flecked snows of shoeless Valley Forge?

What sophistry is this which describes free speech as the God-given right to give aid and comfort to an avowed enemy who plots the murder of some of our bodies and all of our souls? At this juncture I seem to remember Byron's Childe Harold: "In pride of place, here last the eagle flew."

Yet, according to David P. Lilienthal and a parade of scientists before the congressional investigating committee, this intellectual freedom they carp about is Americanism at its best.

I had rather be a dog, and bay the moon, than such an American.

And I remember, too, the anguished cry of Lady Macbeth: "Out, damned spot! Out, I say!"

Will Messrs. Lilienthal, et al, remember? Sometime? Ever?

Things You Don't Buy May Cost You the Most

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. BOLLING. Mr. Speaker, much of the talk of economy in Government which we hear today is designed only to prevent the passage of much-needed social legislation, social legislation which in the long run will save our taxpayers billions of dollars. In connection with this thought and under the unanimous consent granted me, I include the following interesting editorial from the Machinist of May 12:

THINGS YOU DON'T BUY MAY COST YOU THE MOST

The cost of President Truman's Fair Deal is beginning to give some people cold feet. They've figured out that we can't finance public housing, raise school teachers' salaries, set up a real health-insurance program, and guarantee farmers a comfortable living without it costing this country big money.

The Fair Deal is no promise of pie in the sky. If we get it, we're going to have to work to pay for it. We have to make up our minds whether the improvements the President has proposed are worth the several billion dollars they're going to cost.

It's going to cost us either way. It's like buying a car. If we go on driving the prewar jalopy, the bills for repairs keep on going up until, sooner or later, it's cheaper to buy a new model. Mr. Truman thinks the Fair Deal will cost our country less than trying to keep the old model in repair.

Take health insurance. When the Government pays the doctor bills for every working family in the country, it's going to cost six to eight billion dollars a year. That's a lot of money. But we know that sickness—a lot of it preventable—is now costing us Americans about $27,000,000,000 a year in doctor bills, lost wages, and lost profits from absenteeism. And that's not adding a cent for unnecessary suffering from lack of adequate doctor's care.

Take that $300,000,000 bill for aid to education. We know that if we don't vote that one, our public-school system will continue to run down. Our children won't be as well equipped to meet the problems of life as we were. What's that going to cost our country?

Or take the public housing bill. That's going to cost $4,000,000,000 over 10 years. But stop and add up the cost of juvenile delinquency and crime that is spawned in our city and rural slums. How much do we pay for epidemics that bred in our slums?

What about the social-security plan? Suppose we let our aged continue to crawl for relief instead of assuring them a decent pension when they reach retirement age? Won't that drive them to support the Townsend plan or even more costly remedies?

And what about the new farm plan to guarantee a decent farm income and, at the same time, cut the price of health-giving foods like milk, eggs, meat, fruits, and vegetables? Aren't lower prices to city consumers and the extra food they're going to eat as a result worth what it will cost?

There's no question that we're going to have to work to pay for this program. The question is, Will we work just as hard without getting any of it?

The loudest complaints we hear about the cost of the Fair Deal come from families who can afford to run up doctor bills, who have their kids in private schools, who live in comfortable homes, carry plenty of insurance and aren't worried about where their next steak is coming from.

Memorandum of Association of Immigration and Nationality Lawyers in Opposition to H. R. 10

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. BARRETT of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit the following memorandum of the Association of Immigration and Nationality Lawyers in opposition to H. R. 10:

The Association of Immigration and Nationality Lawyers is a national association of lawyers admitted to practice before the Immigration Service and the Board of Immigration Appeals. Some of its members are former officials of the Immigration Service and the Board of Immigration Appeals of the Department of Justice.

The association is interested in advancing the science of the administration of law pertaining to immigration, nationality, and naturalization.

This statement is submitted in opposition to H. R. 10 because we believe that some of the provisions of this bill introduced by Congressman HOBBS are unconstitutional and repugnant to American principles of democracy. Our association has always maintained a vigorous anti-Communist and anti-Nazi subversive attitude.

THE BILL IS REPUGNANT TO AMERICAN PRINCIPLES

The Hobbs bill authorizes the indefinite detention of aliens who entered the United States within 10 years preceding the issuance of a warrant of arrest against them. Aliens who have committed no crimes may be thus detained in imprisonment for the rest of their lives. In the Seventy-seventh Congress, Congressman HOBBS introduced a similar bill known as H. R. 3. At that time extensive hearings were held and many witnesses testified against the bill because it contained simil[illegible]visions. Paul Allen, national executive secretary of the Descendants of the American Revolution, stated at that time:

"I want to go on the principles of American Government, which should be considered as well as the exact provisions of the bill. Now we are opposed to the method in the bill and the theories which attempt to justify the bill, and we are particularly worried about what this bill might be put to.

"You see, we do not like the detention provisions and the system of supervision that the founders of this country actually struggled against. It is part of the same thing which the early Americans objected to in the British rulers who were sent over here. * * *

"The fact that the bill is aimed at aliens does not justify it in our minds."

John Haynes Holmes stated in opposition to H. R. 3:

"If they (aliens) commit offenses they can be tried and imprisoned. If they are law abiding they should be free on bond available whenever deportation is practicable. Any other treatment of aliens is repugnant to American principles."

THE BILL IS UNCONSTITUTIONAL

In Petition of Brooks (5 F 2 (d) 238) Judge Anderson, of Massachusetts, stated:

"The right to arrest and hold or imprison an alien is nothing but a necessary incident of the right to exclude or deport. There is no power in this court or any other tribunal in this country to hold indefinitely any sane citizen or alien in imprisonment except as punishment for a crime. Slavery was abolished by the thirteenth amendment."

In *Wong Wing* v. *United States* (163 U. S. 228) the Supreme Court stated:

"To declare unlawful residence within a country to be an infamous crime, punishable by deprivation of liberty and property, would be to pass out of the sphere of constitutional legislation; unless the provision were made that the fact of guilt should first be established by judicial trial."

The Hobbs bill proposes to provide for imprisonment of aliens, in some cases perhaps for the rest of their lives, where they have committed no crime and where the imprisonment would result from administrative decisions without a judicial trial. It is the opinion of our Association that these provisions of the Hobbs bill transcend the bounds of the Constitution.

Further, we are opposed to section 5 of Hobbs bill because these provisions seek to repeal the Administrative Procedure Act insofar as it applies to immigration, deportation and nationality. The Administrative Procedure Act was intended to require administrative agencies, including the Immigration Service, to make its rules and precedents public, to permit representation by counsel, to authorize court review, to require separation from prosecuting and adjudicating functions, and to require independent hearing examiners. For years these administrative reforms have been advocated in immigration matters and before administrative agencies generally. The purpose of the Administrative Procedures Act is to grant a fair and impartial hearing. We are opposed to any legislation which would attempt to whittle down the Administrative Procedures Act.

We also wish to call attention to the concluding sentence in section 5 of the Hobbs bill which states that the provisions of 503 of the Nationality Act shall not be applicable in any case involving a determination of the right of a person to be admitted or to remain in the United States under the provisions of any of the immediately foregoing described laws. We confess that on first reading we believed that this language was intended to abolish section 503 of the Nationality Act. We think that the language is susceptible of that construction. We understand that the intention of the author was to make former citizens who have been expatriated and who come to the United States to establish their citizenship by court proceeding, subject to the detention provisions of the Hobbs bill. It can hardly be contended that former citizens who might have lost their citizenship by some innocent act such as by mere residence abroad, by voting in Italian elections, or by service in an army of an ally, are such dangerous aliens that they should be subjected to incarceration.

Instead of incarcerating our former citizens, we believe that where their loyalty is established, they should be afforded an expeditious method of regaining their valued rights of American citizenship.

It is our opinion that this bill, for the first time in the history of the United States, seeks to establish concentration camps during peace-time. We believe that the problem of subversive aliens and of nondeportable aliens is a serious one. We think that appropriate means should be devised to maintain adequate supervision of subversives and if possible to solve the problem of those who cannot be deported. However, we feel that the Hobbs bill is not the democratic nor the American way in which the problem should be solved. For this reason we record our opposition to this undemocratic bill.

GASPARE CUSUMANO,
President, New York City.
JACK WASSERMAN,
Washington Representative, Washington, D. C.
THOMAS M. COOLEY, II,
Vice Chairman, Legislative Committee, Washington, D. C.
MAY 31, 1949.

American Scholarships Should Not Go to Communists

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks I include a forceful editorial from the Sacramento Bee of Sacramento, Calif.

It briefly but forceably comments on the granting of a scholarship to Hans Freistadt, a naturalized Austrian. Apparently this young scholar was never really Americanized. When the court makes the order which makes an immigrant an American, it is after the applicant has demonstrated his knowledge of the Constitution and the form of government of the United States. This implies that the proposed citizen approves of and believes in our form of government. No worthy citizen would join a group whose purpose is the destruction of our representative government and the domination of the individual by the state. Consequently, when this brilliant student accepted his citizenship and took his oath of allegiance to the United States of America, he must have done so with reservations. Otherwise, he would not shortly thereafter have joined the Communist Party.

I commend the reading of the following editorial to my colleagues:

BETTER KEEP SCHOLARSHIPS FOR LOYAL AMERICANS

Hans Freistadt came to this country a few years ago an immigrant from Austria. Shortly after becoming a full fledged citizen of the United States he joined the Communist Party.

But young Freistadt is intellectually gifted. He is a brilliant student of physics, so much so the National Research Council, a government agency associated with atomic energy research, granted him a $1,600 a year governmental fellowship to study relativity in the field of nuclear physics at the University of North Carolina.

And, according to all reports, from the strictly academic standpoint, Freistadt was well equipped for the work assigned to him.

But in the university Freistadt renewed his active Communist associations and he frankly admitted his party membership when recently called before a congressional inquiry committee.

In fact, he insisted to the committee that he could see no conflict between his oath of allegiance to the United States and his Communist activities.

He may have a brilliant mentality in the scientific field, but if he honestly believes there is no such conflict in loyalties, he is dumber than a moron in the field of politics.

No man can be faithful to two conflicting national allegiances any more than a husband can be faithful to two wives at the same time.

The National Research Council tries to excuse such scholarship awards to known Reds on the ground national security is not involved in their particular work.

That is a debatable question.

But it is impossible to justify such a policy on a broader ground—namely, that no grant of public funds should be made to any person who is a member of an organization committed to the destruction of our Government and our democratic institutions by force and violence.

And there certainly are brains enough and talents enough among the loyal young men and women of America to supply any needed investigators and workers in any research field.

Save $48,000,000 in Building the Garrison Dam

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. BURDICK. Mr. Speaker, the taxpayers of the Nation can be saved $48,000,000 on just one of the many water programs of the Corps of Army Engineers.

To raise the water level of the proposed Garrison Dam 20 feet above what the engineers originally asked for and which was authorized, will cost the people $48,000,000 more than was first contemplated. Up to date, there is no authority in law for this increase in elevation, but these engineers do not need any authority. They have assumed control of the matter and are going ahead with what they want and not what Congress authorized. As proof of this, the law authorized the water level to contain 17,000,000 acre-feet, which means a water level of 1,830 feet above sea level. No higher elevation was authorized. Does that deter the engineers? Not in the least. According to their own testimony before the Rivers and Harbors Committee, they say they have now secured by purchase and condemnation 43,000 acres of land not needed for a 17,000,000-acre-foot pool, but will be needed for a 23,000,000-acre-foot pool, or a water level of 1,850 feet. In all of their propaganda, in their annual report, and their newspaper interviews and in their speeches before civil associations, they invariably refer to a water pool of 23,000,000 acre-feet, although there is no law supporting any such pool.

The Hoover Commission recommends that the Corps of Army Engineers be removed from civil functions and assigns reasons for it, all of which are absolute facts. The recommendations should be approved by Congress. But will these suggestions be followed? I doubt it. The people generally do not know of the powerful lobby ready at any time to intervene and keep these Army men entrenched in civilian projects. The lobby is composed of the contractors brigade, those to whom the engineers assign contracts; civilian bodies that are led to believe that their particular areas will receive benefits through the good will of these engineers; Members of Congress who want some local project in their district to receive favorable consideration, and other Congressmen whom the engineers convey around at Government expense—not only to view certain projects, but to get free trips home. This engineers' lobby is a powerful thing. In the Senate Subcommittee on Appropriations when I testified before it, General Pick had a permanent place at the witness table and remained there with his aides while all witnesses were testifying. After witnesses were dismissed, General Pick remained, and no doubt disposed of any adverse testimony with a few remarks which no doubt were eagerly received by the committee.

I testified last Friday before the Rivers and Harbors Committee of the House on Congressman LEMKE's bill to limit the water pool of North Dakota's Garrison Dam to 1,830 feet and limit all land-buying activity to that level, and there in that committee the engineers were sitting upon the raised platform with the members of the committee, just as much a part of the committee as anyone else. While witnesses were testifying, the chairman of that committee was in constant communication with the engineers in charge concerning the course of the testimony.

With the powerful lobby in Congress, in which Members of Congress are determined no law shall be passed which shall interfere with these engineers, you can see that the recommendations of the Hoover report have a vicious gauntlet to run before the engineers are removed from all civilian functions.

The people are beginning to find out about this autocratic and power-hungry Corps of Engineers, and their unreasonable action in the field—going ahead in a way not authorized by law, is doing more to bring discredit on this Government than anything else known today. The people will finally become aroused, and when they do this institution will be hit hard. Enough Members of Congress will be elected that this engineers' lobby cannot handle and when that time comes this autocratic, unthinking, brazen, and arrogant body of men will be ousted from functions they should never have controlled.

Civic bodies in North Dakota are generally opposed to the Missouri Valley Authority because they say too much power will be placed in a few hands; yet at the same time these civic bodies are

doing their best to support the engineers where the power is not placed in a few hands, but in the hands of one man, the Chief of Engineers. The sentiment for an MVA in North Dakota is growing with leaps and bounds, and the thing responsible for this feeling is the ruthless, ignorant, and unlawful behavior of the engineers right there where the people, every day, can see their action.

The tragic thing about the whole matter is that the taxpayers will have to foot the bills of this irresponsible and law-violating bunch of engineers. They have now purchased with taxpayers' money, 43,000 acres of land that was never authorized; they have driven hundreds of farmers off their land by bluff, coercion, and proceedings in condemnation at a time at least 12 years removed from any possible use they can make of these lands. They have set up a real estate office that does a lucrative business, buying a farmer out and then renting the land back to him at prices that absorb all consideration he received for his land, in rent payments until the Government needs it.

Congress authorized the Pick-Sloan plan, but nothing is being done on the Sloan plan because the engineers' lobby in Congress is determined to finance just what the engineers want, and that is absolutely in opposition to the Sloan plan. While the engineers have agreed in writing to the Sloan plan, they ignore it, because they feel themselves well enough intrenched in the Congress to do so.

I have seen many lobbies here in Washington, but I have never seen one that shows the arrogance and disrespect for law as is now exhibited by these engineers. They have many Members of Congress who for some reason will fly to their aid on any committee at any time, night or day.

The people of the United States are up against a real fight. In the Garrison project the taxpayers can be saved $48,000,000 and no one—not one community in the United States—will be injured by saving this money. An 1,830-foot dam at Garrison will do as much for flood control as a higher dam, especially when it is realized that when the damaging floods occur in Louisiana and Mississippi the upper Missouri River is frozen as hard as cement. This lower dam will contribute as much to river navigation as a higher one, because the law provides that navigation shall not conflict with irrigation, and consumptive use of waters west of the ninety-eighth principal meridian. If the irrigation proposed 1,300,000 acres is established there will be little water left in the Missouri River on an average year after year. If the water in the Garrison Dam is drawn off to be diverted to the Devils Lake area, there will be still less.

Can we save this extra $48,000,000 and curb the power of these engineers who are schooled in expending other people's money? In war or peace the Army has demonstrated that it is the most wasteful organization in the world in burning up the taxpayers' money. In wartime the extravagance is terrific, but no one can question it then, but in peacetime we should gather up enough nerve to say "No" to this unnecessary and extravagant expense brought on by the Army engineers.

Today, 50 cents of every tax dollar goes to support a military program at home and military assistance programs in other sections of the world. Maybe we cannot stop this, but at least we can and should halt the high-handed extravagance of the Army engineers in our civil functions here at home.

In regard to the Garrison Dam, the Hoover Commission Report says:

> The development agencies sometimes compromise their differences. After sharp clashes over loans for the development of the Missouri Basin, the Corps and the Bureau announced complete agreement on the Pick-Sloan plan. Analysis of that plan reveals the fact that it contains many projects which previously had been subjected to devastating criticism by one or the other agency. The compromise consisted, for the most part, in a division of projects, each agency agreeing to forego the privilege of criticizing projects assigned by the agreement to the other. The result is in no sense an integrated development plan for the basin, and there is serious question in this case whether agreement between the two agencies is not more costly to the public than disagreement.

Again quoting from that report:

> There is simply no escaping the fact that so long as the present overlapping of functions exists with respect to the Corps of Engineers, the Bureau of Reclamation, and the Federal Power Commission, costly duplication, confusion, and competition are bound to result. It has been demonstrated time and time again that neither by voluntary cooperation, nor by executive coordination, can the major conflicts be ironed out.
>
> Painful as the operation may be, the case for a unification of the functions of the Corps of Engineers and the Bureau of Reclamation is so overwhelming that it ought to be effected without further delay.

We have seen this exact situation come to pass in the Pick-Sloan plan. Each agency had a plan of its own, absolutely dissimilar in every respect. Congress asked for an agreement, and these agencies agreed to a common plan and signed a joint agreement. Congress then passed the law based on this agreement. Since then the Army engineers have gone straight ahead with their own plan as it stood before this joint agreement, and have used their lobby in Congress to get funds to carry out their own plans. The Sloan plan remains without funds for starting the project, because the engineers of the Army do not want the Sloan plan and never did want it. They ignore their joint agreement as a scrap of paper.

Congress is at fault. It should have taken time and passed a law pointing out specifically what was to be done and not a law that merely blanketed in the agreement between these two agencies, and which now the engineers refuse to obey. Congress should put this river development under one responsible civil agency and hold that agency responsible for carrying out the will of Congress. It can be done and will be done, unless the Army engineers' lobby is too strong and prevents it.

Transfer of Pacific Islands From Naval to Civil Control Should Not Be Undertaken Without Adequate Preparation—Native People of These Islands Apprehensive of Changes in Prospect

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. FARRINGTON. Mr. Speaker, an editorial appearing under date of May 24, 1949, in the Honolulu Star Bulletin points out that the transfer of the administration of the Pacific Islands from naval to civil rule, as proposed by President Truman, should not be undertaken without careful preparation.

The editor of the Star Bulletin, Riley H. Allen, has visited the Pacific Islands and is exceptionally well-informed on this problem as the result of many years of study.

The Members of Congress concerned with this problem as well as those in the administration should therefore find in his comments some valuable suggestions as to the approach to this important question.

The editorial is as follows:

THE PRESIDENT MOVES—INTERIOR DEPARTMENT TO TAKE OVER PACIFIC ISLANDS

President Truman himself has moved to see that civil rule is set up promptly in Pacific islands now under naval jurisdiction and control.

He has ordered the transfer of Guam to the Interior Department within the next year.

He has ordered a like transfer of American Samoa and the Pacific Trust Territories to Interior Department supervision "within the next 2 or 3 years."

The President's order was probably hastened by the recent friction on Guam between the natives and the naval government.

This friction resulted in a sit-down strike by the Guam legislators.

They walked out of their assembly, refused to come back until a compromise was reached.

This compromise effected a little face saving all around. It did not settle Guam's underlying grievance—that the Guamanians desire and demand a larger degree of self-government than they can get under the Navy.

And theirs is an understandable, a natural position. It is founded on the basic principle of Americanism—government by consent of the governed.

This move by the President has brought to a climax, if not to a finish, a long series of skirmishes, mostly behind the scenes, over the government of American Samoa and Guam.

The skirmishing over the trust territories (taken from Japan in World War II) has been shorter. That is only because the United States has had the trust islands in its keeping a much shorter time. Guam and American Samoa have been under the United States flag a half century.

The order to transfer from Navy to Interior Department rule is much more easily issued than carried out.

The Navy has been governing American Samoa and Guam for five decades.

It has built up an extensive establishment—in physical equipment and in personnel—to do the job. It expanded this

UNIVERSITY OF MICHIGAN LIBRARIES

considerable establishment to take in the trust territories.

The Interior Department has no such establishment. And the Navy has serious and quite sincere doubts that the Interior Department either realizes the size of its job or can, within a few months, develop the facilities to take over from the Navy and carry on without set-back or loss.

One thing is certain: Unless the Navy gives the most cordial and wholehearted support to the transfer, there is certain to be an unhappy period for the natives of these islands.

They are already uneasy over the projected transfer.

Whether or not their apprehensions are entirely of their own thinking, or have (as Department of the Interior men sometimes hint) been planted by the Navy, the doubts and fears are there—unmistakably there.

The Department of the Interior must be able to come in and take over with no loss of efficiency, no period of hesitation, no obvious experimentation. Otherwise, the natives will feel that their misgivings have been confirmed, and they will, correspondingly, be disappointed.

And if this feeling starts, it will grow. In many a distant atoll, and over many an archipelago, the natives will be frightened, obdurate, uncommunicative, difficult to govern.

Many months ago the Star-Bulletin suggested that, as the transfer was inevitable—sometime—Department of the Interior men ought immediately to be assigned to the Pacific area, and get right out on the job.

That move is now imperative. Guam is to be transferred within a year. Interior Department should have not merely a representative, but a staff at Guam without delay, learning the many things they must know about Guam, the Marianas, the Carolines, the Pacific.

Further, a group of Guam's ablest and best equipped men should go to Washington and get thoroughly acquainted with the transfer, at the National Capital, of jurisdiction from Navy to Interior.

The Guam Assembly has voted $10,000 to send two Guamanians to Washington. Our own National Government might well supplement this. A group of 6 or 10 would not be too large.

We owe it to the world as well as to these helpless natives to do a first-class job of government.

We are spending billions of dollars in foreign relief and in foreign financing.

We are willing to assign to this job skilled administrators and staffs that total more than 25,000 persons.

We should be not less solicitous about the welfare and the happiness of the relatively few thousand Pacific island natives under our own flag.

You Can't Have Your Pie and Eat It, Too

EXTENSION OF REMARKS

OF

HON. JOHN SANBORN

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. SANBORN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I insert a letter from Mr. Grebe, attorney for the Boise Kuna irrigation district in Idaho.

Attorney Grebe calls our attention to a fundamental truth that we cannot continue spending without having to pay for the things we desire. I congratulate Mr. Grebe for his willingness to sacrifice in order to maintain our Government and bring order into our fiscal matters.

The letter of Mr. Grebe follows:

BOISE-KUNA IRRIGATION DISTRICT,
Kuna, Idaho, May 26, 1949.

Hon. JOHN SANBORN, M. C.
Washington, D. C.

DEAR CONGRESSMAN: I am vitally interested in completion of Anderson Ranch Dam, Lucky Peak Dam, Cascade Dam and other Reclamation Service construction in Idaho. I own land under these projects and would benefit by further expenditure of funds for reclamation.

But I am willing to sacrifice any benefits which may be taken from me in the further development of my own pet projects, that may be necessary to sacrifice, in order to get favorable action on the recommendations of the Hoover Commission.

I realize that unless all of us who have a finger in the pie sacrifice something personally, the Commission's work will be of no avail. This tremendous waste must be stopped to prevent the eventual downfall of our form of government.

Truly yours,

G. W. GREBE,
Attorney for
Boise-Kuna Irrigation District.

Sore Spots in the Far East

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to call attention to an editorial appearing in the New York Times of May 18 under the title "Sore Spots in the Far East."

The editorial very appropriately points out the importance of taking action promptly to provide an organic act for the government of Guam.

The editorial is as follows:

SORE SPOTS IN THE FAR EAST

Our preoccupation with problems of world-wide scope and our attention to great dramatic crises such as those in Germany and China may cause us to overlook some smaller situations in which something can and should be done. There are sore spots in our whole Asiatic relationship that need attention. They do not require any vast examination or reversal of policy, but they do need action.

We have not yet, for example, carried out the full repeal of our now discredited Asiatic exclusion policy. In 1943 we lifted the ban against the Chinese. In 1946 we lifted it against Filipinos and Indians. What is needed now is to finish the job and set up the quota basis for the other Asiatic states. The House of Representatives on March 1 adopted the Judd bill to do this. But that bill is still buried in a Senate Judiciary Subcommittee. It should be brought out and adopted and not allowed to die in the Senate crush or the Senate pigeonhole.

Similarly, Congress has not yet come to grips with the need for adopting an organic act for Guam. The Guam Congress, trying to function lawfully, has had a difficult dispute with the naval government and the governor in which the basic issue has been the interpretation of the legislative authority granted to the Congress by order of the Navy Secretary in 1947. To clarify the issue and to resolve the dispute the Guam Congress, on March 5, adopted the draft of a proposed organic act defining civilian and legislative rights. This was forwarded to the United States Congress through the Navy Department, but it is obviously still far from enactment. A matter as important as this should not be buried in channels, but should be brought out for constructive examination and action.

The great crises will, no doubt, continue to make the headlines. But at the same time wise actions on less fearful matters should not be sacrificed, since those actions may make the sum total of policy.

Bravo! Bravo! Bravo! Excelentissimo! Nein! Nein! Nein!

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1949

Mr. O'SULLIVAN. Mr. Speaker, the writer thought that it was fitting, meet, and right to give this article not only a conflicting title, but also to scramble the Portuguese and German languages up in that title. I think that it would have been more appropriate however, to have had the title made up of all of the known living and dead languages, but, obviously of course, that could not be accomplished with any idea of maintaining and preserving the well known O'Sullivan brand of brevity.

The idea of the above title occurred to me when the President of the United States of Brazil was addressing in Portuguese the joint session of the Senate and House of Representatives on May 19 last. When our good friend, President General Eurico Gaspar Dutra, President of the United States of Brazil, had completed, what was evidently, to those who could understand, a very good point, one of his Portuguese admirers sitting in the House gallery, amidst rousing hand clappings, exclaimed bravo! bravo! bravo! excelentissimo! Then followed a brief and chilly silence and then I heard another man in the House gallery, who had a distinctly German accent say, nein! nein! nein! I fancy that a few Nebraskans and the majority of the State senators of Nebraska were also in the bravo bravo bravo excellentissimo class when they memorialized Congress to cut national expenditures 10 percent across the board, while the great majority of the thinking, understanding people of Nebraska, and a minority of the State senators of Nebraska were in the nein nein nein class, as far as doing any such memorializing was concerned.

By way of recapitulation I call attention to the fact that in a previous article, entitled "Physician Cure Thyself," which I caused to be placed in the Appendix of the CONGRESSIONAL RECORD at page A3115, attention was called therein to the fact that almost unanimously, the Nebraska Legislature had by resolution memorialized Congress to cut national expenditures 10 percent across the board,

while at the same time that very same legislative body was actively pursuing a different policy as far as State expenditures were concerned.

The foregoing course of conduct reminds us of the story of the old religious hypocrite, who in order to be fair with God and man alike, while singing the grand old church hymn, When the Roll Is Called Up Yonder I'll Be There, instead of pointing skyward when he uttered the words "I'll be there" reversed the gesture and pointed downward in the supposed general direction of hell.

In fact that old hypocrite was fairer in what he said, if you could see him singing, than was the memorializing Republican-controlled Nebraska Legislature, because it never pointed the finger at the tremendous State expenditures, or ever even breathed an "itsy-bitsy," "teeny-weeny" word about its own public wastrel-lust.

Recently the Nebraska State Journal of Lincoln, Nebr., brought to the fore again the utter inconsistency and ridiculousness of the economy position of the afore-mentioned legislature and its memorializing antics, by publishing the following newspaper article:

LEGISLATURE REFUSES 10-PERCENT BUDGET CUT—WILLIAMS MOTION PROVOKES ATTACK

(By Burt James)

A request for a flat 10-percent cut in the 1949–51 budget bill was defeated Wednesday by the legislature.

The vote was 4 to 21. Senators Frank Nelson, O'Neill; Charles Vogt, Liberty; George Weborg, Pender, and W. J. Williams, Ravenna, supported the motion.

The reduction was proposed by Williams just after the legislature approved additions to the bill totaling $372,940.

The increases made by the legislature total $1,806,331 above the budget committee's original recommendation of $130,946,251. The grand total for the bill now stands at $132,810,582.

"The legislature has added about $1,700,000 over the committee's recommendation," Williams said in making his motion.

"It's time we do something that we asked someone else to do," he added. He was referring to the legislature's action of earlier in the week in adopting a resolution asking Congress to reduce Federal expenditures by 10 percent.

Williams was immediately accused of being insincere and with seeking publicity. The charges were made by Senators John Callan, Odell, budget committee chairman, and Willard Wilson, Holdrege.

"I doubt the sincerity of the introducer of the motion because he voted against a motion to cut $800,000 in Federal funds from the budget," Wilson said. "I know it is popular to favor a 10-percent budget reduction but you can't do that."

"Williams' motion looks good in the newspapers but you can't kid the people," Callan said. "The motion is more for publicity than anything else," he added.

"Let's call this motion what it is," said Sen. Hugh Carson, Ord. "This is just a roundabout way to take a potshot at the chancellor of the university," he asserted.

Williams said he was sorry the members doubted his sincerity. He explained he voted against the move to cut $800,000 in Federal school funds from the bill because "I'm not ready to start picking on defenseless children."

"What's going to happen when these prices break?" he asked.

Earlier, the legislature approved amendments by the budget committee adding $300,000 to the budget of the game commission. This is the amount the commission expects to receive during the next biennium as the result of increased hunting and fishing license fees.

Included was a $50,000 reappropriation from the unspent balance of the $500,000 emergency blizzard aid. This was earmarked for use by the governor in event of future disaster in the State.

Three divisions in the State health department were increased a total of $22,940.

A hike from $25,000 to $32,940 for the State survey of human tuberculosis was approved; the maternal and child health division was raised from $39,380 to $49,380, and the bureau of examining boards from $97,850 to $102,850.

Rejected was a requested increase of $6,000 in the budget of game commission for the purpose of building a home for the caretaker at Fort Kearny park.

The amendment was offered by Senator W. Halsey Bohlke, Hastings.

The budget bill, L. B. 434, was moved from general to select file.

The Unionist, an Omaha (Nebr.) newspaper, had this to say about the memorializing action of the legislature:

The insincerity of much of the economy talk was displayed in the lower House one day last week. Two economy-minded members made vehement speeches for economy and were loudly applauded. Then the house voted unanimously to give each member an additional clerk and $600 more in postage expense.

That reactionary crowd that has taken up the cry of economy, and makes so much noise and intemperate statements may be playing with fire that could get beyond control. More than once in this land financial panics have been created out of little or nothing. And we all know that the human animal, once he is seized with the stampede complex, goes as wild as a herd of fear-stricken longhorns rushes across the prairie in a western movie.

Millions of Americans believe that had the Old Guard captured the Eighty-first Congress and the White House they fully intended to junk all the social legislation passed during the Roosevelt administration.

Presently there are many who suspect that the extreme phobia regarding domestic spending sprouts from the same root, and that one plan is to cut budgets for Social Security, the Labor Department, and other agencies of social aspect to points where their functioning would be difficult or impossible. Some of those agencies were established under Republican Presidents. Hereabouts we frequently hear criticism regarding various phases of social security, old-age assistance being the principal target. We hear much about the welfare state and similar slurs.

The little people of America are just as much aware and just as perturbed about high taxes and deficit spending as are big business and "economy" politicians.

But there is suspicion that the GOP-Dixiecrat group has a gold brick for sale—a plan to protect at all hazards the fantastic corporation profits that have been pouring in for 3 years.

Mr. Speaker, in any event the Nebraska Legislature has now adjourned for this session, and have left behind them for the Nebraska taxpayers to struggle with and ponder over, one of the largest appropriation bills in the history of that State.

We must practice economy—we must save the taxpayers money—was construed to have no application to their doings but applied only to the Congress of the United States.

It is high time indeed that the Democratic Party be returned by the voters of Nebraska to power again so that our great State may again hold its head high in the ranks of the progressive States, instead of being on the political treadmill going no place, or worse still, going backward all of the time.

East-West Trade and the ERP

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1949

Mr. JAVITS. Mr. Speaker, on all sides the question is asked, "After 1952—What?" This question concerns the economic outlook for western Europe and therefore the political and social outlook for Europe and perhaps for the world. The following editorial from today's New York Herald Tribune indicates how it may be practicable to contribute to Europe's recovery without jeopardizing United States security through further development of east-west European trade in the goods of peace. It indicates also the need for our own willingness to be adaptable to changing needs and conditions in the relations of the democratic world with the satellite nations in eastern Europe:

EAST-WEST TRADE AND THE ERP

When Secretary of Commerce Sawyer dropped the hint that this country might relax in prohibitions against the export of industrial goods to Russia and its satellites, he was giving a sign both of our growing assurance that our political position vis-à-vis the Soviets has strengthened and of our recognition that the success of the Marshall program depends heavily upon a revival of intra-European trade. Relaxation of the restrictions on exports would be accompanied by our releasing the Marshall plan countries from their agreement not to sell eastern Europe the same type of products.

Our willingness to consider a reversal of the 15-month-old policy of restricting exports cannot in itself guarantee the badly needed revival of east-west European trade. Equally essential conditions for that revival are the reentry of Germany in the European economic scheme as a larger trading factor, and a reconciliation between the British desire to curtail imports from the Continent, and the continental countries' plan to boost their exports to Britain. What the Sawyer announcement does indicate is that our Government is taking to heart European and American concern over the possibility of Europe's not achieving independence of American aid by 1952.

If there is any secret to the success of the Marshall plan, it must lie in treating it as an ever-developing and ever-changing blueprint. Even on the limited grounds of the first year's experience (and how many Cassandras regard 1952 as already upon us?) it has become clear that the European countries must place new and heavier emphasis on their anti-inflationary programs, on a speedy coordination of their individual plans for industrial investment, and on a vigorous merchandising effort in American markets.

These lessons are far from being lost on the Europeans. The Organization for European Economic Cooperation has made the

UNIVERSITY OF MICHIGAN LIBRARIES

first two items major topics in its current agenda, and its members are individually making American market studies which, together with some relaxation of tariffs on our part, could bring substantial results on the third item. Indeed, the Sawyer announcement was made at the Canadian International Trade Fair at Toronto, where 35 foreign countries have exhibited the products which they hope will find favor with the consumers of America and other trading nations. With these constructive measures being taken, all estimates of the precise situation in 1952 must be regarded as usable guides to action rather than as firm predictions. But only if the warning signs are read and acted upon promptly will the Marshall plan be justified by results.

Amendment of Fair Labor Standards Act of 1938

EXTENSION OF REMARKS
OF
HON. THOMAS H. WERDEL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. WERDEL. Mr. Speaker, I should like to explain briefly the provisions of the bill to amend the Fair Labor Standards Act of 1938 which I have just introduced this afternoon and the need for its enactment to protect American industry.

This bill will exempt employees in industry from the wages and hours provisions of the Fair Labor Standards Act whenever an industry is in competition with industries in foreign countries with which trade agreements are in effect, and do not adequately protect the competitive position of American industry to the extent of the differential between the American wage rate as applied by the present provisions of the act and the prevailing foreign wage rates.

The State Department's reciprocal-trade policy is the worst enemy of American labor and industrial prosperity with which we presently have to deal. Apparently the reciprocal trade planners give no consideration to the differential between American wages and the low prevailing scales in foreign countries when they negotiate these agreements. An examination of existing trade agreements will reveal this condition to exist today.

Unless labor and industry are permitted to adjust their labor contracts to meet this foreign competition, the creeping paralysis of unemployment already underway, will progress steadily as foreign nations recover from the devastation of war and flood our country with their exports.

The number of our producers and manufacturers who already are fighting the competition of foreign imports is enormous and is steadily mounting. Labor leaders, also, are rapidly becoming aware of this threat to wider unemployment and are seeking means to avoid widespread layoffs as the imports of foreign goods gradually saturate the American market.

Is History Repeating Itself?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. REED of New York. Mr. Speaker, I have just read a newspaper article which I shall insert in the Appendix of the RECORD at the conclusion of my remarks. I call attention to a speech made by Demosthenes more than 2,000 years ago. He was addressing the men of Athens, and here is what he said:

For I gave warnings and solemnly protested at all times, both in your midst and wherever I was sent. But the Greek states were rotten, the men who were engaged in public life and action taking bribes and sacrificing their principles for money, while the majority of private citizens either had no foresight or were caught by the baight of daily ease and leisure, and all alike suffered from some delusion as this, each community fancying that the danger would come against all except themselves, and that at others' risks they might safely secure their own interests when they pleased. In this way, I fancy, it has come about that the masses, in return for their excessive and unseasonable indifference, have lost their liberty; while their leading men, who fancied they were bartering away everything but themselves, discovered they had sold themselves first, for instead of friends and guest friends, as they used to be called at the moment when they were taking bribes, they are now saluted as parasites and apostates and by all other well-deserved titles. For no one, men of Athens, spends money in pursuit of the interest of the established as master of the situation, he is also lord over those who sold him his position, and, knowing their villany, then—if not before—he hates them and distrusts them and treats them with contumely. Only look at the facts: for if the right time for action has gone by, the right time at any rate to learn lessons of this sort is always present to the prudent.

Under unanimous consent, heretofore granted, I am inserting the article, to which I have referred, which was written by Joseph Alsop and which appeared in the New York Herald Tribune of Wednesday, June 1, 1949:

THE OFFICE MARKET
(By Joseph Alsop)

WASHINGTON.—There is an excellent chance that the London Embassy will shortly be sold for cash on the barrelhead. The purchaser, if the deal goes through, is expected to be the present Ambassador to the Argentine, James Bruce. President Truman and Secretary of State Dean G. Acheson have not finally settled the disposition of the valuable London property, which will probably be vacated soon by Ambassador Lewis W. Douglas, who is ill. But the sale to Bruce has strong support, according to insiders.

The foregoing paragraph could well have appeared in the real-estate columns of this newspaper, with a few names changed. It raises an issue which everybody in this country ought to begin thinking about.

The particular case of James Bruce can be dealt with rather briefly. He is a banker and a Democrat. He has only two visible qualifications for the Embassy in London. The one that carries weight is the money he gave and raised for the last Presidential campaign. The one that will be publicly mentioned is his "success" in the Argentine, where he has been a good ambassador in the sense of establishing close relations with Juan and Evita Peron and their flashy, totally corrupt inner circle.

POOR PREPARATION FOR LONDON

Being on a cozy footing with Evita Peron seems rather poor preparation for doing business with Sir Stafford Cripps and his colleagues in the British Labor Government. And the London job has never been more important.

The western united front against the Soviet Union hinges upon Anglo-American cooperation, which is about to be severely tested by the need to evolve a constructive Far Eastern policy. The success of the Marshall plan hinges upon British recovery, which is already in danger from the world trade recession. Yet James Bruce's backing for London is so strong that it almost prevented the appointment of his brother, David K. E. Bruce, as Ambassador to Paris.

The case of David Bruce is precisely the opposite of the case of his brother. He was not a Democratic contributor, but as ECA Administrator, he had already proven himself brilliantly well equipped for the Paris Embassy.

Even so, the Paris place probably would have gone to another large party contributor, Stanton Griffis, the former Ambassador to Egypt, if Averell Harriman had not pressed David Bruce's claims. And what gave Harriman the right to intervene was not his great services to the country, but his own large party contributions, which the White House vaguely feels have not been sufficiently rewarded.

James Bruce's political friends wanted Griffis for Paris instead of David Bruce, because they thought the appointment of one brother would rule the other out. Possibly this same theory will still prevent James Bruce from going to London. Whether he goes or not, does not affect the issue that is raised.

SHAMEFACEDNESS GONE

The truth is that the public auction of major offices, which at least used to be done in a shamefaced way, is beginning to be regarded as a matter of course.

It was openly cast up as a crime against James V. Forrestal that he had not participated in the auction in the last campaign. All the President's pious statements after Forrestal's death cannot conceal the fact that members of the President's own staff participated without punishment in this cheap attack. Even today failure to lay the dollars on the line is being cast up as a crime against Ambassador Douglas, another of those who have given the best service to the President and the country. The President has voiced no indignation.

Instead, he has just given the secretaryship of the Navy to a certain Francis P. Matthews. It is well known that this dim figure has been fished from his native obscurity because of his handiness with a checkbook. This winter he gave the vital secretaryship of defense to Louis Johnson. Whatever Johnson's other qualifications, it is well known that financial services rendered were a major consideration. And in the same way the other large contributors—Griffis, Lawrence Steinhardt et al.—will ultimately receive as their rewards posts in the gift of the American people.

The truth is that this traffic has reached a shockingly dangerous stage. It is by no means limited to the highest offices of state. There is also the fact the large-business men and large corporations who make contributions are always suspected, frequently correctly, of seeking Government favors. The whole system is inherently, irremediably pernicious. The whole country should be indignant about it. And Congress should

begin at once considering the long-bruited plan for public financing of political campaigns, which would stop this squalid barter.

Arming Western Europe

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including a timely article by Mr. Henry Hazlitt of Newsweek, which appears in the current issue. The title of his article is "Arms and the Money." Every Member of this House should be interested in the subject of the article. It follows:

The commitment we have made to defend the integrity of western Europe has been forced upon us by the Russian threat. It is a grave and tremendous commitment. In return for it, our negotiators had both the right and duty to ask heavy quid pro quos. Instead, they assumed that they had to promise monetary and military aid in addition in order to bribe western European governments to accept the tremendous pledge from us for which they have been begging ever since 1914.

If western Europe has a will to defend itself, it will have little trouble in finding the means. The $1,130,000,000 grant that we have promised them for the first year is after all only 3 percent of the present total governmental expenditures of the Atlantic Pact nations. They can easily make that up by cutting less essential things out of their swollen governmental budgets.

On the other hand, as I pointed out in a Newsweek article of April 4, there is no way in which we can insure that either the money or the equipment we contribute would actually result in a net increase of European armament by that amount. To the extent that we free European governments from the necessity for military spending, we release just that much more of their resources for bigger social-security schemes, bigger food subsidies, bigger nationalization deficits, or what not.

It is now being argued that we can solve this dilemma by insisting that each beneficiary European government spend on armaments in the next fiscal year, say, at least as much as we contribute, in addition to the amount it has already been spending in the current fiscal year. But it is dubious policy to try to force any country to spend more on defense than it thinks it ought to spend. This could easily give rise to the unwholesome belief in that country that it was spending large sums on defense, not for its own self-preservation but as a favor to us. It might also tend to encourage bookkeeping fictions under which Government expenditures were charged to the military budget that did not in fact belong under that budget.

If our administration is none the less determined to go ahead with its $1,130,000,000 military-aid program, then Congress, instead of adding this to the already dangerous burden upon our taxpayers, should take it out either of our proposed military budget of $15,300,000,000 or of the $5,430,000,000 authorized for the ERP.

Consider the military budget first. For a single year it already equals the military expenditures for the entire 19 years from 1922 through 1940. Must our military budget now be larger still? Does it make any sense to assume that our military expenditures with the Atlantic Pact must be actually higher than without the Atlantic Pact? Even if we do not assume that the Atlantic Pact in effect adds the existing military expenditures of western Europe to our own, can we not assume that if we transfer a billion dollars of our defense expenditures to Europe, it at least removes the necessity of spending that billion dollars here?

Finally, if the administration refuses to take this $1,130,000,000 out of the home military budget, Congress could take the whole amount out of the $5,430,000,000 authorized for the ERP. It could simply authorize the beneficiary European governments to use up to this amount of their ERP funds for buying armament from us instead of other things. As it is, we are about to throw most of this $5,430,000,000 away anyhow.

We are turning it over to European governments to meet a trade deficit that they themselves have brought about by exchange control with overvalued currencies. Our ERP funds, in short, are being used in the main to subsidize and prolong a vicious totalitarian device that strait-jackets economies, retards recovery, and makes impossible the free multilateral flow of world trade.

The further burden on our budget involved in the proposed European armament-aid program is without logic or excuse.

Shift in Engineers

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith an editorial from the Portland (Oreg.) Oregonian attesting to competence and ability of Colonel Walsh and Colonel Weaver, who have both been directing the Army engineers' projects in the Pacific Northwest:

SHIFT IN ENGINEERS

In his 3 years as division engineer of the North Pacific division—the Pacific Northwest plus Alaska—Col. Theron D. Weaver has implemented his earlier knowledge of the region and its affairs obtained as Bonneville district engineer during construction of the first big Federal dam on the Columbia. As chairman of the Northwest regional council of Federal and State agencies, he has had an important part in efforts to develop a unified program of multiple purpose Federal projects in the Columbia Basin.

But the Army Corps of Engineers rarely leaves its top men in key positions long enough to put down deep roots. Colonel Weaver has been reassigned to the Eurcpean command where his extensive experience in industrial problems will no doubt be put to use in the reconstruction of western Germany.

Fortunately, Colonel Weaver's successor, Col. O. E. Walsh, has had 3 years in which to familiarize himself with the Northwest's development problems, as Portland district engineer, and his engineering and combat experience has been world-wide. The Northwest owes a debt of gratitude to Colonel Weaver, under whose administration McNary Dam was started. It is good that there will be compensation for his loss in the advancement of Colonel Walsh to division engineer.

Thomas-Lesinski Bill

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1949

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith a portion of an editorial from the Portland Oregonian:

The three-vote margin by which the House of Representatives reversed itself and sent the Wood labor bill back to committee was a face saving, if hollow victory, for the Truman Administration. But President Truman, counting noses in House and Senate, might well exclaim, as did King Pyrrhus after his army was decimated in defeating the Romans in the battle of Asculum: "Another such victory and we are lost."

Address by David W. Howe at Annual Convention of American Newspaper Publishers Association

EXTENSION OF REMARKS
OF
HON. RALPH E. FLANDERS
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Thursday, June 2, 1949

Mr. FLANDERS. Mr. President, the president of the American Newspaper Publishers Association is the publisher of a country newspaper in Vermont, the Burlington Free Press. His address as president of the association has much in it that is of public interest. I ask unanimous consent to have his address, delivered at the annual convention of the association in New York City, printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BREAK-EVEN POINT IS SET TOO HIGH, SAYS HOWE

(High break-even points in newspaper economics threaten to keep publishers awake nights, implied David W. Howe, Burlington (Vt.) Free Press, president of ANPA, in his annual convention address in New York City.

(Complications in attaining solutions through free and independent initiative were seen, too, in the increasing burden of the "welfare state" and threats to freedom of the press.

(Mr. Howe insisted that the first function of the press is the job of getting at the truth and auditing government.

(Excerpts from the address follow:)

Welcome to the sixty-third annual convention of the American Newspaper Publishers Association.

Representing over 90 percent of the daily and Sunday circulation of the country, we are meeting to consider our common problems and common aims.

The threats to freedom hammering at our country and at all free nations have brought determined resistance. The events of the past 2 years have brought us signs of a respite in certain of the internal threats to

UNIVERSITY OF MICHIGAN LIBRARIES

our freedom. In high places we hear it said that a speaker or an editor has the right to be wrong. Again we hear quoted Justice Oliver Wendell Holmes' opinion that "Freedom of speech is really freedom for the thought we have."

THREATS TO FREEDOM, OLD AND NEW

Legislators, local administrative officers, and even courts—as witness the strange Baltimore press gag on crime news—will always continue to crowd the freedoms guaranteed the people under the first amendment. It is our duty to be vigilant and to furnish the public with the information and background needed for their corrective action.

When Jefferson made his famous remark about preferring newspapers without a government to a government without newspapers, he thought of government performing police, regulatory, defense, and judicial functions. His type of government served the electorate and did not expect to rule or to determine their incomes, their food, or their shelter. He did not picture 9 percent of the civilians employed being on government pay rolls. Most certainly he and all the founding fathers did not look ahead to government propaganda, designed to influence voters in their decisions on public policies. Newspapers he pictured as serving as auditors of government to tame its threatened abuses of powers, to expose arbitrariness, to expose and fight corruption.

FEDERAL PROPAGANDISTS—42,000

The welfare state—so-called—imposes an enormous additional burden upon the press. There are several times as many public officials to watch. Tending to smother in some degree all objective and searching reporting is an enormous Government propaganda bureau. The Budget Bureau reports more than $74,800,000 is now spent annually for propaganda by Government executive agencies. A total of 42,000 Federal employees were found by a congressional subcommittee last December to be engaged in such propaganda work. This committee reported even more engaged in propaganda activities, with innocent sounding titles. While the majority and minority reports of this committee differ as to the importance they appear to agree upon the facts.

When one officer of the Children's Bureau, Federal Security Agency, was asked whether he had presented both sides of the question, the committee quotes as his reply: "I don't know what you mean by both sides."

In the meantime private citizens who seek in any organized manner to keep their views before Congress are labeled as lobbyists.

OUR VULNERABLE POSITION

The past year has seen new tops in newspaper publishing in daily circulation, in Sunday circulation, in advertising linage and revenue. It has been generally accompanied by a greatly lowered net profit. The inflationary period has fastened high break-even points. We are especially vulnerable in general to shrinkages of advertising volume. Labor scales, labor costs, taxes, and newsprint have given high fixed charges and high unit costs; and circulation prices have reached a ceiling which appears difficult to pierce. Economies and greater productivity are recognized as urgent.

In addition to large and growing information services your association is engaged in several activities designed to aid you in maintaining strength, stability and a profit margin. Upon several of these may I now report in summary.

ARE PRODUCTION INCREASES DUE?

The classical school of economists has long reminded us that realized income depends upon production volume. Dr. Williford I. King, in his recent book, The Keys to Prosperity, states: "the amazing increase in the average real hourly wages of American workers has been due to increasing physical productivity per man-hour and this increasing efficiency has, in turn, been brought about by inventions and discoveries implemented by vast amounts of new capital."

We are informed from figures in the economic report of the President of the United States published last July, that the real gross national product per employed civilian increased 19 percent in the past 7 years. From 1940 to 1947 as measured in 1940 dollars per employee, productivity nationally went up that much—19 percent. This surprising statement is based upon the tables which the President's economists prepared. They did not make such calculations in the text of the report. The director of research of J. Walter Thompson Co., however, has drawn such conclusions and we may hope they are substantiated by other statisticians.

Looking back to a slightly similar period after World War I something most unusual happened in 1920–22. Productivity rose 11 percent a year preparing the way for the general fall in prices and the rise in real earnings of 1923–29. The National Bureau of Economic Research is authority for this observation.

GREATER PRODUCTIVITY NEEDED

Our Nation needs increased productivity per man-hour. The evidence that we are getting it is hard indeed to find. The President's Economic Report of last July has references to the cost upon the economy of feather-bedding, make-work practices, and soldiering. Our business needs increased productivity per man-hour to keep pace with progress and to maintain health, strength, and a future for our businesses and all who operate them. The Technological Development Branch of the Bureau of Labor Statistics shows in the newspaper and periodicals business from 1939 to 1945 that the output per man-hour decreased 11.3 percent. These figures sifted and compiled by Will Lisner in last August 26 New York Times cover 4,000,000 workers in 34 industries. The base is probably too narrow to be conclusive. The trend, however, is clearly not good. The challenge to management and to government is great.

* * * * *

ARBITRATION DEVELOPS

The International Arbitration Board of which the special standing committee is the management panel, has heard several cases since the last convention, and they have conciliated other disputes when arbitration was imminent. Local signers under the International Arbitration Agreement with the pressmen have reached a new high.

Voluntary arbitration agreements at local level are the traditional core of our labor relations program as individual publishers. It is the part of our special standing committee and our Chicago office to facilitate such agreements. Other unions in time are apt to find that arbitration, whole-heartedly entered into, is a more satisfactory policy for all concerned than occasional displays of arbitrariness and muscle.

Truth and justice are rare articles today outside of the Western World. Together with freedom they form our constant goals. A labor union that has been willfully setting truth and justice to one side for several years could experience a change of heart. Cussedness and intimidation on the part of a monopoly—even a labor monopoly—can build nothing substantial and lasting. The rank and file of a recently belligerent union can be coming to the conclusion that the door is open to a better way.

"We Get Along Fine" is the motto of a national group of exhibits by labor and management to be jointly presented in Cleveland 3 weeks hence. The American Federation of Labor has appropriated $250,000 for this exposition and a group of employers of national scope are joining in it. None of the unions in this program has unilateral rules that are designed to regulate working conditions, and are held by the union to be nonarbitrable. This exposition is a healthy sign of the times.

In tomorrow's session the litigation between the National Labor Relations Board counsel and the International Typographical Union will be highlighted by our own general counsel, Elisha Hanson. His aid in bringing healthier attitudes toward the Nation's laws on the part of union officials puts us all in his debt.

MECHANICAL RESEARCH PROGRAM

Last year at your convention here you tripled the program of mechanical research set up in 1947. You voted unanimously for a 2-year special assessment designed to provide $140,000 a year for the mechanical research program. Basic research, long-term research, and some that gives promise of early results are now in progress. You will hear more about it this morning.

As we consider our cost trends, our comparison with other industry, our urgent present and future needs, it is a safe wager that we will never turn back on the path recently undertaken in mechanical research. It is simply the rate of yearly investment and the rate of advance that you will decide by your future expressions. We have increased our wage scales to one of the two top positions in industry without corresponding cost cuts. Our strength if not our healthy survival is largely dependent upon early improvements and cost-cutting, time-saving equipment and methods.

* * * * *

Consider what the periodic and frequent newsprint waste figures painstakingly pursued have meant to our business. Six dailies recently show 1.25 percent waste or less. Eight members show above 5 percent newsprint waste. Small dailies and many large dailies some years ago thought 5 percent waste including wrapper was acceptable. Suppose Mr. Spitaleri's figures result in urging a daily of 500 tons consumption to get in line with the very best performance. There's a saving of $500 to $1,675 per year for that 500-ton consumer. Save 1 percent on newsprint waste (and probably half of us with effort and equipment can do so) and you save $1 on each ton on your newsprint.

POSTAL COMMITTEE

Upon invitation, our postal committee under the effective leadership of Josh L. Horne of the Rocky Mount (N. C.) Telegram has appeared recently before House and Senate postal committees. ANPA spokesmen made clear that newspapers are not receiving and do not desire a postal subsidy. Newspapers showed more interest in service than in rates in these presentations. Less than 12 percent of the daily and Sunday newspaper circulation ever sees the mails these days. Of this 90 percent is delivered on rural routes. Rural free deliveries are a public policy of over a half century, not designed to be paid for by the users A large share of the dailies which still enter the mails are trucked at newspaper cost to the destined post office of delivery yet pay full rates. Long obsolete postal service standards are the most disheartening condition. Only modern service will keep newspapers in the mails in substantial future volume.

Our postal committee's testimony was in connection with proposed greatly increased rates for second class mail. Our committee chairman asked the department to estimate what savings could be made if all newspapers were eliminated from the mails. This alternative was faced by Postmaster General Walker several years ago and embodied in

his report. The Post Office Department feels that this is an unhappy question.

Two years ago and this year we have respectfully suggested to Congress that before tinkering with rates they require the department to know its cost to keep them to a proper level, to respect competitive factors, to set up fractional rates for fractional service, and place itself on a businesslike basis. The recently published Hoover report has sustained our consistent position in these matters. You have noted bulletin suggestions as to individual publication deliveries until the Post Office Department modernizes.

COMMITTEE ACTIVITIES

Your committees have put in much time, thought, and effort in your interest throughout the year. One of the great sources of strength of our association is the willingness of so many members to take assignments and to do a thorough job for the common good. They deserve your gratitude and full measure of appreciation.

THE BUREAU OF ADVERTISING

Newspaper advertising reached new peaks in 1948. The Bureau of Advertising with approximately 1,000 participating newspapers is producing gratifying results for all of us. We are greatly indebted to Richard W. Slocum, chairman of the governing board and Harold S. Barnes, the director. Newspaper national advertising gained slightly more than $32,000,000 in 1948 over 1947—or from half again to 10 times the gains scored by each of the 5 other major national media.

Continually general advertisers are leaning upon the Bureau for valued research. The theme "All Business Is Local" is much more than a slogan. It is widely considered as the most valuable rediscovery of our generation in advertising and marketing.

A partnership between merchants who plan and newspaper advertising salesmen is welded out of the daily use of the material issued by the Retail Division of the Bureau. With such scientific use of newspaper advertising, both national and retail, it is reasonable to expect that our advertising volume will be steadier—less volatile, year by year.

At present, advertiser beliefs and moods affect the purchase of considerable space quite as much as facts or even results. When advertisers recently met in convention, for example, an increase of 8 percent in unit costs of a newspaper list in 1949 as compared with 1941 seemed to be a good deal of a psychological hurdle. A program of tested research behind advertising programs, both national and retail, is a confidence builder and therefore a stabilizing factor. The Bureau's research—and the Bureau's correlation and use of significant research by individual newspapers—is impressive.

* * * * *

TRAFFIC DEPARTMENT

Increase in transportation costs directly bearing upon increased newsprint and other costs have further emphasized the importance of our Traffic Department. The many services rendered by this department are fully appreciated by those members who have taken advantage of them.

New low accident ratios of 2.23 per 100,000 miles were reported by our 404 newspapers in our steadily growing safe-driving campaign and competition. Over 100,000,000 miles of driving were recorded. Of 5,011 motor vehicles participating, 53 managements experienced no accidents last year and 704 drivers were awarded no-accident buttons.

NEWSPRINT SITUATION

The doubling in price of newsprint since 1941 has been a strain upon our business. The steadily gaining circulations and the advertising demand have focused our attention primarily upon securing an adequate supply. Canadian mills have for 3 years equaled or excelled 100 percent of rated capacity. This figure is a moving average. Speed-up of existing machines have each year brought added tonnage. Publishers are looking to the new capacity at Coosa River, Ala., next year and to increased capacity at Lufkin, Tex. A canvass among members last year showed a desire to make firm contracts for some 458,000 tons of newsprint annually above present contracts. The ANPA is always abreast of this many-sided problem, and continues to be at your service. The Newsprint Report will inform you how supply and demand now are moving toward a condition of balance.

The association's staff of 60 people, if I may speak for them here, earnestly hope they have measured up to your high expectations. The New York office has 35 people for over-all staff; The Chicago office personnel numbers 20; in New York and Easton the Mechanical Research Department consists of five people.

* * * * *

TRENDS AND NEEDS

Our field of service will continue to expand and many more dailies of smaller circulation will come to understand and appreciate the privileges and the values of ANPA membership. The association's services, as this outline has indicated, are geared to publishers' needs. Your future ability to operate at a profit and to maintain leadership in your home communities is closely linked up to the success of ANPA activities. For your timely criticisms, you have the appreciation of the officers. For your participation and support, our sincere thanks.

Summarizing the observations on the peculiar problems with which we as individuals and as an association must deal: First, a powerful surge of individual productivity is a great need for our business as for the Nation. We shall get some of it by new equipment, new methods, and much of it by new employee awareness. Second, big government with huge propaganda funds is tending to smother the effectiveness of a free, objective, and independent press. Government holds many of the cards today. These conditions are a constant challenge to us.

AUDITING GOVERNMENT

If I were to make one other observation it would be that the first function of the press is not now understood by most of the public. It is often overlooked in textbooks and is largely forgotten by those who teach government and civics in colleges and in schools. The first function of the press referred to by Milton 300 years ago, and which caused it to be referred to as the fourth estate in the eighteenth century was the job of getting at the truth and auditing government. How many do you find who are conscious of that fact? While some thinking people assume this newspaper duty, what is the average civics student's understanding of it? When a newspaper exposes arbitrariness, heedlessness, little tyrannies in big government, a generation hence a government-fed proletariat may regard us as interlopers. For nearly a generation, Marxian-inspired textbook writers have created the assumption that the power of government is inherently good. Previous generations for three centuries have known that it was inherently evil, required constitutional checks and balances, probing from all sources of information and opinion, and continuous auditing by the press. In the past, individuals or minority groups that met with injustice from government had the press as their first line of defense. The press exposed and at times interposed. It still happens every week in dozens of communities. The press has the duty to expose all usurpers of power.

The advocates of big government have been gnawing away at the press. Curtail its freedom, its strength, or its independence and there will be less vigilance, less resistance to corruption, and the abuse of power. Likewise there will be less opposition, less discussion and debate, less parliamentary delay, more free rein for directives and edicts.

The press supplies that check upon government which a free people must have and which no constitution has ever been able to provide. Can we get that back into textbooks and into the minds of students and into the hearts of all who love liberty? Fellow newspapermen, it is worth trying.

Atlantic Pact Should Have Priority Over Politics

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 2, 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Atlantic Pact Should Have Priority Over Politics," published in the Philadelphia Inquirer of June 2.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ATLANTIC PACT SHOULD HAVE PRIORITY OVER POLITICS

The indefensible decision of President Truman and his congressional leaders to give repeal of the Taft-Hartley Act priority on the Senate program over ratification of the North Atlantic Pact is a flagrant betrayal of the best interests of America and the world.

An immediate result will be a serious weakening of the position of Secretary of State Acheson at the Council of Foreign Ministers now in session at Paris at the very instant when a display of unity on the part of the west would have its greatest impact.

Hardly less damaging will be the delay in approval of the $1,450,000,000 arms-for-Europe program designed to implement the pact and the resultant postponement of the day when the free nations of Europe will be in a position to resist successfully a major military attack. It now appears certain that the arms bill will not receive consideration until next year.

By delaying action on the pact—the most important matter before Congress—in order to accede to appeals of labor leaders for action on the Taft-Hartley Act the administration again has put politics ahead of national welfare. It has demonstrated that its concern with the 1950 elections overrides its interest in promoting international understanding.

The urgency which Mr. Truman and his advisers now attach to revision of the labor law is all the less acceptable when it is realized that on several occasions the administration has shown a willingness to let this issue go over to next year rather than risk being unable to fulfill the 1948 campaign promise of outright repeal of the Taft-Hartley Act.

The administration's management of labor legislation stands out—even in the sorry record being compiled by the leadership of the Eighty-first Congress—as a glaring example of ineptitude and irresponsibility.

To give labor legislation priority over ratification of the pact, especially in view of Secretary Acheson's appeal from Paris for

UNIVERSITY OF MICHIGAN LIBRARIES

prompt action, is a blunder of appalling dimensions which reflects the administration leadership's unwillingness to recognize that there are greater issues in the world today than the winning of national elections.

Preservation of the American Way of Life

EXTENSION OF REMARKS
OF
HON. JOHN C. STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Thursday, June 2, 1949

Mr. STENNIS. Mr. President, I recently received a letter from a personal friend of mine, Dr. A. M. McCarthy, of Daytona Beach, Fla., which is one of the clearest and most sincere short statements of the principles of pure Americanism that I have ever read. This letter represents the lofty thought and patriotic feelings of one who personifies the very highest type of American citizenship—a great surgeon in peace and a great surgeon-soldier in war. I ask that the letter be inserted in the Appendix of the RECORD for the benefit of the Members of Congress and the people of the Nation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DAYTONA BEACH, FLA.

DEAR JOHN: For several years I have felt that our wonderful way of life in this great country of ours is not fully appreciated by many of the people who live in it and it has been heartbreaking for me to watch the slow erosion of our personal initiative and liberties and our drift toward soft socialism where the National Government will forever regulate our daily lives and mode of living in exchange for the paltry illusion of perpetual security.

My experiences in Europe taught me one lesson above everything else, and that was a greater appreciation of our American way of life. I have always been a stanch believer in the competitive system which has made this country great, which stimulates individual initiative, and which promotes for every man the freedom to progress in proportion to his diligence and ability. By so doing our accomplishments and our standard of living have been unmatched by any other way of life, and we stand alone today as the great example of efficiency and progress—the envy of the whole world. Yet there are many who are entrusted with our sacred heritage who insist that we import a new order of life which has failed to inspire greatness or respect in other parts of the world.

The time has come, in my humble opinion, for the citizens of this country to choose the system they prefer and to fight to maintain it. I am sure that the majority still believe that the competitive system is still the best way of life, but I fear that they do not realize the insidious drift to socialistic control and the danger to our personal freedom that lurks in the background.

I am going to fervently pray that those of you in our National Government who have similar beliefs will be stanch and determined in your effort to stem the tide that threatens to engulf us and that you will emerge from the conflict as the champions of true constitutional government as was intended by the fathers of our country, who themselves had fled the persecutions of the freedomless type.

Sincerely your friend,

A. M. MCCARTHY, M. D., F. A. C. S.

Wheat Alarm Up

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 2, 1949

Mr. SCHOEPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Wheat Alarm Up," written by Henry S. French, and published in the Kansas City Star of May 29, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHEAT ALARM UP—STORAGE PROBLEM INTO SHARP FOCUS AS THE HARVEST STARTS IN SOUTHWEST—MUCH TO GO ON GROUND—WITH AREA CROP LARGER THAN LAST YEAR, TERMINAL BIN SPACE IS LESS

(By Henry S. French)

On the eve of the winter wheat harvest southwestern farmers have no place to go with their grain. Terminal storage space is scarce.

Producers have been worrying for months, but their fears swelled to a crescendo last week when the railroads clamped a limited embargo against shipments of grain from the area.

UNDERLINES THE SITUATION

Although the embargo restricts storage grain only, the fact that it was formulated so soon, to become effective at the unprecedented date of June 1, pointed up sharply the alarming situation.

With wheat already arriving at southern Texas markets, there are 70,000,000 bushels less storage space available in the Southwest now than at this time last year, according to the Association of American Railroads.

Far more space is needed in the area this year. While the total winter wheat crop is estimated at 1,021,000,000 bushels, only 31,000,000 bushels more than last year, the production outlook in the Southwest took a giant stride upward, largely due to a 67,000,000-bushel gain in the Texas estimate over a year ago.

For Kansas, Oklahoma, and Texas combined, the outlook is for a harvest of 483,298,000 bushels, or an increase of 95,678,000 over 1948.

MORE SERIOUS THAN 1948

The situation is worse than last year when, on July 9, a general embargo was imposed against shipment of any wheat except that for immediate sale unless the shipper could prove he already had contracted for storage space.

Greatly adding to the prospect for congestion is the 300,000,000-bushel carry-over expected from the 1948 wheat crop, which now is clogging elevators. According to the April 1 Government report of stocks in all positions, more than 238,000,000 bushels of wheat were stored in the winter wheat States of Kansas, Oklahoma, Texas, Missouri, Nebraska, Colorado, and New Mexico.

Some of this grain since has been directed into consumer and export channels, but a large amount of it has been held from the market through Government price-supporting operations.

Of the wheat reported in the Southwest April 1, more than 131,000,000 bushels were under loans and 55,000,000 under purchase agreements, according to figures compiled by the Kansas City Board of Trade.

A BARRIER TO RESALE

No loan wheat was moved before the maturity date, April 30. A very small amount, if any, of the loan wheat has been absorbed into trade channels since the Government took possession, because of the agency's high resale price.

Also, little of the grain has been moved to storage in a less crowded area, except perhaps a moderate quantity taken from Nebraska.

The only remaining means of disposal for Government-owned wheat in the Southwest is by export through Gulf ports. Since export capacity at Gulf ports is around 30,000,000 bushels a month, less than that amount could have been shipped out.

According to the Department of Agriculture's report of stocks in all positions April 1, the farm-storage situation is a little better than a year ago.

This year there were 239,000,000 bushels of farm-stored wheat, or around 18,000,000 bushels less than last year. The situation has been aided since that date by the CCC's efforts to vacate farm storage of loan grain.

Also, there have been reports of added construction of storage space on farms.

TERMINAL SPACE IS SHORT

Terminal markets, however, are in bad shape. Latest figures show almost 125,000,000 bushels of wheat stored in these centers, or 54,000,000 more than at the same time last year. Interior mills, elevators, and warehouses also have 70,000,000 bushels more than a year ago.

Most of this grain belongs to the Government, and with the CCC confining its efforts to moving farm-stored wheat, there is little hope that the agency will get around to the terminal stocks before the crop starts to roll.

Last week, in the major markets of Kansas City, Hutchinson, Wichita, and St. Joseph, stocks of grain totaled around 50,000,000 bushels. The working capacity of the public elevators in these cities is 70,000,000 bushels. Since most of the grain is Government owned, there is no indication the four markets can accommodate more than 20,000,000 bushels of new-crop wheat.

What will be the result of such a pronounced shortage of storage space? The farmer will be hard hit. If he has no place to store his grain, he is not eligible for a price-supporting loan. Faced with the prospect of no place to go with his grain, he can either pile it on the ground and wait for the storage pinch to ease, or sell it at market price.

With the July future selling at more than 30 cents under the prospective loan, indicating sharply lower prices for wheat at harvest time, farmers will be reluctant to sell.

However, in the event of a wet harvest, they might be forced to sell, rather than risk deterioration. In the latter case, a big run of grain for sale could bring a full embargo.

A Progressive Tax Policy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 2, 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a letter written by Prof. Seymour Harris, of Harvard University's economic department, which appeared in the New York Times of May 20, 1949.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

To the EDITOR OF THE NEW YORK TIMES:

May I raise a dissenting voice to the universal demand either for less public spending or more taxes. Back in January 1949, the correct policy was more taxes. But by the spring of 1949 it has become increasingly clear that the problem in 1949 is not going to be one of inflation, but rather that of preventing a small decline from snowballing into a large one.

It is the essence of forecasting policy to adapt recommendations to the latest statistical findings. To suggest at this point that tax increases are no longer expedient would reflect political statesmanship; to reiterate the plea for more taxes at this point might be interpreted as face saving. Surely, the April developments emphasize the failure to achieve the improvements which would have justified a continued support of higher taxes. The correct policy is not to raise taxes but rather to reduce taxes on the masses of consumers, to some extent thus stimulating buying. As one who has strongly supported the fair-deal program, with great reluctance I dissent on current proposals for more taxes.

This is far from offering support to the George-Byrd-Taft-CED coalition to reduce total spending at this time. (Waste is another matter.) At least the administration proposes a balancing of the budget at the expense of the relatively well-to-do (the taxpayer), and not at the expense of the relatively less well-to-do—i. e., the recipients who would suffer either directly or indirectly through unemployment as a result of reduced public expenditures.

It is indeed strange that after 15 years of educational work by economists Congress still has not learned the lesson that taxes are not increased primarily to balance the budget. President Truman was correct in fighting for higher taxes to control inflation; but he would be wrong to insist on higher taxes in order to balance the budget. As the situation deteriorates, it is the task of the Government to stop a decline by spending more and taxing less, not spending less and taxing more. For spending determines employment and output. The Congress may well now be choosing a saving on public debt of five to ten billion dollars (and one hundred to two hundred million dollars of debt charge annually), thus contributing to a cut of income of the proportion of twenty-five to fifty million dollars. At this writing the decline is already about $10,000,000,000. They ought to know what they are doing.

We are all anxious to save American capitalism; but it won't be done by penny-pinching. Indeed, the Treasury may save billions on the ERP, on the Atlantic Pact, and as a result of failure to introduce anti-depression measures early enough, but these savings will be trivial compared to the costs of world war III, which might well amount to three times the cost of World War II, say $1,000,000,000,000, or measured against the two hundred to three hundred billion dollars of potential annual income over the next 50 years. Put the savings of $5,000,000,000 or even $10,000,000,000 against, say, $12,500,000,000,000 of income that might be expected of our capitalist system in the next 50 years. The Gladstonian Senators would also do well to compare the $40,000,000,000 income and $500,000,000 of debt charge in 1932–33 with the $225,000,000,000 income in 1948 and $5,000,000,000 of debt charge. They might draw the conclusion that although the growing national debt has raised serious problems, it may well have salvaged capitalism as well. Or do they prefer 1932? Unfortunately, the goods provided by Government spending had to be used for destructive purposes primarily.

Senators alarmed over the size of the debt might also be censured for having failed to follow the recommendations of Presidents Roosevelt and Truman to raise at least twenty-five to fifty billion dollars of additional taxes in the inflationary period 1941–49. In that manner they would have kept this debt down, slowed up the inflation, and thus have done the country a service as well.

SEYMOUR E. HARRIS.

CAMBRIDGE, MASS.,
May 17, 1949.

Christianity the Best Defense Against Communism

EXTENSION OF REMARKS
OF
HON. JOHN C. STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Thursday, June 2, 1949

Mr. STENNIS. Mr. President, the Veterans of Foreign Wars Post at Gulfport, Miss., recently conducted an essay contest for high-school students on the subject of how we can best defend our way of life against communism. The prize-winning composition, entitled "Christianity Is Our Best Defense Against Communism," was written by Miss Mary Elizabeth Bickerstaff, of Gulfport. This young lady's observations on this important subject are worthy of the attention of every one of us. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

CHRISTIANITY IS OUR BEST DEFENSE AGAINST COMMUNISM

Today, it has been said that the United States is faced with the problem of combating communism. To combat something, we must first know what it is. Let us look at Webster's definition: communism is "Any theory of social organization which advocates common ownership of all agents of production, and some approach to an equal distribution of the products of industry." In plain everyday words that merely means that the government owns everything and distributes everything equally. In such a case one man who works tirelessly at his job gets as much as does the lazy, good-for-nothing slacker. It seems to me that such a form of government would tend to crush all initiative in everyone and put civilization on the down grade.

The Communist Manifesto, which was written by Karl Marx and Friedrich Engels in 1848, stated the principles on which the Communist League was formed. There were two main ideas expressed in this, their handbook. They claimed that human society revolved around class struggles. The capitalists were eternally pushing the working people underfoot. They say that the bourgeoisie, that is, the capitalist group, takes advantage of the proletarist by appropriating the difference between the value of what the workers produce and what they receive in wages. To do away with such imposition, the Communists feel that all factories and businesses should be owned by the national government. The second idea is that labor, owned by the capitalists, is driven to greater efforts. These efforts bring on overproduction. Then overproduction brings on business crises. The whole machinery of production and exchange is outgrowing the ability of its masters to handle it, and sooner or later, the capitalist system will entirely destroy itself. The ultimate goal of communism is revolution by destroying class distinction which is done by abolishing private property. If no one owns or controls a factory, there can be no labor problems between management and labor. In seeing these truths, we must realize that if such a policy were adopted, all hope of personal or national (as the nation works according to the individual) advancement would be curtailed. The manifesto says in closing: "The Communists—openly declare that their ends can be attained only by the forceful overthrow of all existing social conditions. Let the ruling class tremble at a Communist revolution."

Now that we know the problem we are up against, we must find some way to solve it. Mr. Albert Edward Wiggam, who writes Let's Explore Your Mind, says that one of our best ways to cope with this problem is to send to Russia comparative price list of things in the United States, a democracy, and things in Russia, a Communist state. He feels that this price list should consist of the hours of labor taken to get these things rather than the actual dollars and cents that each item costs. As an example of this, two pounds of meat costs 1 hour of labor in America, whereas in Russia, it costs 8. He also feels that we should send to the common everyday citizens, or slaves, I should say, some mail-order catalogs in order to show the working class of Russia the things that the working class of Russia can't afford that the working class of America can. We must show them that even though prices of things in labor hours are cheaper that our standards are higher and that even the working class, the so-called oppressed class, of the United States is able to have things that the average person in Russia classifies as luxuries. Wiggam believes that these lists should also be distributed among the Americans so that they can see how much better off they are to be living in a democracy than a Communist form of government.

Mr. J. Edgar Hoover, head of the Federal Bureau of Investigation, thinks that the American way of life is our only defense against communism. He feels that by the backing up of our Constitution and the Bill of Rights we can protect ourselves from any force of evil that is forged against us. We must not endorse such organizations as the Ku Klux Klan. This great G-man says, "Don't fail to make democracy work with equal opportunities and the fullest enjoyment of every American's right to life, liberty, and the pursuit of happiness." He believes as does Drew Pearson, a famous news commentator, that to kill communism we must "Make democracy live."

Many of our modern educators feel that we can fight communism best through our public-school system. They feel that any educated person would prefer for himself and his posterity democracy, a true government of freedom and liberty for all, rather than one where a dictator and his favored few rule the mass of the citizens as though they were slaves. How could anyone feel that communism breaks down discrimination; it just brings it on—against everyone. To educate the Russians in a public-school system such as ours based on a democratic form of government, would prove to them that democracy is better than communism. This would not only help improve Russia, but kill the desire to bring communism to the United States. Even with that, I don't believe it would entirely solve or dissolve (as the word should be) the problem.

Others say that democracy is our best defense against communism. Democracy is controlled in reverse of communism. In a Communist form of government, the ruling power starts at the top with the generalissimo who is not elected and who is in command as long as he can keep the power of controlling the people. The ruling power works down through the party leaders to the people. In that kind of government, the people haven't even the liberty to voice their opinions, much less change any of the

UNIVERSITY OF MICHIGAN LIBRARIES

laws or officers. In America, a true democracy, the power is held by the little people, the everyday citizens, like you and me. We tell our Congressmen, whom we've elected, just what we want. They stand for those things and vote accordingly. The President, our Chief Executive, governs his actions from the views of Congress which is a representation of the people and a great deal of the time from the views of the people themselves. Oh, how much greater a democracy is than any other form of government, especially communism.

Many others tell of the usefulness of the individual right to vote as a weapon against communism. The Communists too have the right to vote. One name is on the ballot; if another name is written in, the secret police quietly take the voter away to the salt mines to work for many years. Yes; they have the right to vote, but not for whomever they please. In a democracy each individual votes for whomever or whatever he pleases. No one can object to the way he votes nor can anyone punish one for the way he votes, as he votes by secret ballot. No one knows which way a person votes in a democracy unless he himself tells it. Yes; the right to vote and taking advantages of that right offers great protection against communism.

I think all of these are fine reasons; they are all sound and good, but all of these things could be brought about through the spread of Christianity to all the world. If every person had Christ in his heart, every nation would be a Christian nation. If every nation were a Christian nation, every government would be a democracy. God meant for all to be free and have, as Thomas Jefferson so ably put it, "life, liberty, and the pursuit of happiness." If Christ were in the hearts of all, we would have no fear of war or international friction. Each person would be thinking of the other in the light that I am my brother's keeper. Under such conditions, communism could not exist. One Communist leader has been quoted as saying, "We must as workers learn to hate the capitalist class. We cannot fight unless we hate. We—the vanguard of the working class—must teach the worker to hate." Now, one can see why, if Christianity reigns supreme, communism could not exist. God's love is a contagious love. When one has God as the Lord of his life, he loves everyone else. Only a government that lives through love could survive.

Many people take our American freedom of religion all too nonchalantly. Lenin, one of the big wigs, in the Communist Party taught: "We must combat religion—this is the ABC of all materialism and consequently Marxism." "Down with religion." "Long live atheism." "The dissemination of atheist views is our chief task." If the love of Jesus Christ as Saviour reigned in the hearts of men, communism, whose worst enemy is religion, especially the Christian religion, would become extinct.

J. Edgar Hoover tells of how the very foundation of communism would crumble in the sight of Christianity. He states, "Communism begins with the group. Christianity and in turn democracy begins with the individual." This is so very true.

All of the things I have mentioned would come as a matter of course if Christianity reigned supreme. Culture and a high standard of living is not enough; did not early Greece have these? We see that education is not enough. Is it not true that Karl Marx, the founder of the Communist League, and many of our atheists of today are extremely well educated? The right to vote would be of no avail, if the people did not hold up high Christian morals for their candidates to stand by. Democracy would be an empty form of government if Christ were not in it. Is it not so that our democracy was founded on the belief that the rights God gives to the individual should be protected? Without Christianity it would be impossible to "Make democracy live." Yes, having Jesus Christ as Saviour, Master, Lord, and even Ruler of the heart and life of every individual that treads the earth is our only sure-fire defense against that treacherous enemy—communism.

The Middle Way for America

EXTENSION OF REMARKS
OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include an article by Leon H. Keyserling entitled "The Middle Way for America," which appeared in the May 1949 issue of the Progressive magazine.

Mr. Keyserling, Vice Chairman of the President's Council of Economic Advisers, has become identified as one of the Nation's foremost spokesmen for a middle-way economy for America.

The article follows:

THE MIDDLE WAY FOR AMERICA

(By Leon H. Keyserling)

I

It doesn't take a massive array of complicated statistical analyses to present the central problems of the American economy. What is needed, as government and the country seek a safe path between boom and bust, is a simple, unemotional discussion of questions uppermost in the minds of Americans. They are asking—

"Is the main issue we now face inflation or deflation?"

"Is not deflation a greater danger than inflation?"

"Have the proposals of the administration to deal with inflation which were under discussion in 1948 any relevance to conditions in 1949?"

"Is the administration persisting in presenting solely an anti-inflation program when in the judgment of some economic commentators the threat of inflation has vanished?"

These are fair questions. They deserve an earnest effort to answer them.

Suppose we take a brief look at economic conditions last year and now. In 1948, prosperity was bountiful. Employment broke all records. Production surpassed previous peacetime performances. Workers received good wages, business earned better profits than ever before, farmers enjoyed unprecedented prosperity, and standards of living reached new heights. Along with these conditions, prices and wages and costs were chasing each other upward in a spiral of inflation.

Under such conditions in 1948, why did President Truman propose, with the advice of the Council of Economic Advisers, a series of economic measures which came to be called an anti-inflation program?

Certainly, no one had any desire to interrupt the high levels of employment or prosperity or business confidence which then prevailed. On the contrary, the measures proposed were designed to enable our prosperity and business confidence to advance even further, so that we could have still more employment as the size of our labor force increased and still more production as labor productivity, managerial skills, and our technology improved.

These proposals were deemed necessary because some underlying flaws were detected in the prosperity of 1948—flaws which, if left undisturbed, threatened to turn the economy downward into a spiral of deflation, lower employment, reduced business confidence, and cut-backs in production.

What were these flaws under the surface of prosperity in 1948?

No one was primarily concerned about rising prices or costs or wages or profits in themselves. There was concern that certain changes taking place in the relationship between the cost of living and consumer incomes, and in the relationship between the cost of industrial commodities and the income of the average businessman, would ultimately make it difficult or impossible for the economy to absorb all the goods that were being produced and that this would lead to a business setback.

There was concern that, in the course of the boom, history might repeat itself to the point where certain basic producers such as farmers would lose too much ground in the price-income race, be forced backward to a disadvantageous position, and thus renew the problem of farm unbalance in its more traditional aspects.

There was concern, in short, that distortions and maladjustments were being generated which ultimately might throw our whole economic machinery out of gear. And so a program was proposed—not because there was more worry about inflation than deflation, but because of the desire to remove the danger that inflation would culminate in deflation. The intent was to take these preventive steps before it was too late so that we could steer a safe course between the excesses of a boom and the excesses of a bust.

II

Now let's have a look at conditions as they appear thus far in 1949. There is nothing in the current economic situation to cast doubt upon the legitimacy of the economic analysis presented in 1948. The only new occurrence is that some of the unfavorable developments, which were foreseen in consequence of the maladjustments then depicted, have now actually begun to manifest themselves in slight degree.

1. There is some slackening of employment and production, concentrated largely in the soft goods or consumer goods area and in housing, thus reflecting in large measure the results of the very forces which threatened to produce this softening if allowed to continue unchecked.

2. There has clearly developed a disparity or maladjustment between the present price-income condition of basic industry and the present price-income condition of the basic agricultural producer.

3. At various spots in the economy, there is cumulative evidence that the growing maladjustments which called for treatment in 1948 call even more insistently for prompt treatment in 1949, and this treatment can still be preventive because the disruptive and damaging forces in our economy have not yet gained ascendancy over the forces making for high-level prosperity.

To be sure, the program needed now is not precisely the same one that should have been applied in 1948. But it would be a tragic irony of contradiction for one to have said last year that action was needed on the theoretical ground that the flaws underlying our prosperity might some day lead to declines in employment and production, but to say this year that action is no longer needed just when the economic situation begins to demonstrate concretely that the earlier concern was justified.

Those who said that inflation "always takes care of itself in time" are not now in a position to say "I told you so" when inflation has only just begun "to take care of itself"

by resulting in some increasing unemployment and some hesitancy in production. Let us not tarry until "inflation takes care of itself" fully by bringing on an actual recession or depression.

Of course, if we waited until the neglect of maladjustments within our economy caused a serious deflation with heavy unemployment, it would then be too late for a preventive program. We would then need to install an all-out program to fight deflation and to start the painful and costly climb back to prosperity. But we all know from experience how difficult and uncertain that effort would be. We all know that under such circumstances the people would expect, and the Government would undertake, a broader and deeper intervention in economic affairs than any of us would now like to contemplate.

Fortunately, however, we have nowhere near arrived at the stage where an all-out curative program for a sick economy needs to be applied on an enormous scale. Those who say at the first bare signs of softening in the economy, "Let's worry about the cure for extreme deflation instead of the maintenance and improvement of the prosperity we now have," are like the doctor who would rush the patient under an oxygen tent when all the patient needed was an aspirin tablet.

So, instead of giving credence to the utterly unfounded claim that the Government is more concerned about inflation than deflation and instead of quibbling about whether a program should be called an anti-inflation program or an antideflation program when the two under current conditions are part and parcel of the same problem, I submit that we should seek a realistic program to protect our economy from any further downturn in employment and production and to return it as rapidly as possible to the highest levels of employment and production that are attainable—and to help keep it there.

We are now in an excellent position to move along these lines before it is too late.

Civilian employment during the first quarter of 1949 was higher month by month than during the first quarter of 1948, and 1948 was considered a very prosperous year. Unemployment, it is true, was about 3,167,000 in March 1949, or about 727,000 higher than a year earlier. But the level of unemployment is still very low contrasted with an average monthly level of unemployment of about five and a half million in 1941 when employment was seven and a half million less than now.

Steel output is now higher than ever before.

Planned business investment in new plant and equipment is estimated at about eighteen and a half billion dollars for the first quarter of 1949, contrasted with about twelve and a half billion dollars for the first quarter of 1947 and sixteen and a half billion dollars for the first quarter of 1948 (annual rates).

Consumer incomes, personal incomes, national income, and total savings are extraordinarily large.

Government demand for goods and services will increase considerably throughout the year.

Sensational overplaying of a few soft spots in the economy and of some recent increases in unemployment should not be permitted to distort judgment or to produce a fear psychology. The outlook for 1949 is still bright, and optimism combined with the right course of action can keep it bright.

But optimism should not be so unquestioning as to overlook the serious problems confronting our economy. For example, we now hear it stated in some quarters that a satisfactory leveling off of prices and incomes and production and employment is now in process which has already restored or will soon restore our economy to a state of healthy balance without further effort. The facts simply do not bear this out.

It is true that there have been some desirable price adjustments downward, and many other prices have leveled off. But this does not automatically provide the relationship among prices and incomes which on the one hand will provide ample funds and incentives for maximum production and on the other hand ample purchasing power to buy all the goods that are produced. Maladjustments in the price structure can exist at a high general price level or a low general price level, when prices are rising or when they are falling.

The price situation now reflects a mixture of trends and problems. Some prices are still too high, and some sectors of the economy are still draining off too large a share of national income, from the viewpoint of the health of the whole economy. Other prices may be too low or falling too rapidly, and some incomes are too low. These distortions, which in the long run would have dismal consequences if neglected, can be corrected not by forgetting about the price-income problem but by devoting more attention to it.

Likewise, it is fallacious to assume that we are moving into a period of healthy adjustment because civilian employment is leveling off at a constant figure instead of rising with the growing labor force. As our population grows from year to year, a constant level of employment would mean a constantly increasing amount of unemployment. We should reject the idea, voiced in some quarters, that four or five or six million unemployed would be good for the economy.

We should reject the bland assurance that a leveling off of production represents a normal or healthy situation when the postwar boom is over. We are firmly committed by law, by our vital national requirements, and by the world situation to seek the goal of maximum production at all times. This means more output from year to year in a growing economy. If this task is becoming more difficult than when we were moving along easily on the momentum of war-created demand, we should redouble our efforts and not give up in defeat.

Above all, we should reject the idea that the way for supply and demand to come into balance is through falling demand and the reduction of supply in response to that fall. Such an adjustment would represent only the failure of our economic system to make available to the people the goods that we can produce. Such an adjustment is but the first warning signal in the process of transition by which an economy moves from boom to bust. The objective of economic policy must be, instead, to maintain demand at the highest levels of supply that the full use of our resources can provide. This is the true meaning of United States prosperity.

III

Now what are some of the current economic maladjustments, some showing on the surface and others still hidden deep beneath, which endanger the prosperity we now have and the higher goals toward which we aspire?

The first maladjustment in the current economic situation results partly from the fact that the cost of living has risen 71 percent since the middle of 1939, and 27 percent since the middle of 1946. The downturn in the cost of living in recent months has thus far been only about 3.2 percent, and there is as yet no assurance that it will continue. By 1947—and the situation is not better now—a very substantial portion of the families in the country did not have sufficient income to maintain what has been defined as a reasonably adequate living standard. People living on fixed income have been hit hardest. Possibly a full half of the families in the lower income groups are currently spending more than they earn, or barely breaking even.

The second maladjustment in the current economic situation involves the relationship between industrial prices and farm prices. Since the last prewar year, 1939, farm prices and incomes have risen more than most other prices and incomes. This has helped to redress the unfortunate position of the farmer in the prewar economy. But since the middle of 1946, industrial prices and incomes have been outrunning agricultural; since then, wholesale prices of farm products have risen 22 percent and of industrial commodities 43 percent. In 1948, wholesale prices of farm products declined almost 14 percent and wholesale food prices declined almost 9 percent, while industrial prices continued to rise. In 1949, wholesale prices of farm products and foods have declined about 4 percent and other wholesale prices less than 1 percent.

With per capita net income of persons on farms estimated at $909 in 1948, contrasting with $1,569 per person not on farms, we again face the emergence of the traditional problem of maintaining agriculture in balance with the rest of the economy. The farmer's share of the consumer's dollar has dropped constantly since 1946, and the cost of living can and should be reduced without driving farm income further downward. The farm program recently proposed by Secretary Brannan is geared to this purpose.

The third maladjustment in the current economic situation is that prices of certain vital industrial products tend to be inflexible or sticky, and not to adjust themselves with sufficient sensitivity to changes in market conditions. While farm prices are highly sensitive, and while retail prices tend to be sensitive insofar as wholesale prices permit them to be, the same is not sufficiently true as yet of the price policies of some of the highly integrated durable-goods industries. Residential construction, for example, showed a severe drop in 1948 because of outpricing of the market. We cannot afford to wait until the same thing happens in other vital areas which would lead to serious unemployment and cutbacks in production.

The fourth maladjustment in the current economic situation is that consumer expenditures or demand have dropped from 76 percent of total output in 1929, and 75 percent in 1939, to only 70 percent in 1948. In contrast, gross private domestic investment has risen from 10 percent of total output in 1939 to 15.6 percent in 1948, the latter percentage being even higher than in 1929.

Correspondingly, compensation of employees as a share of total national income has dropped from 65.9 percent in 1939 to 62.1 percent in 1948, thus moving close to the undesirably low 58.1 percent of 1929; while business and professional income and corporate profits as a share of total national income are much higher than in 1929 and even more above the 1939 level.

The fifth maladjustment in the current economic situation is that the aggregate of corporate profits has been running higher than needed to maintain current or even somewhat increased levels of business investment. Between 1947 and 1948, corporate profits after taxes increased by $1,600,000,000, and undistributed profits increased by $700,000,000, while there was a decline of $1,200,000,000 in corporate uses of funds.

Although many individual businesses, particularly small businesses, find it hard to obtain equity capital, the larger corporations in general have been financing an abnormally high portion of their operations from internal sources. Corporate dividend payments as a whole were only 40 percent of profits after taxes in 1948, contrasted with 69 percent in 1929 and 76 percent in 1939.

UNIVERSITY OF MICHIGAN LIBRARIES

The sixth maladjustment in the current economic situation is that some basic industries are not increasing their capacities sufficiently to attain the production levels required for the steady growth of a maximum employment economy. Instead, they are gearing their capacities to the assumption that in the future as in the past there will be very sharp fluctuations in the business cycle. This assumption of recession or depression, in turn, tends to increase the likelihood of the very evil against which it is designed to insure.

Some marginal producers or small businesses need financial assistance to increase production. But the road to more production in the main is not higher prices and profits today based upon the fear of sharply falling prices and profits later on, but a rounded policy which adjusts prices and profits and capacities to a long period of stability and growth.

While these maladjustments are serious and fundamental, they may not turn the economy sharply downward in 1949, for some of them are patent but others now only latent. Even if that be so, these maladjustments are charged with danger for the years ahead. The easiest time to apply correctives is before a crisis appears, and the hardest time would be later on when neglect produces the crisis.

IV

Now, what kind of effort is needed to remedy the difficulties confronting us and to create conditions making for stability and steady growth within the American economy?

First, we need to awaken the people as a whole to the prospects of what we can do if only we try. The people should know that, through a program for steady growth, we can within a decade lift our annual national output by more than a third. They should know that 10 years of sustained progress would yield to us an aggregate national income over the decade, measured in uniform dollars, about $400,000,000,000 higher than if we should level off at the current rate of production, and about $800,000,000,000 higher than if we should go through the traditional pattern of "boom and bust" and slow recovery which characterized the years 1929 to 1939.

This attainable aspiration should be embodied in what might be called a national prosperity budget, formulated and revised from time to time under the Employment Act of 1946 through the cooperative efforts of industry, labor, agriculture, and Government. This prosperity budget would not only set general targets for employment and production. It would also establish a few major classifications within the totals to indicate the priority needs of our people in such matters as housing, food supply, education, and transportation. Thus it would give specific content (without overrefinement) to the general targets for employment and production.

Second, the national prosperity budget would also contain some conclusions of economic analysis. It would sketch out in outline, and constantly improve through progressive study, some broad patterns suggesting those price and wage policies in the private enterprise economy, as well as those Government policies, which would serve the purpose of the Employment Act of 1946 to develop "national economic policies" for the maintenance of "maximum employment, production, and purchasing power."

Third, these broad patterns would be advisory rather than mandatory. They would be a guide to the market rather than a substitute for the market. In short, there would be full recognition that the preponderant majority of economic policies would be devised in detail and executed in full by our system of enterprise rather than by Government.

This would place upon industry and labor a higher degree of responsibility for understanding the workings of the whole economy and for formulating their price and wage policies in a broader context of concern for the national welfare.

The widening of this area of voluntary cooperation, through common study of common problems, is the only way that our highly industrialized and integrated economy can steer between the danger of periodic collapse and the danger of excessive governmental centralization of power.

Fourth, it should be recognized without apology that Government has vigorous functions to perform. The private determination of prices and wages needs to be supplemented by minimum wage laws. It may need to be supplemented for a time by action against monopolistic pricing or by temporary resort to selective controls. Fiscal and monetary measures need to be adjusted flexibly to changing trends in the economy as a whole. In other areas, enlarged and improved public programs will be needed because certain services which cannot be provided in any other way stand high on the list in weighing the needs of a highly endowed and cultivated people. These include, for example, social security, resource development, low-cost housing, education, conservation, power projects, and national defense and international economic arrangements.

In January 1949, President Truman, in his Economic Report, state of the Union message, and budget message, set forth in related context the short-range and long-range measures desirable to promote the economic stability and growth and justice which are the necessary counterparts of our native endowments and our political democracy. The enactment of these measures is important, but equally important is the process under the Employment Act of 1946 whereby the President, with the assistance of the Council of Economic Advisers, and the Congress, with the assistance of the Joint Committee on the Economic Report, undertake at frequent intervals to reappraise the condition of the American economy and to reformulate programs best suited to its ever-changing needs. Above all, there is required the watchful eye of an informed people, so that by glad consent rather than by force we work our way toward unity of endeavor and consequent practical progress.

V

In the final analysis, the successful functioning of a system combining economic freedom with political democracy depends upon this widening of areas of agreement. This is the case not only because even the laws enacted under such a system must be founded in popular acceptance if they are to be successful, but also because the bulk of economic policies must be formulated and executed voluntarily without benefit of law.

In the 1920's, we took prosperity for granted, neglected to remedy the dangers that were there, and suffered the crashing consequences. In the 1930's, our economic thinking was so influenced by a great depression that we thought only of remedial measures rather than of preventive measures. This gave currency to the idea that our private enterprise system was necessarily unstable, that prosperity could not be maintained continuously, and that the main task of Government was to wait until a depression came and then launch a vast program of its own to prime the pump or to compensate for the deficiencies in the private economy.

We have now come to reject that lack of faith in our economic system. We now have more faith that private enterprise and Government, working together, can forestall the need for drastic measures by moderate preventive action while prosperity is still with us.

To call such an approach radical or socialistic is profoundly to mistake its purposes, and thus to diminish the opportunity for its most beneficial application.

It is perilous to delay action until we think we know just when a serious business downturn may occur, or to set action aside if we think that the downturn is some months or years away. That kind of delay or temporizing violates both reason and experience. The significant fact is that we know that the powerful and high-speed and ever-changing American economy will not automatically and perpetually stabilize itself; it requires policies directed toward that end. If the evil of a serious downturn is not imminent in terms of months—and I do not believe that it is—that is all the more cause to act before the hour is late.

Such action should be more than an effort to forestall calamity. It should reach out toward the peaks of achievement which beckon to us and await only our will to scale them.

The Manresa Retreats

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Thursday, June 2, 1949

Mr. O'CONOR. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article on Manresa, by Mr. William P. McCahill, which appeared in the Catholic Virginian.

The author of the article, Mr. McCahill, is a former Marine Corps officer, now in Government service, who recognizes the importance of a strengthened religious acceptance by the people of America and who contributed this article to the Virginian as a means of spreading abroad the opportunities for increased religious understanding and acceptance offered by such retreat houses as Manresa.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LIFE'S PATHWAYS CHARTED ANEW AT MANRESA RETREATS

(By William P. McCahill)

Manresa on the Severn is a quiet place. Each week end it provides Catholic men of northern Virginia, Maryland, and Washington with a chance to get closer to God. Last week the men of St. Thomas More joined with two Washington parishes in a retreat conducted by the Jesuit Fathers.

At Manresa retreats everything is new, and yet everything is old, for eternal values never change. They only become better focused during a retreat. They only grow dim with lack of emphasis. And so to many Virginians the retreat was physically a reliving of past experiences, but spiritually a time of polishing up one's armor against the battle constantly raging in the world outside.

Manresa is in the world, but not of it. Across the Severn stands Annapolis and the mammoth buildings of the Naval Academy. In the distance all is hustle and noise, confusion and uncertainty. At Manresa order prevails, noise is subdued, and life's pathways are charted anew by the skillful words of the retreat master and the soothing sanctifying grace that flows so abundantly

from the busy tabernacle where God holds court.

THREE THOUSAND TWO HUNDRED MEN IN YEAR

For 22 years Catholic men have motored here to reorient their sense of values, to thoughtfully steal away from the world. For 14 years the kindly Father Robert S. Lloyd, S. J., has worked ceaselessly for retreatants at Manresa. Last year more than 3,200 Catholic men pushed thoughtfully through the 2 days and nights of week-end retreats and came during weekdays. Thus, Manresa has become an institution for the Washington area and more, and more the men of northern Virginia are becoming part of Manresa and it of them. Bishop Ireton is a great friend of the retreat, Father Lloyd will tell you. Catholic men of Arlington and Alexandria find here a new home where spiritual cobwebs and moral menaces are swept away and the house of the soul stocked full of spiritual provisions for the days ahead. Manresa is like a jewel set in a green setting of trees. Here are pearls of wisdom and diamonds of grace for the taking. Here, also, is love and patriotism, for the flags of Maryland and the District flank the side altars and the American flag stands quietly opposite the church's own banner. Four red, white, and blue boxes repose on the altar. They are so strange to a Catholic altar that a newcomer must inquire what they are there for.

In these boxes are the names of 7,650 servicemen, living and dead. Here is the notation of a Navy officer, killed in action at Pearl Harbor, the first chapter. And near the bottom of a stack is a similar KIA card datelined Okinawa, the last chapter. These men and their intentions are forever remembered at Manresa. Father Lloyd is happy when talking about these cards for they are each one a personal memento of some serviceman who passed through Manresa or of the father, brother, or relative who stayed a while in this oasis of grace.

HERE GOD BECOMES REAL

The beds are springy and the cots narrow, the food plain but plentiful and tasty. The air is clear, the sky brighter, for God is here perpetually. Here God becomes more real individually to the half hundred moored here for a speck of eternity.

At Manresa there is no priority for rank, prestige, wealth, or position. The high Government official, the officers of our armed services, the wealthy men of business and finance, shed pretense and authority to mix with the day laborer, the aged tool maker, or the fuzzy-chinned college student. In the informality of dress and quiet conversation the brotherhood of man takes on a new look under the Fatherhood of God and the forceful words of the Reverend Thomas M. Brew, S. J., who is pivot man during the meditation sessions, acting as the transmission belt for grace and thoughtful analysis of self between God and man.

Inside, the one-time semipro football player, Father Brew, is telling the men that they must place themselves mentally on their deathbeds if ever in doubt as to the wisdom of a particularly important decision. Outside, as if to fit the retreat mood, God's heavens blacken and release swirling rain and a bolt of thunder that comes so close half the men in the pews jump instinctively. Father has just said that death comes suddenly and outside the lightning proves the point as a nearby tree is shriveled and blasted in a finite sort of death.

On the altar, Father is saying that death is blind. In the audience, a young blinded war veteran has clearer eternal vision than the many missing men who could have made the retreat with just a little extra effort. During the entire period the angels are working overtime delivering the sanctifying grace being earned during the various sessions, morning prayer, mass and communion, visits to the blessed sacrament, meditation, public and private, examination of conscience, confession, spiritual readings, stations, rosary, benediction, litanies, and night prayer. Is it any wonder the angels are working overtime?

Quietly behind the scenes is the faithful Brother Lawrence A. Hobbe, S. J., who does the work of six men and who can even sleep through the clanging bell that calls to prayer, a bell that has all the urgency of a general quarters alarm, all the authority of a police siren. The good Brother acts as straw boss for the four permanent helpers and three schoolboys who wrestle the chow and keep the wheels going smoothly.

NO MATERIAL NECESSITIES

It is no wander that those who came here as boys are still coming, and that men who started years ago are now retired and gray with years and slow of step. Off the busy highway of the pagan world, Manresa stands with open arms ready to give Catholic Virginians a new spiritual life, the old look of peace with Christ, of childlike trust and confidence.

The pundits or smart writers would say that Manresa is quite a place. That it is. But, more importantly, it is a quiet place where God and man can get together sans telephone, telegraph, newspaper, radio, television or any of the other necessities that clutter up our spiritual life. Quiet means the presence of peace and here in the Divine Presence of the Prince of Peace, men of our diocese carve out of Manresa their own particular piece of this quietness and store it away in their souls against the temptations and distractions of a world which Catholic men must attempt to change.

Yes, Manresa is quite a quiet place and for that we are deeply thankful and eternally grateful.

Arlington men of St. Thomas More parish attending last week's retreat included Thomas C. Bumgardner, F. R. Cawley, Andy Drance, John W. Flatley, Dave Gatzenmeyer, Forrest Hall, Thomas Kenney, Joseph Kirchner, Edward W. Lockwood, John W. Papurca, Arthur Pomponio, George Poole, James I. Rooney, Charles Sher, J. V. Tiernan, Jr., Capt. S. D. Winningham.

Theopholis Bond

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. HAYS of Arkansas. Mr. Speaker, the recent death of Theopholis Bond, of Madison, Ark., outstanding planter and Negro leader, brought sorrow to thousands of friends and admirers. In a resolution commenting upon his death, the Memphis Negro Chamber of Commerce paid tribute to his qualities of "industry, initiative, intelligence and faith," and stated further "that his career is a testimonial to the validity, genius and opportunities of the American system of free enterprise and democratic principles." The Memphis Press-Scimitar expressed appreciation of his civic leadership in the following editorial:

FIVE THOUSAND AT HIS FUNERAL

The life of Theopholis Bond was proof that by industry and integrity a Negro can attain both wealth and respect in the South.

Some 5,000 persons, white as well as Negro, attended his funeral Sunday.

Who was this man whose life drew tribute from both white and Negro citizens?

He was a farmer who had helped till 3,000 acres of Arkansas soil to help feed the Nation in war and peace throughout the many years of his life.

Of this man whose father was born in slavery, Chancelor A. R. Hutchins, of St. Francis County, Ark., said:

"He was one of the finest citizens I have ever known—a credit to his race, to his State and to his country."

Repeal the Peacetime Draft

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address I delivered on WMEX, Boston, Mass., June 2, 1949:

Ladies and gentlemen of the radio audience, they give it the fancy and disarming title of "Selective Service" to cover up the ugly fact of forced conscription. And what is conscription? The taking of a young man from his job, his home, his friends, and forcing him into the armed forces against his will.

During time of war, when the Nation must mobilize every resource to survive, we know that every citizen must make certain sacrifices and waive some of his precious rights. War is a dire emergency—an exception to the rule.

Ours is not a military state. We have been dead set against compulsory military training in any form. We believe in preparedness but through a voluntary system offering suitable inducements and rewards to those who are interested in such a career. With the incentives of good pay, allowances, retirement benefits, and opportunities for advancement we shall always be able to get sufficient men for our peacetime needs, and they will be men with a high morale.

Almost 4 years have come and gone since the war ended, but there is a selective service law on the books which could be brought into play at a moment's notice. Under these circumstances it is impossible for a young man to proceed with full hope and confidence on his career. It is not enough to say that no men are being drafted at the present time. It is no encouragement to point out that the law is in reserve—to be activated only at the President's discretion. There were 9,000 inductions in January 1949, 46 in February, and 10 in March. Although we are pleased by the swift drop toward zero, there is no positive assurance that the calls may not zoom upward again. And while this law plays hide-and-seek every young man must so alter his plans to make provision for a complete change in his way of life. If he is in business it is advisable for him to make stand-by arrangements that will take care of his enterprise should he be ordered into military service. If he has just bought a home it will be difficult for him to keep up payments on it from his thin pay as a buck private. There is no guaranty that any man who is pulled away from his job will be able to get it back when his draft term is over. There is no more certain way of scrambling up the lives of our young men than to have this threat hanging over them.

UNIVERSITY OF MICHIGAN LIBRARIES

I propose that we free them of this nuisance by repealing the selective service law.

The draft is but another word for compulsory military training, which Americans abhor. True it does not regiment them annually, come peace or war as soon as they come of age, but this does not lessen the sting of coercion for the smaller quotas who have been, or who may be, conscripted.

The draft not only wastes the time which young men should be giving to more profitable undertakings. In an age when we know the frightful destructiveness of the A-bomb, can imagine the possibilities of germ warfare, and live in dread of other secret weapons, it seems to me that large masses of men belong to an outmoded military technique. Until such time as the world can win the elusive goal of sure peace, it is more important that we train our youth in the arts of science and industry. These will be the base of a productive power which can be quickly mobilized, if necessary, for offense or defense.

In the meantime we have the best Air Force, the best Navy, and an efficient Army. And we are maintaining these under a system of voluntary service.

With this adequate protection the bulk of American youth should have the opportunity to complete their education and take their place in the normal life of the community without being forced into uniform during peacetime under a conscript system that has never justified itself in any country throughout all history.

It is not in accordance with our concepts of individual liberty to force a man to do anything against his will, or to call upon him to give up so much when his next-door neighbor, of the same age and physical condition, is required to make no sacrifice. It is a serious infringement of personal freedom to press him into the armed forces where he is subject to the stern Articles of War, and to the rigid courts-martial procedures.

It was not until September 1940, that the Congress ever authorized peacetime conscription and then only because World War II was engulfing so many nations and threatening our own security. Only after long and bitter debate, and by the smallest of margins, did the Congress legislate the draft. It was dictated by necessity, and the fact that we had a very small standing army. Even so, it was distasteful to many Americans who have always feared the concentration of power in the hands of a few.

One cannot justify the draft of today by comparing 1949 with the year 1940. A so-called cold war, which is the term used to describe the various economic and political maneuvers on the international scene today, is far removed from the actual warfare of 1940. Furthermore, we are prepared. As of January 1949, we had 332,000 in the Air Force, 370,000 in the Navy, and 685,000 in the Army. In other words, we had nearly 1,400,000 men under arms in peacetime, or about one-third of the total number mobilized during World War I.

Peacetime conscription is a step in the direction of fascism, and as between fascism and communism there is little choice. Both are sworn enemies of the Constitution, and of our democratic liberties which it defines and protects.

Last year, the military hierarchy whipped up a war hysteria in order to push through its pet project of universal military training. The American people did not fall for this strategem. However, the Selective Service law, which is compulsory military service in disguise, is waiting in ambush, ready to spring on American youth when the brass hats think they can justiufy such an attack. I say that we should remove this temptation to shanghai our youth, by getting rid of this law. It is not needed. So why keep it?

We are are already engaged in an armament race which is eating into every pocketbook and is putting a severe strain on our economy. This is the type of rat-race, which, if unchecked, will lead inevitably to that third world war which would cripple the world.

We've got to get off this military detour and back on the road which leads to peace. In the development of an international assembly, and through peaceful negotiation under rules of justice and equity, supported by an international police force, this is our only hope. We've got to work harder for these controls, rather than the fiendish weapons which could boomerang on us, to our own possible destruction.

Peacetime conscription leads to permanent militarism. It encourages the formation of a military caste. It flouts that fundamental American belief which states that the civilian shall be the determining factor in our society, and subordinates the military to civilian controls.

During 166 years we have fought several wars, in which we have never suffered a final defeat. We have depended, for this, on volunteer troops supported by conscripted personnel. We do not believe in slave workers or slave soldiers. The record bears out the fact that our system, even in the emergency of war, is the best.

Our constitutional forefathers were very careful to guard against the militaristic methods which had brought so much grief to Europe. Many people fled from Europe to the United States to escape the tyranny of conscription. With this in mind, the far-sighted men who drew up the American charter, specifically rejected peacetime draft for military service.

There are some men who, having enjoyed the special privileges, authority, and prestige that goes with the officer class, were reluctant to return to the competition of civilian life when the war ended. It was but natural for them to try and perpetuate their comfortable positions. A large Army was necessary to support them in the style to which they had become accustomed. That was their idea. But in the military pay-raise bill which was recently defeated in the Congress—a bill, incidentally, which was slanted in favor of the brass, rather than the men in the ranks—they found out what the American people think about such matters. We do not intend to encourage the development of a military nobility who will live the life of Riley at our expense.

The officer class does not surrender a good thing easily. After World War I officer demobilization proceeded at the rate of 1 officer for 8 enlisted personnel. Following World War II, only 1 officer was discharged for every 16 enlisted men who returned to civilian life.

Even though many of these officers are devoted to their country, they cannot help but take an interest in keeping the international pot boiling. Their life-long training is not in diplomacy but in the settlement of all questions by resort to military force. And they must have men to order about to justify their titles and their incomes.

The English-speaking peoples for the past 500 years have waged a stubborn, up-hill struggle to win their freedoms. These gains are presently endangered by the American military system with its insistence on blind obedience to authority.

It is far better to keep our youth engaged in the productive channels of civilian science, industry, and specialized education, and away from the autocratic military control which deadens initiative.

One of the wisest decisions made in this postwar period was the placing of atomic energy development under civilian, instead of military, control. When the true story is told it will be found that we are making remarkable progress because of our adherence to traditional American methods.

Yes, we were unprepared for World War II, but not because we did not have a large standing army. It was due to the failure of our military leaders to adopt the up-to-date weapons which our civilian science and industry developed for them. The classic example of military stubbornness was the court martialing of Gen. Billy Mitchell for insisting in the early thirties that air power would be the weapon of the future. Mitchell was right, but he was punished for keeping up with the times. And we lost many men because the brass would not listen to him.

Cavalry was declared obsolete as far back as 1918, but the military continued to spend large sums on this branch of the service which belonged to the past, before it was finally abolished in 1946.

While Congress was debating the proposed draft legislation, Congressman GRAHAM A. BARDEN said, and I quote: "For every dollar the Army spent advertising for recruits, it spent $10 propagandizing for the draft and universal military training. About the most serious thing I know in a democracy is when it reaches the point that we must reach out and take a man's liberty."

From July 1, 1946, to March 31, 1947, when less than 20,000 men were drafted, selective service spent over $22,000,000. In other words, it cost over $1,000 apiece to conscript each man. Selective service still spends millions of dollars, even though in the month of March 1949 it inducted a grand total of 10 men throughout the Nation. What it cost per man staggers the imagination.

The purpose behind the desire for conscription is to wean control away from the people, acting through their Congress, to the executive branch of the Government which can be dominated by the military departments. The military professional officers would have the say, through the allotment of allocations for industry, concerning the life or death of any business. Through the draft they would determine where and how our youth would live and would control members of the medical profession by draft up to the age of 45.

I have no intention of underestimating the international problem. We are carrying out our defensive military obligations by a force composed of volunteers. Our greatest strength is the example we offer as we work to help build the world-structure of peace. And that strength has its base in the rights of independent citizens here in the United States.

I am thinking of the mothers of our Nation and their sons who are coming of age. I don't want to see them laboring under a cloud of fear, unable to devote all of their energies to their work, their education, and the development of family life, which together form the source of our progress. I don't want to see them become the victims of those who put military strength above moral fibre.

The draft law in peacetime is a veiled threat to our freedom of action and carries with it the creeping danger of military dictatorship.

It must be repealed.

On May 20, 1949, I introduced a bill in the United States House of Representatives, known as H. R. 4796, to repeal the Selective Service Act of 1948. I believe, as one of your Representatives in the Congress, that it speaks for you and the majority who believe in the American tradition. I hope that it will enlist your active support.

I thank you for your kind attention.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. ELLIOTT. Mr. Speaker, the need for Federal aid to education in Alabama, and in many of the States of this Union is great.

I point with a high degree of pride to the great achievements of Alabama in its own efforts to support its public schools. In 1947 Alabama's income averaged $837 per person, thus ranking Alabama at forty-fifth place among the 48 States in per capita income. But, even so, only 14 States spent a larger share of their income for education than did Alabama.

Over one-fourth of the some three million people of Alabama are of school age. Thus Alabama ranks fourth among the States in the number of children to be educated, in proportion to the total population.

In order that the school children of Alabama, and of many other States, have adequate educational opportunities, I ask the House of Representatives to pass Federal aid-to-education legislation before the Congress adjourns.

Measured by the yardstick of opportunities that Federal aid to education will create in the lives of the millions of children of school age in this country, I hope the leadership of this House will give this legislation a high priority.

If this Congress passes this legislation, I believe its record as a great Congress will be assured. The hearts of the American people will recognize and respond to what we do to assure a continued and expanding opportunity for their children.

Mr. Speaker, as a part of my remarks I include a statement by the Hon. Frank L. Grove, secretary, Alabama Education Association, which he recently prepared and submitted to the Committee on Education and Labor of the House. It is a very fine factual statement with reference to the educational needs of Alabama:

STATEMENT SUBMITTED BY FRANK L. GROVE, SECRETARY, ALABAMA EDUCATION ASSOCIATION, FOR CONSIDERATION BY THE HOUSE SUBCOMMITTEE ON FEDERAL AID TO EDUCATION, GRAHAM A. BARDEN, CHAIRMAN

Recent achievements in school support: In recent years Alabama has made some notable achievements in its efforts to support its public schools. Some of these achievements are cited in the following table:

Increased school support [1]

	1940	1948
State support for operating expenses	$12,151,000	$44,598,000
Per pupil support [2]	$18	$68.46
Average salary paid teachers	$719	$1,909
Rank among States in salaries paid	46	37
Length of school term (days) [2]	154	176

[1] Figures taken from Why They Teach and Quit, Missouri State Teachers Association, 1948.
[2] Figures taken from Annual Report of State Board of Education (Alabama) 1940.

Alabama, a low-income State: This advance in school support has been made, despite Alabama's relatively low income. For the fiscal year 1947 Alabama's per capita income was $837,[1] forty-fifth among the 48 States. Only three States—Mississippi, Arkansas, and South Carolina—ranked lower. Its actual resources on which to base school levies are relatively meager and are totally inadequate for the heavy education demands made upon them.

Achievements indicate creditable effort: The above achievements are the result of a high[7] creditable effort by the citizens of Alabama to educate their children. In 1947–48 Alabama used 2.4 [1] percent of its total income to maintain and operate its schools. In the percent of income used for schools it ranked as the fifteenth State. Thus, while 44 States had a higher per capita income than Alabama, only 14 ranked above it in its effort to secure public education.

A State of many children: In relation to the number of adults included in Alabama's population the State has a large number of children of school age. In 1947 the total population in Alabama was estimated to be 2,834,000. For the same year the school-age population (5 to 17 years) totaled 756,000. The ratio of school-age population to total population was, therefore, 26.7.[1] In this item Alabama ranks fourth among the States. In other words, throughout the Nation, Alabama—

Ranks fourth in the number of children to be educated.

Ranks forty-fifth in per capita income.

Ranks fifteenth in its effort to educate its children.

Low educational rating not surprising: In view of the large number of children to be educated and its relatively low per capita income, it is not surprising to learn that Alabama ranks low educationally, despite its creditable effort to educate its children with its own resources.

Salaries far below national medium: In 1947 Alabama voters through a special referendum assigned the net proceeds of the income tax specifically to teachers' salaries. In 1948 this increased teachers' annual salaries to $1,909—the highest point on record up to that time. Even so, in 1948 Alabama ranked thirty-seventh among the States in salaries paid teachers—36 States paid higher salaries. In the same year the national median was $2,440.[1] The long-continued low compensation paid Alabama teachers is reflected in the shortage of teachers and in the low professional rating of many of those employed.

Almost one-third hold non-professional certificates: In 1948 the summer schools in Alabama colleges enrolled the largest number of teachers in professional classes since World War II. In this way many Alabama teachers improved their professional rating. And yet this year over 6,400 [2] of the 21,000 teachers employed hold emergency certificates. Many of them have had little college training. More than 4,000 have had 1 year of college or less.

Serious shortage in elementary-school grades: As discouraging as is the present status of professionally trained Alabama teachers, the future is even more discouraging. Comparatively few young persons are prepared to teach in the elementary-school grades. The total number of new elementary teachers expected to graduate from our colleges in 1949 is 310.[2] Based on the present enrollments, we will need about 1,300 elementary teachers in September just to take care of replacements and to fill new positions.

But enrollments are growing. Since the war school enrollments in the elementary grades have begun to climb. Due to the large number of prewar births these enrollments will become larger during the next 6 years, reaching a peak perhaps in 1953. In that year the 87,000 babies born in 1947—the largest on record—will apply for entrance into the first grade. Hundreds of new, professionally trained teachers must be recruited in the meantime.

Building needs telescope. Alabama has done relatively little school building since the war period. Some of these have been provided from funds allotted by the State Building Commission, but the major task of providing adequate, comfortable school buildings for Alabama children has not been tackled. Since 1945 we have built over 2,000 classrooms [2], 83 lunchrooms, and 52 auditoriums. Today we need more than 7,000 classrooms and many, many special rooms of all types—lunchrooms, auditoriums, laboratories, shops.

Federal aid imperative. If Alabama children are to have their chances to prepare for jobs, to train for citizenship, and to help Alabama and the Nation serve democracy increasingly better, they must be educated according to Nation-wide standards. They cannot live and work in a vacuum. To do this they must have adequate educational opportunities. They must have a lift from Uncle Sam.

In their name prompt consideration and passage of one of the bills for Federal aid to education now pending before the subcommittee appointed to study such proposals is sincerely urged.

The L'Heureux Plan

EXTENSION OF REMARKS
OF
HON. ABRAHAM RIBICOFF
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. RIBICOFF. Mr Speaker, under leave to extend my remarks in the RECORD, I would like to call the attention of the House to the following article by Constantine Brown on the L'Heureux plan, which appeared in the Washington (D. C.) Evening Star of Monday, May 30, 1949. Since formulated by Herve J. L'Heureux, his plan has received widespread attention.

Mr. L'Heureux has been a Foreign Service officer since 1930. After having served as American consul in Canada, he was assigned as consul at Stuttgart, Germany, from 1937; as consul at Antwerp, Belgium, from November 1939; as consul at Lisbon in June 1941; as consul at Algiers, Algeria, from 1943–44, and as consul general at Marseille, France, for 3 years following December 1944.

Mr. L'Heureux served in the First World War; he is a founder of the American Legion; he worked his way through college by operating an elevator in the Senate wing of the Capitol; he entered the Foreign Service as a clerk in 1927, and he has come up through the ranks to the top grade of Foreign Service officer, class 1.

Mr. L'Heureux has a deep faith in the ability of his fellowmen to achieve a just and enduring peace, provided they are guided by a divine inspiration and adhere to the fundamental principles of natural law. The purpose of his plan

UNIVERSITY OF MICHIGAN LIBRARIES

for a universal 1-minute pause at noon, in silent prayer for peace, is twofold: One is spiritual, asking divine assistance in solving the apparently irreconcilable conflict of views which has thus far prolonged the peace negotiations; and, two, create a unity of thought and unity of purpose. Moreover, what he saw and heard among the masses of the people in Europe and north Africa has implanted in him an unshakable conviction that in addition to being adequately prepared, and having the determination to fight with force of arms if necessary, to preserve liberty, the United States should undertake something concrete to correct false impressions prevailing abroad which, at the same time, should be a clear manifestation of the true character and ideals of the American people.

The article by Constantine Brown is as follows:

THIS CHANGING WORLD—THINKING MEN GIVE MORE ATTENTION TO POWER OF PRAYER FOR LASTING PEACE

(By Constantine Brown)

On this fourth Memorial Day since the end of the worst conflict the world has known the thoughts of millions of Americans turn toward prayers, not only for the loved ones lost in war—to whom the day is dedicated—but also for the lasting peace which mankind has denied itself.

We say that mankind has denied itself this peace, because to say that it was denied to it would imply denial by a power superior to man. And that superior power denies peace to no man who really wants it.

One of the significant developments of the postwar period has been the growing attention that thinking and feeling men are paying to the power of prayer in the fulfillment of their dream of lasting peace.

One man, a deep believer in that power of prayer, has done something about it, something more than to offer his own personal devotions on Sunday and to believe that he has done, thereby, all he could to invoke divine help in bringing peace to the world.

DAILY PRAYER URGED

Last October 28 Herve J. L'Heureux, chief of the State Department's Visa Division, delivered an address before the American Legion post in Manchester, N. H., in which he stated that it would be fitting if a custom sprang up for a daily 1-minute prayer for peace in every town and city in the country.

The idea, as Mr. L'Heureux presented it, was that all traffic, industry, and other activities should cease for just 1 minute at noon each day. Simultaneously every man, woman, and child would offer a prayer to God to grant the world lasting peace.

The plan received immediate acceptance by the Manchester Legion, which adopted a resolution urging that this movement be endorsed by all the spiritual, civic, and business leaders in the United States, and that a similar resolution be adopted and implemented by every organization in our country to the end that this custom may become universal in effect.

The suggestion gained adherents. An American Legion post in the South, a civic body in the West, a fraternal order in the East were among its first promoters. Others followed and today scores of veteran and church groups, civic and fraternal clubs, schools and institutions are pausing briefly at noon to supplicate the Almighty for help in achieving peace. Among the groups which have endorsed daily noon prayers for peace is the Cissel-Saxon Post No. 41, American Legion, of Silver Spring, Md.

PERTINENT TO WORLD POLITICS

The pertinency of religion to the hard realities of today's world politics is not to be denied. All along the border between east and west—in Poland, Czechoslovakia, Hungary, Yugoslavia and now in Korea—the pagan is launching some of his most subtle, but most devastating weapons. The church, Catholic and Protestant, is under attack wherever east meets west.

On one side of that border God is denied, totally and without reservation, and his servants are literally proscribed as the bearers of reaction and a capitalistic way of life. On the other side, God not only is accepted but daily is gaining new disciples in the persons of those who seek refuge from the threat of a new war, and a new devastation of the world which, if it comes, will surpass anything mankind has ever known.

There are those cynical, thoroughly materialistic persons, who will sneer at such things as the daily noontime prayers for peace. We must seek our own salvation among ourselves, they say, and not burden the Almighty with such cares.

It is true that man must do what he can to solve his own problems, but there is a limit beyond which man cannot go, where God takes over, and it is in this realm that such movements as Mr. L'Heureaux' possess not only a spiritual importance but also a hard, practical, realistic importance.

Irish Republic

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following:

MASSACHUSETTS CATHOLIC
ORDER OF FORESTERS,
Boston, Mass., May 31, 1949.

Mr. THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR MR. LANE: I am enclosing herewith a copy of a resolution adopted at the sixty-ninth annual session of the Massachusetts Catholic Order of Foresters held May 23 and 24, 1949, at Swampscott, Mass.

Our organization represents approximately 30,000 Catholic men and women in the State of Massachusetts who are vitally interested in this resolution.

Your favorable consideration of the contents will be greatly appreciated by this organization.

Respectfully submitted.

VINCENT P. O'BRIEN,
High Chief Ranger.

RESOLUTION FOR A UNITED IRELAND

Whereas generation after generation of the people of Ireland have struggled and suffered under an often cruel and ruthless oppressor for over 700 years in their efforts to obtain national liberty and independence, the desire for which is an inherent trait of the Irish people; and

Whereas numberless sons and daughters of Ireland have come to America to establish new homes and to seek their livelihood in this land, so greatly blessed by God, which in its own day and for like reasons of oppressive government has struggled for separation and independence from that same authority against which the Irish have so often rebelled, and which in a later day waged a Civil War to overcome the partition of the Nation resulting from the secession of the Southern States; and

Whereas we are now privileged to salute the newly created Republic of Ireland, at present composed of the 26 counties formerly constituting Eire, but unhappily not a completely free country due to the partition resulting from the separation of the six counties of Northern Ireland, the continuance of which results in no small measure from the selfishness of the civil servants who, contrary to the usual Irish temperament, place personal gain through their employment ahead of national welfare: Therefore, be it

Resolved, That we, the delegates of the Massachusetts Catholic Order of Foresters, in annual session and convention assembled at Swampscott, do hereby declare and state that it is our firm belief and conviction that in the interest of world peace and for the enhancement of the prestige of democratic government, the Isle of Ireland should be one united body constituting the Republic of Ireland;

That we, so many of whom trace our ancestry to the land of Erin and are now imbued with the spirit of freedom and independence which so readily wells up within the bosoms of all Americans, are convinced that the interests of the world as a whole will be served best by a completely free and independent Irish Republic;

That we do hereby urge the leaders of our Nation to use their good offices in an effort to bring about the unification of Ireland as a free and independent nation which may enjoy the same cordiality of relationship with the British Government as that which has existed for many years between that government and the free and completely independent United States of America, and we do hereby call upon the leaders of the British Government to lend their efforts toward this same noble goal; and

That a copy of this resolution be spread upon the records of this convention and that additional copies thereof be sent to the President of the United States, the Secretary of State, the Senators and Representatives in Congress from Massachusetts, the Ambassador to the United States from the British Government and the Minister to the United States from the Republic of Ireland.

Proposed by Vincent P. O'Brien, St. Expedit Court No. 219; Patrick J. Lally, Cathedral Court No. 1.

National Citizens Commission for the Public Schools

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. HAYS of Arkansas. Mr. Speaker, the recent announcement of the organization of the National Citizens Commission for the Public Schools, under the chairmanship of Roy E. Larsen, is heartening to all of the friends of our public-school system. Naturally, the legislative aspects of the problem of the public schools must receive our first consideration but there are other phases to engage our thought and attention. The official announcement states that the initial members are men and women in the fields of business, labor, publishing, and law. I am sure that the entire membership of the House commends those who have taken this action and

in general will approve the declaration of their chairman as follows:

We are established as a national commission, not because we think there is any national solution to the problems confronting our public schools. On the contrary, we believe that what happens in and to our public schools is primarily a community problem. We start our studies of the schools with the prejudice that the best schools in any area will be found where the local citizens have made the schools a top concern. As one of our earliest public actions, we hope to cite instances of successful community action for the improvement of the schools. In the process of arriving at such citations we hope to assemble many case histories of community action which we can analyze and pass along to help other community groups who want to go into action.

The idea for this commission was originally suggested by a group of leading educators who felt that real improvement in the public-school situation could not come without citizen understanding, planning, and action. We accepted the educators' challenge in the conviction that their premises was correct, and with full appreciation of the size of the job we have undertaken.

Read CVA Bill

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following guest editorial by Robert Ormond Case appearing in the Portland (Oreg.) Journal of May 23, 1949:

READ CVA BILL

(By Robert Ormond Case)

A kind-hearted lady vacationing at the beach was greatly shocked at the cruel method commonly used for cooking crabs, tossing them into a kettle of boiling water. She proudly announced her own considerate system. She put the crabs in cold water and brought them slowly to a boil.

The latter appears to be the administration's humane approach to the Columbia Valley Authority question.

Early CVA bills—they have cropped up in each of three previous Congresses—frankly and flatly gave the three-man CVA board the legislative, administrative, and spending powers of a superstate. The three-man board could socialize the economy of the Columbia Basin if it desired to do so. Had these early bills passed, the crab—free enterprise—would have been thoroughly boiled.

The current administration-sponsored bill, S. 1645, uses language designed to soothe the fears of the most hard-shelled and barnacled individualist. Sponsors of the bill say its principal intent is merely to provide a three-man administration (not an alarming authority) which will consolidate the various development programs of the army engineers, the Bureau of Reclamation, and the Bonneville Power Administration. Honest proponents of the measure will admit that a few incidental powers have been tossed into the pot, but hasten to assert that "consolidation," "efficiency," and "elimination of friction between bureaus" are the principal and obviously worthy aims of the bill.

Close reading of the bill, however, discloses the true nature of these incidental powers. They are unrelated to efficiency and coordination. They are directly related to ideologies of centralized power and managed economy. They are attuned to the classic New Deal battle theory: "We will spend and spend and elect and elect," and of its extension, "and we will regulate and regulate."

As the "Happy Warrior" of that fading epoch said: "Let's take a look at the record." The record indicates that if S. 1645 is passed with these powers included, the crab's demise may take a little longer than in previous CVA pots, but in the end he will be as thoroughly cooked.

Much is said in the bill, for example, about "State and local participation." This window trimming has actually led some proponents of the measure to state home rule will be closer to the people because the CVA is required to make its headquarters in the Columbia Basin. Caesar, it should be remembered, also made his headquarters in Rome.

RESPONSIBLE FOR POLICY

One sentence in the bill, section 4a, clears up the detail of home rule quickly: "The board shall be responsible for policy, directive, and general supervisory functions." Note the five words, "shall be responsible for policy." They mean exactly what they say. The board—alone—is responsible for policy. Groups of interested but naive citizens may appear before the board, but the board, in its wisdom, decides what is best to do.

Section 10a of the bill is recommended to all students of English. It relates to water rights. Each word and phrase in the first 11 lines of this section affirms and reaffirms the board's total disinterest in water rights—and there are added two provisos which completely nullify all this excellent verbiage and enable the board, on one pretext or another, to condemn any existing water right in any part of the Columbia basin.

Section 13 contains four full pages relating to payments in lieu of taxes to States, counties, and other political subdivisions. This is presumably a concession to the fact that utilities now operating in the region pay an average of 24 percent of their earnings in taxes for the support of our existing form of representative government. Section 13 concludes, however, with this illuminating sentence: "The determination by the administration of the necessity of making any payment under this section and of the amounts thereof shall be final."

Section 6 is a masterly example of the soothing, cold-water approach. It first empowers the three-man board to condemn any real or personal property it needs for its purposes, and then "establish, maintain, and operate research facilities" and "undertake experiments and practical demonstrations."

What does this mean? Viewed through benevolent and perhaps naive glasses, this section may not appear to be dangerous. But it should be remembered that the three-man board will have enormous revenues to be spent at its sole discretion. The bookkeeping, plans, and action will be practically immune to outside control. No member can be removed from the office by the people of the region. Its members may be neither benevolent nor naive. They are not required to have any previous business training or professional background related to any phase of Columbia Basin problems.

UNLIMITED OPPORTUNITY

Suppose, then, that the three-man board happens to have decided ideas relating to the benefits of managed economy and the evils of the profit system. Many of the men prominently mentioned as possible board members do have such ideas. Under section 6 they will have unlimited opportunity to try out their pet theories, since there is no restriction placed upon the type, size, cost, or duration of the research facilities and practical demonstrations. Under either heading the three-man board could engage in any industrial operation it pleased, in competition with existing industries.

Is this too pessimistic a view? Perhaps. Yet the history of democratic government fails to record a single instance where delegated powers have not been used to the limit. And the bill's final paragraph, section 19, anticipates the full use of these delegated powers by erecting a defense around their vague phrasing. For the guidance of the Supreme Court—which has already refused to define the outer limits of discretionary powers delegated in this specific manner—section 19 provides that "this act shall be liberally construed to carry out the purposes of Congress."

What are the purposes of Congress? They are not found in the statements of zealous and sometimes uninformed proponents of a CVA; the sole clues are in the bill itself, set down in black and white. Those purposes merit close reading by every citizen of the Columbia Basin before—not after—the bill is passed.

Chicago Clergymen Here Hail UN Plan

EXTENSION OF REMARKS
OF
HON. CHESTER A. CHESNEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. CHESNEY. Mr. Speaker, under leave to extend my remarks in the RECORD I would like to include the following article which appeared in the Chicago Daily News of May 31, 1949, entitled "Chicago Clergymen Here Hail UN Plan":

CHICAGO CLERGYMEN HERE HAIL UN PLAN

Five prominent Chicago church leaders here went on record Tuesday in support of Trygve Lie's proposal for a 1-minute silent prayer at opening meetings of the United Nations General Assembly.

No spoken prayer has ever been offered at the UN sessions because so many different religions are represented among the 59 member nations.

The Clergymen were unanimously in favor of the silent prayer because, as one put it, "when people are willing to pray together they have taken a long stride down the road to peace."

FIGHTING GESTURE

Some comments:

The Very Reverend Comerford J. O'Malley, president of De Paul University: "Since the UN has for its purpose the bringing about of peaceful relations between the nations of the world, irrespective of their political or religious creeds are subject to God, it is fitting that in their deliberations recognition be given to the presence of God in the affairs of men.

"Without such recognition, it would seem hopeless to arrive at the harmony desired for a lasting and permanent understanding between nations which is the only basis for world peace."

REVERENT CLIMATE

Dr. Charles F. Boss, Jr., executive secretary of the Commission on World Peace of the Methodist Church: "A period of silent prayer preceding the consideration of great international issues would be mentally and spiritually creative. It would help men gain possession of their emotions and thoughts and aid them in acquiring a calm perspective making for better statesmanship. The cultivation of a reverent attitude in UN sessions

UNIVERSITY OF MICHIGAN LIBRARIES

may accomplish more things that the world dreams of."

The Reverend John A. Lampe, pastor of the Presbyterian Church of Rogers Park: "When people are willing to pray together they have taken a long stride down the road to peace. Prayer, even silent prayer, creates the atmosphere of harmony in which men can work together with good will."

MILLIONS TO HAIL IT

Dr. A. G. Merkens, director of education of the northern Illinois district of the Lutheran Church, Missouri synod: "The suggestion will receive the approval of hundreds of millions of persons who have witnessed the ineffectiveness of human devices and plans for world peace and prosperity which leave out God. The silent prayer implies a call unto strife-torn and conflict-ridden nations to know themselves to be but men and to return unto the Lord who once spared repentant Nineveh."

Dr. Louis L. Mann, rabbi of Sinai Temple: "It will bring vision, perspective, and unselfishness to the gathering. Judging by the tone and temper of the sessions, these qualities are greatly and urgently needed."

Admission of Hawaii to the Union as a State Strongly Supported by Kenneth H. Mantel, of Brooklyn, N. Y.

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to present a letter addressed to me under date of May 23, 1949, from Kenneth H. Mantel, of Brooklyn, N. Y., replying to the arguments against statehood for Hawaii set forth in the memorandum submitted by William M. Chadbourne that was recently circulated among Members of Congress.

The letter follows:

BROOKLYN, N. Y., *May 23, 1949.*

Hon. JOSEPH R. FARRINGTON,
House Office Building,
Washington, D. C.

DEAR MR. FARRINGTON: I should like to take this opportunity to answer paragraph by paragraph, a memorandum submitted by Mr. William M. Chadbourne in opposition to statehood for the Territory of Hawaii. The memorandum appears on page A1672 of the CONGRESSIONAL RECORD of March 23d last.

1. The racial organization of the Territories is immaterial—the only important consideration would be that the citizens or residents be unquestionably loyal to this Nation.

2. The population of this Nation is very heterogeneous, being composed of several races and nationalities.

3. The political institutions of the Territories are or could be set up on a similar basis as those prevalent in the States.

4. Come now. Have you forgotten about air travel, telegraph, wireless?

5. There is no need for any change in our great Constitution. Decisions made by a Senator from Hawaii would represent the wishes of 540,500 constituents exactly the same as would a decision by Mr. IVES represent the wishes of 6,700,000 (sic) voters or nearly 15,000,000 constituents.

6. I think that the people of New York, for instance, would be just as prone to accept decisions decided upon by votes of Alaskans or Hawaiians as they would Texans, or New Mexicans.

7. I think this paragraph would be better placed in a memorandum in opposition to communism, rather than in opposition to the Territories.

8. If the progression of this Nation were dependent upon postponements or periods of peace throughout the world then we would probably still be back in 1775. By placing the Territories on an equal footing with the States we would be in a better position to destroy communism if such exists in the Territories.

9. Before I am interested in what is best for the whole world, I am interested in what is best for our possessions and Territories; and before I am interested in what is best for our possession and Territories, I am interested in what is best for the Government and the people of the United States. What you are seeking to do here would be comparable to giving a starving man sterling table service—but no food.

The entire argument presented by the Honorable William M. Chadbourne smacks of inherent selfishness and does not present one honest argument in opposition to admission (and there may be some, indeed).

Yours very respectfully,

KENNETH H. MANTEL.

It's Not Up to President To Compromise in Advance

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes, from the Buffalo Evening News of May 31, 1949:

THOMAS L. STOKES SAYS: "IT'S NOT UP TO PRESIDENT TO COMPROMISE IN ADVANCE"

WASHINGTON, May 31.—A very intriguing new propaganda technique is developing here in connection with the President and Congress.

It points, first, to the slowness with which Congress is moving on the President's program and then blames the failure of Congress to legislate on President Truman's refusal to compromise.

Compromise on what and why?

The President advocated specific legislative proposals in his campaign. When he was elected he presented them to Congress. He stood by his pledges.

Congress has always insisted that it was its job, yea, its prerogative, to write legislation. The trouble just now is that Congress has done a poor writing job, though it has done more than it is given credit for.

Writing of legislation is, itself, a process of compromise in the first instance. Every President accepts that fact. When a President receives a bill from Congress, with its compromises, he decides whether the principles he advocated are compromised too far.

But it is not up to him to compromise in advance. Nobody really expects him to.

As a matter of fact, the Senate passed a housing bill that represented a compromise with administration proposals. Likewise, the House Labor Committee approved a wage-hour bill that was much less than the President asked, and the same compromise process is now going on in the case of social-security expansion in the House Ways and Means Committee. That is a normal process.

The President knows that if Congress does not do its part, the people will blame it. The President is sure that the things he advocates are going to become law sooner or later, whether in this Congress or the next or the one after that, for that's what the people want. His record is clear, and he intends to keep it clear and let the voters decide.

The President is confident, too, that when it comes to fixing the blame in Congress itself, the voters are now discerning enough to recognize that it is no longer a straight party matter, but that it is really a new party that is holding up his program. That is the coalition of Republicans and the southern Dixiecrats whom he has disavowed.

He is certain that the Republican strategy in tying up with the Dixiecrats is just as unwise for the Republican Party as it proved to be for them in the last election. He expects to gain from it.

Republicans are engaged in another familiar piece of strategy now of the type known as diversionary, that is, to distract attention. This is the trumped-up case on David Lilienthal, Chairman of the Atomic Energy Commission, in the attempt to create another Communist scare. Anyone who knows anything of Mr. Lilienthal and his administration of AEC knows it's so flimsy that it will fall of its own weight and probably have a boomerang effect.

An attempt to create a Communist bogey through the Un-American Activities Committee failed in the last election. The voters didn't fall for it.

Roosevelt's Victory Gives Progressives, Labor Lift

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes, from the Buffalo Evening News of May 19, 1949:

THOMAS L. STOKES SAYS: "ROOSEVELT'S VICTORY GIVES PROGRESSIVES, LABOR LIFT"

WASHINGTON, May 19.—Election of FRANKLIN D. ROOSEVELT, JR., as a Member of the House has a lesson for the orthodox, old-line politicians which some of them seem slow to learn.

They might well take notice now before they get punch drunk, for this is the second blow at their legends and traditions in a week. The uprising in New York's Twentieth District, another of a series of jolts to that political shell—and shell game—known as Tammany Hall, followed the downfall of Boss Frank Hague's Jersey City machine that was for so long impregnable.

That this is not just accidental, but is full and clinching proof of a mild revolution in American politics, is shown by the fact that it is the conclusion of a series which, in the last 2 years, also has included the crack-up of the machines of Boss Ed Kelly in Chicago and Boss Ed Crump in Memphis and, before that, of Boss Tom Pendergast in Kansas City.

The day of the machine-delivered vote appears to be passing. The story was told plainly in FRANKLIN D. ROOSEVELT, JR.'s victory. It is just a s simple as this: When you get a candidate with progressive ideas and platform who is willing to work 18 hours a day, and a lot of precinct workers of organized

labor and enthusiastic and alert young people who will ring door bells, organize political meetings, and get out the vote, then it's not too hard to defeat even the apparently most secure political machine.

It is significant of something new, fresh, and hopeful that is happening all over the country in our politics, and it should serve to encourage progressives everywhere.

There was a somewhat similar pattern on a national scale, a mass rally, in last November's election when President Truman was able to win despite weakness and apathy in regular Democratic organizations and open desertions.

Ironically enough, despite that demonstration, the New York congressional election found the national Democratic chairman, Senator J. HOWARD MCGRATH, and by proxy President Truman, playing along with Tammany.

Young FRANKLIN D. ROOSEVELT was, in this election, the stone that the builders rejected. Tammany exhibited the blindness common to long-entrenched machines by refusing to back the FDR heir.

The Roosevelt victory gave a tremendous lift to Progressives here in Congress and to organized labor. This demonstration of vitality among voters on the city streets, the grass roots of our great urban areas, came just at the right time, for it found progressives and labor in a back-to-the-wall fight with an old alliance of convenience here—the southern Democrat-Republican coalition.

Progressivism made some gains in Congress in the last election, but not enough. Progressives leaders recognize now that the fight is not won in one election. The Roosevelt victory encourages them for the same sort of battles they are planning in the congressional elections next year. Both AFL and CIO now have come to look upon the southern Democrat-Republican coalition as a party in itself, outside of traditional party lines, and their campaign to defeat it in the next election will be outside of party lines.

Connecticut Valley Authority

EXTENSION OF REMARKS
OF
HON. ABRAHAM RIBICOFF
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. RIBICOFF. Mr. Speaker, under leave to extend by remarks in the RECORD, I include a resolution adopted by the General Assembly of the State of Connecticut concerning the establishment of a Connecticut Valley Authority, which resolution is as follows:

Resolved by this assembly:

Whereas the tremendous losses to the Connecticut Valley, its environs, and the Nation from floods and pollution and from the failure to develop to the fullest the potentialities of the Connecticut River and its tributaries for power production, city supply, recreational, and other purposes, and the attendant business and industrial losses, are matters of common knowledge; and

Whereas techniques of governmental administration for the multipurpose development of river valleys have now been thoroughly tried and tested in various areas of the country, and with the most conspicuous and enduring success in the Tennessee Valley: Now, therefore, be it

Resolved by this senate, That it urge the Congress of the United States to take measures with the greatest dispatch to establish in the Connecticut Valley a unified planning and development administration like that of the Tennessee Valley Authority adapted as local conditions may require to promote the greatest wealth and prosperity of the region and the Nation; and be it further

Resolved, That a copy of this resolution be transmitted by the secretary of the State of Connecticut, to the President of the United States and to all Senators and Representatives for the State of Connecticut now serving in the National Congress.

Given under my hand and the seal of the State, this second day of May, in the year of our Lord 1949.

CHESTER BOWLES,
Governor.

By His Excellency's command:
WINIFRED MCDONALD,
Secretary.

The Nation Needs a Columbia Valley Administration

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. MITCHELL. Mr. Speaker, the testimony of Secretary of Interior Krug before the Senate Public Works Committee is a forthright and unambiguous statement of the need for a Columbia Valley Administration. Secretary Krug makes it absolutely clear that the existing agreement between the Corps of Engineers and the Bureau of Reclamation regarding Columbia River development is in no sense a substitute plan to the Columbia Valley Administration. I include Secretary Krug's testimony with these remarks.

STATEMENT BY SECRETARY OF THE INTERIOR J. A. KRUG BEFORE THE SENATE PUBLIC WORKS COMMITTEE DURING HEARINGS ON S. 1645, WHICH WOULD ESTABLISH A COLUMBIA VALLEY ADMINISTRATION, JUNE 1, 1949

THE NATION NEEDS A COLUMBIA VALLEY ADMINISTRATION

Mr. Chairman and members of the committee, I am here today to advocate a proposal which would carry out the responsibilities of the Federal Government for development of the resources of the Pacific Northwest in a more effective, a cheaper, and speedier fashion than is now the case. This proposal is embodied in S. 1645 which was introduced in the Senate by Senator MAGNUSON and 16 other Senators. This bill provides for a reorganization of the resource functions now exercised by the Federal Government to secure their more effective administration by establishing a Columbia Valley Administration.

I am appearing here on behalf of the administration at the request of President Truman. He has asked me to take the lead in developing and coordinating the testimony to be presented by the executive branch in support of this bill, which has his endorsement and which was drafted at his request.

I intend to outline for you today the reasons why the enactment of this legislation is urgently needed. By arrangement with the committee, I shall be followed on the stand by other members of the administration who will present additional facts in support of the legislation. Assistant Secretary of the Interior C. Girard Davidson will analyze for you the provisions of S. 1645 and how the Columbia Valley Administration will operate, if established. He will be followed by Under Secretary of the Army Gordon Gray, Secretary of Agriculture Charles F. Brannan, Assistant Secretary of Commerce Thomas C. Blaisdell, Mr. Edward Falck, of the National Security Resources Board, and Bonneville Power Administrator Paul J. Raver, all of whom will discuss the interests of their various agencies in the passage of this bill.

My support of S. 1645 is based upon three major premises which I believe are indisputable:

1. That there is a big job to be done in developing the rich resources of the Pacific Northwest.

2. That the people expect the Federal agencies to play an important part in this job.

3. That to do this part of the job the Federal agencies should be organized as efficiently and democratically as possible.

In the Pacific Northwest is 40 percent of the Nation's hydroelectric potential, but of the region's 33,000,000 kilowatts, only two and seven-tenths million have been developed. The Northwest has 62 percent of the Nation's phosphate deposits but it produces only 8 percent of the Nation's phosphate fertilizer. Its croplands need 200,000 tons of phosphates, much more than they now get. Phosphates are being imported into the region all the way from the Tennessee Valley.

The Pacific Northwest has 25 percent of the Nation's potentially irrigable lands, but of its 8,000,000 acres, only 50 percent of this land now has water on it. The region has 40 percent of the Nation's remaining saw timber, but these forest reserves are shrinking, and more than 6,000,000 acres need to be reforested. Three hundred and seventy miles of inland waters from Portland, Oreg., to Lewiston, Idaho, need to be improved for river navigation. Potentially devastating floodwaters must be brought under control. A great salmon industry, threatened with destruction by dams, must be saved and I am sure a way can be found to do so. Important mineral deposits must be developed with the abundance of low-cost power.

The enormous population growth of the region demands that these potentials be realized. Since 1940 the rate of increase has been approximately three times the rate for the Nation as a whole. Population has increased faster than jobs. Unemployment during the past few years has been roughly twice as great as in the country as a whole.

A power shortage which will probably persist until 1955 has hampered industrial growth. Here is a region with a hydroelectric potential of 30,000,000 kilowatts which must refuse power to new industries which require more than 500 kilowatts. This means lost pay rolls and lost taxable wealth.

Erosion losses from croplands in the Northwest average about 60,000,000 tons annually; from range lands 35,000,000 tons. Almost three-fourths of the nonirrigated croplands are in a serious or critical state of erosion. In the Palouse country of eastern Washington, farmers are losing 1½ tons of topsoil for every bushel of wheat they grow.

That the Federal Government has a large responsibility in helping to conserve and develop the reosurces of the Pacific Northwest is unquestioned. Our functions in flood control, hydroelectric power development, navigation, irrigation, management of the public range and forest lands, fish and wildlife conservation, and other resource development tasks are accepted. In fact, private investment in the industry and agriculture of the region is dependent on the dams, power plants, irrigation facilities, and other services which the Federal Government provides. Federal outlays for these purposes are investments which increase the store of capital wealth for both the region and the Nation.

Rapid realization of the potential riches of the Columbia Basin has vital national significance. Atomic energy plants in the region were threatened by last winter's power shortage. Aluminum plants in the region,

UNIVERSITY OF MICHIGAN LIBRARIES

essential to the Nation's air strength, suffered actual curtailments of production as a result of the power shortage and are unable to expand to meet unfilled demand. In addition, we are at this time extremely conscious of the fact that prosperity of this Nation as well as of the world requires development of undeveloped areas here as well as abroad.

This brings us to the heart of the issue before this committee and the Congress: Is a Columbia Valley Administration a more efficient and more democratic administrative plan than the existing pattern of Federal agencies?

On the Columbia River and its tributaries there are three major agencies presently concerned with water-control functions. The United States Army Corps of Engineers builds dams and other works primarily for the purposes of navigation, flood control, and associated power development. The Bureau of Reclamation in the Department of the Interior likewise builds dams and other works, but for the primary purpose of irrigation and related power development. The Bonneville Power Administration, also in the Department of the Interior, is responsible for marketing the power from projects constructed by these two other agencies.

Many other Federal agencies play important parts in the development of river resources. Much of the hydrologic data necessary for planning river-control structures is assembled by the Weather Bureau in the Department of Commerce and the Geological Survey in the Department of the Interior. The latter agency also is responsible for topographic and geologic data necessary for almost every kind of land and water development. The Fish and Wildlife Service in the Department of the Interior is concerned with the protection of fish in the rivers where the dams are being built. The Public Health Service in the Federal Security Agency is concerned with controlling pollution of the rivers. The National Park Service in the Department of the Interior is concerned with recreation aspects of dam and reservoir construction. The Federal Power Commission is responsible for approving power rates and determining power costs on some of the dams constructed by other agencies. The Bureau of Indian Affairs in the Department of the Interior is concerned with the development of Indian-owned resources, and their protection in areas affected by dams.

On the land, the Bureau of Land Management in the Department of the Interior shares with the Soil Conservation Service in the Department of Agriculture the responsibility for assisting in the prevention of soil erosion which augments floods, pollutes rivers, and silts reservoirs. The Bureau of Land Management, along with the Forest Service in the Department of Agriculture, administers vast areas of public forest land, which, besides providing forest cover for flood protection, also play a large part in the economy of the area. Public range lands located in upstream watersheds where floods begin likewise come under the jurisdiction of the Bureau of Land Management. The Bureau of Mines, the Bureau of Land Management, and the Geological Survey aid in the development of the mineral wealth of the region.

With the exception of the Bonneville Power Administration, none of these agencies is headquartered in the Pacific Northwest. Therefore, major decisions relating to their activities, almost without exception, are made in Washington, D. C. I am not familiar, of course, with the extent of delegation of authority in each of the many agencies. But I can cite for you the example of the Bureau of Reclamation which is so organized that each of the following major policy questions is decided by an office located outside of the Pacific Northwest: Recommendations to Congress for new projects; requests to the Bureau of the Budget and Congress for appropriations; design of dams; design of generators; and schedule of generator installations. It is fair to assume, I think, that a similar situation exists in most of the other Federal agencies.

This by no means completely catalogs all of the Federal agencies concerned with water and land resources development in the Pacific Northwest, but it demonstrates beyond doubt, I believe, that the planning, budgeting, and operation of these agencies must be integrated. Hydroelectric development, flood control, navigation improvements, reclamation, soil-erosion control, reforestation, surveys, and mapping cannot be separated. They are all parts of one job.

With so many Federal agencies responsible for pieces of the total job, and with diverse Federal laws governing their activities, there is no unified approach to the planning, programing, and budgeting of the resource-development job for the Northwest. For example, there are no uniform statutory criteria by which the feasibility of Army-built and Bureau of Reclamation-built dams can be measured. When these agencies submit their project plans to the Congress, their proposals are referred to different committees. Proposals of the Corps of Engineers are referred to the House and Senate Public Works Committees. Most of the agencies of the Department of the Interior report to the Interior and Insular Affairs Committee of the Senate and Public Lands Committee of the House. Agencies of the Department of Agriculture go to the Agriculture and Forestry Committee of the Senate and the Agriculture Committee of the House. Under this arrangement, no single committee of Congress can see the total plan for the Columbia River Basin.

Similarly, no coordinated budget for the Pacific Northwest is presented to the President and the Congress. Each agency in the region prepares its budget to conform with specific functional policies of its respective head office in Washington. In some cases, agency programs and budgets are prepared initially at the national level, with regional requirements given only secondary consideration. The structure of agency appropriation items upon which action is taken by the President and Congress serves to conceal regional aspects. Most appropriation items cover a single Nation-wide program, and often the supporting detail and justification material do not provide the necessary regional break-down. The effect is to throw the entire burden of regional coordination on the President, the Bureau of the Budget, and Congress, where the job cannot be done nearly so well as in the region. The Congress, therefore, does not have any over-all regional program and budget available to it as a guide in its consideration of annual appropriations. The requests for appropriations for parts of the total job are referred to a number of different subcommittees of the Appropriations Committees. No one subcommittee has the complete program before it. All are concerned with only a special aspect of the total budget for the region.

What are the results of this system of divided authority and divided responsibility? The first result is duplication at the taxpayers' expense. Before the Corps of Engineers and the Bureau of Reclamation came to an agreement as to which dams should be built on the Columbia, each prepared voluminous reports dealing with the total length of the river and its tributaries. Competition between the Corps and the Bureau for the privilege of constructing and operating dams has been keen. Hells Canyon was disputed, so also were Lucky Peak and Chief Joseph Dams.

Another result of the present system is that no unified comprehensive program for the region exists. Neither the Bureau of the Budget, the President, nor the Members of Congress are able to know the effect of their decisions on the region. Immeasurably large amounts of money have been spent on river-control structures as compared with related basin-development activities. For example, there is absolutely no assurance that the upstream flood-control program of the Department of Agriculture is in balance with the downstream flood-control program of the Corps of Engineers. There is every indication, in fact, that the two programs are out of balance. Thus the estimate of the Columbia Basin Interagency Committee is that more than $100,000,000 will be needed for the Forest Service in the Pacific Northwest each year during the next 6 years. Yet the appropriation to the Forest Service apportioned to that region in 1949 was only $23,500,000. Similarly, the program for the protection of the fisheries has not kept pace with the construction of the dams. At the present rate, the program will take not 10 but 20 years to complete. To say the least, this is not promising for the future of the salmon-fishing industry. The Hoover Commission has emphasized that basic hydrologic, geologic, and topographic information is necessary for the construction of such huge works. Appropriations for the preparation of these data, however, are far behind schedule. It is estimated that about $20,000,000 will be needed in the next 6 years for the collection of this basic information. At the present rate of appropriations, it will take 60 years to complete the topographic mapping of the region and 60 years for the necessary cadastral surveys.

To take another example, the Bureau of Land Management is seeking to restore 7,800,000 acres of denuded range lands which represent a flood menace. This job, however, would take 25 years to accomplish, even if the agency were given sufficient funds to move 20 times faster than the present rate.

A third result of the existing system is confusion in operating responsibility. Although there are now only two Federal dams operating in the Columbia, and both of them as yet are operated almost exclusively for power production, there is inescapable conflict among three agencies on releasing water from these dams. It took a number of weeks and numerous letters, telephone calls, and meetings to decide upon the release of water from Grand Coulee this spring to diminish the flood danger. If this can happen with only two dams operating, one can envision the chaos which will result when there are a dozen or more dams on the river, unless we have a single water master on the main stem of the Columbia who can switch the flow to navigation, irrigation, and power production as one switchyard master bosses the movement of all trains in a railroad terminal.

The design of generators to be installed in the Army-built McNary Dam was a matter of controversy between the Bonneville Power Administration, the Army engineers, and the Federal Power Commission for a year and a half. The Bonneville Power Administration, which is to market the power from the dam, asked the Army to order generators of low reactance. Such generators would cost $3,000,000 more than generators of high reactance, but the low-reactance generators would make it possible to transmit the power produced at McNary Dam with one less circuit on the Bonneville transmission system. The cost of such a circuit was estimated to be $10,000,000 so that the net saving from using the low-reactance generators would be about $7,000,000. The Corps of Engineers which was not directly concerned with transmission problems preferred the higher reactance installation. The Federal Power Commission was interested because of its responsibility for the design of generators at Army-built dams. After 18 months of three-cornered negotiations and correspondence, extending from April 1947 to October 1948, the matter was finally settled, not in the Pacific Northwest, but in Washington, D. C.

Because of the problems raised by duplication, lack of a unified balanced program, and confused operating responsibility, the major agencies have established the Columbia Basin Interagency Committee. This committee has labored under difficulties. It has served mainly as a medium for exchange of information. Discussions of problems do not necessarily lead to conclusions and recommendations. The committee has not, as a committee, undertaken coordination of budget requests. Since each agency retains absolute power in its own sphere, unanimous consent is necessary for action. In any event, the committee cannot exercise authority. As a result, it has not been able to settle interagency disputes. The only voluntarily coordinated program which it promoted, the lower Columbia River fisheries program, is threatened with failure because of inadequate appropriations. With no staff, no funds, no authority, and no continuity in leadership, the committee has been unable to follow up even those programs voluntarily agreed upon.

This committee has heard considerable testimony about the plans of the Corps of Engineers and the Bureau of Reclamation, and the agreement signed on April 11 by former Secretary of the Army Royall, General Pick, Commissioner Straus, and myself. For some reason, there has been a certain amount of misunderstanding that this agreement represented a substitute plan to the CVA. Nothing could be further from the truth. Let's take a look at the facts.

In June of 1948, after the disastrous Columbia River floods, and again in September of 1948, the President asked the Department of the Army and the Department of the Interior to try to reconcile the reports which each has made for development of the Columbia River. In addition to the jurisdictional conflicts over dam construction, which I have already mentioned, the two Departments had not been able to agree on the use of power revenues for supporting irrigation projects and other issues.

In accordance with the President's wishes, the two Departments completed their overall plans and reached an agreement reconciling the two reports on some but not all issues. This agreement was submitted to the President on April 11. The President has not yet approved the agreement. He has, however, taken a strong position that the Army-Interior agreement is no substitute for a Columbia Valley Administration. In his letter to me of April 18, 1949, he stated, and I quote, "When this plan is fully developed it should provide an inventory of projects and a most useful basis for the operations of a Columbia Valley Administration which I have recommended to the Congress, and which I hope will be authorized at an early date." The reports of the Army and the Bureau of Reclamation and the agreement present an engineering and development plan for the river, but do not present an adequate administrative method of carrying out the plan. The CVA is a rational common-sense method of using the plans developed by the Army and the Bureau of Reclamation as a basis for carrying on the development of the region. Appropriate modifications and adjustments would be made by CVA, of course, as dictated by experience.

The Army-Bureau plans and their agreement were without question a great step forward. To urge, however, that these plans of the Department of the Interior and the Department of the Army, and the agreement reconciling those plans, are a substitute or alternative for a Columbia Valley Administration is to misunderstand the nature of the reports and the agreement. Both the Department of the Army and the Department of the Interior pointed out that their plans, and I quote, "provide an inventory and framework which would be extremely valuable for the proposed Columbia Valley Administration recommended by the President." In this sense, the agreement between the engineers and Reclamation would serve the same purpose as would the engineers' 308 Report on the Tennessee River. It will be recalled that the original Army 308 studies on the Tennessee River were essential in the development of the river-control plan adopted by the Tennessee Valley Authority.

There are certain essential things that the Army-Interior agreement does not or cannot provide. First of all, the agreement does not cover the full Federal responsibilities for development in the region and, therefore, is not a single unified plan. Plans for forest management, land treatment, protection and propagation of fish and wildlife, recreation development, and meeting the needs and rights of Indians have not been prepared except for the one relating to salmon fisheries in the lower Columbia tributaries. The agreement provides no method for preparing these plans other than by the several agencies concerned with those special problems. It does not place anywhere the single responsibility of working with the various agencies to obtain an interrelated unified plan. Second, the agreement does not provide for a single agency to design or construct all of the dams in the basin. Unavoidably there will be duplication in maintaining two engineering staffs to do this single job. There is always the possibility that, working separately, the engineers of the two agencies will not consider in their designs of single dams the relationships to the other dams in the system. Third, the agreement does not provide for a single operating plan for the river. We have noted the difficulty already existing in operating two dams. These difficulties are likely to increase with the number of dams to be built unless and until a single water master is designated who will have the authority to control the flow of water on the main stem of the river. Fourth, the agreement does not provide for decentralized administration. Major decisions still will be made in Washington.

Finally, by its very nature, the agreement cannot provide for changes in plans and programs to meet changing requirements through the years. It is an agreement of the moment. It also cannot provide for a single agency to prepare a construction schedule containing the order in which dams are to be built.

Having described how Federal functions in resources development are carried out under the present system, I shall outline briefly how these same functions would be carried out under the reorganization of Federal activities proposed in S. 1645. I will not go into detail, since Assistant Secretary Davidson will follow me with an analysis of the bill and how it will work. However, I do want to mention several major points.

The CVA bill is a vastly improved mechanism for administering Federal resources-development activities in the region. It provides for the unified treatment of the related resources of the region. To accomplish this, it takes the existing Federal powers to the region and provides the people of the region with every opportunity to participate in their exercise.

In carrying out its responsibility the first job of the CVA will be to prepare a panoramic lay-out for the present activities of Federal resource agencies in the region. In so doing, it will cooperate with each agency and group in the region—Federal, State, and local—to make its contributions and to give it suggestions. The existing plans of the Corps of Engineers and the Bureau of Reclamation will, of course, be drawn upon. The final result, however, will be a prospectus for the Pacific Northwest which will not be compromised by sensitivity toward the jurisdictional pretensions of the various bureaus. It is against this prospectus that the President and the Congress will evaluate the fiscal requirements of the Northwest development program.

The second large responsibility of the CVA is the requirement that it provide annually to the President an increment of the over-all design of things to be accomplished for resource development. Included in this annual statement will be the budget for the activities of the CVA itself which will cover all the river control and related works now being carried out by the Corps of Engineers, the Bureau of Reclamation, and the Bonneville Power Administration instead of three separate budgets, as at present. Inasmuch as only these three agencies are to be absorbed into the CVA, the other agencies will continue to submit their separate budget requests. The President and the Congress, however, will be able to relate these budget requests to the over-all program statement supplied by the CVA.

In this way better decisions can be made concerning the relationship between what the Northwest needs and what the Nation needs, as well as between parts of the job to be done in the Northwest itself.

By absorbing the three agencies mentioned, the CVA would take over complete responsibility for design, engineering, construction, and operation of the major river-development works, the associated water and irrigation facilities, and the major power transmission network. This concept appeals to me as an administrator, as I know it must appeal to you and to the taxpayers who are interested in efficient, responsive government. In this way the single agency, working on the river, could squeeze out the maximum benefits for flood control, navigation, power, irrigation, water supply, fish and wildlife conservation, recreation and public health. The entire water job from plan to marketing would be unified and the present protracted negotiations between agencies, which frequently result in compromises rather than objective solutions, will be ended. Uniform methods of rate fixing, allocation of costs, accounting, and other procedures will be established. Busy officials can turn from endless coordinating sessions to the main task of bringing the benefits of the major capital developments to the people of the region.

As important as any other part of the CVA bill are the strong home-rule provisions. With headquarters in the region, and with two of its three directors being bona fide residents of the region, the CVA will be responsive to what the people of the Northwest want. Through a system of advisory boards and councils not only the State governments but also the local governments and the local people will be able to make their views count in the development of their region from the earliest planning stages through the operation of projects. Congress, too, will know what the people are thinking because these boards and councils will have the right to include their comments in the annual report of the Administration.

As all of you know the Department of the Interior will lose control of one of its major bureaus, the Bonneville Power Administration, and the Pacific Northwest functions of another major bureau, the Bureau of Reclamation, if the CVA bill is enacted. As Secretary of the Interior, I state without hesitation that I should be glad to see these units transferred from the Department of the Interior to a CVA, because I think they will be more effective and of more value to the people of the Columbia Basin States as parts of an integrated, regional, at-home administration. With a century of experience in western development, the Interior Department is convinced that the Columbia Valley Administration is the best possible machinery for carrying out the existing responsibilities of the Federal Government for maximum development and wise use of the resources of the Columbia Basin.

UNIVERSITY OF MICHIGAN LIBRARIES

World Peace

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following open letter to the President and the Congress of the United States:

OPEN LETTER TO THE PRESIDENT AND THE CONGRESS OF THE UNITED STATES

Because we believe that the deep desire of all mankind for a world at peace can be realized and that failure to do so may destroy civilization, we address this open letter to the administration and the Eighty-first Congress.

Peace depends upon an understanding between the United States of America and the Union of Soviet Socialist Republics.

The people of both nations want peace. Yet millions of American citizens believe that the Russian Government wants to impose Russian communism upon the nations of the world. At the same, millions of Russian citizens believe that the American Government is driving toward world domination by American capitalism.

These fears have led to acts by both nations which have deepened the division between them and generated further fear and hostility. As a result, we are today burdened with expenditures of a military nature that consume more than half of our budget. Support for questionable regimes in various parts of the world is costing us hundreds of millions of dollars and the friendship of liberty-loving peoples. War preparations are making it impossible to achieve the program of domestic reform, for which the American people voted, and are jeopardizing our political democracy.

If the present pattern of measures and countermeasures by our country and Russia persists, it can lead only to a war which neither nation can win and in which mankind may be destroyed.

Yet a further step is now being prepared in the form of a North Atlantic military alliance, to be followed by a huge and costly program of arming western Europe for war.

This step will not only retard recovery in western Europe, it will irrevocably commit us to a fatal two-world policy. It and the countermeasures it provokes will widen the split in the world between two armed camps, increase conflict in every part of the globe, and intensify an arms race that will impoverish all people and may end only in a war of extinction.

Therefore, we urge the Congress to reject the proposal for a North Atlantic military alliance.

There is a constructive and honorable alternative.

We are deeply convinced that capitalism and communism not only can but must live together in the same peaceful world. No dispute between the United States and Russia need be resolved by force, and there are no differences between them which in time cannot be settled by peaceful negotiations. We are of the opinion that all of the possibilities for such negotiations have never been fully explored.

We urge that the President, through a special emissary to the Soviet Union, prepare the way for a meeting between the highest ranking authorities of the two governments. Issues now outstanding between the two countries should be thoroughly discussed and an atmosphere of mutual confidence established in anticipation of multilateral discussions at which final settlements could be achieved.

This will prepare the way for peace treaties with Germany and Japan. It should provide for the resumption of trade between east and west. There should be firm commitments against interference in the affairs of other nations and the principle established that aid to the needy peoples of the world be administered through the United Nations. It should lead to a sufficient measure of confidence between east and west as to make possible a general reduction in armaments.

If war comes, a settlement between impoverished, devastated nations must be made after the war—if any survive to make the treaty. Let discussions be held now, before war becomes inevitable.

The new Congress and the administration have a unique opportunity, in Lincoln's words, to "nobly save or meanly lose the last best hope of earth." We petition for the discharge of this responsibility in a spirit worthy of our past and creative of our future—to the end that all mankind may be freed from the threat of total war and total death and may face the days to come with confidence in enduring peace and in a better life for all.

Bishop JAMES C. BAKER,
Methodist Church.
CLARENCE E. PICKETT,
American Friends Service Committee.

Control Is the Aim

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. SHAFER. Mr. Speaker, the Wall Street Journal in its May 26 issue carried an editorial which I think should be of interest to every Member of Congress. Under permission to extend my remarks I include this editorial:

CONTROL IS THE AIM

On Tuesday last we suggested in this space that whatever is forthcoming, inflation or deflation, there would be powerful demands for Government controls over the economy.

Our point was that there is a political group in Washington to whom control by Government is the be-all and end-all and that they are capable of demanding it as a cure for inflation or for deflation, reflation or any other kind of flation.

We did not expect our little prophecy to be fulfilled with such startling suddenness.

In a Chicago speech Tuesday night Mr. Leon Keyserling, of the Council of Economic Advisers, offered a packaged prosperity plan designed as an antideflation measure. The package, when unwrapped, contains almost the same plan offered us a bare 4 months ago as an anti-inflation cure.

In Washington the so-called liberal wing of the administration (including Mr. Keyserling among others) has drafted a bill which they contend would combat depression and stabilize the United States economy at a high level. This bill, as summarized yesterday in Mr. Haller's dispatch, turns out to be the twin of the Spence inflation-curbing bill which is already in the congressional hopper.

It is difficult for the parents, much more so for strangers, to tell one twin from the other.

The Spence bill, for instance, would authorize the Federal Government to set up shop as a manufacturer of basic commodities, such as steel, whenever the bureaucrats thought it necessary. This provision was urged on us because of the alleged awful shortage of industrial capacity; the Government was going to increase capacity to alleviate shortages and combat inflation.

The Spence bill got shelved because before its ink was dry industrial capacity did not seem so short and the course of events seemed to be working its own way with the inflation. One might have thought that the planners would be a bit abashed at being so out of joint with the times.

But the planners are never abashed. Their real concern is neither with inflation nor deflation. Their goal is to get economic power for Government, and consequently one flation is as good as another if it will serve as a plausible argument for control.

So the new bill would likewise authorize the Government to go into the business of making steel and other basic commodities. Only this time its announced purpose is not to provide new capacity and fight inflation; it is to provide more jobs and to lift our economy ever upward.

Past mistakes deter these planners not in the least. It is no use to remind them that when they had controls at the war's end they planned against a feared deflation and nearly wrecked us with inflation; nor that after inflation had passed its peak they were still planning against it and, if they had had their way, would have spun us into real depression. What is past is past, they say, and now we are confronted with a new emergency.

There is, by the way, an ominous note in this talk of the new emergency. One legislator remarked that it would take a full-scale depression to get Congress "scared enough" to vote the new controls. Another sponsor said he would expect action if the "pressure on business" continues downward. Perhaps this explains the hint of satisfaction in the depression warnings that come now with regularity from the administration's experts. If controls are desirable and if a depression will get them, well then.

It should be clear by now to what end these planners plan. That end is the lodgment in Government of complete economic controls, and to that end any argument can be turned wrong-side-out.

State Department Holds That Statehood for Hawaii Would Serve To Support American Foreign Policy and Strengthen the Position of United States in International Affairs

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter addressed to me by the Honorable James E. Webb, Acting Secretary of State.

The letter follows:

DEPARTMENT OF STATE,
Washington, May 24, 1949.

MY DEAR MR. FARRINGTON: In your letter of May 3, 1949, you request an expression of the Department's views as to the importance from the standpoint of the foreign policy of the United States and the obligations assumed by the United States under chapter XI of the Charter of the United Nations of immediate enactment by the Congress of legislation enabling Hawaii to become a State. The Senate Committee on Interior and Insular Affairs has requested the Department

to comment on the legislation and such a report is being prepared.

In the meantime I am glad to tell you that the Department of State sees no reason, from the standpoint of the foreign policy of the United States and the international obligations assumed by this Government under the Charter of the United Nations, for interposing any objection to the enactment of legislation to enable the people of Hawaii, who have repeatedly demonstrated their desire for statehood, to form a constitution and State government and to be admitted into the Union on an equal footing with the original States.

On the contrary, such action by the Congress would be in conformity with the traditional policy of the United States toward those peoples who have not yet become fully self-governing and would be an act in fulfillment of the declaration regarding non-self-governing territories set out in chapter XI of the Charter of the United Nations. In its historic policy and in accepting this declaration the United States has recognized its obligation to take due account of the political aspirations of the peoples of the territories under its administration and to promote their political advancement.

Action by the Congress enabling the people of Hawaii to fulfill their expressed aspiration for statehood would, in the view of the Department of State, serve to support American foreign policy and strengthen the position of the United States in international affairs.

Sincerely yours,

JAMES E. WEBB,
Acting Secretary.

Washington Machinists Go All Out for CVA

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. MITCHELL. Mr. Speaker, the Washington Machinists Council has joined with other great labor organizations in the State of Washington to actively support CVA legislation. I include with these remarks an article in the May 12 issue of Aero Mechanic, official publication of Lodge 751, International Association of Machinists, which contains the CVA resolution of the Washington Machinists Council, of which Harold J. Gibson is president:

WASHINGTON MACHINISTS PLACE FULL WEIGHT BEHIND CVA BILL

The weight of the strong Washington Machinists Council is officially and fully behind the move to obtain a Columbia Valley Authority for the Pacific Northwest.

The machinist council, meeting Saturday at Grand Coulee Dam, adopted a resolution calling upon Congress to enact the CVA program proposed by President Truman so that the Northwest can be developed and increased and jobs provided for its people.

The council session was presided over by Harold J. Gibson, Aero Mechanics Union president, who also is president of the Washington Machinists Council. Delegates in attendance were from machinists' lodges throughout the State.

Besides passing the resolution supporting the CVA, the council also took action to become one of the sponsors of the project, and a committee was named to work with other union agencies and groups to see that the CVA becomes a reality. On this committee are Gibson J. A. Penn, Local 1152; George O. Gibblett, Local 282; and J. J. Barin, of Local 1201.

The text of the resolution on the CVA is as follows:

"Whereas crippling power shortages, floods, the loss of 100,000,000 tons of our precious topsoil every year through erosion, and unemployment three times the national average are continuing to plague the Pacific Northwest; and

"Whereas the immediate development of our rich natural resources will mean increased and continued employment for the Pacific Northwest; and

"Whereas the existing Federal agencies have not been given the means to do the job of developing natural resources of the Northwest as pointed out by the nonpartisan Hoover Commission; and

"Whereas selfish interests still persist in attempts to block the development of the Northwest; and

"Whereas future welfare of every person demands the immediate development of these resources: Therefore be it

"*Resolved*, That we, the delegates to the Washington Machinists Council in session May 7 at Coulee Dam, hereby recommend to the Congress the immediate enactment of the CVA proposed by the President."

The Housing Bill

REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. MULTER. Mr. Speaker, it has been a strange coincidence that each year the organizations which make up the real-estate lobby find reason, on short notice, to call important meetings which require the presence in Washington of a considerable number of members about the time basic housing legislation is ready to come to the floor of this House. There has been no change in this pattern this year as the House prepares to take up H. R. 4009, the Housing Act of 1949.

This past week about 150 directors of the National Association of Home Builders met in Washington, in accordance with the announcement contained in the association's Washington Letter dated May 12. Presumably there were matters of great importance to the organization and its members to take up at this meeting, but I am certain that the primary business was stated in the May 20 Washington Letter as follows:

Fortunately, the spring meeting of your national board of directors is about to start so that the private home builders' position on housing will be given to Members of Congress by nearly 150 of your directors.

This organization gives as an excuse for this assemblage that the so-called public housers had a big meeting the previous week in Washington. It does not mention that the date for the 2-day public-housing conference, like the dates of all its annual meetings, was set months ago, when no one could forecast the legislative calendar.

These 5-day meetings of the home builders are only one phase of the high-pressure propaganda campaign being staged right now, as in previous years, under the direction of the paid lobbyists in Washington. These lobbyists have written the literature which has been handed or sent to Members of Congress. They have prompted the stock arguments which have been parroted time and time again in letters, telegrams, and personal interviews. I am certain that an examination of your files will reveal the same old arguments in the same old kind of a campaign that has been staged every time this legislation has come up for consideration.

This is a campaign, I regret to say, that is based not on the facts themselves, but on a distortion and misrepresentation of the facts. I would like to remind the House that during the last 5 years congressional committees have had many opportunities to review the real facts which demand this legislation. Every time they have reached the conclusion that the provisions now contained in H. R. 4009 are most urgently needed if we are to solve the most dire housing problems, particularly of low-income families. Your Banking and Currency Committee on two occasions, and the Joint Committee on Housing of the Eightieth Congress, reached that conclusion. The Senate has passed the substance of this legislation on three different occasions.

Mr. Speaker, I do not say that all those who, at the instance of the Washington lobby, are writing or wiring their Congressmen against this legislation are guilty of deliberate misrepresentation, I do say they have been fed the same kind of propaganda by these paid lobbyists. Let me cite you just one example. In the April 18 issue of Headlines, the publication of the National Association of Real Estate Boards, two paragraphs were devoted to testimony of a representative of the American Legion before our committee on H. R. 4009. This publication which, according to the masthead, is "devoted to news and developments of significance to the real-estate profession and allied interests," found the only newsworthy part of the Legion testimony to be its disagreement in detail as to the operation of the slum-clearance program proposed in H. R. 4009. This lobby-controlled publication did not find newsworthy the fact that the American Legion testified in general support of this legislation, including slum clearance and public housing. I do not wonder that the members of this association and of other organizations which depend on the real-estate lobby for information ofttimes miss the true facts.

This lobby has not hesitated to stoop to heap abuse upon those who vote for and support this legislation. In an editorial in the May 16 issue of the same Headlines, which appeared over the signature of Herb Nelson, they say:

The Senate version of the bill was sponsored by 11 Republicans and 11 Democrats and has not, therefore, even the excuse of partisan advantage. It is political racketeering by power-hungry politicians who hope to pick up or control votes here and there.

I am sure you have never read anything so contemptuous of the 75 Members

UNIVERSITY OF MICHIGAN LIBRARIES

of the Senate, Democrats and Republicans, who voted for or were paired or announced for S. 1070 or of the Members of this House who are going to vote for H. R. 4009. Never have we experienced so contemptuous a regard for the motives of our governors, mayors, and other local officials throughout the country, of all the major veterans' and labor organizations, of the church groups—Catholic, Protestant, and Jewish—of the women's organizations and of all others who have supported and worked for this legislation.

I find it hard to believe that realtors throughout the country subscribe to this expression of contempt but there it is, in black and white, in their official publication over the signature of the man who has been their principal paid executive for as long as most of us have known anything about the organization.

Mr. Speaker, I know that there are Members of this House who will conscientiously vote against this legislation, after a full consideration of the facts. But I hope that no Member will be swayed by the misrepresentations and distortions which stem from a source so utterly contemptuous of the motives of the Members of the Congress, of conscientious public officials, and of citizens throughout the country who sincerely feel that H. R. 4009 offers the best solution to the disgraceful housing conditions of several million American families.

Aid to Education

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Detroit Free Press:

THE STATES' OBLIGATIONS—EDUCATION

The United States Senate recently passed and sent to the House a bill appropriating $300,000,000 to aid the States to support their public-school systems.

The measure has long been advocated. Similar bills in the past have died in the House. The fate of this one is not known.

The Federal aid-to-education bill has much to be said in its favor—and much that honestly can be said against it. In one way it is not unlike the administration's socialized-medicine bill, although it does not go nearly so far.

The chief basis for comparison is that no one will seriously object to the ultimate goal the education bill seeks to attain. But there is, legitimately, a wide difference of opinion whether the means to obtain that end are in the best interests of the Nation.

Already the education bill has been branded socialistic. But in answer to this, the measure's proponents—not all of whom are by any means Socialists—point to the dire plight of the Nation's school systems and the urgent need to establish proper educational standards for all children.

The bill allots the money to the States on a formula basis which is the chief bone of contention. But after the money is distributed, the States handle it without further strings attached. To that extent, there is not much soundness to the cry of socialism.

But the afore-mentioned formula is something else. The money would be given to the States on the basis of need. The rich States would contribute for more than they will receive back. The poverty-stricken States, mostly in the South, would benefit out of all proportion to what they contribute.

Michigan, for example, will pay about $11,000,000 in taxes toward the $300,000,000 fund, but its share in the distribution will be only an estimated $6,750,000.

On the basis of this formula, it would appear that those States which already are doing the most to maintain educational standards, would be penalized for their sacrifices and efforts.

Not only would the people of Michigan have to continue to support their own schools, but the taxpayers of this State would have to contribute an additional $5,000,000 to help support the public schools of Georgia. The formula would give Georgia $8,358,000 for its contribution of $3,585,000.

The Michigan taxpayer, aware of the constantly growing demand upon him to maintain his own schools, which certainly are not wallowing in wealth, can be expected reasonably to ask why we of this State should send $5,000,000 to Georgia. That amount of money would help to balance our own needs.

Of course, this money is Federal money, derived from the income and other taxes which Washington puts on us.

Nevertheless, no matter who draws the taxes, Federal, State, or local government, they come out of the pockets of the people.

The question then is, Can the States which pay more than their own way continue indefinitely to support their weaker sisters without a deterioration of the services which they render to their own people?

Another question: Are the poorer States really so poor, and are they doing all they can?

The answers must largely determine whether such legislation as the Federal education bill is really justified.

There is another aspect of the matter. That is the trend toward federalization, substantially helped along by this type of bill.

Are the sovereign States to surrender their sovereignty and let the Federal Government do their thinking—and spending—for them?

On the other hand, we all know that times have changed, that State borders mean less than they did once. Illiteracy in Mississippi may have a costly effect upon Michigan. It may be, that under present-day circumstances, the national interest is primarily the interest of the States.

The dilemma is one to trouble the most ardent partisan.

Why Democracy Works

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. KEATING. Mr. Speaker, the Benevolent Protective Order of Elks is conducting a national contest among the secondary-school young people of the Nation to select the author of the best essay on the subject Why Democracy Works.

Through the courtesy of Edward W. Walsh, the exalted ruler; Frank M. Miller, secretary, and Edward I. Cristy, prominent attorney and chairman of the awards committee of the Rochester, N. Y., Lodge, No. 24, I have been furnished with the four winning essays in the contest in which the young people of the public, private, and parochial schools in Rochester and vicinity participated.

The awards were made as follows: First, Kay Curran, senior at Nazareth Academy; second, Arnold Goldman, Monroe High School senior; third, Madeline Panepinto, Livonia High School junior, and fourth, Gerald De Coursey, junior at the Rochester School for the Deaf.

The fine content of these essays and the alert patriotism and high devotion to the ideals of democracy which they evidence merit their inclusion in the CONGRESSIONAL RECORD.

I know I voice the sentiments of my colleagues when I extend congratulations to these young people and also to the officers and my brothers in the Rochester Lodge of Elks for their praiseworthy activity in promoting the dissemination, particularly among our young people, of a true conception of the blessings enjoyed under our democratic system.

WHY DEMOCRACY WORKS

(By Kay Curran, Rochester, N. Y., Nazareth Academy)

Democracy is a huge factory of freedom. From its smokestack curls the invigorating air we breathe—liberty; from its assembly line come products necessary for life—the Constitution, Bill of Rights, United Nations Charter. But first and foremost come the stockholders and employees who make it work—the American people.

Stockholder Thomas Jefferson requested equality for all men. Noteworthy among those who worked for that equality is Jackie Robinson, the first Negro to be accepted as a big-league ballplayer. Stockholder Peter Zenger fought with a mighty pen for a free press. As an employee of Democracy, Inc., Horace Greeley used this freedom in editing the New York Tribune. Our founding fathers invested stock which still pays dividens today—a living constitution.

Like all other factories, Democracy, Inc., has had its ups and downs. Take, for example, the strike of 1861. Some of the employees were dissatisfied and decided to set up their own factory, the Confederacy. Ably did President Lincoln guide the men back to work under one flag, that of the Union. In addition, Mr. Lincoln gave both the North and the South a new coworker, the Negro.

The personnel director of Democracy, Inc., could name countless others who make democracy work. People like Harry Truman, the little man with the "fair deal" or Jesse M. Donaldson, who worked his way up from letter carrier to Postmaster General. Perhaps the personnel director would smilingly admit that women were "O. K." when he mentioned Clara Barton or Ingrid Bergman.

To its stockholders this corporation of democracy pays dividends. World War II veterans invested with sweat, blood, and yes, even death. Democracy, Inc., paid them with more than silver stars and purple hearts. It helped the veteran to further his education under the GI bill; it built homes for the ex-soldier and his family; it remembered the sailor who gave his life by giving insurance shares to his family.

Behind the gigantic wheels of our machinery are the moms and dads of America. Dad is the man with the lunch box tucked under his arm and mom is the one who fills it with ham sandwiches and chocolate-chip cookies. Dad buys socks for the family and mom

mends them. Dad builds the house and mom makes it a home.

But how does our democracy factory compare with totalitarian competitors? Little Susie can fall asleep without hearing a Gestapo soldier pacing to and fro; Johnny can have a sandwich and a glass of milk instead of a stale crust and a sip of Russian rain water; J. PARNELL THOMAS will be tried by impartial equals and not by a bigoted Hungarian jury.

As we make an inspection tour about the factory we can see democracy working. MARGARET CHASE SMITH discusses a bill on the Senate floor; Arthur Godfrey keeps America happy via the air waves; Mark Sullivan expresses his opinion in a free press.

As we leave the factory we experience a twofold sense of accomplishment and challenge. Whether our job is that of student, lawyer, mother, doctor, or technician we look back upon democracy incorporated and see the stars and stripes that glisten in the sun and hear the martial music that fills the air. Most of all we feel what makes democracy work—the American people with their shares of toil, vision, determination, and ideals.

WHAT MAKES DEMOCRACY WORK

(By Arnold Goldman)

What makes democracy work? Why has it been such a successful force in leading the world out of chaos and strife? Why has it made our Nation the greatest in the world? I think that the answers to these questions are based on the concepts of democracy which a person has, and I should therefore like to explain my concepts of democracy, and why it has worked so well.

Our form of democracy is based on the scientific method. That is, it is based on past experiences, adapted to the needs of the present. The men who have attempted to advance the cause of democracy have taken the errors and solutions of the past, and have attempted to incorporate them into a living, democratic way of life. We are also able to recognize the ills of our society; and do all that we can to improve them. We realize that the only way to cure the ills of democracy is by using more democracy, in the form of reducing poor living conditions, and aiding the needy. That's what makes democracy work.

Democracy is an outgrowth of the Christian-Hebraic code of ethics. It teaches the equality of men, and the fact that there should be equal rights and privileges for all. It demands the guaranty of these rights to every citizen, regardless of race, creed, sex, or religion. Through the teachings of democracy, we attempt to understand the different racial viewpoints of the various elements which come into our society. We try to rid ourselves of prejudice toward those who come to us from foreign countries, and appreciate their contributions. We know that we must respect the spiritual law as well as the man-made law, or our civilization will fail. That's what makes democracy work.

In America, we realize the value of education as a means to peace through understanding. We have seen that force is not the best means for achieving a goal, and that force leads to distrust and rebellion. We have substituted education for force, knowing that education breaks down prejudice and superstition. Our educational system is a free system, and is not subject to the censorship of an autocratic government. That's what makes democracy work.

The citizens of our land enjoy the benefits of freedom. They are not hampered by Government censorship or restriction, but are able to speak, gather, and worship as they please. Each individual is guaranteed individual liberty, but not the liberty to oppress a fellow man. We are all given rights and privileges, but not without a related responsibility—a responsibility for loyalty to the ideals of American citizenship. The absence of Government tyranny has led to the development of some of the finest men in the history of the world. It has made America the greatest industrial nation in the world. It has truly rooted democracy in this country. That's what makes democracy work.

One of the most excellent concepts of democracy is: "That it is the ability of men to govern themselves, motivated by good will." We firmly believe in participation in government—all of us, regardless of faith or nationality, must get together to solve the world's problems. In democracy, we pool our judgment and come together through an exchange of ideas. We know that democracy is the outcome of the work of many individuals, and that we must all take an active interest to insure its success. Democracy is a force in which everyone can participate, and in which everyone should participate. This means that democracy recognizes the value of every individual, and counts on each of its citizens to make it a success. Each of us has a distinct and important role to fill in the national and world scene. We must contribute the best of us to win the peace. Democracy asks this of us to make it successful. That's what makes democracy work.

All of these factors have made democracy a working, successful force. They have made of it, a pattern for the rest of the freedom-seeking world to follow. They have made it a symbol for a successful way of life, both socially and politically. They have made it a guiding light, which, I am sure, will lead the world and our country toward peace and prosperity.

WHY DEMOCRACY WORKS

(By Madeline Panipinto, Livonia, N. Y.)

The growth and development of America has been due, in large measure, to the fact that the young country opened its gates to people of all racial and religious differences. Out of these differences has grown the toleration that is a characteristic of democracy. And the part these people played in making American democracy is the proof of the success of the melting pot. Not all our people are equal in ability, but there is a place for all able and willing men and women in our national life. American democracy still means opportunity.

Henry Adams once said that the action of a government can be judged only by its intent. Good intent is a feature of good character. Thus, in a democratic government where the will of the people is the final power, the intention of the government rests upon the collective character of the people. If that character is built on fairness, toleration, and justice, these qualities will direct the actions of the government. Democracy needs the mature individual, and only in a democracy can the individual develop the dignity of which man is the heir.

The great mass of American workers are laborers in shops and factories. For this group, as indeed for all workers, political and social democracy is basically a part of that economic democracy of equal opportunity in the business world.

In America individual liberty and right to a livelihood are derived from the Constitution. Civil liberty, equality of economic opportunity, equality before the law, the right to hold and dispose of the just gains of one's labor or skill are fundamental American rights and constitute the foundation of our whole political and social system.

American democracy differs from every other form of democracy that the world has seen, in that the sovereign people, while framing the Federal Constitution, reserved to themselves all rights not specifically delegated to their Government, and set up courts of justice to protect the humblest individual from interference with its privileges and rights, even by the Government itself. It recognizes the institution of private property, but demands that all property shall bear its just share of the expenses of Government; it recognizes that its safety and perpetuity rest upon the education of all its citizens. It is a Government by public opinion in which honesty and fair play are recognized as fundamental to lasting success. It guarantees to every individual the right to his own religious opinions and believes in and adheres to the principles of the total separation of church and state.

Public opinion is the basis of authority in the democratic state. In a democratic society, government is controlled by the will of the people. If the people are to form sound opinions we must not permit the sources of information to be controlled for selfish purposes. Free speech and a free press are weapons by which free people can defend their freedom. The ideal of democracy requires that the laws made with the consent of the people be obeyed by the people. Democracy attempts to achieve a rule of law, not of men, in which the rights deemed natural to man have been set up as legal rights.

Democracy and totalitarianism are completely opposed, not merely as forms of government but alas, and more fundamentally, as ways of living and thinking. The basic difference lies in the attitude of each system toward the individual. Democracy recognizes the natural dignity and worth of each individual. It holds that the state exists to promote the welfare of individuals. Totalitarianism holds that the individual has significance only as he serves the state—that in himself the individual is nothing.

Because democracy respects the individual, it sets up safeguards to protect certain essential rights of the individual. It guarantees freedom of speech, of the press, of religion, of assembly. It upholds the right of every man to be secure in his own home, which the officers of the state may not invade except with a warrant issued upon legal grounds. It declares that no man shall be condemned without a trial, nor shall anyone be deprived of life, liberty, or property except for proper cause and through legal process. It holds that all men are equal before the law, regardless of race or creed. It believes that men should control their government through elected representatives. These principles are recognized as the supreme law of the land and no officer of government has the power to set them aside.

Totalitarianism, on the other hand, recognizes no rights of the individual that the state cannot set aside. It does not hesitate to use cruelty and barbarism against anyone who questions its policies. It claims the sole right to decide what shall be published, or communicated over the radio, or taught in the schools. It admits no limitations on its power over the life, liberty, and property of the individual, and recognizes no rights that cannot be set aside by decree of the head of the state. It interferes with or suppresses the practice of religion. They hold that there must be one leader with supreme power because people are not capable of self-government. They do not believe that all races and creeds have equal rights, and they have fanned the flames of race hatred and have persecuted minorities. It is plainly seen why democracy works.

Democracy and freedom are primarily ideas. Their existence is in the minds and hearts of men, and when they cease to have a place there, no political institutions can preserve them and no institutions based on them can survive. Democracy is an essential part of American culture, and this gives us faith in the survival of American democracy and in its ability to meet the demands made upon it and adapt itself to changing conditions. It can only do so, however, if we really believe in it, practice it, and seek to apply it in the solution of our national problems. The responsibility for making democracy work rests upon each of us.

UNIVERSITY OF MICHIGAN LIBRARIES

WHY DEMOCRACY WORKS

(By Gerald De Coursey, Rochester, N. Y.)

Democracy works because it is the best kind of government under the sun. It is the will of the people and it is the only form of government established since the beginning of time which gives every man a fair, square deal and allows him the right to live his life as it should be lived.

Democracy is not young. It was first introduced in ancient Greece where it flourished for several centuries. With the decline of Greecian dominance in the old world, the torch of democracy was passed on to Rome. In Rome it dimmed out until it had a rebirth in Italy during the age of the Renaissance. From that time on, it never dimmed out and became firmly established in America in the eighteenth century.

In America, democracy has flourished for about two centuries. It has brought America untold wealth and prosperity which might be termed, the Golden Age of America. It seems plausible that democracy must have something extra special, something that no other form of government can offer or approach.

The rewards of living in a democracy are many. The welfare of the common man is the foremost thought of the government. The laws made in our Congress are those which protect and insure the safety of each and every law-abiding citizen. In democracy every man has great respect and honor for his government because the knows it is for him. He knows that in America there is no one superior to him, that he is as good as the next man. There is a feeling of brotherhood in every true American. That in itself is what makes democracy a really fine government. No good American is an anti-Semitist or an anti-Negro because he knows that in order to make democracy work, all men must be treated as they really are—equal. Each man is capable of doing as good a job as the other and the true American is the one who realizes it. Washington put it, "To bigotry—no sanction. To persecution—no assistance." That sums up the feeling of every American.

Democratic government meets the needs of the people as a whole, gives them security against the dreaded scourge of war, enables every man, regardless of his race, the right to develop his resources, to worship God in his chosen way, and to live his life as he wishes, as long as it does not hinder that of his neighbor.

In such a government can man go forward. Under such circumstances can man really develop his resources. Thus, in such a government where the rules of living are set down by the individual himself, can man find happiness. Only here where such benefits are open to the common man, the individual, is the life of each person capable of coming as close to perfection as is humanly possible.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. HENDERSON LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. LANHAM. Mr. Speaker, under leave to extend my own remarks in the RECORD, I am including an editorial which appeared in the Atlanta Journal of Atlanta, Ga., on May 10, 1949, entitled "Federal School Aid Not a Gravy Train."

I agree wholeheartedly with this editorial and while I am very much in favor of Federal aid for education, I think the law should make it impossible for the States to cast the whole burden on the Federal Government.

FEDERAL SCHOOL AID NOT A GRAVY TRAIN

A very wise feature of the Federal-aid-to-education bill, which was passed last week by the Senate and is now awaiting action by the House, is that it will encourage the States to do their utmost to help themselves. A State that rests on its oars because Federal money is pouring into its coffers will only penalize itself.

The bill authorizes $300,000,000 annually to assist in establishing a foundation program of $50 per child of school age in each State. No State will get less than $5 per child, but the program is heavily weighted in favor of the poorer States. In computing the amount to be received the first year, the administrators will multiply the number of children by $50. This figure will be compared with 1 percent of the State's income payments over a 5-year period. The difference between the two figures is the amount of Federal aid.

Thus the State of New York would receive $5 per pupil and the State of Mississippi $29.18, to take two extremes. The total spent per child by those States would then be $235 for New York and $84.50 for Mississippi.

But after the first year the bill, in its present form, will penalize States that spend less locally for education than the government thinks they should. If a State and its political subdivisions together pay out less than 2.25 percent of their income payments during each of the first 2 years, Federal aid is cut in proportion. After the second year, the ante is hiked to 2.5 percent. And if State plus local effort falls below 2 percent after June 30, 1952, then the State in question gets its Federal aid slashed to $5 per child.

A table inserted in the CONGRESSIONAL RECORD last week showed what the bill's incentive proviso would mean for Georgia. The table gave the percentage of average income payments that each State spent for education in 1945–46, as against a national average of 1.82. Nine of the 16 Southern States made efforts equal to or above the national average. Georgia fell below, with 1.52, while South Carolina was above with 2.17 and Alabama with 1.90.

Thus the influx of Federal money for education will not mean that Georgia and other less wealthy States can relax their efforts. On the contrary, they will profit only in relation to their zeal in helping themselves.

Federal aid to education is not a gravy train.

First Quarter Shows Corporation Profits Up Another 7 Percent

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. MITCHELL. Mr. Speaker, the following compilation published in the Machinist, the publication of the International Association of Machinists, throws light on two questions, namely, the relation of profits to wages, and the relation of profits to depression so many business publications are talking about:

FIRST QUARTER SHOWS CORPORATION PROFITS UP ANOTHER 7 PERCENT

The daily newspapers have printed a lot about labor's four rounds of wage increases. This week the Machinist dug into the facts to see how the four rounds of corporation profits compare with the wage increases since the war ended in 1945.

Returns on the fourth round profit increases are tentative, of course. Corporation financial reports for the first 3 months of the year show that business profits are running about 7.2 percent above the all-time record profits of 1948, according to the Wall Street Journal, a conservative newspaper. The record increases in corporation profits for 1946, 1947, and 1948 were furnished to the Machinist by the Federal Reserve Board.

How much labor will get in fourth-round wage increases is not yet clear. That will depend on the outcome of union negotiations now in progress. The record on increases in average weekly earnings was supplied by the Bureau of Labor Statistics. The average weekly earnings for the year shows, better than hourly wage rates, how the average workingman's family has fared since the war. It is the hourly wage rates, not these weekly earnings, that are usually reported in the daily newspapers.

Here is the record of four rounds of profit and wage increases:

First round: Corporation profits after taxes went up 43 percent from $8,300,000,000 in 1945 to $12,800,000,000 in 1946.

The average weekly earnings of men and women who work for a living in private, nonagricultural industries increased 4 percent, from $44.86 in 1945 to $46.93 in 1946.

Second round: Corporation profits after taxes increased 40 percent, from $12,800,000,000 in 1946 to $18,000,000,000 in 1947.

The average weekly earnings of men and women who work for wages went up 10 percent to $51.58.

Third round: Corporation profits after taxes went up 15 percent from $18,000,000,000 in 1947 to $20,800,000,000 in 1948.

The average weekly earnings of men and women who work for wages went up 7.7 percent to $55.55.

Fourth round: For the first 3 months of 1949, corporate profits after taxes went up 7.2 percent over the same period of 1948.

The average weekly earnings of men and women who work for wages went up 3.3 percent to $57.38.

On all of the first three rounds, IAM members fared considerably better than the average reported by the Bureau of Labor Statistics for all wage earners.

General Pick Testifies

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. BURDICK. Mr. Speaker, before the House Public Works Committee this morning—June 1—Wesley R. Nelson and Kenneth F. Vernon, of the Bureau of Reclamation, testified; as did Mr. W. G. Sloan, who fathered what is now known as the Sloan plan for the development of the upper Missouri River Valley.

These three witnesses said that up to the time the law was passed authorizing the dam, Public Law 534, that the water pool was always fixed at 17,000,000 acre-feet in the Garrison Dam. That was the capacity recommended by the Army engineers themselves; in House Document 475; that was the size of the pool as contained in the joint agreement reached between the engineers of the

Army and the engineers of the Bureau, Senate Document 247. There was nothing said about an 1,830- or an 1,850-foot water level. But the testimony is before the committee that a water pool of 17,000,000 acre-feet means a pool approximately 1,830 feet above sea level, and that a 23,000,000 acre-foot pool means an elevation above sea level of approximately 1,850 feet.

All three representatives of the Bureau of Reclamation testified that they had never agreed to an increase in the impounded waters. That so far as they knew the water pool was still 17,000,000 acre-feet.

Then the blustering General Pick appeared, who had as much time as all three representatives of the Bureau of Reclamation. He said he had planned the whole thing and that he always had in mind an elevation of 1,850 feet, but none of the documents before the committee mention 1,830 or 1,850. He, in substance, said all the witnesses from the Bureau did not tell the truth and inferred that he was the only honest witness. He harped on the fact that the height 1,830 was never mentioned in any of the reports or at the time of the agreement found in Senate Document No. 247. He should have said, if he were honest himself, that neither was 1,850 mentioned. He did admit that in his own report, the impounded waters recommended by him was 17,000,000 acre-feet. But he said that after making his report in House Document No. 475, he had found 6,000,000 acre-feet more water, and that the pool therefore would be 23,000,000 acre-feet instead of 17,000,000—that discovery of this has caused all the trouble in North Dakota about the height of this dam.

He says that the agreement reached between the engineers and the Bureau had since been changed. The Bureau says it was not changed and remains today as it was in that agreement.

Pick then read from some minutes of a meeting in Omaha by a secretary of the meeting that all hands agreed to an 1,850-foot-water level. That is the first time that this elevation of 1,850 appears in any of the documents. No agreements were entered into—no papers were signed—the Bureau did not agree to a 1,850-foot level, and signed nothing to that effect. But still General Pick says the agreement was changed and that anybody who says it was not is—in substance—a liar. General Pick, while testifying, showed just what he is—arrogant, bullheaded, and determined to have his own way, and that anyone who interferes with him is to be classed in the same category as he had put the representatives of the Bureau of Reclamation.

He said he had tried to tell the people at Williston that he would put dikes around the town, around the railroad, and around the three irrigation projects, but he said that when he said the people of Williston would have to live behind dikes, someone said, "Let's go to lunch," and the meeting broke up.

His reason now for increasing the water pool, among other things, is that he has acquired 43,000 acres of the 100,000 of additional lands to be flooded, because he wants a pool 20 feet higher. He did not tell the committee that under the law, he had no authority to buy that land, and that all of these transactions are illegal; and that he can be held personally liable for spending this money. I presume it will do no good to call this to his attention further, because he will probably call anybody who says he had no right to buy this land "untruthful."

Well, it will be a wonder if this general name caller is not hailed into court to answer for his personal doings regarding this dam. Apparently law means nothing to him. His unbridled boldness is amazing, and it may be that from his fertile brain more water will be found and that a water pool of 30,000,000 acre-feet may be constructed. Nothing so far has stopped him. If he can drown out an extra 100,000 acres, he can just as well make it 200,000 or 300,000.

Do the people have no say? Does Congress lack the fortitude to check him? Will the people whose homes he ruthlessly intends to destroy have to resort to expensive court litigation because of him? I think the issue is well drawn—are the people of this country running this Government or has that function been arbitrarily assumed by an Army general?

New Order in Germany

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following excerpt from the March 1949 Newsletter of Julius Klein, of Chicago, Ill.:

NEW ORDER IN GERMANY

German industries displayed their progress here in the United States a few short weeks ago, and the furor over this event overshadowed a more important occurrence. The vesting of control of the Ruhr, Germany's arsenal of war, in the hands of 12 Germans. Overlooked too were the ominous reports from Germany dealing with the resurgence of German nationalism and nazism. On January 24, 1949, for instance, the New York Times reported that "most of the former managers in factories, mines, and banks are again in positions of influence." On April 27 Gen. Telford Taylor, American chief counsel for war crimes' prosecutions at Nuremberg, said that there is a "resurgence of militant nationalism." That is why the appointment of the 12 German trustees assumes such an importance.

Selection of the trustees was made by Dr. Hermann Puender, chief executive of the Bizonal Administration, who himself has quite a record. Throughout World War II he distinguished himself by outstanding services rendered to the Nazi cause. Promoted to lieutenant colonel in the German Army, and placed in charge of the Division 3H Abwehr of OKW—the German High Command—his duties were to devise ways and means of fighting the British and American psychological warfare. Dr. Puender's role was the equivalent of a party commissar in the Russian Army.

Faithful to his ideology, Dr. Puender, when asked to select the German officials to operate and administer the giant Ruhr industries, turned to the real masters of the Ruhr—the Nazi economic war lords. As the best man to run Ruhr industries Dr. Puender appointed Dr. Heinrich Dinkelbach of the notorious Vereinigte Stahlwerke, which did so much harm to the United States interests, even before the war. Who is Dr. Dinkelbach? A member of the Nazi Party since 1929, throughout the Hitler regime he was the paymaster for the German steel cartel. His duties were to get as many orders as possible from the Nazi regime for his steel combine, and in return he contributed 50,000,000 marks to the Nazi Party chest. Shortly after the downfall of Germany instead of being arrested for war crimes, he was appointed by the British as trustee for the German iron and steel industry. Simultaneously his son, who was a major in the SS, was released from his prison camp in Great Britain and returned to Dusse'dorf to help his father run the German steel industry. No wonder the New York Times of March 20, 1949, reporting the selection of the 12 German trustees had the following comment to make: "With the exception of Dr. Dinkelbach, the trustees are regarded by many occupation authorities as innocuous."

No less significant is the selection of another trustee, Herbert Mondon, formerly of the Herman Goering combine. Before the war Dr. Mondon was vice president of the iron and steel association whose task it was to coordinate Germany's heavy industry for war. These appointments seem to indicate that the German cartels are being strengthened, rather than abolished, as is demanded by law No. 56. In their anxiety to set up Germany as an independent state, the Western Powers evidently have lost sight of the cardinal principle that to give back to a recently conquered country the means to prepare for another war means disaster.

What Is an Un-American?

EXTENSION OF REMARKS
OF
HON. EUGENE D. O'SULLIVAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. O'SULLIVAN. Mr. Speaker, in this day and age, in the great and glorious United States of America, almost everyone of us has his own idea as to what it takes to be labeled as "an un-American." Big business with its credo of free and unbridled capitalism and its great hordes of "kept men and women," "kept newspapers," "kept periodicals," "kept pamphleteers," and other "kept sheets," with the jarring voices of overgrown and over-glutted scavenger birds rave that every progressive, humanitarian, and constructive measure is socialistic, communistic, paternalistic, or statistic, and hence un-American, and that every forward-looking, liberal-thinking American is un-American. They claim that they are the oracles that are privileged to blither and rasp the truly American doctrine. They proclaim now and have proclaimed throughout the years that liberals are left-wingers.

I do not claim that I am an authority on the subject, but it has occurred to me, as I have thought this matter over that the two groups endeavoring to mold wrongly the political thought in our Nation today, are the extreme left-wingers and the extreme right-wingers,

UNIVERSITY OF MICHIGAN LIBRARIES

and of these two groups the most dangerous one, in my opinion, is the extreme right-wingers. I venture to say right now that if the Government of the United States of America is ever overthrown it will not be by the weak and crude extreme left-wingers, but it will be by the strong and slippery extreme right-wingers. These extreme right-wingers are to be found mostly in the ranks of big business, and their "kept" ilk. Their "whitened sepulcher" approach, their knavish hypocrisy, their feigned reverence of God and love of all of his children, plus their money, and the power which their money gives them with those who place the dollar sign above the welfare and the best interests of our country and its people, makes them all too dangerous for the present good of our country.

I believe that it was a move in the right direction to have a congressional committee appointed to probe the plans and doings of left-wingers, but why has no congressional committee been appointed to probe the plans and doings of this other more dangerous group of right-wingers, who seem to control so many organizations, public servants, and people of wealth, brains, social standing and influence.

My statement that the most dangerous group in America is the extreme right-wingers may shock many people in this country but it is the truth nevertheless as every extreme right-winger in these United States of America well knows.

Certain reliable sources have informed me that a well organized 10 percent can control or rule in any meeting, or any election if their real purposes remain concealed, and that the total of the extreme right-wingers and left-wingers in the United States of America today does not exceed 20 percent of the population. That means that this ignoble 20 percent are seeking to control the unsuspecting 80 percent of the population of our country.

More chaos has been created in the United States of America to date by extreme right-wingers than extreme left-wingers. What the extreme left-wingers have planned to do and have done against the best interests of the Republic has been exposed pretty well up to the present time, but no exposures, however, have been made of what the extreme right-wingers have planned to do and have done against the best interests of the Republic, and it is now high time that some committee be set up to do this very thing.

Some of the things which the extreme right-wingers have done which are against the best interests of the Republic, in my opinion, are these:

First. They have endeavored to make the great free press of the Republic an unfair, one-sided press and a mouthpiece for their selfish, ignoble desires.

Second. They have hired and continued to support financially so-called news commentators in order to endeavor to mold public opinion to conform with their Fascist theories of government.

Third. They have by their investments endeavored to gain control of the air waves and pervert the radio to their most unholy cause.

Fourth. They have organized and supported and now support tremendous lobbies.

Fifth. They have tried to carry their sinister cause to the people, and are seeking to overthrow government by the people with government by propaganda, by fomenting silly and fruitless balloting on vital questions after they have lost an election, without giving the persons so voting both sides of the questions sought to be answered.

Sixth. They have organized illegal trusts, combines, and cartels, and have conspired to do many other things to mulct the people, such as conspiring to raise the prices of commodities, increase rents all out of line with real rent values, and gouge the people in many other ways out of their surplus money.

Seventh. They have endeavored to hamstring public power and other efforts to bring other public musts to the people.

Eighth. They have indulged in labor-bating tactics and purposely provoked labor discord and strikes.

I have neither the time nor the inclination to enumerate all of the wrongdoings of the extreme right-wingers, but suffice it to say that what our Republic needs most now is not a good 5-cent cigar, or a nickel beer, but bigger and better men in our United States and State penitentiaries, and a proper congressional committee could make the task easier for the prosecuting authorities, and do the greatest possible good for our beloved country at this time.

Since I have been in Congress I have heard much about the past doings of the un-American Activities Committee. I think it was right to reshuffle its membership and take the witch-hunting men and technique out of it.

Lately I was horrified to read from the writings of one Gerald K. Smith the statement that he had personally approved the membership of that old committee, so, if this be true, I am doubly happy that the committee does not now exist with its old personnel in the saddle.

One of the best manuscripts I have read on the subject What Is An Un-American was a sermon delivered by Rev. A. Powell Davies, D. D., on Sunday, January 2, 1949, at All Souls' Church, Unitarian, Sixteenth and Harvard Streets NW., Washington 9, D. C. He gave me permission to insert same in the CONGRESSIONAL RECORD, and it is as follows:

WHAT IS AN UN-AMERICAN?

A few weeks ago, a committee of the United States House of Representatives released a pamphlet entitled, "100 Things You Should Know About Communism and Religion." It was one of a series of pamphlets, the titles of the others being, 100 Things You Should Know About Communism in the U. S. A., 100 Things You Should Know About Communism and Labor, 100 Things You Should Know About Communism and Education, 100 Things You Should Know About Communism and Government.

This made 500 things in all—which is not too many to master if one is a diligent student; and the committee is certainly to be congratulated upon discovering that the questions and answer fall so naturally into classification each of which contains precisely 100 items.

Unfortunately, however, the pamphlets have not given universal satisfaction. The one on Communism and Religion, for instance, has caused considerable pain among religious leaders, some of whom have spoken very sharply in condemnation of it. They have also condemned the committee itself, disapproving of its methods and doubting some of its conclusions.

What is the issue between the churches and this committee?

By its own account, the committee is trying to save the churches from something: Indeed, not the churches alone, but the entire Nation. And although in the pamphlets this something is limited to communism it is not a prescriptive limitation, since the title of the committee is quite general and refers to un-American activities. The first question to be settled, therefore, is one of definition. What is an un-American activity? And if a person who engages in such an activity is in some sense an un-American, what does it mean to be an un-American.

In trying to find a context for these questions, I found myself wondering how a similar adjective would sound if applied by some other nation. What, for instance, would be an un-French activity, or an un-Peruvian activity, or even an un-Eskimo activity? Would we take it as a matter of course if in Sweden, for example, there were set up a Committee on Un-Swedish Activities? Or (to come nearer home) in Canada, a Committee on Un-Canadian Activities. I found these comparisons revealing: The word "un-American" quite evidently had a different connotation: And it seemed to be not only a more extended connotation but one different in kind—or at least partly so.

I asked myself what countries might have such a committee, and I could not help noticing that a Committee on Un-Nazi Activities would have sounded quite natural under Hitler; and so would a Committee on Un-Communist Activities be unsurprising in the case of Soviet Russia. And the reason, of course, is not obscure.

The word "un-American," like the words "un-Nazi" or "un-Communist," has reference not only to a national territory and the national system located upon it, but to the whole contested territory of ways of life and to the struggle between systems of ideas. Americanism is opposed to nazism and to communism not only because the United States as an inhabited country is threatened by these movements but because Americanism is a rival movement.

As Justice Oliver Wendell Holmes once put it, "Not by aggression, but by the naked fact of existence, the United States is an eternal danger and an unsleeping threat to every government that founds itself upon anything but the will of the governed." In other words, unlike most other countries, the United States by its very nature is a world influence, a world force.

I do not say that the House o. Representatives, in appointing the Committee on Un-American Activities, had this significance in view. But I do say that the name would have sounded awkward and impossible unless such a significance, whether understood or not, had been conferred by history. And therefore, it would not have been proposed or allowed.

But here, surely, is the very matter that we must explore. To know what the word "un-American" means, we must know what the word "American" means, and since it evidently has a meaning indicated by a special history, we must ask what this history is.

Nor can we find another starting place, so far as I can see. If it be said that an American is simply a person born in America, then clearly, since he cannot be born all over again somewhere else, he can never be anything but an American, no matter what his

activities. Nor can his activities, whatever they are, be other than American, for American activities, on this rendering, would be any activities in which a person born in America cared to engage, and such a person, no matter what he did, could not be justly accused of un-American activities.

Nor, unless we wish to indict the Roman Catholic hierarchy, can we simplify the question by defining un-American activities as activities controlled by a foreign state. For the Roman Catholic hierarchy is controlled by the Vatican and the Vatican is a foreign state.

It is the same if we think of un-American activities as friendliness to a foreign revolutionary movement. Thomas Jefferson was friendly to the French revolutionary movement, at any rate until its excesses shocked him; and yet it is difficult to think of this as in itself an un-American activity; or of Jefferson as un-American.

It is obviously not a matter, then, of any of these simplified approaches. It must be something in the realm of ideas, something that tests behavior by a standard supported by ideas, and thus something that has a history.

What is this history? It began with the fact that the Nation itself was founded upon a particular inheritance, and took its rise under circumstances likely to encourage the influence of this inheritance. As to this last fact—the extent to which the United States would be in a special position in relation to the rest of the world—it was foreseen even in the earliest days, as, for example, by de Tocqueville, and by Horace Walpole, who wrote from England (in November, 1774, to Sir Horace Mann, in Italy) that the next Augustan age will dawn "on the other side of the Atlantic," whence visitors would some day come to see the ruin of European cities. Or the poet, Shelley, who wrote in 1818 that America would be

"An epitaph of glory for the tomb
Of murdered Europe."

But what was the inheritance?—the distinctive national inheritance transmitted through our early history? It came from non-conformist English Protestantism, and from the philosophy of the natural rights of man as developed by John Locke, and from the supremacy of reason and justice declared by Voltaire, and from the French philosophical movement that followed: so that American democracy, as Irwin Edman has put it, is a "union of the ideas of natural justice and natural rights * * * The notion of justice was classical and French; the concept of liberties was revolutionary and English."

It was the ferment of these ideas that evolved the principles avowed in the Declaration of Independence: The principles of equal liberties and equal natural rights. It was from these ideas, carried into action, that the American Revolution came, and the Constitution, and presently and very importantly, the Bill of Rights. Nor is the further evolution of these ideas to be marked only by such figures as Jefferson, Jackson, and Lincoln, highly significant though they are; it was not only "government of the people, by the people, for the people"; it was also Emerson's doctrine of the sacredness of the individual: The doctrine that has sometimes been called "the citizen as soul", and it was Whitman's song of the citizen as brother and comrade. And the vision of all of them that America had a mission for the world.

If we suppose—and sometimes it is supposed—that all this is a matter only of what Americanism came to be in the minds of outstanding national leaders, we are far astray. Not only did the people accept these leaders and come to venerate them, thereby authenticating the Americanism thus exemplified, but, as documented by such writers as Professor Gabriel,[1] even in the early nineteenth century there was scarcely a July Fourth utterance that did not exalt the American mission "of being a beacon, a God-given beacon, showing to the world what liberty might mean to the whole human race."

It is in this history, then, that we begin to see what the word "American" means. And it is from this that we see how, even from the beginning, the new Nation has been a potent world influence, challenging all humanity with the revolution of the rights of man.

If we are to define un-American activities, therefore, we must define them as everything whatever that hinders the advance of liberty under the law, or that betrays the equality of human rights, or that transgresses the freedom of the individual conscience, or profanes the sacredness of human personality. We should have to define as un-American all impairments of civil rights, all discrimination on account of race or creed. And we should have to identify as un-American whatever threatened not only the material security but the spiritual influence of the United States as a nation whose mission to the world is indicated in its founding principles.

And this, of course, if we want to know what un-Americanism is, is only a beginning. But it has to be confessed, I am afraid, that the House of Representatives Committee on Un-American Activities has not got very far in this direction. Indeed, if one may be forgiven for being candid in so important a matter, a doubt arises at times as to whether the members of this committee are much imbued with American history. The impression is occasionally almost irresistible that some of them believe that the United States was founded rather recently and more or less in their own constituencies, the founding fathers being perhaps the local chamber of commerce. I recognize, of course, that this cannot be their real belief, and I mention it only because I wish their real belief were clearer. And I wish something were being done about not one but all our un-American activities.

For the truth seems to be that the only un-American activity with which the committee is concerned is communism. As to communism being an un-American activity I wholeheartedly agree. I have always believed so. I am not in the least startled by the information in the committee's pamphlets or by the sworn statement of William Z. Foster, head of the Communist Party in the United States, as printed on the back covers—although I think it was well to print this statement. Mr. Foster says quite plainly that the Communist Party in the United States expects to take over the Government of the United States, backed by the Red army. We had suspected as much, of course, but it is good to have his formal confirmation.

But if the committee is interested only in communist activities, why is it not called a Committee on Communist Activities? Even in that event, however, the question cannot quite be dismissed as to whether the committee is composed of the most suitable people. Some of the church leaders believe that the committee, through its recent methods, is likely on the whole to increase the number of American Communists rather than reduce them. Communism, as the committee's pamphlets so clearly imply, thrives upon resentments. And the committee has built up a great many resentments. It has also—at least, it is probable—somewhat diminished the nation's effectiveness in fighting communism as it threatens us from abroad. For what else can be the result of accusing scientists—atomic scientists—of unreliability, and building up doubt and accusation, the victims of which are deprived of opportunity to reply, even when the Atomic Energy Commission has cleared them? How, in these circumstances, are the most able scientists to be persuaded to work for national defense?

Or to turn to the question with which we began, it is certain—so it seems to me—that the committee is not saving the churches from communism. I happen to be a person deeply interested in saving the churches from communism, and my interest goes a long way back. But—and I am sorry to say it—I find nothing in the committee's 100 Things I Should Know about Communism and Religion that gives me much assistance in saving the churches from communism. And when a member of the committee, upon being informed that someone accused by the committee of guilt through association has jumped to his death from his office window, replies that others will be named as they, too, jump through windows, I feel that the committee's usefulness to churches, if there ever was any, is entirely over. We of the churches do not want to be saved by people who give out names as their victims jump through windows. Furthermore, we remember that Jan Masaryk jumped from a window and that it was Communist activity that induced him to do it. We do not like this parallel.

Moreover, we find ourselves—or I do, for one—turning to the question I have explored a little, here, this morning: What is an un-American activity? What is an un-American? And as we look at this committee, we feel at times that we are warm on the scent.

We remember that it was the inquisition that used to direct that an individual could be seized on the information of anyone whatever, no matter how infamous or criminal; that when brought before his inquisitors, this victim could be tried in secret and denied an advocate to defend him; and that the name of his accuser was not necessarily made known to him. We would call the inquisition un-American.

We remember some of our fellow citizens who have been rather confused about Americanism in the recent past. Mayor Hague of Jersey City, for example, who said to the chamber of commerce of that city, on January 12, 1938, the following words: "We hear about constitutional rights, free speech and the free press. Every time I hear those words I say to myself, 'That man is a Red, that man is a Communist.' You never heard a real American talk in that manner." We would call that un-American—uncredibly and appallingly un-American. And we would draw to the attention of the committee, Mayor Hague's reference to constitutional rights.

As to the propriety of mentioning these matters to the committee, we remember the saying of Thoreau, that "the real lovers of law and order are those who observe the law when the Government breaks it." And Thoreau, who was no literalist, meant not only the technicalities of the law, but the spirit of it.

But then, when it comes to this, it is not only a question of Americanism, it is even a question of moderately dignified behavior. There are times, in reading reports of the procedures of this committee, when one feels transported into the atmosphere of Alice in Wonderland. Of the trial scene, for instance, in that admirable and delightful fantasy, when the queen clears up all the confusion in the court by demanding that the sentence be pronounced first and the verdict brought in afterwards.

There are other times when it seems to be the atmosphere of Gilbert and Sullivan, as, for example, when one reads so frequently in the pamphlets of what the House Committee on Un-American Activities can do for him, and that if he is ever in doubt he should "write, wire, or telephone the House Committee on Un-American Activities, room 226,

[1] The Course of American Democratic Thought, R. Gabriel.

UNIVERSITY OF MICHIGAN LIBRARIES

House Office Building, Washington 25, D. C."—and is irresistibly reminded of the lyric in The Sorcerer:

"If anything anyone lacks,
He'll find it all ready in stacks,
If he'll only look in
On the resident djinn,
Number 70 Simmery Axe."

Yes * * * from the viewpoint of a churchman, interested in saving the churches from communism, there is definitely something missing in this committee. Even when, through an odd circumstance, the committee does stumble upon some important evidence, the something missing is not made up. One sees only hurrying and scurrying, stratagem, and maneuver. One has a feeling of hasty improvisation just before the curtain goes up and the committee steps forward to take a breathless bow. There is nothing about this committee that conveys a sense of sure, unhurrying purpose. There is nothing to make one feel that its methods are skillful, or its members delicate enough in sensibilities, discerning, perceptive, sensitive—to anything like the extent necessary to deal with the psychology of communism.

Even the psychology of treason, as Rebecca West has shown, is far from simple. And the aim of such a committee should be to understand it. Because we not only want to prevent Communist plots from succeeding; we want to prevent communism itself from spreading. And I think, wherever possible, we want to help former Communists to redeem their mistakes and become useful citizens again. I am not sure that a recanted Communist who becomes an informer is always the highest type of repentant sinner. I would like to know something of the psychology of those who have been informed against. Where they are guilty, I think they make a great mistake in not promptly confessing it, and saying as plainly as they can, what motives led them into error. But in any case, I would like to know if they are redeemable—and how? I do not mean by this that actual treason or connivance against the public security can be condoned. Far from it. But I do mean that a genuine study of communism would involve a kind of investigation for which the present committee appears to be unfitted, both by personal aptitude and knowledge of the background.

A committee composed of people of the necessary capacity could tell churchmen, after a while, quite a lot about why church people, and sometimes ministers, become Communists. And it is necessary to know. It is necessary to know the motivation, the moral dilemmas, the confusions—everything that can help us in our struggle to make American ideas prevail against Communist ones.

But all this is merely addressed to the question as though the whole business of such a committee lay with communism. I would rather return to the larger possibility—a committee that really did concern itself with un-American activities; un-American activities such as I indicated earlier: Activities that bring into contempt American justice, American civil rights, American liberties; activities that lessen our influence in the world by betraying our ideals at home. I would like to see an Un-American Activities Committee that investigated tract 48—the unspeakable slum to which hundreds of our Negro fellow citizens are condemned—in the Capital City itself. Maintaining such a slum, and drawing income from it, certainly cannot be called an American activity.

If this, however, is too much to ask, I would at least like to see a committee that could manage its business without damaging the morale of loyal workers for the Government; a committee American enough to be at least chivalrous in its treatment of those against whom there is nothing more than rumor or suspicion, and fair enough to give them an honest chance to indicate presumption of their innocence.

Until the committee can be as American as this, there is nothing it can do to help the churches fight communism except dissolve itself and go out of existence. Then there will be one less embarrassment: one less argument that Communists can use against us; one less blot on the American principles the churches are eager to uphold.

And it will be best in any case if the committee's unhappy career can be terminated. Then, perhaps, another committee, more broadly based than this one and with fewer political axes to grind, can be formed of persons eminent in public life and better equipped to undertake so difficult a task. Perhaps the apprehension of persons conspiring against the peace and security of the United States can be left to the Department of Justice, which has considerable experience in dealing with such matters. And if so, perhaps the committee appointed would undertake its task with seriousness—and tell us, first of all, what it means to be American. Then we shall understand a great deal better what is meant by un-American activities.

Meanwhile, in the churches, some of us—some of us at least—while keeping alert—as alert as we can—to communism's infiltrations, will refuse to be merely defensive against it. We shall attack the evils that communism thrives upon. We shall try to carry the faith and purpose of the American people higher. We shall try to give them confidence in their own standards, their own national principles, their own spiritual inheritance, and to deepen their faith that America can be sufficient to its time of trial and hour of opportunity.

Detectives in Your Parlor

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. MULTER. Mr. Speaker, the following article by Morris L. Ernst is deserving of the attention of every Member of Congress. It appeared in the New York Herald Tribune of May 29, 1949:

DETECTIVES IN YOUR PARLOR

(By Morris L. Ernst)

Every morning in New York City, 200 special policemen report for duty—to tap our telephone wires. With all 200 working a full-time, 40-hour week, they do a lot of listening. But they are not the only ones with whom our telephone confidences are being shared. State and Federal men are doing their own tapping, and we can only guess at how many private investigators are eavesdropping on a large scale.

Every tapped wire means not just that one person's privacy is being invaded, for once a wire is tapped, there is no way to limit the conversations overheard to the purpose of the investigation.

Suppose, for example, that Dr. John Jones' jealous wife employs a private detective to check up on her husband. If the investigator taps Dr. Jones' wire, he will overhear more than just the good doctor's conversations with the blonde waitress Mrs. Jones suspects.

He will also get a complete record of all Dr. Jones' conversations with his patients, including, of course, those matters which are so confidential between doctor and patient that the law often protects the patient against unauthorized disclosure.

It's easy to imagine the invitation to blackmail in the case of the tap on a doctor's wire. The opportunity is even greater from the numberless taps made on gangsters, bookies, and petty criminals.

EAVESDROPPING IS BIG BUSINESS

Wire tapping has grown beyond the stage where the average honest citizen can sit back smugly and regard it as a phenomenon affecting only bookies, subversive agents, and gangsters.

In its salad days, wire tapping was confined to people suspected of serious crimes. But at present, any suspected offense graver than illegal parking may provide the impetus for tapping by a Government agent, and simply the willingness to spend some cash seems to be all a private citizen needs to get a wire tapped.

The likelihood of blackmail provoked J. Edgar Hoover some years ago to go on record as opposing an extension of the wire-tapping activities of the FBI. In effect, he said: "I do not want to find myself the head of an organization of blackmailers."

If this was what could be feared of a group of men hand-picked for their integrity, how can we doubt that the city, State, and the private tappers have in their ranks people who are not above making a dishonest dollar on the side?

Our present situation is particularly anomalous in view of the fact that when the Federal Constitution was drawn, one of the amendments which the people insisted upon as a condition of ratification was one designed to protect the citizen's privacy in his home. A police officer, for instance, cannot search your home without a warrant.

LAWS LOOK GOOD—ON PAPER

But wire tapping, a greater invasion of privacy and security than the Founding Fathers ever dreamed of, is not limited by any constitutional safeguards. A majority of the justices of the Supreme Court in 1928, more concerned with technicalities than jurists interpreting civil rights should be, ruled that unlimited wire tapping was constitutionally permissible because there was no physical seizure of anything belonging to the tappee.

Theoretically, there is ample law limiting wire tapping. As a practical matter, it is more impressive on paper than in practice.

The Federal Communications Act, passed by Congress in 1934, prohibits the interception of foreign or interstate messages. New York State law provides that the police must secure a court order permitting the tapping of a wire and must show that the person whose wire is to be tapped is suspected of a crime. No doubt, hundreds of phones a day are being tapped pursuant to such orders.

What is important is that never has any data about these orders been made public. We do not know whether permission to tap wires has been confined to cases in which there is genuine evidence of crime; we do not know in how many cases the wire tapping has led to convictions and, of course, we do not know whether in any cases the wire-tapping power has been used as a political weapon.

There is certainly some evidence that this last is more than a hypothetical possibility. When the district attorney tapped the wire of Frank Costello a few years ago, the tapped conversation between Costello and Judge Thomas Aurelio was made public before it was used in any courtroom.

In addition to its possible use in the courtroom, the tapped wire has thus become a weapon of political espionage and a new inducement to trial by newspaper.

MEAGER PROTECTION

Besides the so-called legal wire tapping, there is a tremendous amount of patently illegal interception conducted by govern-

mental authorities, as well as by private agents. The law in many States gives the tappee some relief against such illegal interception since the Federal courts will not permit evidence to be introduced in a trial which was secured by illegal means.

However, if the evidence which is introduced is not tapped conversation itself but evidence which Government agents were able to secure as a result of information culled from tapped conversations, it may be admitted. It just has to be far enough away from the conversation itself to have the taint removed.

Even worse, many State courts—including New York's— have said flatly that they are not concerned with whether evidence was secured by legal means or not and that they will admit any evidence no matter how it was obtained.

The person whose wire has been illegally tapped presumably can sue the offending officers for damages or institute a criminal proceeding for violation of the Federal Communications Act. But there have been very few suits for damages.

Where the tapping has been unsuccessful, often the tappee never knows it was done. Where the tapping has actually brought forth information of a damaging nature, it is unlikely that a jury, insensitive to the larger constitutional issues, will award damages against a police officer whose work, illegal or not, has resulted in the conviction of a tax evader or a bookie.

NOT FOR D. A.

Criminal prosecutions are even fewer. District attorneys are very reluctant to bring suits against the officers and agencies with whom they work, particularly since those very prosecutors themselves use wire tapping extensively.

It is my belief that even a policeman tapping a wire under a New York court order is operating illegally. Many groups, such as the New York County Criminal Courts Bar Association and the New York State Bar Association, have become increasingly concerned with the problem, and recently, the United States Supreme Court divided equally in its consideration of the illegality of local wire tapping in a case that in no way involved the safety and security of the Nation.

PUBLIC IN THE DARK

It is not easy to propose remedies for the wire-tapping situation as long as the public is left in the dark as to its nature and extent. Perhaps the first thing we need is to have pressure brought to bear to enforce those few protective laws which are already on the books.

The bill recently approved by Gov. Thomas E. Dewey making it a crime to possess wire-tapping equipment should be helpful in eliminating private tapping. But drastic revisions are still needed to stop governmental abuse.

The privacy and security of the individual are so much more important in the long view than the fact that a few petty or great criminals may go unpunished that wire tapping should be restricted to two classes of cases—those affecting the national security, such as espionage, and possibly kidnaping cases.

Tapping in kidnaping cases might, it seems to me, be the sole internal exception to the general prohibition because the telephone is as much the weapon of the kidnaper as the gun is of the murderer. The international raison d'être is due to the fact that only recently have we been faced with the need to protect ourselves against world-wide underground movements.

Even in these cases, I would recommend that the wire tapping be permitted only on application to the Attorney General of the United States or to the State or Defense Departments in the case of international matters. A time limit should be fixed on every order.

In addition, the applicant officials should be required to make a public report annually stating the number of taps during the year, the length of taps, the crimes involved, and the number of cases in which the evidence was of value.

An appraisal of final results on wire tapping which was done for the year might well be reported to two important committees of the Senate and the House.

A country can pay too high a price for 100-percent efficient police work. People who have lived under the fear of the Gestapo and the MVD learned that lesson.

Wire tapping is dirty business and, unless strictly controlled, will corrupt the Government and reduce our police to the low levels of the crooks, the spies and the blackmailers.

Rise Up, Liberals

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. SABATH. Mr. Speaker, under leave to extend my remarks, I include therein an article which appeared in the Chicago Sun-Times newspaper on May 30, 1949. It was written by that great liberal Samuel Grafton.

I feel that the same is entitled to real thought and consideration on the part of all Democrats.

The article follows:

RISE UP, LIBERALS

(By Samuel Grafton)

NEW YORK.—The time has come for a rank-and-file rebellion against the Democratic party leadership, including, if necessary, the President.

If the leading liberals in the party continue to take what is being handed to them from on high, they can close up shop as liberals. The news given by Senator LUCAS, Democratic floor leader, after a Presidential conference, that a July 31 adjournment of Congress will be sought, even, apparently, if that means no action this year on civil liberties, health legislation, minimum wage improvement, etc., is not news that can be handled in the ordinary way, by polite deprecation, mild expressions of concern, or general remarks about the pity of it all. This news calls for the reply of positive, affirmative political action.

I mean specifically action by such persons as Senator DOUGLAS, of Illinois; Senator HUMPHREY, Representative HELEN GAHAGAN DOUGLAS, of California, and the newly elected FRANKLIN D. ROOSEVELT, JR.

These leaders, and others like them, must repeat what was done on the floor of the Democratic Convention on that day last summer when the party bigwigs were defied and a rousing civil-liberties plank was written into the platform. The liberal forces took over effective, if not formal, direction of the party then, and they can do it again.

The issue is exactly the same as it was last year, to keep the Democratic Party on the liberal road at any cost, because the cost of not doing so is certain to be even higher.

The party's leading liberals must at once organize themselves into an informal committee to fulfill the Democratic platform of 1948. No matter what new statements the top leadership issues, it is not going to be as easy as it was a week ago to convince the public—and the conservative opposition—that there is real urgency behind the official Democratic drive for social reform.

Only an answer in terms of affirmative political action, only an answer from deep down within the Democratic Party, of a nature that comes close to a real shift in effective control, can convince the public and the congressional minority party that the fight is still on.

The Democratic Party can prosper only when the liberal and independent voters are convinced that their desires and feelings are somehow finding expression within the party organization. Right now those voters are feeling a sense of outrage at the party's casual attitude toward the matter of timing on social reform.

The party's outstanding liberals must react unequivocally and at once to the challenge of postponement that has been laid down to them; they must react as the public is reacting, under the penalty of losing that public. There must be no hesitation and no delay, because hesitation and delay are precisely the issues.

The Lilienthal Story on the Editorial Page

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. KLEIN. Mr. Speaker, David K. Lilienthal and his colleagues of the Atomic Energy Commission are going through that form of trial by front page peculiar to our democracy.

Quite obviously, there are AEC employees who, whatever their rating in the loyalty program, do not have the concepts of loyalty to their boss and to their jobs which is considered basic in the American tradition.

However, I wonder, Mr. Speaker, what Elbert Hubbard would think of the publicity-seeking, loose-tongued individuals—quite obviously at a level of responsibility far removed from classified information—who have blabbed to imaginative reporters about things of which they have no real knowledge.

It is interesting to note that some very influential and conservative leaders of public opinion have come to the defense, editorially, of Mr. Lilienthal. It is difficult to conceive of the Washington Evening Star condoning any actual breaches of trust by the chairman or members of the Atomic Energy Commission; it is even more difficult to imagine David Lawrence defending any one on grounds of liberalism. Tom Stokes' brilliant objectivity as a reporter is as well known as David Lawrence's conservative slant.

Under consent, Mr. Speaker, I am including in the record several editorials and columns from recent issues of the Washington Star and one from the New York Times:

[From the Washington Evening Star of May 27, 1949]

IN FAIRNESS TO MR. LILIENTHAL

Chairman Lilienthal of the Atomic Energy Commission is entitled to the kind of investigation he has asked for in answer to the serious charges made against him by Senator HICKENLOOPER and others. Fair

UNIVERSITY OF MICHIGAN LIBRARIES

play demands as much. So does a proper regard for the democratic concept of an enlightened public opinion.

Up to now the situation has produced more heat than light. The charges—the gravest of them accusing the AEC of "incredible mismanagement"—have left the impression in many minds that Mr. Lilienthal has been making a mess of the atomic project and that maybe the security of the Nation has been grievously affected. As yet, however, none of this has been convincingly substantiated; the true facts—whatever they may be—have been obscured by a kind of emotional mist creating doubts and suspicions which actually may be wholly unjustified.

In all fairness, therefore, as a matter of simple justice, the Senate-House Atomic Energy Committee owes it to Mr. Lilienthal to look into the matter as thoroughly and as publicly as possible. Beyond that, after it has completed its investigation, the committee will owe it to the Nation at large to make public a definitive report on the validity of the charges. For the truth is, as Mr. Lilienthal has said in his spirited and challenging letter to Senator McMAHON, that if the charges are true "it is difficult to imagine any single fact more disturbing to the peace of mind of the people of the country or to the security of the world's democracies."

Our atomic project, after all, is a thing of overshadowing importance to the safety of our own and like-minded nations in this period of dangerous international tension. If it has been subjected to "incredible mismanagement," that fact had better be established now and corrective action taken before it is too late. On the other hand, if it has been well managed, charges to the contrary ought to be specifically dismissed, not merely to vindicate Mr. Lilienthal, but to put an end to unwarranted uneasiness among Americans and to make clear to other countries—including Russia—that we are not falling down on the job in any degree.

By means of a good, thorough, dispassionate inquiry, the Senate-House committee should find it easy enough to determine whether developments like the recent loss of an ounce of uranium 235 and the AEC's now-revised policy on atomic fellowships have been grave in their implications or whether they have been exaggerated out of all proportion to their real meaning. Further, apart from placing these matters in perspective and weighing the "human errors" admitted by Mr. Lilienthal, the investigation should go into the even more important consideration of just what he and the Commission have achieved, or failed to achieve, since they began their operations 2½ years ago.

Thus, as Mr. Lilienthal himself has suggested, the character of the AEC's stewardship can be measured by answers to such questions as these: (1) Has the state of our A weapons improved or declined? (2) Is production of fissionable materials worse or better? (3) Has nuclear research gained or lost ground since the Commission began functioning? (4) Is today's personnel morale higher or lower than in 1947? And (5) in terms of security, the protection of plants, safeguarding secret documents, clearance of individuals, etc., are present conditions looser or tighter than those prevailing 2½ years ago?

Judging from his letter to Senator McMAHON, Mr. Lilienthal is pretty certain that if these and similar questions are fully explored, the joint congressional committee will find that the AEC has done an excellent job under his chairmanship. There is some reason to believe that his confidence is well-founded. Whether it is or not, however, a complete investigation will have the virtue of clearing up current doubts and forcing reforms if any are really needed.

[From the Washington Evening Star of May 12, 1949]

LILIENTHAL OFFENSIVE—WAY FINALLY SEEMS OPEN TO TELL PEOPLE SOMETHING ABOUT ATOMIC ENERGY

(By Thomas L. Stokes)

It is fortunate that the way finally seems open to tell the American people something about their possession, atomic energy.

David E. Lilienthal, chairman of the Atomic Energy Commission, has asked that the whole record of the AEC's stewardship be explored, with the public to be told as much as is compatible with necessary secrecy in public hearings before the Joint Atomic Energy Committee of Congress.

Senator McMAHON, Democrat, of Connecticut, Joint Committee Chairman, long has urged the need of more enlightenment for the public. Chairman Lilienthal, likewise, has sought to find ways by which this could be done.

TOOK THE OFFENSIVE

Dramatically, the AEC Chairman took the offensive in the campaign against him, in which political and military influences are now clearly discernible, by telling the committee that the charges made against his administration of AEC are so grave that the facts should be laid before the public. He submitted to the Joint Atomic Committee a long list of witnesses, including some of the most prominent industrialists, scientists, engineers, and public figures in the country who have been connected with the atomic energy program, whom he suggested be called to testify about various phases of the giant enterprise which is custodian of a momentous force of nature and employs 60,000 people and operates three cities.

Senator HICKENLOOPER, Republican, of Iowa, who charged Mr. Lilienthal with "incredible mismanagement" and demanded his resignation, now narrows his case to "the administrative policies which the Commission under Mr. Lilienthal's guidance and influence has followed and continues to follow," which he said he believed to be "harmful and not in the best interests of the continuing development of the basic program outlined by Congress." He reemphasized that he has not impugned the AEC Chairman's personal honesty or personal patriotism.

It was obvious to those present at the opening public session of the Joint Atomic Energy Committee at which Mr. Lilienthal appeared that the Iowa Republican sought to soften the sensational impression his original broadside created.

The Senate committee should not rest until it gives the public all the information it can. This should include, among other things, the influences that are operating behind the scenes against Mr. Lilienthal.

It is significant, for example, that Senator CAIN, Republican, of Washington, has introduced a bill to abolish the AEC and turn the whole atomic energy project over to military control.

Atomic energy, with all it involves, would seem too important to the public to become a plaything of party politics.

Chairman Lilienthal has stated very clearly the issues involved. The biggest question of all, he said, is how the American people can know about this project without jeopardizing security, and this he wants the Senate committee to explore carefully.

"We believe," he said, "that the world can be shown that American self-government can function despite the need of secrecy."

[From the Washington Evening Star of May 26, 1949]

THE ATOMIC PROGRAM

In his letter inviting a complete investigation of the work of the Atomic Energy Commission and in his appearance yesterday at the opening session of the inquiry, Mr. David E. Lilienthal, the AEC chairman, has effectively reduced the attack upon him to its proper perspective and proportion. He has spoken so effectively, in fact, as to elicit from Senator HICKENLOOPER this singular weak pronouncement:

"From the standpoint of actual production, the atomic energy program has gone forward due to the zeal and loyalty of the scientific and technical personnel in charge of the various projects. The point of my objection is not to the activities of these people but to the administrative policies which the commission under Mr. Lilienthal's guidance and influence has followed and continues to follow."

But that is a very far cry from the charges of "incredible mismanagement" * * *. The public will not readily distinguish the zeal, loyalty, and accomplishments of Mr. Lilienthal's scientific and technical personnel from Mr. Lilienthal's own managerial ability; and it is likely to conclude that seldom has there been so transparent a confession by a statesman that he had gone off half-cocked.

Nor is the Hickenlooper explosion rendered any more impressive by a bill rushed out yesterday * * * for abolishing AEC and putting the whole activity into the hands of the military Secretaries and the Chiefs of Staff. It is difficult to resist the feeling that what we have been witnessing is an upsurge of a whole mass of old jealousies, animosities, partisans and factional differences, seizing upon a few apparently trivial lapses in order to reopen issues which, having been decided 2 years ago, ought to stay decided for at least a reasonable period.

If this estimate is correct, it follows that this is certainly no way in which to deal with the grave and terrible problems of atomic energy development. Yet this kind of thing is the nearly inevitable result of the almost psychopathic secrecy with which the public and the Congress itself have insisted that the atomic program be surrounded. That program will never be on a really firm and efficient basis until at least enough is popularly known about it to save it from exaggerated and irresponsible attack and interference. It is as unnecessary as it would be unwise to publish the secrets of atomic bomb manufacture and stock piling to the world; but, like Mr. Lilienthal, this newspaper welcomes an investigation which can consider the adequacy of the atomic operation as a whole and provide a body of data on the subject at least sufficient to end the kind of blindfolded in-fighting which has dogged the work from the beginning.

[From the Washington Evening Star of May 26, 1949]

LILIENTHAL CALLED MAN TO KEEP ALL-IMPORTANT JOB AS AEC HEAD—JOINT COMMITTEE PROBE SHOULD DEVELOP SYSTEM OF CHECKING MATERIALS

(By David Lawrence)

Because of the mysterious nature of the atomic bomb, almost everything that is said or done about the Atomic Energy Commission takes on a mysterious atmosphere. Hence any charge that the big "secret" or any infinitesimal part of the valuable material used in making bombs has been lost is bound to produce excitement and perhaps a bit of hysteria. No secrets, however, have been given away or stolen.

The facts about David Lilienthal, Chairman of the all-important Atomic Energy Commission, are the same today as when he was the subject of controversy before being confirmed. He is a loyal American and is as devoted to the preservation of secrets as anybody else who could be named.

But the new controversy doesn't concern itself with matters of loyalty. They go to the question of efficiency. Mr. Lilienthal cannot be expected personally to police all

the plants where projects of the Atomic Energy Commission are being handled. He can, however, be expected to hire and supervise officials who will see that the work is efficiently done.

DELEGATED AUTHORITY

When Mr. Lilienthal was the head of the Tennessee Valley Authority, it was his habit to delegate to the general manager the job of administration. He has been doing virtually the same thing now in a much larger project. The question has arisen whether the job of administration can be delegated entirely to subordinates and whether it doesn't involve the chairman himself in administrative responsibilities of a concrete nature.

But to raise this issue is not to indict Mr. Lilienthal or to justify the calls that have been made for his resignation. On the contrary, it is healthy to have the joint committee of the Senate and House and the public made fully aware, through occasional public hearings, of the delicate problems involved in policing the Commission's work.

Mr. Lilienthal admits that errors have been made. He speaks of them as "human errors." This means merely that mistakes can occur and such mistakes as have happened are by no means dangerous in themselves. They indicate the possibilities if the project is not carefully administered.

The fact that a test of security was made and that three bars of uranium were hypothetically stolen and retained for 3 months by a security officer is a subject of real anxiety. It has been argued that only an insider could have had access to the uranium, but the theory behind security precautions is that only insiders would ever have an opportunity to do any stealing.

CHECKING SYSTEM NEEDED

The idea of the test came from inside the Commission itself. What seems unfortunate is that the absence of the three bars of uranium was not discovered promptly. This apparently was because no adequate system of keeping track of materials of this kind has yet been devised. It takes a complicated bookkeeping and checking system to make sure that money isn't stolen from a bank and the wonder is that any is ever stolen, but it is, even under the most elaborate system of precautions.

What is needed is some kind of system of checking materials in constant use that is absolutely secure. To get such a system in the Atomic Energy Commission's set-up would not perhaps have been possible without the recent publicity. Incidentally the actual amount of uranium said to have been really lost probably will turn out to be negligible, and it may develop that it was never stolen at all, but wasted.

There remains the question of fellowships to scientists. Obviously any known Communists shouldn't get any fellowships or help or anything else from the Government or any of its projects. The specious cry of the Communists that they are merely a political party and that they are being punished for their political beliefs seems fantastic indeed when leading Communists have announced that in the event of war with Russia they would not fight the Russians.

But even this issue is not as simple as it appears. The scientists are a group peculiarly interested in seeing that other scientists are told what they discover. That is their training and background. To get the wholehearted cooperation of good scientists it is necessary to win their confidence. Hitler lost the confidence of his scientists and thereby lost the war. Some of those same scientists helped the Allies. It is important not to discourage the scientists and this is not a problem that can be handled by politicians.

David Lilienthal is the man to keep on with this difficult job—and being checked constantly by a vigilant congressional committee will help him to do a better job.

[From the New York Times]

THE AEC INQUIRY

The current inquiry into the work of the Atomic Energy Commission can be of great value. Arising out of charges of "mismanagement" and "maladministration" by a responsible Senator, the investigation has been undertaken by the proper body, the Congressional Joint Committee on Atomic Energy. This is a standing committee of Congress set up to make continuing studies of the activities of the AEC and of problems related to the development of atomic energy.

The hearings will be valuable if they stick to the point—that is, if they inquire into the alleged "mismanagement" and "maladministration" looking into the policies and the accomplishments of the Atomic Energy Commission. The hearings will not be valuable if they are permitted to fly off at tangents or if they are allowed to be used for the airing of unsubstantiated, sensational or partisan accusations.

Development of the atomic program under civilian control is among the Nation's supremely important tasks. Serious charges demand serious answers, and it is apparent from Mr. Lilienthal's statement yesterday that he is prepared and eager to give responsible answers. The inquiry may well result in further education of the public in the work of the AEC, and it may also uncover weaknesses in the administration of the AEC. But the Nation cannot afford to permit the hearings to be distorted into a persecution of Mr. Lilienthal or his colleagues because some human errors have been committed. Loss of a small amount of uranium oxide at the Argonne Laboratories is deplorable. But the entire work of the AEC is not to be dismissed because of such a mistake. Furthermore, the Commission has made certain decisions on which, as Mr. Lilienthal has said, "equally patriotic and reasonable men * * * entertain differing views." Within the Commission itself there have been and there probably always will be honest differences of opinion. That is of the essence of democracy.

The fact that there are such honest differences should not be allowed to divert the hearings from their only point and purpose—an inquiry into the broad question: Is the AEC performing its gigantic work well or badly, are its policies in conformity with the public interest and in what ways, if any, can administration and execution of the atomic energy program be improved?

Fraternity Is More Than a Word

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "Fraternity Is More Than a Word," by Maurice Goldsmith, public relations director, Rho Pi Phi, international pharmaceutical fraternity, holding its thirtieth anniversary convention July 17–20, 1949, Hotel Statler, Boston, Mass.:

Fraternity is a lovely word—it is pleasing to the tongue and to the ear; the images it evokes are peaceful and harmonious with a harmony built upon triads: Fraternity, liberty, equality.

Fraternity, fraternalism, brotherhood—the brotherhood of man—isn't that just another way of saying democracy? Isn't that what democracy stands for? Can men be free, truly free or truly equal, without sharing his freedom, his privileges? And how better can freedom and equality of privilege be shared, or implemented or won than through fraternity of man with man, of race with race, of country with country?

We are engaged, at the present time, in an all-out attempt to convince the world that democracy is to be preferred over all other forms of government; that the democratic way of life—so-called American way—is in every sense superior to all other ways. The way of free men working together for their common betterment—a fraternity of freedom.

We are, as the saying goes, trying to sell a tired and disillusioned old world a bill of goods; in order to succeed we must convince the customer that, under democracy, fraternity as well as liberty and equality, is more than a word. And the more convincing our demonstration of true democracy—that is, of true fraternalism, the more likely we are to make the sale and satisfy the customer.

A world fraternity—a world brotherhood, working together for the common good, shoulder to shoulder, without regard of race, creed, complexion, or geography, is not that the true goal of democracy? It must be if the United Nations is to be more than a noble experiment; if the United States of Europe, the United Nations of the world are ever to become realities.

Organization, group movements, have proven the surest, indeed we might say the only way for the worker, the common man, to win consideration, fair dealing, and security. Whatever the failings of organized labor it has gone far toward bringing the advantages of the American way of life within the reach of those whose labor has made that way of life possible for any of us.

We might stretch a point and call labor unions fraternities, and point out that, like all other fraternities, their value lies in focusing and directing the power of many working together with common interest in a common cause.

One of the first and one of the most potent of labor organizations recognized the fraternal nature of their group and called themselves not a union but a brotherhood. The Brotherhood of Railroad Trainmen. They have, I think, never changed that title nor could they have improved on it.

Fraternalism, the fraternity, the grouping together of those of common interests and viewpoints is very old; probably as old as the human race itself.

The powerful guilds and craftsmen's societies of the Middle Ages were only new in point of size and increased ability to assert themselves. Probably the Cro-Magnon men had a society of stone-hammer throwers and the fire makers' guild when it came along, must really have been something. Maybe we shouldn't recognize only the human race. If we extend our boundaries a bit we will find that animals, birds, and insects, even plants, band together for reasons which, even if purely instinctive, generally prove clearly beneficial to the individual and to the group.

That desire to band ourselves together in special groups is certainly a pretty universal social aspect. It really begins with children, in the playground, what boy hasn't belonged or hasn't wanted to belong to a secret society, a club, bristling with passwords and codes and countersigns, perhaps complete with clubhouse, someone's woodshed or barn, or maybe a noble edifice built from packing boxes in a vacant lot. And most girls have belonged or wanted to belong to some group of similar but more feminine scope.

Doesn't the popularity of the Boy and Girl Scouts and similar splendid organizations spring, at least in part, from their recognition and fulfillment of that basic urge?

UNIVERSITY OF MICHIGAN LIBRARIES

Even grown-ups do not lose their love of ritual, of mystery of drama, their delight in ceremonial costume—witness some of the biggest and best of fraternal societies.

Then, too, there is another basic inborn desire or group of desires: the desire to excel, to be chosen, or merely to be accepted; the child who is, for any reason, unacceptable to his group is the wretchedly unhappy child and, often the psychoneurotic adult in the making.

The desire to belong, once gratified, may however result in an attitude of snobbery and intolerance toward those outside the magic circle and it is right here that the unworthy aspects of college and school fraternities develop to bring down upon all fraternities criticism, and as we have been made increasingly aware of late—actual condemnation by authority.

I do not think we should limit that last statement as applying only to school and college fraternities. Many so-called fraternal groups have been protective coloration for snobbery, racial or religious bias, sectionalism, even, in some cases, for real persecution and actual violence.

These are not fraternities and should not be allowed to masquerade as such. Their concept of brotherhood is too limited to be acceptable. Unfortunately, evil forces as well as good gain strength in union.

In regard to the milder aspects of alleged snobbery, of discrimination of class against class, against which high school and college fraternities have to defend themselves it is honest to admit once and for all that there is a natural tendency for some of the "ins" to exalt themselves slightly over the "outs," and that the "outs" quite naturally resent this. Even the college fraternities supposed to be based exclusively upon scholastic achievements have produced snobs, or at least have developed innate snobbery in some few of their elect.

As a matter of fact, the "ins" suffer as much or more through this development than do the "outs."

The holier than thou great I Am stuffed shirt does not make a very good citizen of the larger world into which he emerges at graduation. He is apt to meet with some very unpleasant surprises. He may even find that he has been looking at himself through the small end of the telescope when he should have been using the large or diminishing lens, that is one the world at large seems inclined to use almost exclusively when considering him and his attainments.

On the other hand, of course, envy, unhappiness, and resentment bred in the "outs" by the condition of outness does not make for the soundest and happiest approach to a successful life, either. It's like all wars, nobody ever really wins.

Probably the best way to rate either the real or the nuisance value to humanity of any fraternity is to consider its basic aims, and what it is actually doing to accomplish them.

No group that exercises, either openly or overtly, racial or social, intolerance or religious bias should be allowed to call itself a fraternity. There are plenty of other titles more suitable and less misleading. This prohibition should not be too difficult to enforce and it would protect the innocent from sharing the blame for intolerances and retrogression.

Of course, it is very unlikely that any amount of official prohibition is going to do away with the fraternities, such acts on the part of authority would be interpreted as persecution and would probably send the persecuted societies underground, increase their membership, and enhance their subversive tendencies, if any.

Such prohibition is rather against our democratic principles, or is it? Of course, any form of intolerance or persecution is decidedly against those fundamental principles, too.

Of course, in the case of school or college fraternities of which the existence and activities can be proven beyond all question to be injurious to the best interests and aims of the institution and its student body, the authorities might well find just cause to turn thumbs down.

However, it seems likely that a better understanding and application of the principles of true fraternalism, a more particular insistence upon the proper definition of fraternity, and more care in using it as a society or group title would automatically do away with many of the abuses brought about by those groups who take this lovely name in vain.

Fraternity is a lovely word—but it is so much more than a word—it is the hope of nations, it can be the savior of the world. The meeting of minds and hands, the working together for a common good, for universal peace and the welfare of all peoples, creating, developing true fraternalism is at once the substance and the spirit of real democracy.

Fraternity, like freedom, is more than a word.

Conserving Our Soil

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. ASPINALL. Mr. Speaker, the most important attributes of the future national economy depend upon our conserving the natural resources of our country. We must not permit our valley floors or mountain steppes to be depleted of their natural soils. In this connection, the employees of the soil-conservation districts, in their work throughout the United States, are to be highly commended in their endeavor to keep the citizens ever mindful of their duty toward this goal.

Recently the San Juan soil conservation district in Colorado sponsored an essay contest. Under leave to extend my remarks, the prize-winning essay of Miss Ethel Johnson, whose subject is Conserving Our Soil, is submitted.

CONSERVING OUR SOIL

(By Ethel Johnson, grade 11, Pagosa Springs High School, Pagosa Springs, Colo.)

We are losing our topsoil all too rapidly. This must be prevented, and can be, by the cooperation of all farmers in proper farming. People have been carelessly grazing their land too closely and farming wastefully and harmfully for so long that the productivity has been reduced and erosion has taken place.

There are two kinds of erosion—wind and water. By proper methods both of these can be prevented from destroying so much of our land, although not entirely stopped.

In the past, careless farmers have plowed straight down hills, thus providing a runway for water to carry away valuable topsoil. By plowing on the contour, the water is slowed down and has a chance to soak into the ground. Gullies that have already been formed should be filled and seeded to soil binding crops. They make a good dump ground for garbage which will help fill them and make fertilizer. They also may be graded full. When plowing a field, a dead furrow should be avoided, as a potential gully.

Terracing often gives the owner more land in production and also avoids erosion. It slows the water down and allows it to soak into the soil, thus increasing production.

Wind erosion also claims its toll from the land. This can be retarded too, if treated by the correct methods. Windbreaks should be planted at right angles to the prevailing wind, shrubs or slow-growing trees first and the taller trees next to the crop. While this may occupy some cropland, it lessens loss of soil by wind, makes a haven for wildlife, and is a good place to obtain firewood and fence posts.

Strip cropping is another good method for prevention of wind erosion. A strip of hay is planted alternately with a row crop. The close growing hay crop lessens the velocity of the wind against the row crop. This practice works in well with crop rotation as the hay crop replaces nitrogen used by the row crop.

The land should be farmed to the best advantage. Some ground is too run-down for profitable cultivation and may be ruined beyond repair by constant farming. Such land should be used for pasture, if not grazed too heavily. Soil binding plants should be planted and the land allowed to heal, which if left to nature, takes a good many years, but if we have the welfare of future generations at heart, we won't grudge the loss of the time it takes. However, we can speed up the process somewhat by the use of our modern machinery, bulldozers, tractors, etc.

The land that is suitable for cultivation should be kept in as good a condition as possible. By applying barnyard fertilizer, you can lessen the need for commercial fertilizer. Stubble mulching is another practice useful in returning nourishment to the soil and keeping it moist.

It is time for the Nation to realize the fact that if something is not done soon about the loss of valuable life-giving soil, it will all be washed and blown to the bottom of the ocean.

Resolutions of Key Club International

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. HAND. Mr. Speaker, I think it will be helpful to the House to have information on the attitude of our young people on pending governmental problems, and it is my privilege to include herewith the resolutions adopted by Key Club International at their recent convention in Washington.

As you know, Mr. Speaker, Key Club International is a young men's organization sponsored by the International Kiwanis Clubs. Among the many fine things that Kiwanis has done, has been the establishment and sponsorship of this splendid group, which gives to those who are fortunate enough to be members, a very early interest in civic and governmental problems which is bound to pay dividends in future good citizenship.

It is my rather special pleasure to do this at the request of Kenneth L. Miller, Jr., the president of Key Club International, who is a personal friend, and who lives in Cape May, N. J., the home of my own Kiwanis Club.

The resolutions follow:

Whereas it is desired by this convention to thank the city of Washington, D. C., and the Key Clubs of the surrounding area for their cordial hospitality: Be it

Resolved, That Key Club International express our appreciation in formal letters to all parties concerned.

Whereas the profits derived from school entertainments, amusements, and athletic contests are generally utilized in furthering the educational achievements of the students: Be it

Resolved, That we, the members of Key Club International, ask the Congress of the United States to provide for the exemption of Federal admission tax on school entertainments, amusements, and athletic contests, the proceeds of which are used for educational purposes, and that we take active participation in any action toward this goal.

Be it resolved, That the delegates assembled at this sixth annual Key Club convention go on record in reaffirming its stand as opposed to the principles and ideals of communism and commending the governments of the world who stand in opposition to these principles and uphold the freedom, rights, and privileges of man.

Be it resolved, That Key Club International go on record as favoring the 70-group air force.

Be it resolved, That Key Club International favors the Hoover plan for reorganization of Government administration.

Be it resolved, That Key Club International favors the reduction of the voting age to 18 years.

Be it resolved, That Key Club International favors a constitutional amendment whereby the President and Vice President of these United States would be elected by popular vote.

Be it resolved, That Key Club International work for the promotion of the sales of peacetime savings bonds.

Rex McDonald, the Champion Saddle Horse

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. MOULDER. Mr. Speaker, a few persons may scoff and ridicule my remarks honoring a great horse, but such persons should acknowledge that, until the event of the machine age, the horse was indispensable and carried our pioneer ancestors' burdens in the development and improvement of the resources of our great Nation. He was our transportation system and served loyally in the front lines in all battles of major wars.

I, and many of my constituents in Boone County, Mo., believe it fitting and proper to commemorate the anniversary of the birth of the great saddle horse, Rex McDonald. His ancestor sires, Black Squirrel and Rex Denmark of Kentucky, were the greatest ever known in Kentucky and Missouri. His dam, the mare—Lucy Mack of Missouri—was also a famous horse.

Rex McDonald was born and reared in the Little Dixie section of Missouri, Callaway County, and later served his owner, Dr. R. E. Graham, of Columbia, Boone County, Mo., for many years. Today, in that part of Little Dixie, Missouri—Boone, Chariton, Howard, Randolph, and Saline Counties—which I have the great honor of serving as their Representative in Congress, there are many famous saddle horses, descendants of the great Rex McDonald; and each year at the Stephens College, Christian College, and the county horse shows of Boone County, you can see and enjoy the most exciting and thrilling exhibition of horsemanship and beautiful horses, the best in the Nation, and many of the best horses shown are descendants of the great champion, Rex McDonald.

Rex McDonald was a magnificent black stallion to which every horseman paid great tribute; no other saddle horse ever lived so well known; no other ever held quite the same place in the minds and hearts of the people as did Rex McDonald. He flashed into the ring and brought people to their feet in recognition of his beauty, brilliance, animation, and presence. No other horse ever had such a victorious career. He was the champion of all great saddle horses and none have ever equaled his equine fame. No horse in America was a more magnificent illustration of the remarkable prepotency of the saddle horse blood and its fidelity to conform to its type than Rex McDonald. He was the champion of champions for more than a decade. His sons and daughters were champions and they in turn produced champions.

The name, Rex McDonald, still remains in the history of horses as the king of all saddle horse champions, and, on this day, we in the Little Dixie area of the Second Congressional District of Missouri salute and honor the great record and life of this phenomenal Missouri horse—Rex McDonald.

There Is Something Wrong in Germany

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. KLEIN. Mr. Speaker, not only is the decartelization program breaking down in Germany; the voices which are raised in protest against abandonment of the stated policies of the administration are being brutally stilled by the most effective of all methods: they are being fired.

There is something wrong in Germany.

Perhaps the reason is that there is something wrong here in the United States.

The President has given clear and firm public commitments. His own personal knowledge of the operation of international cartels, gained as chairman of the Senate Committee Investigating National Defense Problems, led him to make unequivocal statements on decartelization and denazification.

Somewhere down the line of authority, his directives are being ignored and flouted. There is a weak link, or perhaps several weak links, in the chain of command.

I am sure that I shall have more to say on this subject in the near future.

At this moment I wish only to insert in the RECORD, under consent, and with full credence, the column by Tom Stokes, an independent and fearless columnist of the Scripps-Howard syndicate, United Features, as printed in the Washington Evening Star of June 1, 1949, on the subject of the recent firing of Alexander Sacks and Charles H. Collison. I want to remind you, Mr. Speaker, that one distinguished name after another has resigned from AMG rather than submit to the deliberate distortion of the decartelization program, among them our former colleague, Charles LaFollette, of Indiana, and James Martin.

Text of the column follows:

HEARING HERE NEEDED—MILITARY ACTED ARBITRARILY IN FIRING CRITICS OF PROGRAM ON GERMAN CARTELS

(By Thomas L. Stokes)

Accumulating evidence reveals how arbitrarily American military government officials in Germany acted in firing two members of AMG's decartelization staff who were ousted because of criticism that the program to break up German cartels had not been carried out.

Developments emphasize the need of an open hearing here in Washington, for an airing of these two cases will show how high military government officials frustrated our war aim to break up the military potential of Germany.

The two men are Alexander Sacks, a member of the decartelization staff whose case first was disclosed several weeks ago, and Charles H. Collison, deputy chief of the decartelization element, whose dismissal came to light recently. Mr. Collison practiced law in New York for 13 years before he went to Germany, and Mr. Sacks formerly was with the Justice Department Antitrust Division.

TESTIMONY BACKED UP

Both were summoned as witnesses before the special commission headed by Garland S. Ferguson, member of the Federal Trade Commission, which was sent to Germany last December by then Secretary of Army Kenneth C. Royall to investigate the cartel program. In its report a few weeks ago the Ferguson commission backed up the testimony of the two men.

First suspended last February, Mr. Sacks was reinstated when his treatment was protested. Recently he again was summarily dismissed by order of Gen. Lucius D. Clay just before the former United States Military Governor in Germany gave up his post to return home, though simultaneously here in Washington Acting Secretary of War Gordon Gray had written his counsel, Wendell Berge, former head of the Justice Department's Antitrust Division, that Mr. Sacks' case was closed.

His case now is the subject of a grievance hearing, as it is called, in Frankfort. Acting Secretary Gray has informed Mr. Berge that if Mr. Sacks is not satisfied with his hearing there he can ask for a hearing, de novo, before the Secretary of the Army here. It is assumed Mr. Collison will be given the same opportunity.

UNIVERSITY OF MICHIGAN LIBRARIES

LETTER BY COLLISON

More light is shed on Mr. Collison's case in a letter he wrote, dated May 21, to John C. Stedman, chief of the legislative and clearance section of the Justice Department antitrust division, who was on the staff of the Ferguson Commission. He said:

"In January 1949, shortly after your committee had departed from Germany, Mr. Richardson Bronson, chief of the United States Decartelization Element, demanded that I resign from my position as Deputy Chief of the Decartelization Element because after reading my testimony before your committee, Mr. Bronson stated that I had been disloyal to him personally. I refused to resign.

"On May 17, 1949, Mr. Bronson again demanded that I resign because of my testimony before your committee. I refused again and Mr. Bronson told me I was fired then and there because of my testimony. I requested this statement in writing and Mr. Bronson promised to give it to me. Later the same day Mr. Bronson wrote me a letter but it merely stated that I had been declared surplus."

Mr. Collison said he was declared surplus, despite the fact that on May 6 Mr. Bronson had announced that the official policy of the military government was that the decartelization personnel would not be cut but probably increased. The Ferguson committee recommended strengthening of the staff.

The ousted deputy urged that something be done to protect Government employees who are called to testify before investigating committees.

Government Reorganization

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of May 31, 1949:

TO RESCUE REORGANIZATION

It is hard to believe that the same Congress that is represented as being in an economy mood would muff its chances of making a lasting, monumental contribution to the cause of governmental economy. Yet, ironically, that strange turn of affairs seems to be happening at the Capitol. For, unless Congress has a change of heart about adjourning sine die on July 31, all hope of economy through reorganization this year of the executive establishment faded with congressional adjournment over Memorial Day.

The Senate and House bills to give the President the green light on reorganization under the Hoover Commission program were reposing over the week end in a conference committee desk. It is said the conferees are stalemated over the issue of whether to give the legislative branch a one-House or two-House veto on Presidential reorganization proposals. This issue, raised by the Senate, should never have been injected into the reorganization legislation. Mr. Hoover strongly favors a normal concurrent veto by both Houses and so does everyone else who remembers the nullifying effect of a one-House veto in the past. Yet the Senate conferees are reported to be holding out for this reorganization-frustrating arrangement.

This deadlock has carried the conferees up to the time limit for action under the present congressional timetable. Under both bills, the President must submit his reorganization plans to Congress at least 60 days before the end of a continuous session. Unless Congress should decide to extend the session beyond July 31, there will not be time enough left for congressional consideration of any Presidential program at this sitting. The most alarming aspect of this situation is that the longer Congress puts off action, the less likelihood of any effective action at all. Mr. Hoover is not alone in the belief that if nothing is done at this session, when reorganization has more support than ever before, the prospect of accomplishing anything in the future is distressingly dim.

There is one way that Congress could rescue reorganization from such a dismal fate. It could insist on an early conference agreement—preferably on the House version of the veto plan—and it could then remain in session long enough beyond July 31 to insure action on the first of the President's reorganization proposals. If Congress is as earnest about economy as its Members profess to be, it will make a supreme effort to launch the reorganization program right now.

Address of Gen. Hoyt S. Vandenberg

EXTENSION OF REMARKS
OF
HON PORTER HARDY, JR.
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. HARDY. Mr. Speaker, last Monday was truly Memorial Day in Suffolk, Va. At that time the good people in the city of Suffolk and Nansemond County participated in most impressive memorial services. The principal address was made by Gen. Hoyt S. Vandenberg, Chief of Staff of the Air Force. He was introduced by Governor Tuck.

In order that the Members of the House may have the privilege of reading General Vandenberg's remarks, I am submitting his address for inclusion in the RECORD:

Governor Tuck, ladies and gentlemen, when I visit southeastern Virginia, I am always aware that this is an old and historic region. Here the settlement of this continent began. Here our independence as a Nation was finally won.

There is little evidence today that the peaceful city of Suffolk and county of Nansemond were ever ravaged by war. Yet I am told that 87 years ago this area was occupied by hostile forces, and that 83 years before that occupation, the town of Suffolk was burned by an enemy army. On many occasions, hostile fleets have entered the nearby waters of Chesapeake Bay.

During the great World Wars of recent years, many men of Suffolk traveled far and fought in distant places to save our homes from devastation. Some of these men did not return.

Today we honor those who dared to make the greatest sacrifice. Some were killed in combat, others lost their lives in wartime service. Today we honor them all, for they all served with honor.

Some of these men lie near us here in the warm soil of Virginia. Others lie far away. But they came from here, and this is still their home. Their names are inscribed on these memorials, new and old. They will be long remembered in the hearts of the people who knew them best.

All over America at this moment and throughout the day, other men like these are honored and remembered. These ceremonies, these memorials, these acts and words of remembrance are not designed to glorify. The men we knew did not live or die for glory. Most of them were young and hopeful. They loved the good things of life as other men. They did not welcome death, and most of them perhaps did not expect it. Yet when danger threatened, each was willing to bear his share and more.

Why was this so? Why were these men willing to risk and lose their lives? Why did they earn the fullest measure of respect we now can show them? If we could ask them and hear their answers, I am sure the answers would not be the same. Some would mention their comrades in arms. The comradeship of men who train or fight as a team is a powerful force and is indispensable to victory. In the face of danger men establish bonds of friendship too strong ever to be lost. But the oldest and deepest sentiments are never displaced. Most men would first recall their relatives and their friends at home. Certainly they would speak of the pride and hope of the mothers and fathers, the brothers and the sisters, who inspired them to live and die like men.

Some had wives and children whose welfare and safety they were anxious to protect. Others would recall their duty as citizens and Americans, while still others would describe the peaceful beauty of the home communities they wanted to preserve.

All these are reasons why the men we remember today went forward when their country called. The words are different, but the basic reason is the same. They knew that no man exists merely for himself, and that no man lives or dies alone. Life for them was homeland, freedom, and the friends they loved. They staked their lives to save that homeland and that freedom. Whether they won or lost depends upon the friends they left behind.

All the things for which these heroes fought have passed into our hands. We are the heirs of their sacrifice. We live today in peace and freedom because they paid its heavy price.

This is a serious occasion but not a day of mourning. It is rather a time to rejoice that such men lived and that they did not live in vain. This is a day to resolve again that we shall not waste their sacrifice, and that the hopes for which others fought and died shall not perish through our neglect. Being human, we have not always followed the wisest course. We have been slow to match our strength against the threats we have to face. But we have learned too much to make the same mistakes again.

Our Nation is stronger than ever before in years of peace. More than ever before it represents the best hope of all mankind. Peace and freedom for all mankind must be our goal, for the day has come when no nation on earth can live or stand alone. If this means sacrifice, we must prepare to make it. If this means renewed determination, we must show to all the firmness of our high resolve.

To do this we need an ample measure of armed strength, but we need far more than armed strength alone. The basic strength of a nation is the product of the character of its people. The men we honor today were not produced by the armed services. Those services could only train them to work together and to use the complex machinery of war. The men we honor here were the product of this community, of its schools, its churches, and its homes.

The day will never come when we can maintain our strength without the services of men who are willing to make sacrifices for our communities and for our Nation. The basic attitudes and convictions that such men possess must be developed throughout their early lives. To produce a man of character is almost a lifetime job.

Here in this community today, men and women are growing up to accept responsibility—even to seek responsibility and opportunities for service beyond all hope of reward. We lean heavily upon such people now. They are everywhere, in private occupations and in public service. They are in the many departments and offices of our States and Nation.

These men and women are working to maintain our strength at home and abroad. Their efforts have increased our influence for peace and stability in a dangerous and disordered world. If they succeed, we may continue to live in peace and freedom for many years to come.

The crisis has not passed. The strain is great and the responsibility is heavy. The urgent need for service to the Nation in a thousand fields of service will continue for a long time to come.

The men we honor here today did not lay down their lives just to win a war. They aimed to make this Nation and its people safe. Their work is done but ours continues yet.

From this city, and from others, new leaders and new heroes must arise to serve in war or peace. It is not enough that we keep faith. That faith must be transmitted to our sons. The proud banner carried by these honored dead will pass into their hands.

Chennault Says United States Can Stop China Reds

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York World-Telegram:

CHENNAULT SAYS UNITED STATES CAN STOP CHINA REDS

(By Allan Keller)

With an annual investment of less than a half billion dollars, this country could help Nationalist China hold the Chinese Communist armies at bay before a natural line of defense the Japanese forces were never able to penetrate, Gen. Claire Chennault, former head of the Flying Tigers and leader of American air forces in China, told the World-Telegram in an exclusive interview.

The airman who checked the forward rush of the Japanese almost single-handed before this country entered the war said that his proposal not only could insure an end to Communist encroachment in China and southeast Asia but would permit exports of critical materials needed in this country in sufficient quantities to repay the money advanced the Chinese Nationalists.

COULD HELP NATIONALISTS

"It is my firm conviction that we could help the Chinese Government to hold a sanitary zone in western China that would keep the Reds out of India and Indochina," said General Chennault at the Waldorf-Astoria before he left for Washington. The defense zone was held against the Japs and can be held against the Reds.

"Starting in the north at Ningsha the line would cut straight south to the Gulf of Tonkin and would hold behind its defenses 150,000,000 of the most courageous of all the Chinese. They are mountaineers and desert people who are used to fighting all invaders.

SMALL SUM NEEDED

General Chennault argued that the relatively small sum of $500,000,000 would be sufficient to supply the small arms and other supplies the Chinese need for their defense. He said no heavy equipment is needed because of the mountainous terrain along the eastern front of the sanitary zone.

"I propose that an American military mission should control the expenditure of this money to prevent waste or misuse," said the former chief of the Flying Tigers. "The best fitted man of all is Lt. Gen. Albert Wedemeyer for whom the Chinese have the deepest admiration."

General Chennault said it was evident to all strategists that if the Communists gain access to the south of China there will be no way to keep them from swallowing up India, Burma, Malaya, and Indochina.

AIRFIELDS INCLUDED

"The areas we would hold back of the defense line would include the big airfields we built for the subjugation of Japan," said the general. "From them B–29's and B–36's could interdict movement along the Trans-Siberian Railroad if that became necessary and we could reach every factory area east of the Urals."

General Chennault said that his plan called for the holding of the island of Formosa to prevent the flanking of our advanced defense line from Japan to the Philippines and the rejuvenation of the forces under Gen. Chiang Kai-shek.

"This is a businesslike proposal that will cost us little in cash," he said, "but which may some day save the democracies untold tragedy."

Address of Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley at the Catholic Culture Center, London, Canada, May 8, 1949:

This is the month of May, the one month in the year which, traditionally, in the Christian world, is dedicated to the honor of Mary, the mother of Christ, and it is indeed fitting that one day in this month, the second Sunday, has been set aside when we pay our respects to the mothers of our two countries. On such an occasion as this, I feel very much honored and humbly grateful to have the opportunity to speak before the membership of the Catholic Culture Center Forum.

Although our peril of actual warfare has been over for 4 years, we are fully cognizant of the great strain, the stress and the chaos which have ever since pursued and harassed the world. In these days of world-wide distress we can well pause to make a silent prayer that divine providence will guide our leaders and our peoples to the end that our efforts will speedily achieve a complete, just, and lasting peace.

And it seems to me that much and great good could be accomplished in that direction if the nations of the world ever keep before them the simple, wise, and just advice that mothers of men impart to their little ones at their knees. As I say this, I recall the advice which the mother of Andrew Jackson, a great leader and the seventh President of the United States, gave to him shortly before she died. It impressed me so deeply that I have never forgotten it. She said:

"Andrew, if I should not see you again, I wish you to remember and treasure up some things I have already said to you: In this world you will have to make your own way. To do that you must have friends. You can make friends by being honest, and you can keep them by being steadfast. You must keep in mind that friends worth having will in the long run expect as much from you as they give to you. To forget an obligation or be ungrateful for a kindness is a base crime—not merely a fault or a sin, but an actual crime. Men guilty of it sooner or later must suffer the penalty. In personal conduct be always polite but never obsequious. None will respect you more than you respect yourself. Avoid quarrels as long as you can without yielding to imposition. But sustain your manhood always. Never bring a suit in law for assault and battery or for defamation. The law affords no remedy for such outrages that can satisfy the feelings of a true man. Never wound the feelings of others. Never brook wanton outrage upon your own feelings. If you ever have to vindicate your feelings or defend your honor, do it calmly. If angry at first, wait till your wrath cools before you proceed."

These words were repeated by General Jackson on his birthday, March 15, 1815, at New Orleans, to three members of his military family, Maj. John H. Eaton, Maj. William V. Lewis, and Capt. W. W. Butler. "Gentlemen," said General Jackson, "I wish she could have lived to see this day. There never was a woman like her. She was gentle as a dove and as brave as a lioness. Her last words have been the law of my life."

Mothers are instinctively—and we instinctively expect them to be—a fount of virtue and inspiration to their children. As a daughter, as a sister, or as a wife, a woman represents only herself, but as a mother she is an institution, a living source of man's beginning, a living symbol of mankind's destiny. A man may be steeped in cynicism and despair, but still his mother's words will be for him a source of strength and a fortress of hope.

Many a man's wife who took the oath with solemn voice has withdrawn her support, but a mother always is constant in her support "for better, for worse, for richer, for poorer, in sickness and in health, until death do us part."

That oath imposed in the marriage ceremony implies the expectation that those made one before the law will be one in spirit, too. Though often only a hope between spouses, it is a fact between mother and son. No solemn soundings are needed to bind a mother and her son "for better, for worse unto death." Nature herself forges the undying bond, for it takes her into the shadow of the valley of death to give him life at the risk of her own. Affection thus born is surely not a mere sentiment or an accident. It is a profound manifestation of nature and shows that though we may turn to our scholars for the answers to technical problems, we would do better to turn to our mothers when we seek fundamentals.

Long before the dawn of the Christian era, the reliability of a mother's instinct was recognized in all ages and places. The best known story goes back thousands of years to the time of Solomon. You recall, I am sure, the story of the two women who claimed the same child. As it is told in the Scriptures, one said to Solomon, "Oh, my Lord, give her the living child, and in no wise slay it." But the other said, "Let it be neither mine nor thine, but divide it." Then the king, turning to the first woman, said, "Give her the living child, and in no wise slay it; she is the mother thereof." How easy it was for him to be sure which of the two was the true mother.

UNIVERSITY OF MICHIGAN LIBRARIES

In the Christian tradition, of course, the mother has always been the voice of virtue and the living star of truth. Dignity and honor have been hers, and her material welfare has been the proper concern of every self-respecting son.

Most mothers live obscure lives and die obscure deaths, their grace and inspiration enhancing the lives only of their offspring. It is significant, therefore, of the genius of motherhood as an institution that mothers as a class are so widely heralded throughout all literature.

My country's Washington Irving states simply but well: "The love of a mother is never exhausted, it never changes, it never tires."

A father may turn his back on his child, brothers and sisters become inveterate enemies, husbands may desert their wives, or wives their husbands. But a mother's love endures through all; in good repute, in bad repute, in the face of the world's condemnation a mother still loves on, and still hopes that her child may turn from his evil ways and repent; still she remembers the infant smiles that once filled her bosom with rapture, the merry laugh, the joyful shout of his childhood, the opening promise of his youth; and she can never be brought to think him all unworthy.

The life of Augustine shows how sound such a mother's faith can be. Augustine—contemptible before the world—was to his mother the soul of beauty and honor. She tirelessly pursued him, determined to convert him to the Christian life of which she knew he was worthy. When at last she had lifted him out of the mire and set him among princes she knew and said her life was done, and she was happy to pass on to her place in eternity—the great St. Monica.

Some writers have gone very far in their portrayals of the function of motherhood. The English novelist Dickens wrote: "I think it must somewhere be written that the virtues of the mothers shall be visited on their children, as well as the sins of their fathers."

The philosopher Michelet: "It is the general rule that all superior men inherit the elements of their superiority from their mothers."

New England's Ralph Waldo Emerson contributes the concise remark: "Men are what their mothers make them."

It is almost trite to repeat that our boys fought for freedom of the oppressed, but, in substance, doesn't that mean that they fought for the sanctity, the security, and the importance of the home? And what is home without a mother? As the American James Russell Lowell said: "Many make a household but only one the home."

These are thoughts it should not be necessary to dwell upon and you may well ask why it is desirable to cite testimony to such a well-accepted truth. Precisely because it is not so well accepted as we may blindly believe. While the overwhelming majority of the mothers of our nations—and of the fathers, too—have done their duty to help crush a system which would make of mothers mere instruments of propagation for military conquest, there are abroad within our midst groups and individuals who conspire for the success of their peculiar brands of philosophy, which would make a mockery of the values upon which we have bred. The honest average citizens of these lands work hard at home and in shop to make a living and to serve their country. When their day's work is done they quietly and in good faith turn their minds to the peaceful enjoyment of family life. They have little or no time for political activity. They can only have faith that their efforts and the efforts of their neighbors are expended in behalf of the fundamental principles which they understand to be the essence of our constitutional Government.

There seems to be a spirit growing, among some, that is alien to our institutions. I have an uneasy feeling that the belief is spreading that the people are not capable of governing themselves, that the problems of today are so complex that the citizen at large must of necessity be detached from his own difficulties. The concept of the political elite is growing.

A few years ago, a book was published and widely discussed in which the author stated his belief that mankind can be divided into a small class of the ruled type. "Political action," the author contends, "is confined for the most part to a small minority of men; the majority is and remains, whatever else happens, the ruled." This writer even dares to suggest that Machiavelli is an excellent sample of the elite.

We see clearly what this intellectual believes. He believes that the hard-working masses of great nations were meant to be just hard working, and were not intended to bother about the solution of their own problems but were meant to leave them to be determined by a small group of know-it-alls.

We have always had the social snobs who have no respect in any sense for persons of crude though honest habits, and we have always had the intellectual snobs who think an individual becomes an individual only after he has acquired certain facts or theories; who refuses to recognize that the individual has merit unto himself and in himself.

Mothers have always been an antidote to the influence of social and intellectual snobbery in our society because mothers by nature appreciate that a child has a basic dignity equal to or greater than an adult's. The substance of human nature is there; later social or intellectual attainments are mere accidents.

We have got to realize that many years of liberty do not assure us an eternity in its enjoyment. We have got to rid ourselves of the fixed idea that liberty is imperishable on our continent. Reference to eternal vigilance as the price of liberty are not amusingly hollow words because they have been unnecessary in lands where liberty without vigilance has been a free commodity. Perhaps our time has come. We can learn the price of liberty by alertness. If the choice is given to us of liberty or security, we must scorn the latter with the proper contempt of freemen and the sound judgment of wise men who know that liberty and security are not incompatible in the lives of honest men.

It is upon our mothers—in Canada and in the United States—that our two countries must depend to protect their institutions. The mothers are the repository of the fundamental principles of our national structure. Should these principles be subverted, the sacrifices of our patriots, present and past, will seem minor compared with the sacrifices of future generations to bring about the resurrection of those freedoms which have made our countries great.

The people of your country and mine must learn, and learn well, that our continent is still the New World and that we are but a thin stream of light in the long black history of human bondage, and that the illusion of permanence abiding in the hearts of so many proud Americans—whether Canadian or of the United States—is a disarming perspective. The warm enlightening flame of liberty must be kept alive with the twin fuels of intelligence and courage.

I cannot believe we have talked the meaning out of the words that now, trite with use, bear no message to inspire our populace. Liberty and freedom as words become trite only at a price. I will not believe that we must suffer their loss to learn their value. The tragedy is that the process of rediscovery of their value seldom involves a recovery of their enjoyment.

The titanic efforts and the copious bloodshed that went into the settlement of the North American Continent; the sacrifices of the great battles that have been fought in World Wars I and II—and those which preceded them—are matters of meaning full and deep in these days of new trial. In years of peace and complacency we heard their recital with pleased but semiconscious ears, but we must now grasp their full import and hold to it if we are to be equal to the threat before us.

Our mothers will do their part; they have offered their own lives that their sons might live and they offered their sons' lives that their countries, yours and mine, might live. And it is into their hands and the ideals that guide them that we willingly and with faith entrust the future of our beloved nations. We do this knowing in our hearts and our souls that Mary, the Mother of Christ, whose month we now honor, will never desert us.

Contribution to the National Reclamation Association

EXTENSION OF REMARKS
OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. JACKSON of Washington. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I sent to Mr. Harry E. Polk, president of the National Reclamation Association:

JUNE 2, 1949.

Mr. HARRY E. POLK,
President, National Reclamation Association,
National Press Building,
Washington, D. C.

DEAR MR. POLK: On February 22, 1949, while testifying before the Interior Appropriations Subcommittee of the House of Representatives, you agreed, at my request, to furnish for the record a statement of the sources of income, both direct and indirect, of the National Reclamation Association. The relevant testimony appears on pages 861 through 864 of part 2 of the subcommittee's hearings.

On page 862, the following question appears:

"Mr. JACKSON. If you could, Mr. Polk, I should like to have you submit for the record a statement of the sources of your income and whether the income comes from associations or other groups within the State, and that you list where they derive their funds. I think it is a matter of fairness that we have that information because these questions are bandied around from time to time and I think it would be helpful to clear the record.

"That is the reason I ask not only for your income from private utilities but I also ask public bodies, because I think they both contribute. I would like you to submit a list of all the sources of your income, both direct and indirect."

To this question you responded:

"Mr. POLK. I shall be glad to do that."

The information which you submitted appears on page 862 of the record. It begins, "Following is the record of finances of the National Reclamation Association, as furnished by members of the board of directors from each of the 17 Western States:".

As an example of the information furnished, I should like to cite the statement regarding the State of Washington, which appears on page 864 of the record:

"WASHINGTON

"Affiliating State organizations? Washington State Reclamation Association.

"How financed? Voluntary subscriptions.

"How is quota met to NRA? Largely with State appropriations and individual and organization members.

"Total amount received from State in 1948? $1,437."

Obviously, this does not answer my request for "all the sources of your income, both direct and indirect." The phrase "voluntary subscriptions" does not tell whether the income comes from associations or other groups within the State as I asked.

In earlier testimony, which appears on page 861 of the record, the following exchange of questions and answers appears:

"Mr. JACKSON. Do any of the private utility companies contribute to the National Reclamation Association?

"Mr. POLK. Any of the utility companies?

"Mr. JACKSON. Yes.

"Mr. POLK. No, sir; they do not, not a single one.

"Mr. JACKSON. Do they contribute to any of the State associations that are members of your national association?

"Mr. POLK. Possibly they do.

"Mr. JACKSON. Rather large sums, in many instances?

"Mr. POLK. In many instances; no, sir.

"Mr. JACKSON. In some instances?

"Mr. POLK. I understand that in a very few instances, some contributions are made to State associations. Most State organizations, however, either limit such contributions or specifically accept none.

"Mr. JACKSON. Do any of the public utility or public bodies contribute?

"Mr. POLK. What do you mean by 'public bodies,' Mr. Jackson?

"Mr. JACKSON. I mean municipalities or REA co-ops?

"Mr. POLK. Yes.

"Mr. JACKSON. Do they contribute to your association?

"Mr. POLK. Yes; several municipalities do.

"Mr. JACKSON. Cities?

"Mr. POLK. That is right."

I should like to quote the financial report for 1948 of the Washington State Reclamation Association, as it appeared in the Wenatchee (Wash.) World, in an article written by Mr. Rufus Woods, editor. This statement lists by name the sources of income of the association:

Receipts

Cash on hand Jan. 1, 1948	$64.52
Collections:	
119 sustaining memberships at $25	2,975.00
14.75 active memberships at $10	147.50
National Reclamation Association	687.50
Refund, post office box rent	7.49
Refund, telephone rental	4.90
Contributions:	
Jan. 6: Washington Water Power	2,000.00
Jan. 19: Puget Sound Power & Light	1,500.00
Oct. 7: Washington Water Power	1,000.00
Oct. 23: Puget Sound Power & Light	750.00
Nov. 22: Northern Pacific Ry	100.00
Nov. 22: Great Northern Ry	100.00
Nov. 22: Union Pacific R. R.	100.00
Nov. 22: Chicago, Milwaukee and St. Paul R. R.	100.00
Total	5,650.00
Total collections	9,536.91

This shows that almost 70 percent of the income of the association came from private utility companies and railroads. I find this difficult to reconcile with your statement that "most State organizations . . . either limit such contributions or specifically accept none." I also note the absence of contributions by public power groups (such as municipalities and REA co-ops) which, you told the committee, contribute to the State reclamation associations.

As a member of the Interior Appropriations Subcommittee of the House, I am repeating my request for the sources of your income, both direct and indirect, which you agreed, in the hearings, to furnish. This, of course, includes the sources of income of the various State associations, which, as you state, contribute to the national association. I should like statements similar to that pertaining to the State of Washington, which I have quoted above, naming specifically the sources of income.

As I stated in the hearings, I am only trying to be fair. I am anxious to learn whether or not the case of the State of Washington is a coincidental exception to the general statements made by you in your testimony.

I presume that the information which I seek is easily available from the various State associations, and that your prompt attention in this matter will enable you to furnish the committee with this information in the near future.

Sincerely yours,

HENRY M. JACKSON,
Member of Congress.

Dr. Sterling Ruffin

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. DURHAM. Mr. Speaker, under unanimous consent, I am inserting in the CONGRESSIONAL RECORD an editorial which appeared in the Evening Star under date of June 2 in tribute to Dr. Sterling Ruffin.

The city of Washington has suffered a great loss in the passing of this great man. He has rendered an outstanding service both as a teacher and physician. Dr. Ruffin comes from a family which has contributed much to the State of North Carolina.

DR. STERLING RUFFIN

A physicians' physician, Dr. Sterling Ruffin set a standard in medicine in Washington for more than half a century. His connection with George Washington University began when he came here as a student about 1886. He was professor of practice for 22 years. Approximately 1,200 men passed through his classes. The method of teaching which he developed was rigidly scientific, yet it also was inspirational. A doctor, he insisted, must understand the soul as well as the body of a patient. His influence went out from the classroom and the operating theater to the whole community in terms of service repeated again and again in the labors of his pupils.

Dr. Ruffin's own charges found him tirelessly devoted. He brought to them the reassurance of a calm and placid confidence. Sure in his judgments, he dealt with disease simply as a problem to be solved. His procedures were mathematical. Modern theories annoyed him because, as he believed, they were too adventurously experimental. But he was philosophical in his attitude toward even the most radical innovations. Progress in medicine, according to his conception of it, must be accomplished by medicine itself. It cannot be expected to come from outside and would not be lasting if it did. What really was wanted, Dr. Ruffin declared, was constantly increasing knowledge of what makes people sick and what correctively can make them well.

Never married, Dr. Ruffin lived alone in his Connecticut Avenue home, surrounded by his books. Much of his library dealt with the career of President Woodrow Wilson, whom he attended and greatly admired. When friends yesterday were invited to comment on the net result of his life, one of them said: "He built a monument to himself in the young people who are alive today because he was so competent, so skillful, and so downright good in his work."

Charter of Principles Called Way To Obtain Armed Forces' Unity

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence appearing in the Washington Evening Star of June 1, 1949:

CHARTER OF PRINCIPLES CALLED WAY TO OBTAIN ARMED FORCES' UNITY—PRECEDENT FOR STEP SEEN IN KEY WEST AGREEMENT ON STRATEGIC FUNCTIONS

(By David Lawrence)

There's one way out of the confusion which has developed in the effort to secure unification of the armed services. It doesn't require any new legislation. But it does require a simple piece of constructive planning by the Secretary of Defense.

The solution has been slowly crystallizing out of the current experience inside the Joint Chiefs of Staff. It necessitates a brief charter of principles for the operation of that all-important agency. It can be written only by the Joint Chiefs and put into effect as a directive by the Secretary of Defense. The precedent for such a step is the famous Key West agreement on strategic functions.

In that agreement, roles and missions only were outlined. When, for example, to the Air Force alone was assigned the primary responsibility for strategic bombing, it was also stipulated that the Navy should assist wherever practicable in the carrying out of such a mission.

But to the Navy were assigned certain missions, too, such as antisubmarine warfare, the bombing of submarine pens, and the laying of mines and other tasks.

EXCELLENT BEGINNING

The outline of missions made at Key West last year was an excellent beginning. It didn't, however, go far enough and take up internal procedures and budget-making. Using the same approach, it now becomes necessary for the Joint Chiefs of Staff to make a basic agreement on two major points:

1. Shall there be a specific plan for war and shall everything be related to that particular plan, or shall there be a flexible plan which would permit the armed services to meet any contingencies that arise when a war

UNIVERSITY OF MICHIGAN LIBRARIES

comes? A rigid plan has the serious disadvantage of basing all strategy on one defense, such as on the Maginot line. Obviously the flexible plan is the better.

2. Shall each service vote its view in the Joint Chiefs of Staff as to the way in which another service's mission shall be carried out and with what weapons? This goes to the root of the present controversy.

It will be conceded by fair-minded men in all the armed services that a certain amount of scrutiny of each other's budgets is desirable so that no service can go off on a tangent with a strained interpretation of its needs. It is admitted also that the mutual scrutiny of budgets can be helpful if carried merely to the point of criticism and observation. When, however, the discussion reaches the technical point of what weapons shall be used to carry out an assigned mission, then the decision should be made by each service as to what weapons it needs for that mission. Nor should any weapon be the exclusive or monopoly privilege of one service. When war comes, it is necessary to hit the enemy with all services and all weapons.

Today the Joint Chiefs of Staff is in a state of disunity and confusion because it lacks a guiding charter. The statute does not specify what the procedures should be inside the Joint Chiefs. The omission is probably a good thing because flexibility is essential, especially in emergencies.

CAUSES OF FRICTION

Here are specific examples of what has happened recently to cause friction: The B–36 was submitted to the Joint Chiefs at various stages. The Navy representatives on the Joint Chiefs did not question the policy of putting all the eggs in one basket, as the Air Force appeared to be doing. Approval was given to the budget asked by the Air Force and the routine changes in B–36 orders on the theory that the Air Force knew best what weapons it wanted for its missions.

Conversely, however, both the Army and the Air Force voted against the building of the large carrier, despite the insistence of the Navy that it needed such a vessel to carry out naval missions. Now the dispute has entered another vexatious stage. The Army and Air Force have begun to question the modernization of such aircraft carriers as already are built. This is carrying matters to the technical point of saying, in effect, that a man who has spent his entire career with ground troops is capable of navigating a ship and carrying out sea operations or bringing his inexpert judgment on those subjects to the conference table. It is this absurdity which is holding up unification. Selecting a chairman whose experience is also confined to one service doesn't help matters any.

The problem can be solved by letting the three services come to agreement on an overall budget to recommend to Congress and then let each service, by adhering to the Key West agreement on missions, determine for itself what weapons and organization it shall use to carry out those missions within the budget figure set finally by Congress for each service. Unification then will come naturally.

UMW History at Harvard

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the United Mine Workers Journal of June 1, 1949.

KENNEDY CITES UMW HISTORY AT HARVARD

Historic achievements of the UMWA in both the economic and legislative spheres were reviewed by Vice President Kennedy in a talk at Harvard University before the advance management class in the Graduate School of Business Administration.

It was because of the leadership of the UNWA, Kennedy related, that the right to organize and bargain collectively was written into Federal law. He told of the labor sections in the law creating the Bituminous Coal Commission and the National Recovery Act which were the basis for the Wagner Act.

Commenting on labor history in the United States, Kennedy told how the UMWA had been influential in sharing the policy of the AFL on such legislation as social security. He also recounted the UMWA's great progress in organizing the unorganized. Comparing UMWA policy with that of miners' unions in other nations, he told of its attitude toward mechanization which has enabled the American coal industry to outproduce the rest of the world.

The Things We Believe

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. MULTER. Mr. Speaker, on May 27, 1949, the New York Post announced the appointment of James A. Weschler as its new editor. On the same date the following statement of policy appeared on its editorial page. New York looks forward to the continued publication of the New York Post in the best interests of the community:

THE THINGS WE BELIEVE

The men and women who are putting out this newspaper have done a lot of soul searching in recent days about the function and character of a liberal newspaper. All of us are newspaper people who respect the techniques of our craft; and all of us regard ourselves as independent liberals with strong convictions about the kind of world we want to live in. What we have come up with is the deep belief that there is no conflict between our craft responsibilities and our social idealism, if we may be permitted a lofty phrase. In fact, we are convinced we will be better newspapermen because we are liberals; and—in the most profound sense—better liberals because we are newspapermen.

Which means we have a transcending allegiance to printing the truth, even if it counfounds our most cherished premises or prejudices; that we believe the heart of the liberal tradition is tolerance for contrary opinions; and that in our angriest hour we will try to remember that those who disagree with us are not necessarily thieves and villains. We shall even concede the possibility of our own error.

There are those who believe that a newspaper cannot fight hard unless its dogmas are inflexible. It is often suggested that the great strength of both the Fascists and Communists is their denial of the principle of doubt. They profess to know all the answers and they are equally certain that those who do not accept their answers are fools or knaves. This doctrine may bring private solace but it bears no relation to the essential values of American life.

We believe an independent liberal newspaper can fight harder, more effectively and more resolutely than a journal committed to an absolutist party line. For what we are saying and doing represents not what we have been told to believe by an all-wise leader or what we have read in a political text which may be reinterpreted to mean something else next week. It represents the intensity of conviction arrived at with the use of our own minds and the exercise of our best judgment.

When we take our stand we will do so with the awareness that we are not God—but with the certainty that there are things for which men are willing to fight and even die. We will not equivocate in the defense of civil liberty. We will not differentiate between good dictators and evil ones. We will not accept a moral double standard under which tyranny and exploitation are defensible in one area of the world and intolerable in another. We despise repression and cruelty in Greece or in Georgia, in Moscow, Madrid, or Manhattan. We believe millions of people in our own country and abroad deserve a better break; that too many children are still born into this world without a fighting chance for human happiness; and we hope this institution will never grow so old or so smug that it becomes indifferent to suffering or tries to discover elaborate reasons why nothing can be done about it.

It was said long ago that the function of a newspaper is to "comfort the afflicted and to afflict the comfortable." Too many newspapers have forgotten the words or grown so fat and comfortable themselves that they view the phrase as inflammatory. We like it and we propose to remember it, not because we regard success as subversive but because success too often means the complacent loss of conscience.

We know where we are going and only a final explanatory word is needed. It has often seemed as if liberal journalism must be dull journalism on the theory that any interest in the variety of human experience is somehow irreverent or irresponsible. We don't accept this grim view. A newspaper is the first draft of history; it is the record of how people lived, exulted and suffered in every phase of their existence.

We know that all of you will not agree with us all of the time, but we vow that you will never be bored.

Bug in Planned Economy

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. PATTERSON. Mr. Speaker, I wish to include in the RECORD an editorial from the Waterbury (Conn.) American of May 27, 1949, commenting on the President's economic program.

The writer's analysis of administration thinking is as correct a one as I have yet seen.

The editorial follows:

BUG IN PLANNED ECONOMY

"The only person in Government worried about inflation is the President himself," declared Representative JAMES T. PATTERSON the other day. The Fifth District Congressman went on to stress that the rest of us are more worried over deflation and specially concerned on that account for what the President's resistance to expenditure reduc-

tions and his call for higher taxes threaten to do to a declining economy.

Mr. PATTERSON's point is well taken and it would certainly be a stimulant to business if Government could balance its books by retrenchment instead of by seeking new revenues. The fact that economy in Government is today attaining more popularity and support than it has had for many heedless years is a hopeful augury that the free-spending cycle has about run its course.

Why the President is resistant to a sentiment which is a growing one among both lawmakers and the people can be explained on the grounds of politics, not economics. That is the fatal bug in the theory of a managed economy. There are undeniably lots of things that Government could do to level off the ups and downs of capitalist economy. Whether it would do them is another matter.

We institute subsidy devices to bolster our economy in times of depression, only to have pressure groups perpetuate such grants through times of inflation. A President is elected on promises of expensive reforms and persists in seeking them, despite the onset of deflation, a shrinking national income, and consequently shrinking tax receipts.

Government is not scientific. Government forever mixes up the exact equations of supply and demand, credit and debit, and all the rest with the tricky human equation. A long process of educating both the politicians and the people and strenuous exercise of conviction and character are needed to make controls under popular government expertly serve our economic well-being.

Poland Seeks East-West Peace—East-West Peace Is Needed or Nation Will Be Trampled

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article that appeared in the Detroit News of Tuesday, May 31, 1949. This article is written by David M. Nichol, who is now in Warsaw, Poland, and is writing a series of articles on the conditions in that country for the Detroit News and the Chicago Daily News. There have been many articles written on the conditions in eastern European countries, but in most cases these articles were slanted too much to either the left or the right in order to propagandize a preconceived viewpoint. I believe that Mr. Nichol is trying to present an objective and unprejudiced report. The article follows:

EAST-WEST PEACE IS NEEDED OR NATION WILL BE TRAMPLED

(By David M. Nichol)

WARSAW.—Of all the countries of the modern world, the position of Poland is about the unhappiest.

It is inextricably bound with the Soviet Union by the hard facts of geography and by formal treaty, yet for most of Poland's history the Russians have been greedy and unpleasant neighbors, often open enemies.

Its heart and its yearnings and centuries of cultural history incline it toward the west, yet the west has turned its coldest shoulder toward postwar Poland.

Most important of all, in the Polish view, the west has refused to guarantee or even to recognize the country's western boundaries.

Poland knows that any alterations that may be made will be for the benefit and strengthening of Germany.

Yet it is less than 10 years since Germany not only destroyed Poland as a geographical entity but undertook the incredible and ghastly task of killing all its people.

TRADITIONAL ALLY

France is Poland's traditional ally in Europe. But France, after the devastation and blood letting of two world wars, is in no position to help. Its own security can only be preserved in the closest cooperation with the other western powers, which means, again, the reconstruction of Germany.

Nor can Poland's answer be found in the divided, weakened, and artificial Germany which is likely to result if the Foreign Ministers fail to reach genuine agreement.

A divided Germany means continued Soviet occupation of eastern Germany, where its military forces now number some quarter of a million. It also means continued protection of Soviet lines of communication through the Balkans.

IN A RUSSIAN HOOP

Poland would remain literally encircled by the Soviet armed forces, except for the Baltic Sea. And the Baltic, except its western outlet, is under control of the Soviet fleet.

If Soviet forces are withdrawn from eastern Germany, their first stop will be western Poland. It is estimated that 80,000 Soviet soldiers already are dug in firmly there in former Nazi barracks and training grounds.

Genuine agreement in Paris could make Poland the bridge between east and west, a role it is qualified eminently to play.

Lacking that, it has no choice but close and continued cooperation with the Soviet Union, willingly or unwillingly.

A PRAYER FOR PEACE

The last thing that Poland wants is to be involved in the big power quarrels. And it is almost the last thing that Poland can avoid.

"What do you hope for from the Foreign Ministers' meeting?" I asked one high-ranking Polish official.

His reply was in three fervent words:

"Peace. Peace. Peace."

Poetry Prizes for University Students

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. BEALL. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I am including a news item from the May 20, 1949, issue of the Catholic Review, of Baltimore, entitled "McGovern Awards for Poetry Made." Such awards were established in the Catholic University of America and the American University in January 1948 by James Patrick McGovern, a member of the bar of the District of Columbia; special Washington correspondent of the Arizona Daily Sun, and a former captain in the American Expeditionary Forces of the First World War, whose widely read Poems of World War II were published by the Bethesda-Chevy Chase Post, No. 105, Department of Maryland, of the American Legion, in 1945. For further and complete details of such awards I refer to the remarks of former Representative Richard F. Harless, of Arizona, on pages A426 and A427 of the Appendix of the CONGRESSIONAL RECORD, from which I quote this inspiring sonnet from Captain McGovern's pen:

THE HEART'S UNDYING QUEST

Poetry has nature's root and flower,
The soul of life from essence of the earth;
Born of truth and beauty, it reaps power
To make the mortal of immortal worth.
The spirit which is nurtured in its seed
Can build such health, such faith, such harmony,
That wisdom of the heart and mind then lead
To peace and brotherhood and liberty.
The art of poetry owns a domain
Unique and universal in its sphere.
With words like pageants gleaming in its train,
With strains of music blending for the ear;
It is the diamond light of man's unrest,
The rhythms of the heart's undying quest.

I now append the article from The Catholic Review of May 20, 1949:

M'GOVERN AWARDS FOR POETRY MADE

Two prizes for poems have been won by Brother Fidelian Burke, F. S. C., of De La Salle College, Queens Chapel Road and the District line, who is a senior in the College of Arts and Sciences of the Catholic University of America, university authorities disclosed today. Rev. William J. Rooney, chairman of the committee which judges the poems entered for the prize money awarded each year by James P. McGovern, a Washington lawyer, announced that Brother Fidelian's poem, The Reelection, won the first award of $75. Richard N. Foley, chairman of the O'Hagan poetry prize committee, disclosed that Brother Fidelian's entry, Two Bernini Poems, was awarded $25, left by the late Thomas O'Hagan, of Toronto, Canada.

James Irwin, of Detroit, Mich., a candidate for his doctor's degree in English in the Graduate School of Arts and Sciences, was awarded the McGovern price of $50 for his Poor Linguist My Comrade. Honorable mention in the McGovern competition was awarded to Brother Adelbert Scheve, F. S. C., also of De La Salle College, for his poem, To Death.

"I Have Cancer and I Am Going To Die of It"

EXTENSION OF REMARKS

OF

HON. CLINTON D. McKINNON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. McKINNON. Mr. Speaker, not all the heroes die on battlefields. And sometimes the good works of a man do not die with his body. Such is the case of Forrest Warren, a veteran newspaperman, a beloved friend of thousands, and a worth-while servant to the helpless and handicapped in San Diego.

Mr. Warren's doctor told him of his incurable disease. I believe every Member of the Congress will be interested in his reaction, published on the front page of the San Diego Journal. I am sure that many Members will be glad to know

UNIVERSITY OF MICHIGAN LIBRARIES

that following publication of the article that a Forrest Warren Cancer Fund spontaneously developed, and within a week the fund has reached several thousand dollars, with contributions pouring in from all over the country.

After reading Mr. Warren's statement, Members of Congress may wish to assist the Forrest Warren Cancer Fund. Contributions may be sent care of the San Diego Journal.

Here is Mr. Warren's reaction when told he faces certain and immediate death:

FORREST WARREN SAYS, "I HAVE CANCER, I AM NOT AFRAID"

I have cancer and I am going to die of it.

But I am not afraid.

I have made my peace with God. My heart is filled with love. Only happiness will surround me until the end.

My doctor, after I had been ill 7 weeks, told me what was wrong. I have malignant melanoma, a type of incurable cancer.

I am glad he told me. I think that all cancer sufferers should be told. It is not pleasant news—no one wants to go—but it does give you a chance to get your house in order. And that is so important.

I have called in all of my family and we have had a long talk. And I've pretty well worked out the funeral arrangements. I've called the men I want for pallbearers and they've accepted. And I've had a chat with my preacher, and asked him to keep his remarks brief.

So far, I have had little pain, but I am very tired and sleepy. I tell my friends I could qualify in a laziest-man contest.

The thing that bothers me most right now is that the doctor says I must have no visitors and no phone calls. I've tried to argue, but the doctor is firm. On that rule, he just won't budge at all.

My very life has been wrapped up in newspaper work—for more than 50 years. I will be 72 next August.

In my career I have written every type of story, but this is the most unusual. I am dictating it to my devoted wife Nina, who has been of such strength to me down through the years, and particularly in these days. She is seated by my bed with our portable typewriter, putting down what I have to say.

I am writing this column for only one reason—or perhaps, I should say, for two reasons.

First, I feel it might bring a measure of comfort to others who are hopelessly ill and face to face with their Maker, just as I am.

Then I would like to say a word to those who are not ill but who are blessed with health and strength, and have time ahead of them.

I would like to appeal to them to give to the cancer research fund so that it may become possible for doctors to detect cancer more quickly, and even perhaps find a cure.

Many people have been telling me what a wonderful life of service I have had. I say to all, "If you think I have done good, why not do likewise? Now is the time to begin. Help somebody today."

When I was a very young man my first wife was killed by a train, and I was left alone with a baby boy. For a time I was battered and broken, and my little world seemed at an end.

It was my mother's counsel that shook me out of my despondency. With an arm around me, she said, "Son, sorrow too much indulged soon becomes a weakness. The only way to lighten it is to share the sorrow of others."

I acted upon my mother's advice. In all humility, I tell you that from that day I have shared the sorrows and lifted the cross from the overburdened wherever possible.

My stories and columns in the San Diego Journal have all had one purpose—to bring happiness. I am grateful to the management for giving me the privilege of writing columns and stories to help others. The Journal is truly a metropolitan daily with a heart.

We have a revolving wheelchair plan. A chair is used by a person as long as he needs it, then returned, repaired, and passed on to someone else.

Chairs and funds for their maintenance are obtained through the Journal columns. Archie Cairns is my right-hand man in this project, and I know he will carry on.

We have a Santa helper's fund, operating the year round to give aid to the needy. At Christmastime hundreds of dollars in money, toys, and clothes help to spread cheer.

Through appeals, five projected books have been purchased by individuals and clubs. These are projected onto the ceiling to help brighten the days of the bedridden.

The Indoor Sports received several thousand dollars for their clubhouse through my solicitation in The Journal.

The Golden Wedding Club, sponsored by this newspaper, has brought happiness to many couples who have been married 50 years or more. We hear and read a lot about divorce and marital unhappiness—but there is so much on the other side.

Why do I write about these things?

I do it only to say that when you help someone, you receive more than you give. I am so grateful for the full life I have had; I am so grateful for my friends, and I am so grateful for the privilege of serving by being a sort of middleman between those who have and those who have not.

I have no monopoly on that gratitude. You may share it, too.

I am tiring now, but I want to say that my doctor and his associates are wonderful. They are doing everything for my comfort. It is a joy to know that I am leaving three grown children, all good citizens, and six grandsons. My wife, who has been my constant companion, nurse, and partner in my writing, will carry on the work I love.

The time is not set for my departure. Only God knows when that will be. I face the future with faith and, in my heart, love for all.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. HILL. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an editorial on Federal aid to education taken from the Denver Post.

This is a very excellent statement, and I trust that all Members interested in this most important national legislation will find time to read this article very carefully:

THE CONCERN OF ALL

We don't know any arguments against Federal aid to education which are not based on (1) a tightwad opposition to social expenditure, no matter how meritorious or (2) the professed fear of Federal interference in the schools.

Regardless of how seriously these objections may be advanced, they become feeble in the hard light of facts about the state of United States education. We are a Nation which prides itself on free schools for all, but—

In 1940, 10,000,000 of our citizens had no more than 5 years of schooling.

Census estimates in 1947 showed that 4,000,000 of our children between the ages of 5 and 17 were receiving no schooling at all.

In the war years, 8 percent of our young men were draft-rejects because of educational deficiencies.

In the years 1939 and 1940, studies showed that the best of our school systems spent $6,000 or more per classroom, while the poorest spent less than $100, a spread of more than 60 to 1 in educational opportunity.

This is the age of the atom and of conflicting ideologies. It was never more important that America have informed citizenship. We cannot have such a citizenship when there exist these appalling holes in our educational structure.

To a great and demonstrable extent, these weaknesses are due to the unequal spread of wealth among our States (and it should be obvious that unequal educational opportunity is a prime factor in perpetuating these inequalities of wealth).

It is the aim of the Federal-aid-to-education bill, which the Senate has just approved by an overwhelming 58 to 15 vote, to fill these gaps. The measure provides $300,000,000 to be distributed among the States on a basis of need.

Opponents have appealed to the self-interest of the more well-to-do States, pointing out that their share of taxes to pay such Federal grants will be, in many cases, several times what they would receive in aid. This is obviously true. Colorado, for instance, would chip in $2,171,000 in Federal taxes and receive only $1,240,000.

Far from being a sin, that is the very philosophy of Federal aid. It takes from the richer States and gives to the poorer. But the aim, and a worthy one, is to advance the entire Nation.

James V. Forrestal

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. PHILBIN. Mr. Speaker, the following is an excerpt from a news story by John A. Giles appearing in the Washington Star of May 23, 1949, concerning the late James Forrestal, former Secretary of Defense:

When, as Navy Secretary, he visited Pearl Harbor Navy Yard, he shunted aside the efforts of an admiral to talk to him to speak to a lonely junior officer he had just met for the first time. "I'll tell Phil I saw you, Dave," he called while the brass stood back abashed.

The young officer concerned is my good friend, Commander Davitt M. Rooney, of Palmer, Mass., prominent central Massachusetts newspaperman who served as a Navy public-relations officer during the war. Secretary Forrestal, subsequently, gave me his message.

The episode described by Mr. Giles vividly illustrates one of the many-sided facets of Secretary Forrestal's personality and character which brought him the respect and admiration of the public and which endeared him to those who knew him best

Jim Forrestal was as much a casualty of the war as if he were stricken in battle, because his selfless zeal prompted him to labor so arduously in behalf of the Nation that he was finally borne down with the weight of heavy responsibility and work. Outstanding in every respect, he was a brilliant administrator and a man of strong conviction. He was efficient, painstaking, conscientious, and he was also kind to his associates and all the members of the armed services, humane in extending a helping hand to those in need of his assistance. A gifted policy maker, he was an able and faithful public servant who performed his duties with poise and efficiency, always with rare discernment of the particular needs of the ordinary enlisted man who came under his jurisdiction. His loss is not only a personal but it is national and the country deeply mourns his untimely passing. Truly it may be said of him that he gave his all for his country.

How Can We Best Resolve Our Differences With Russia?

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address I gave on the above subject on Town Meeting of the Air over the ABC network on May 31, 1949:

If to resolve our differences with the Soviets means that they must become democratic, or we become communistic, then there is no hope indeed. However, our practical task is to try to get a workable agreement on traffic rules under which orderly and peaceful relations may be carried on between the two systems, despite their unlikeness.

Two years ago our Government finally began to wake up to the fact that we cannot buy Russia's cooperation by sacrificing our principles and other peoples' rights and territory. Step by step we have embarked on a fivefold program which I believe is sound as far as it goes and has some promise of success, if firmly and patiently continued and expanded:

First, rebuilding enough of our scrapped military strength to fulfill our commitments overseas and to meet any probable emergencies or dangers. Strength, here at home, is indispensable if we hope to influence the Kremlin at all.

Second, resistance to any further spread in Europe and the Near East of the glacier of tyranny moving out of the Soviet Union.

Third, assistance, on a cooperative basis, to the western European nations and western Germany in their struggle to recover economic stability against determined Communist efforts to weaken and subjugate them.

Fourth, the North Atlantic Pact. From the beginning it was apparent that full economic recovery could not be achieved without this additional step—a mutual defense program. A sense of security is essential if the peoples of Europe are to put everything they have into the recovery effort. The defense program and the economic program are both necessary if either is to succeed.

But progress in Europe alone cannot be enough. Asia must also be free and on our side if we hope to have so strongly favorable a balance of power in the world that it can perhaps influence the Soviets toward cooperation rather than conquest.

Tragically, our Government has followed opposite policies on the opposite sides of the globe. In Europe we follow the Truman policy of resistance to communism and assistance to freedom—and are making real headway; in Asia we still follow the Wallace policy of trying to appease communism—with total disaster.

By refusing to give vigorous and effective support to those opposing Communist aggression in China, we actually intervened in favor of that aggression—the worst possible alternative. That is the measure of how immature we still are in the political and ideological fields.

That brings us to the necessary fifth step: Not just opposition to further extension of the Soviet system of compulsion, but a positive sense of mission to spread throughout the world our system based on voluntary cooperation. We must give to the world a more adequate presentation of the thrilling story of what has happened and can happen under freedom. Through press, radio, films, books and magazines, and exchange of teachers, students, scientists, we must show the oppressed peoples and the undecided peoples of the world a better alternative—the record of performance, not just promises. The desperate measures Russia is taking to prevent the story of freedom from reaching those under her control and her own stupendous efforts in the propaganda field are the eloquent proof of how great is her faith in the power of ideas. We dare not be less active and effective in presenting the facts about America than Russia is in selling her falsehoods.

All of the above are essential but they are not enough. They merely buy time for a sixth step, give us one more chance to get the world organized politically on a sounder basis.

We must move boldly and imaginatively to strengthen the United Nations so that it can handle effectively all threats to the peace from whatever source. If Russia will not agree to changes that would make all members subject to the same laws, and vetoes them, then we should organize on a closer basis with all the nations that will agree—not outside the United Nations, but inside it.

As long as we timidly indicate we will not do anything unless or until Russia agrees, of course she will not agree. Why should she?

We can expect the men in the Kremlin to change from obstructionism to some sort of cooperation only when we confront them with a set of circumstances where agreement is more advantageous to them than continued disagreement—a closed door to conquest; an open door to cooperation.

To demonstrate to the Russians, quickly, that if necessary, we and the other free peoples can and will get along without them, is, I believe, the best way to get along better with them.

Harmful Fertilizer Practices

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. LEMKE. Mr. Speaker, since July 1945, I have introduced four different fertilizer labeling bills at the request of Mr. William G. Holman, a public-spirited Virginian.

And on February 28 last, a fertilizer labeling bill limiting the amount of soluble nitrogen in fertilizer was introduced by the distinguished Representative from Wisconsin, Hon. FRANK B. KEEFE.

While it is not my purpose to criticize the Committee on Agriculture for its failure to conduct hearings on any of these bills, I do think the time has come to give Mr. Holman an opportunity to prove: First, that an excess of soluble nitrogen in fertilizer makes all plants more susceptible and less resistant to disease; and, second, that a reduction of the soluble nitrogen content of fertilizer, and the use of more organic nitrogen, would enable the farmers to grow better crops with 50 percent less fertilizer per acre—thus lowering the amount the farmers annually pay for fertilizer—$260,000,000.

While my State uses only a few thousand tons of fertilizer, I am interested in the economic phase of this matter, and more particularly in the health phase of it.

The maintenance of fertility is the farmer's problem, but every one of us should be interested in knowing that the food we consume will have no harmful effect upon our health.

I shall quote a few paragraphs of a paper that Mr. Holman has prepared on this subject which leave little room for doubt as to how seriously the health of the people is involved:

Dr. James Asa Shield, an eminent medical scientist of Richmond, Va., says that people in other countries whose food crops are grown with nature's plant food—organic nitrogen—do not have sclerosis of their nerves, their blood vessels, blockage of their veins, or high blood pressure, or kidney or gall stones.

He also says that people whose food comes from soils fertilized with chemicals appear to have more vascular diseases and more degenerative diseases.

The Yearbook of Agriculture, 1948—page 288—says that more than 1 or 2 percent of nitrates in plants as a result of very heavy fertilization or of excessive amounts in soils is known to be poisonous to stock.

An editorial in the Bee, Danville, Va., says that it now appears that cows that graze on highly fertilized pasture lands become sterile, and that this is also believed to be the cause of the X-disease that afflicts so many cattle.

The Spectator (London) October 17, 1941, says that rabbits have died after eating cabbage grown with an excess of nitrates.

Anything that poisons cattle and kills rabbits is undoubtedly harmful to human beings, and may be the cause of the great increase in the number of deaths from heart disease and cancer.

Mr. Holman goes on to tell in his paper how a few fertilizer manufacturers acquired control of many of the phosphate deposits in this country, and how they used this monopolistic control of such a basic fertilizer material to dictate to other manufacturers not only how fertilizer should be made, but what the selling price should be.

He then tells of the loopholes in many of the State fertilizer laws which permit the manufacturers to use almost unlimited proportions of the cheap water-soluble sources of nitrogen without

UNIVERSITY OF MICHIGAN LIBRARIES

letting the farmers know that this is being done.

Mr. Holman cites the fact that the increase in the soluble nitrogen content of the fertilizer was soon followed by an extensive spread of destructive plant diseases, and by an alarming increase in human diseases.

He then shows how the use of so little organic nitrogen forces the farmer to use more fertilizer per acre in order to get enough organic nitrogen to feed the plant to maturity.

Mr. Holman tells of the ravages of blue mold that destroyed so many tobacco plants in Virginia this year that a majority of the farmers in several of the tobacco-growing counties were forced to go entirely out of the State in search of plants with which to plant their crops.

Finally, Mr. Holman dramatically appeals to the public for a helping hand in the following words:

In the name of the farmers who have been oppressed; in the name of those who are suffering, and of those who have died from diseases that might have been prevented, let us appeal to the awakened conscience of the people.

Here is what you can do to help: Write to your Congressman and to your Senators, and urge them to help me get a hearing before the Senate and House Committees on Agriculture.

Drop me a line at 305 B Street NE., Washington, D. C., and let me know that you are in sympathy with what I am trying to do for the public good, and that you will do all you can to help me.

Mr. Speaker, I think Mr. Holman deserves the support of right-thinking citizens throughout the Nation, and I hope he will get it.

Armed Forces Pay Bill

EXTENSION OF REMARKS
OF
HON. JAMES B. FRAZIER, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. FRAZIER. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include an editorial appearing in the Daily Post-Athenian, of Athens, McMinn County, Tenn., under date of May 25, 1949:

THE EDITOR COMMENTS IN THE FRIENDLY CITY OF PROGRESSIVE EAST TENNESSEE

(By C. C. "Chuck" Redfern)

Every front page has the story today about the defeat of the Armed Forces pay bill. It was discovered that the bill raised top brass pay about 50 percent and the recruit's pay 3 percent.

The stories on the defeat of the bill carry the name of PAT SUTTON, freshman Congressman from Tennessee.

SUTTON called the hand of the brass in the lopsided pay scale and gave forth with such potent articulation that the bill was defeated.

There was little the generals could say. PAT SUTTON is not the kind to be backed into a corner and he was in World War II, but good.

Remember the name of PAT SUTTON. You'll hear more of him. You vets in the State may know the young man now.

He enlisted as an apprentice seaman. Then volunteered for underwater demolition, which as you all know is the most dangerous form of military service.

PAT SUTTON received both Army and Navy decorations and in fact is the most decorated veteran in Tennessee.

He carries a steel plate in his shoulder and another patch over his eye. He has more guts than a Sherman tank and yet is friendly as a flower in spring. He has possibilities, wouldn't you say?

Under-water demolition men put on rubber fins and swam from subs or other craft to shore installations before troops landed. They cut wire, detonated bombs and eliminated other water hazards so troops could land.

Sometimes they came back. PAT SUTTON was one of the far too few who survived.

And so it comes as no surprise to those who know Congressman SUTTON that he spake his piece when he felt it needed speaking. Let the brass fall where it may or anyone else if they are off base.

By the same token PAT SUTTON has fought just as hard for his friends and constituents. He seems intent on doing what is right and we mean doing it, not just half doing it.

So as we saw the story come in on the wire today, of PAT SUTTON, freshman Congressman, mowing down the brass, it was no surprise.

It will be a surprise that if some day we do not see the name of PAT SUTTON more prominently displayed; maybe a Senator—hmmmm?

PAT SUTTON handled the chore of thousands of ex-servicemen who would have enjoyed looking at the big brass feel the pangs of disappointment, just as many a recruit has felt, when refused a 3-day pass.

Japanese Educational Program on Communism

EXTENSION OF REMARKS
OF
HON. JOHN S. WOOD
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. WOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

HEADQUARTERS, KANTO MILITARY GOVERNMENT REGION,
APO 201, May 26, 1949.

CHAIRMAN, COMMITTEE ON UN-AMERICAN ACTIVITIES,
Old House Office Building,
Washington, D. C.

DEAR SIR: The work of your committee and the publications released on communism have had far reaching influence. The findings of your committee can be put to invaluable service in Japan among the American occupation personnel who are not adequately oriented in communism—what it is, how it functions, how to contain it.

The duties of my staff are devoted to development of the Japanese educational program from nursery school to university, including adult and out-of-school youth education, in seven of the prefectures or States having a total of 6,000 schools, 70,000 teachers, and 3,250,000 pupils. Copies of your material will be most useful at this time of critical political agitation in the Far East, and I assure you will be put to intensive use.

I fully realize that this is a special request and your committee may not be in a position to render the assistance asked for, but we in our duties in Japan will be appreciative of whatever materials you can provide and reference to other sources that you can give.

Very truly yours,
ROLLIN C. FOX,
Regional Education Officer.

More Power

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. MACK of Washington. Mr. Speaker, the Grand Coulee Dam, in the State of Washington, is now the largest producer of hydroelectricity in the world. It became so when the tenth generator of 18 to be installed at that dam went into operation. The rated capacity of Grand Coulee Dam is now 1,100,000 kilowatts, compared to 1,000,000 kilowatts at the Hoover Dam, now the Nation's second largest hydroelectricity producer.

Eventually when, by 1952, all 18 generators are in operation at the Grand Coulee Dam, the electrical capacity of that dam will be 2,000,000 kilowatts.

Despite these great expansions in electrical production in the Pacific Northwest, this fast-growing, industrially expanding area is still short of power to meet its ever-growing needs. More power is needed. On this subject the Portland Journal, of Portland, Oreg., one of the largest newspapers in the Pacific Northwest, recently said editorially:

MORE HORSEPOWER

Another 108,000-kilowatt generator goes on the line at Grand Coulee today. This in ordinary times would be routine stuff. But two things make it a very important event indeed.

First, the power-hungry Pacific Northwest needs that generator. And how it is needed! The flooding Columbia, by reducing the usable heads of water at Bonneville and Grand Coulee, has put a 190,000-kilowatt crimp in production from these two plants. And the region still has a continuing 150,000-kilowatt peak shortage that may really hurt next winter.

Second, addition of that tenth generator at Coulee gives this biggest of all multiple-purpose hydroelectric projects the greatest rated capacity of any such plant—1,100,000 kilowatts as compared with Hoover Dam's 1,000,000 kilowatts.

Eventually Grand Coulee will have a rated capacity of almost 2,000,000 kilowatts. But as the 1,000,000-acre Columbia basin project comes in, starting in 1952, more and more of this hydro giant's power will be required to lift water from the Columbia into the great irrigation canals. Eventually half Grand Coulee's total capacity will be used for this purpose during the irrigation season.

There is this additional factor: Until additional storage dams are completed above Grand Coulee, the firm capacity of the plant will be limited to the equivalent of 15 generators, even if all 18 of them were installed.

Even the mighty Columbia has its limits at certain low-water periods.

Thus the new generator at Grand Coulee won't solve our power problem, but it will help mitigate the shortage. Additional generators are to be added as fast as manufacturers can produce them.

It's a grim race the Pacific Northwest runs against a drastic power curtailment. Every kilowatt counts.

Wake Up, America—It Grows Like a Cancer

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. AUGUST H. ANDRESEN. Mr. Speaker, I believe that the following article from the Financial Post, Toronto, Canada, of May 28, 1949, should be of vital concern to every citizen of the United States and particularly American businessmen. The rapid drift toward a totalitarian welfare state in this country follows the pattern that took Britain into socialism. Americans, we must not let it happen here. Wake up, before it is too late.

IT GROWS LIKE A CANCER

The silencing of dissent is the well-known, universal characteristic of every totalitarian state.

In Hitlerian Germany, business and professional men who could foresee the path down which they were being led and who alone might have had the will and the power to organize effective opposition, found themselves trapped by the Hitler machine. Willy-nilly, business and industry found itself unable to escape being made increasingly a tool of Hitler policy.

In Britain, the peril of dissent against Socialist rule soon becomes apparent to any visitor. "Keeping in well" with the bureaucrats who can do so much to help or hinder business processes becomes an important part of company policy. Being careful not to antagonize the masters, hence prolong, or invite new regimentation and restriction, easily becomes the businessman's habit.

And this docility and servility grows like a cancer.

The damage resulting from this creeping paralysis of resistance and criticism, and evidence of its growth in Britain, has been previously commented on in the Financial Post.

Now the Recorder, public affairs weekly of London, is talking about it. Editorially, the Recorder says:

"It is a queer thing that industrialists who are so active and enterprising in their business are slow when it comes to safeguarding their whole future.

"Could it be that in some cases there are Government contracts to consider? That may be uncharitable; but certainly the word 'government' whatever its color, has a strangely awing effect on most of the people of Britain."

The Recorder points out that most British industrialists are members of the Federation of British Industries and that it is with the FBI that the Government holds its negotiations.

"One big fact does disturb many men who subscribe their company's funds to the FBI. That is whether the FBI is sufficiently wholehearted and active in the fight against nationalization. Some who direct the policy of the FBI seem to be smitten with the disease of 'statesmanship.' To them a fight is a brawl, however worthy the name.

"Some represent companies not yet threatened by nationalization. Some represent companies threatened by nationalization but not yet decided how, or even whether, to fight it.

"Does the FBI believe in Britain? Does it believe in British industry? Does it believe that Britain thrives better, and even depends wholly, upon a free British industry? Those questions should be decided now."

It will have struck many Canadians that some British businessmen who have spoken publicly here sounded much like apologists for the Socialist government. They seemed frantically eager to say nothing which could by any remote accident be interpreted by their Socialist masters at home as critical or hostile.

And is it very much wonder? In the totalitarian state, everyone is dependent in a thousand ways on the will and the whim of the totalitarians.

That is only one of the perils of socialism. One way and another, it inevitably suppresses and silences opposition and criticism and that is the direct path to the permanence of dictatorship; the end of all individual freedom. It is indeed the road to serfdom.

United States Bonds as Reserves

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. MACK of Washington. Mr. Speaker, it is constantly said that the money in the old age and survivors insurance reserve fund has been spent, that it is all gone and that in its place is only Federal Government I O U's.

In a sense that is true, but only in the same sense that all of the money we have borrowed from banks, insurance companies, savings and loans, and private individuals, and for which we have given them Federal Government I O U's called bonds, is true.

Our Government owes $252,000,000,000, that being the size of the national debt. Of this $252,000,000,000 of debt, $31,800,000,000 have been borrowed from Government reserve or surplus funds, including the railroad retirement fund, the Federal employees retirement fund, the old age and survivors insurance reserve fund, and several other Federal reserve funds.

The Wall Street Journal, the Nation's leading financial newspaper, judging from a recent editorial in that paper apparently sees nothing wrong or unsound in the Federal Government borrowing these reserves and replacing them with bonds. Neither do I.

It can be said, and I think rightly, that there is danger in building a reserve such as that of old age and survivors insurance too large, thereby making easy borrowing by the Government easier and thus encouraging extravagant Federal spending.

The present old age and survivors insurance reserve fund now contains $10,700,000,000 and is increasing at the rate of a billion dollars a year. There are those who want to see this fund increased to $40,000,000,000 or $50,000,000,000. No such enormous reserve is or, in my opinion, ever will be needed. A reserve fund of $10,000,000,000 to $15,000,000,000 should be big enough.

The editorial of the Wall Street Journal dealing with borrowing by the Federal Government of old age and survivors insurance reserve funds and replacing them with Government bonds follows:

UNITED STATES BONDS AS RESERVES

Belief still persist in some quarters that a reserve fund in the old-age and survivors insurance system is purposeless or has no real existence or swells the cost of the retirement annuities. If there were any foundation for these criticisms of the OASI reserve, it would be in order to take a serious look at a number of other reserve funds of the same composition.

Government obligations in which Federal law requires a score of insurance reserve and surety funds to be invested are classified by the Treasury as "special issues." As of April 30 last they were outstanding to a total of $31,800,000,000, an increase of $2,600,000,000 during the preceding year. So far as this newspaper is aware, only the OASI reserve has been denounced by anybody as being a mere bookkeeping trick.

The Railroad Retirement Account offers a particularly interesting illustration of an annuity system reserve invested in Government obligations. It is adminstered by a three-member board to which the railroad labor organizations nominate a man, and the railroad companies another. The President of the United States appoints the third member in his own free choice. Between its inception in 1937 and the end of 1948 the Railroad Retirement Board realized, in round figures, $3,200,000,000 from taxes on employees and employers and upward of $100,000,000 in interest on the reserve, a total of $3,300,000,000. It paid out just under $1,700,000,000 in benefits and invested just over $1,600,000,000 in the Government obligations which some people say haven't any real existence.

Railroad labor unions have been enthusiastically in favor of their tax-and-reserve system of retirement pensions, though some groups of their members have objected that the present tax rate of 5¾ percent each on employees and employers, applicable to wages up to $300 a month, is too high—too high, anyway, in its bearing on the employees. But the well organized beneficiaries of this retirement system, with their own man on the administrative board, do not contend that reserve accumulation is no good.

If reserve accumulation of Government bonds is a hollow sham, why pick on the OASI reserve alone?

Keeping Faith With Our War Dead

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include the address I delivered on May 30 at the annual Memorial Day exercises in the city of Worcester, Mass.

UNIVERSITY OF MICHIGAN LIBRARIES

This commemorative ceremony, in honor of the dead of all wars, took place on the Common at Worcester, Mass., and was sponsored by the Willie Grout Camp No. 25, Sons of Union Veterans of the Civil War.

The address follows:

It is an honor to take part in these exercise of homage to those of our comrades for whom the last human roll call has been sounded, but whose spirits ever look upon us from the ramparts of heaven.

Today, in all parts of the land, in great cities and rural graveyards, the people of the United States are holding commemorative ceremonies for those who fell in their country's service. Similar tribute is being paid in the far-flung military cemeteries, large and small, where Americans sleep on foreign fields, from Iceland to Japan, in Europe, Asia, and Africa, and the lonely islands of the Pacific. The sun never sets on the little white markers of our war dead.

In our contemplation of their supreme sacrifice we are reminded of their love and devotion to the cause of freedom. Yes, we cannot forget that they were victims of war, man's greatest plague since the dawn of history. The wars in which America has been called upon to participate have been conflicts begun by despotic and totalitarian governments.

The American people have always been a peaceful people. They have never been prepared for war, when war came, because they were motivated by good will toward their fellowmen, not by any lust for power over other people, nor by any greed for the territory or possessions of others. Whenever the manhood of America has marched, as you men and your comrades marched, to do battle for your country, the motive and purpose of America has always been to extend the boundaries of freedom.

No one can deny nor dispute that record and that impelling motive on the part of America. History sustains it completely. Our record in the Philippines, our record in Cuba, our record in every case where we have rescued subjugated peoples from the heel of the despot, has been to prepare them for self-government, and then help them set up their own government.

Our whole doctrine and concept of government is to live at peace with our neighbors; to permit self-determination by peoples within our own sphere of influence and encourage he peoples of every nation to choose their own form of government.

All we asked in the First World War in return for the millions of men and the billions of dollars we spent, was world peace between all the nations. We did not get that world peace.

When we became embroiled in the Second World War our purpose was perfectly clear to every informed person in the world. We were again going into war, we were again preparing to contribute millions of men and unprecedented billions of dollars that the world might have peace and security; that small weak nations might be made free of the fear of being overrun and enslaved by stronger neighbor powers.

In the course of that terrible conflict, we not only had to pour millions of fighting forces and billions of dollars on munitions and supplies of war into the European theater, but at the same time we had to pour other torrents of blood and billions of dollars into a war in the Pacific which we fought alone with practically no aid from any of our allies. Such a feat of waging war directed toward freedom and motivated by a desire that all men might be free and secure has never been witnessed before in the history of mankind.

Today, after the last great struggle, America remains the outstanding bulwark of liberty left upon this planet while across the world two conflicting concepts of government clash. With the world of the future in between, democracy and communism watch each other, with their conflicting ideologies and governmental policies. We have been, by force of circumstances, impelled into the position of world leadership, as well as the world's banker and samaritan of mercy. Out of that position there arises the imperative necessity that we face facts realistically and no longer bemuse ourselves with wishful thinking.

The problems of peace are equally as grim and urgent as the problems of war. If we do not remain alert to our duties, heroism will give way to lethargy, self-sacrifice to self-indulgence and national pride to national indolence. We will not abandon our efforts for peace, but at the same time, we must make it clear that we do not propose to stand by and see our war aims abandoned, small helpless nations overrun, American democracy challenged, and freedom everywhere threatened with extinction.

This Memorial Day seems a very appropriate time to reaffirm our passionate yearning to live in peace with all the world, and also, perhaps, to dwell upon the beliefs that have been retained for us by the blood of our departed comrades, of all wars.

We believe, and we have demonstrated, that peoples enjoying liberty and equality of opportunity will not take upon their shoulders the yoke of any despotic oppressor; they do not and will not look into the dust as they live out a life of weary toil and torture. Freemen under our American concept lift their eyes to heaven to search out their destiny among the stars.

Yet we are being told by a small cult of subversionists in this country that America is archaic; that Americanism is outmoded; that our Government by consent of the governed is not as efficient as government under communism or socialism, or some other alien ism. The hour has come for us as citizens and especially as veterans, to examine and answer that challenge.

The other nations of the world have had thousands of years in which to achieve everything we have achieved in America in 170 years. They did not succeed. We did. Now, since our forefathers came from those very countries which failed to reach the heights we have scaled in America, by what magic did they build the foundations upon which, in 170 years—a brief and fleeting period in the life of nations—we erected the greatest nation the world has ever known.

It was the magic of our Government by consent of the governed; it was the magic of our Constitution in which we bound ourselves to refrain from the oppression of minorities in moments of passion and vehemence on the part of the majority. It was the magic of the Bill of Rights—the right to worship God as each should choose; the right to know what his Government does and to criticize it if he sees fit; the right of petition and peaceful assembly; the right to seek work, go into business, or enter a profession; the right to exercise individual freedom while recognizing a like right for our neighbors. It is the magic of that concept and system that has brought us in 170 years to the highest standard of living in the experience of men.

These same underground detractors tell us that Americanism cannot meet the conditions of the modern world. Let us reply to that charge.

After Japan had prepared for 40 years for war; after Stalin had prepared for 20 years for war; after Hitler had driven the German people for 12 years getting ready for war, what happened in America when we were forced to fight? Under a free government a free citizenry, a free agriculture, a free industry, a free labor, all cooperated to put us, in the short space of 3 years, on an offensive war basis and the road to victory.

In 3 years, we in America overcame the decades of preparation in those totalitarian countries. In 3 years, we were in sight of victory in two wars, in two oceans, while we were pouring out billions upon billions of dollars worth of war machines and material to sustain, not only our own millions of fighting forces in Europe and the Far East, but to sustain our allies as well. During that same war, we had a national election without impeding our efforts in the least. That is the kind of an America that you fought for. That is the kind of America our comrades died for. That is the kind of an America that we must live for. That is the kind of an America these subversionists say has failed.

Let us look a little further at this picture. After the war was over, after we had proved to be the deciding factor in the two wars, all the other nations of the world turned to us to feed them, to clothe them, to give them the money by which to rebuild their shattered factories and their war-blasted agriculture. On this very day, every nation on the globe is looking to us for help. If there is any other governmental system in the world remotely comparable in benevolence and efficiency, where is it? The subversionists who prosper under the hospitality of this country and who then seek to destroy the very system that makes this Nation all it is, cannot answer that question, but we can. There is no better country under the sun and with the help of divine providence and our own loyalty it ever will be preserved.

We all hope and pray that war will never again come to this planet. We know that war, instead of being a heroic, chivalrous adventure under flying banners and to the noise of blaring trumpets, is a cold, scientific, efficient method of mass destruction of men and factories, of cities and farms. We know that war has reached such scientific advances that it will be mass suicide if it comes again.

So then, on this Memorial Day in 1949, as we are gathered here to pay tribute to our heroic dead, we must remember that the peace of the world and the safety of our liberty lie in eternal vigilance. We must remember that in the state of the world today, while we work wholeheartedly for peace and understanding, we are forced to remain sufficiently strong to discourage any aggressors' direct attack. Above all, we must give our common devotion to our common country just as those who today sleep beneath the grassy mounds gave their common devotion. They died in their devotion to liberty and we cannot give them any better pledge of remembrance than in the words of the immortal poem—

"Nor shall your story be forgot,
While Fame her record keeps,
Or Honor points the hallowed spot
Where Valor proudly sleeps."

We must live our devotion to liberty if they are not to have died in vain. May God give us the strength, the wisdom, and the courage to keep the faith with those who died for us.

Soviet Crusade Against Jews

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by

Eugene Lyons, from the New York World-Telegram of May 27, 1949:

STALIN HURLS JEWS TO LIONS TO SALVE RUSSIAN MASSES

(What is back of the Soviets' crusade against the Jews? Eugene Lyons, United Press correspondent in Russia for 6 years and a noted authority on Soviet affairs, today offers an explanation of the Kremlin's shocking anti-Semitic campaign which staff writer Frederick Woltman disclosed in a series of articles just concluded.)

(By Eugene Lyons)

Despite panicky denials by partisans of the Soviet dictatorship here, the tragic fact of an officially sponsored campaign against Jews in the Soviet Union can no longer be doubted. The documentation presented by Frederick Woltman in the World-Telegram is, of course, only part of the cumulative evidence.

It is helpful to recall that other terrifying Soviet events, at first vehemently denied, were acknowledged in time even by Stalin's faithful. The man-made famine of 1932-33 which took at least 3,000,000 lives is an example.

Some actions of the modern police state are so extreme that they defy credence by normal minds. The anti-Semitic turn in Kremlin policy belongs to this category. It seems fated to go through the familiar cycle of shock, doubt, and ultimate acceptance as one more aspect of the moral degeneration of the Communist experiment.

REVEALS TENSION

For the world at large the new development is significant for the light it throws on the nature of the Soviet regime and for what it reveals about tensions inside the U. S. S. R. today.

The Kremlin leaders know their anti-Semitic venture will cost them the allegiance of millions of friends of the Soviets abroad. It may well mark the beginning of the end of the tenacious myth that Stalin's dictatorship, despite everything, is somehow on the side of liberalism and progress.

The readiness to forfeit foreign support at this critical juncture in world affairs, points to a difficult if not desperate internal situation. As always when governments take up the weapon of anti-Semitism, it amounts to a confession of serious weakness.

Students of the Soviet scene long have been familiar with the growth of anti-Semitic feelings among the Russian masses. But they were aware, at the same time, that the Kremlin was fighting the tendency.

JOIN HATEMONGERS

Now the Soviet regime itself has joined the howling pack and in effect has given its blessing to racial persecution. The Kremlin has not merely given up its struggle to curb anti-Semitism, but is forging a united front with hatemongers.

Why has the regime chosen to switch sides on this issue?

Before attempting to answer the question we must realize that the Moscow claims that anti-Semitism had been abolished was a propaganda fraud. The truth is that this evil is more widespread than under the czars.

The reasons for this are too complex to explore in a brief article. The gist is that the Jew in Russia has been cast in the classic role of scapegoat for discontents, for which he is in no way responsible. Anti-Semitism has risen as a reflex of the general misery of the population and in direct proportion to the horrors imposed on the people. Only in part is it a leftover of prerevolutionary anti-Semitism, being overwhelmingly a product of Soviet conditions.

COULD NOT TURN TIDE

The Soviet Government rightly regarded anti-Jewish sentiment as an indirect expression of the deepening popular hatred of the Soviet system. It fought anti-Semitism not for liberal idealistic reasons but out of necessity, as a species of counter-revolution.

That fight was unfortunately futile. Laws and punishments could not turn back the anti-Semitic tide. Only an improvement in living conditions and an ersing of political terror could have accomplished this. As long as bitterness against the regime grew, it was bound to find outlets in unthinking blame of the Jews.

Since the end of the war, disillusionment with the Communist set-up has been especially sharp. Grumbling is more open and more bitter than ever. The dictatorship, we may surmise, is increasingly alarmed by the ugly mood of its subjects.

TRYING TO APPEASE

The new party line on Jews is in the first place a measure of the Kremlin's panic. Unable or unwilling to provide more bread, clothes, and freedom, it is offering its subjects a whipping-boy instead, a convenient object of hatred.

Stalin and his gang are setting up lightning rods to deflect the people's pent-up angers from their own heads. In a sense they are trying to appease and conciliate the most primitive elements in the population by throwing them the red meat of race hatred.

Precisely as the Russian czars did in times of political trouble, the Soviet czars apparently have decided to channel feelings against the ancient scapegoats.

NATIONALISM NOT MOTIVE

Even terror has its limits as an instrument against mass opposition. Evidently those limits have been reached. Some safe outlets for hostile emotion seemed desirable to the Politburo. They are deliberately catering to the lowest instincts of a portion of their people in the hope of throwing a bridge, however flimsy and ugly, across the gulf that separates the despotic dictatorship and its victims.

In addition, the new line fits neatly into the current Russian nationalist propaganda. That gives the Kremlin a patriotic excuse for abandoning its old pose of racial tolerance. But nationalism, in this writer's opinion, is the alibi, not the primary motive. The purpose of the anti-Jewish drive is to placate and if possible win over the kind of people—a minority, but deployed through the whole population—who blame the Jews for Russia's troubles.
